earnestly entreated Takayama to renounce his faith. But he steadfastly refused. Before leaving his home he collected a year's dues from his retainers, and handed over the whole of the money to Maeda with the request that it should be given to his successor in office and that no more money should be collected till the following year. (7) When Hideyori was preparing to make war on Ieyasu at Osaka, he despatched a messenger to Nagasaki in order if possible to induce Takayama to fight on his side against Ieyasu, but when the herald reached the port, Takayama had already sailed. (8) The ship that took the refugees to Luzon encountered a great storm on the voyage. Four missionaries were drowned. Takayama, with his infant grandson in his lap was to be seen clinging to the mast in the storm, Bible in hand. (9) On his arrival at Manila he soon became very popular among his own countrymen, several thousands of whom dwelt there at that time, and among the Spaniards residing in the town. Prior to Takayama's arrival the Japanese in Manila had been causing the Spanish Government considerable anxiety. They were nearly all warriors and had combined to establish a system of extra-territoriality in Manila. The Government regarded his arrival as a godsend. They at once endeavoured to use him as a mediator between themselves and the turbulent Japanese settlers. With this end in view the Governor-General offered Takayama emoluments. But he, quoting the old Chinese saying, *Chūshin wa nikun ni tsukayezu* (The loyal servant does not serve two masters), refused to accept anything from aliens. "Though an exile," he said, "I am still a Japanese, and will be true to my country. To receive pay from a foreign Government seems to me wrong." "We are only paying you for the services you have rendered us," said the Spanish officers. "Your acceptance of our gifts will place you under no obligation to serve us in any way that is displeasing to you." But Takayama still persisted in refusing to take anything from a foreign Government. (10) The climate of Manila seems to have disagreed with Takayama; for within a year after his arrival he fell ill, and, in the 64th year of his age, died on Feb. 5th 1615, saying in his last moments to his wife, children and grandchild, "Weep not for me; for I am happy." So highly was he respected in Manila that he was honoured with a State funeral. It is said that there is no other instance of a Japanese receiving a State funeral in a foreign country. We have only been able to give a bare outline of Mr. Fukumoto's interesting record. The book he has promised the public will certainly prove a valuable addition to the ever growing literature bearing on the history of Japanese Christianity in the sixteenth and seventeenth centuries.

A recent issue of the *Fukin Shimpō* has an article entitled, "Differences in the Construction of Religions," of which the following is the gist. If, as is maintained by most writers, religion is a product of man's nature, how does it come about that there are such wide discrepancies between the great creeds of the world, since human nature is alike everywhere? The answer given to this is that in original nature and essence religions do not differ from each other, it is only in methods of manifestation and development that they follow different courses. They all proceed from the same source, namely from certain desires and aspirations in the human breast, from a longing on the part of mankind to establish a connection between human beings and a Power that is above nature or embodied in it as a life-giving and controlling principle. The differences in existing religions are of course to be attributed to the varying histories of the peoples by whom they were developed. The customs of whole races of people have been embodied in religions and are to a large extent inseparable from them. This is specially so with Mohammedanism and Judaism. There is no doubt that special forms of religion suit some races much better than forms developed by alien peoples. Although the fundamental ideas of religion are true, no existing religion can be pronounced absolutely true. Religions having been developed by human beings, they necessarily contain erroneous ele-

ments. And seeing that all the historical religions have gone astray in one way or another, there have been in all times writers who have advocated a recasting of religion so as to embody in a new creed only such teaching as is free from error. In Germany, England and France this course has been repeatedly recommended. But the majority of thinkers plainly see that the proposed feat could never be carried out by any one man or by any body of men to the satisfaction of the world at large, and so in the West it has been decided that the best course to follow is to leave the historical religions just where they are, recognizing the special merits of each and its suitability to local conditions. The writer we are quoting concludes his article by expressing the opinion that though no religion is absolutely true Christianity possesses more merits in it than any other form of faith and he calls attention to the fact that in certain parts of the world it has no rivals. "What Christianity cannot effect no religion can effect. What truth is there taught by other religions that she does not teach? And what reforming agency is there in the world that surpasses hers?"

YACHTING.

Five yachts started in the race for the Cruising Class on Saturday at 1.45 p.m., in a fresh Easterly breeze. *Nina* carried her working gaff topsail, but the others were content with plain lower sails. At the start, *Daimyo* was for once a few seconds late, instead of crossing the line right on gun-fire as usual. *Asagao* was first out of the harbour entrance, followed by *Nina*, *Daimyo* and *Wanderer*. *Mosquito* found the wind and sea a bit too much for her, and gave up. *Nina* passed *Asagao* on the reach out to the lightship, and increased her lead on the run down to the Widow Buoy, which was rounded in the following order; *Nina*, *Asagao*, *Daimyo* and *Wanderer*. The sea off the spit was a bit heavy, and shortly after coming on the wind for the beat back to the lightship, *Asagao* pulled out her starboard chain-plates, and had to retire disabled. She was eventually towed back to harbour by a launch. *Nina* increased her lead from *Daimyo* to the finish, and both the cutters drew away further from the yawl, but the *Wanderer's* handicap of 30 minutes proved too much in such a fast-sailed race.

The times at the finish were:

Yacht.	Finish.	Corrected.	Handicap.
		Club	Arbitrary.
		h.m.s.	h.m.s.
<i>Nina</i>	3.44.03	3.38.59	3.30.03
<i>Daimyo</i>	3.50.05	3.45.01	3.46.05
<i>Wanderer</i>	3.58.25	3.58.25	3.28.25
<i>Mosquito</i>	Gave up.		
<i>Asagao</i>	Gave up.		

Wanderer takes first prize; *Nina* second prize and two record points, *Daimyo* one record point.

The 21-raters had a very lively time of it in the heavy sea and fresh breeze, and clearing the harbour entrance was a matter of no small difficulty. All took aboard a considerable amount of water ere the race was finished. Times:—

	Corrected	Finish.	h'cap.
	h.m.s.	h.m.s.	h.m.s.
<i>Edna</i>	4.07.15	4.03.15	
<i>Vixen</i>	4.10.20	4.10.20	
<i>Winsome</i>	4.11.12	4.07.12	
<i>Pete</i>	4.13.25	4.09.25	
<i>Sunbeam</i>	4.15.10	4.15.10	

THE AUTUMN REGATTA.

The autumn regatta of the Yokohama Amateur Rowing Club can not be written down as an unqualified success. To begin with, the weather was in a bitter, snarling mood, the skies were of a leaden hue, with more than a suspicion of rain in them, while a shrill easterly breeze raised a nasty, jobbly sea which made racing-shells anything but comfortable craft for their occupants, and rendered rowing in form impossible. Under these circumstances it is not surprising that two of the races, owing to accidents, practically fell through, though in each case the boats got down

to the starting post. The course, by the way, was necessarily inside the harbour, and was reduced to three-quarters of a mile, but this made little difference, for big waves were sweeping over the breakwater all the afternoon and each race finished with boats more than half full of water. It was in fact a day for yachtsmen, not for oarsmen. Notwithstanding the cheerless weather there was a fairly numerous attendance of ladies, who all took the precaution of coming warmly clad, and so after the tea-tables were cleared from the gymnasium a most enjoyable dance was started which was kept up with unflagging vigour till a late hour. Tea was served throughout the afternoon under the direction of Mrs. Walter Weston, who was assisted by Miss Jackson, Miss Rhea Kenderdine and others, and as these ladies were most indefatigable in their exertions this portion of the afternoon's programme can be voted as being most highly successful. Mrs. Weston at the close of the regatta very charmingly presented the prizes to the winners, and was rewarded with some hearty cheers. The regatta was under the following direction:—

COMMITTEE:—H. C. Litchfield, President; F. J. Hall, Captain; W. Goddard; F. Lammert; H. E. Hayward; M. Schellenberg; W. W. Weston; C. Thwaites, Hon. Secretary; J. Cartwright, Hon. Treasurer.

OFFICERS OF THE DAY:—Judge H. C. Litchfield; Starter, F. J. Hall; Time Keeper, P. B. Clarke.

PONTON OFFICIALS:—Dr. Ed. Wheeler; Rev. W. W. Weston.

JUNIOR FOURS.— $\frac{1}{4}$ MILE.

Bow.	W. Graham	123lb.
2	R. Wallace	132lb.
3	G. B. Spain	152lb.
Str.	A. S. Caro	144lb.
Cox	G. Kenderdine	131lb.

"SWAN"

Bow.	H. Russell	115lb.
2	J. Kaufner	150lb.
3	R. S. Schwabacher	137lb.
Str.	L. Serkis	130lb.
Cox	C. H. Abbey	119lb.

"DARTER"

Bow.	G. Charlesworth	123lb.
2	W. B. Mason	130lb.
3	J. Figueredo	125lb.
Str.	D. L. Abbey	110lb.
Cox	J. Abbey	115lb.

"PELICAN"

Bow.	J. T. Cassidy	126lb.
2	J. S. Graham	144½lb.
3	P. E. Nicolle	150lb.
Str.	O. T. Gillon	140lb.
Cox	W. Goddard	135lb.

After a little delay to allow of the racing yachts to clear from the course, the four boats were got off to a level start. Caro soon drew ahead and keeping his advantage won by a length and a half; the second boat losing by about 4 seconds in time. Time, 6m. 16½s.

SENIOR FOURS.— $\frac{1}{4}$ MILE.

Bow.	E. J. Moss, Junr.	132lb.
2	G. Kenderdine	131lb.
3	J. H. C. Goodban	141lb.
Str.	W. M. Squire	148lb.
Cox	J. P. Abbey	115lb.
Bow.	J. E. Moss	129lb.
2	F. Pollard	163lb.
3	O. Strome	193lb.
Str.	J. S. Cartwright	158lb.
Cox	W. Goddard	135lb.

This was rather a surprise to punters on the verandah, who all expected Cartwright's crew to win, an expectation in which the crew also shared, we believe. Squire is an old hand over the Yokohama regatta course, be the weather fair or foul, and so adapting his stroke to the conditions of the day, he managed to get a lead soon after the start, though the form and time of his men were execrable. But it was not a day for good form and Cartwright's men, with their longer, steadier stroke, finished a length behind their opponents. Time, 5m. 57¼s.

SENIOR DOUBLE SCULLS.— $\frac{1}{4}$ MILE.

Str.	L. Serkis	130lb.
Bow.	A. E. Caro	144lb.
Bow.	E. J. Moss, Jr.	132lb.
Str.	C. H. Moss	145lb.

This race soon degenerated into a procession in which the winners paddled along at their ease,

for C. H. Moss, after making a bad start, caught a crab and was some time before he could settle down to work in the troubled water. Time, 6m. 43½s.

JUNIOR PAIRS.—¼ MILE.

"WIDGEON."	
Str. W. B. Mason	130lb. }
Bow. R. L. Schwabacher	137lb. }
Cox. C. H. Abbey	119lb. }
"MALLARD."	
Str. H. J. Hearne	142lb. }
Bow. J. L. Graham	144½lb. }
Cox. C. L. Manley	140lb. }

This race saw the best start of the day, both boats getting off well together. Schwabacher soon established a lead and then the hearts of their opponents seemed to die within them, for they suddenly began to abandon all effort and the winners came in as they pleased. Time, 7m. 7½s.

OPEN FOURS.—¼ MILE.

Bow. J. E. Moss, Jr.	132lb. }
2. G. Kenderline	131lb. }
3. L. Thompson	140lb. }
Str. W. M. Squire	148lb. }
Cox. J. P. Abbey	115lb. }
Bow. E. J. Moss	129lb. }
2. F. Pollard	163lb. }
3. O. Strome	193lb. }
Str. J. S. Cartwright	158lb. }
Cox. W. Goddard	135lb. }

The boats made bad weather of it going down to the starting post, shipping much water. A start was made, but the first stroke saw the race abandoned, Cartwright's oar breaking. Their opponents seeing what had happened generously offered to row the race on Monday, and the two crews accordingly made the best of their way home. Cartwright's craft proved very unmanageable in its crippled condition and it was soon water-logged, but the crew managed to get almost up to the pontoon ere their ship sank beneath them. Everyone had then to swim ashore, and none were the worse for the ducking perhaps, save the poor coxswain, who was hampered by his heavy boots and walking costume. But he eventually reached the pontoon and was deservedly cheered as he made his dripping way to the Boat-house.

JUNIOR DOUBLE SCULLS.

"PEARL."	
Str. G. Kenderline	131lb. }
Bow. P. Komor	112lb. }
"TERN."	
Bow. H. Luther	147lb. }
Str. H. J. Hearne	142lb. }

The second accident of the day occurred in this race, Kenderline's left scull snapping eight strokes after the start. The race, which was at once abandoned, will be rowed off on Monday, we believe.

SCRATCH FOURS.

Bow H. Luther.
2 J. Figuiredo.
3 R. L. Schwabacher.
Str. H. Luther.

This was rowed in semi-darkness and the spectators on shore saw little of it. A good deal of bother was experienced in making a start and in the end one crew displayed very bad manners and on landing criticized in language that was much to free the action of the starter. The whole affair is to be greatly regretted, for it made a very unpleasant ending to the regatta, and certainly did not disclose that gentlemanly bearing which his supposed to characterize amateur oarsmen.

JAPANESE WORKERS IN THE MISSION FIELD.

One of the most pressing problems in Christian work in Japan to-day, writes a correspondent, seems to be the supply of Japanese workers as pastors and leaders in various capacities. At almost every missionary and religious gathering it is one of the leading topics of discussion. A small pamphlet on this interesting subject has just been issued by Mr. John R. Mott, whom many in Japan still remember vividly. Mr. Mott discussed the question in the course of an address delivered before the ninety-third annual meeting of the American Board of Commissioners for Foreign Missions, held at

Oberlin, Ohio, on October 16th, 1902. He began by declaring that there is need of strengthening greatly the native arm of the service throughout the mission fields of the world, and that for every thousand missionaries there will be needed not less than ten thousand native workers to serve as pastors, evangelists, catechists and Bible women; for, as he points out later in his address, "the sons and daughters of the soil will leave the deepest mark on their own people and generation." "History teaches," he goes on to say, "that the principal factor in the evangelization of non-Christian nations has been the native factor. There has never been an extensive region or nation thoroughly evangelized, but by its own sons." To illustrate his point he quotes from the writings of Alexander Duff, the great missionary statesman of India; from Joseph Neesima, of Japan; Mackay of Uganda; Dr. Nevins, of China, and last but not least Dr. Griffith John, the Nestor in the Far Eastern Mission field. Of course there are difficulties in the way of securing and using native workers, and Mr. Mott duly alludes to them. First he places the *tempt* in which religious workers are held in the East, due to generations of corrupt lives among the priesthoods of the indigenous religions; next is the *reproach* which so often attaches to the native who is related to the foreigner; then there is the question of *status*, which seems to stand in the way of some, particularly in India; *misconception* of the motives of missionaries is another obstacle, while the *opposition of parents and relatives* is a very real hindrance. Mr. Mott meets all these objections and then passes on to the attractions presented by commercial pursuits, by government service, etc., which cause so many promising native students after leaving the mission schools to fall away from Christian work. But all this notwithstanding, Mr. Mott declares that "wherever I found a native student upon whom the Spirit of God had laid his mighty hand, I found a student who was eager to enter upon the service of his fellow men, and, therefore, willing to face the hardships, opposition, and sacrifice involved." With regard to the raising of the great army of native workers, the speaker said:—"Those missionaries whom I have met in my travels, who have had the greatest burden upon them, that they might be used of God in enlisting young men and women for this important service, are the missionaries who are turning out the largest number of young men and young women into Christian work as a life work." Mr. Mott holds that it is necessary to greatly enlarge and strengthen the educational missionary work, and if this is done he expects to see a larger fruitage within a very short time. To do this requires money, but he believes that men of large financial ability and large outlook will respond far more generously to a plan which seems adequate to do the work which God has assigned to our generation, than to one which is obviously insufficient to meet the need and opportunity. So he counsels that the various Mission Boards should add to the force of workers in their colleges. These men need not necessarily be all ordained. "Now and then an unordained man who has been well prepared for teaching, and who is a religious force among students at home, would be very successful in such work abroad." Still for all that he urges that quality not quantity should be the guiding principle in the selection of workers for the field, for personal influence is a predominating factor, and he quotes from the lives and writings of many devoted men and women in India, China, and Japan, whom he also had met and conversed with, to drive home the point. Mr. Mott acknowledges that his suggestions in order to be properly carried out, require a large investment of money and he realizes keenly the difficulty of the problem. But he is firmly convinced that there is a way to use money which will not hinder, but rather further, one of the great objects which the American Board has in view; namely, the stimulating and enlarging of self-support. In his opinion "there is no body of men in Christian work to-day who can be depended upon to make a wiser use of money for such a purpose than the men stationed in the key positions of the missionary societies of Great

Britain and America. Moreover, we should co-operate with the Christian Student movement in non-Christian countries." Mr. Mott concluded his illuminating address with these words:—

What we do to solve this great problem and every other problem which has come before us during these days, we must do quickly. Too many organizations and individual Christians to-day are acting and planning as though they had two or three generations to do the work for which God is going to hold them responsible. We need to revise our methods in this respect and to focus our energies upon the task at hand. While it is true that we should build for the future generations and for eternity, the best way to do it is to serve our own generation by the will of God. The only way that this world is ever going to be evangelized is going to be by each generation of Christians resolving to evangelize its own generation of non-Christians. The Christian world to-day can evangelize the unevangelized now living; the Christians of the last generation and the Christians who are to come after cannot do it. I repeat it: we must evangelize our own generation of unevangelized if they are ever to know and obey Jesus Christ. There is an element of urgency and immediacy in the command of Jesus Christ that we are prone to overlook. The dominant impression made on me during my last tour around the world was that every mission field is ripe, yes, dead ripe, and that the time has come to reap. In my judgement, if we rise to our opportunity, the next ten years will witness an unprecedented ingathering into the kingdom of Christ in all the great mission fields.

SHUZENJI: A FLOOD.

(FROM A CORRESPONDENT.)

Shuzenji, in Idzu, is not a place greatly frequented by foreigners, but it may be presumed that anything relating to the village will interest a considerable number of our readers, Japanese as well as foreign. Earlier in the present year, June or July, a heavy rain storm filled all the rivers in this locality bank high and in consequence even to this day, so tardily do such matters move, persons desirous of reaching Shuzenji and other neighbouring places from the railway terminus, Ohito, are ferried across the fast-flowing Kanogawa in a scow where jinrikishas, carts, horses, humans, etc., crowd together in friendly equality—except that the last mentioned having the forward hold as first class passengers get their feet wet while the ponies who are aft on the poop deck don't. The bridge went out in the floods and it is still down—all but a few timbers clinging to one bank.

Shuzenji could boast of four bridges up till a short time ago when that highest up, the Katsuragawa (which is an affluent of the Kanogawa) being indeed quite out of the village, was broken down. Of the three that were left, you used the lowest and largest if you wished to go to the Arai and Kikuya Hotels, which are the chief resorts of foreigners, and which are situated on the south side of the river. This structure spans a deep gully some 25 feet above the normal level of the Katsura, which here, debouching from its mountainous course upon the plain, moves in alternating reaches of rapid and pool. Higher up the river is the private bridge of Kikuya, and still higher by some three hundred yards was the third bridge the Tongetsuhashi, crossing from the Kikuya main hotel to a point a little above the post office. A hundred yards above is the curious hot spring mentioned by Murray's Guide Book, which issues from a bed of rock (always bare in ordinary seasons) in the very centre of the turbulent river and was reached from the north side by planks laid from rock to rock. This spring was roofed and walled round in the style of a summer house and people on shore could, through the bamboo sides, easily recognize friends and, but for the brawling of the torrent, carry on conversation with them.

On the evening of Thursday (Oct. 1st) rain began to fall heavily in this district, and the result of the downpour was to send the rivers thundering down in ever-increasing volume. During the night the Katsura steadily rose and by daybreak people on both sides were moving their effects, for the houses on the banks which project over the river and are sustained on that side by posts were shaking and the flood was roaring along in yellow fury. Still the rain

ted as it had continued all night and shortly
ees and other debris came along.

About half-past six the flood was at its height,
gher than any record of many years past—indeed,
ie people say that not in a couple of hundred
ears has there been such a visitation. At this
me the one street of the village on the north
de and the bathhouses on both banks were in
ost imminent danger, for the river, over-flowing
gher up, was pouring along the roadways, fill-
g and sadly injuring the baths and washing
nder and into houses some distance from the
inks. But the chief damage was caused on the
ver front. Freightened with huge trees, one at
ast of which must have been over a hundred
ars old, the flood wrought its culminating
voc, as has been said, about half-past six. The
msy hot-spring shelter was first destroyed, and
en, sheering into the south bank, the river tore,
after another, some twenty or thirty houses to
eces. A few, those farthest up stream, were practi-
cally carried bodily away; the others thrown inland
e huddled together in ruins. With its burden
wreckage the river bore down upon the Ton-
subashi, and in a few moments Shuzenji was
orn of a bridge. How the Kikuya bridge
aped it is impossible to tell but that it was
verely assaulted is shown by the state of its
anking. The Arai bridge was not so fortunate;
northern supports gave way and the roadway
gged and opened so dangerously that passage
ross was rendered impossible. So Shuzenji
stead of four bridges has only one in use.
ad this structure gone, the people on the south
le would have been awkwardly situated for they
st have waited till one or other of the bridges
is repaired, or travelled eastward in the hope,
at too substantial, of finding a boat in which to
pass.

Many thousand yen will represent the damage
the town—the Tongetsubashi was only recent-
rebuilt at a cost of yen 720. In the low dis-
c by Obito everything was submerged and a
ge proportion of the rice is laid. However,
may still, with good weather, be harvested
ctically without loss.

Two lives were lost at Shuzenji on Thursday
ning. One man, a guest in the place, was
ried away by the river; the body of another
n was afterwards recovered.

OPENING OF THE ORIENTAL PALACE HOTEL.

On Tuesday evening a very large number of
idents accepted the invitation of Messieurs
raour and Dewette to take part in a soiree
seuse at the Oriental Palace Hotel, and thereby
mally start the Hotel upon its public career.
e new building is in many respects a
at improvement on the former structure,
ependent of the extra accommodation gained
the addition of a third story. The walls are
idly constructed of red brick set in cement
rtar, with facings of white imitation stone,
ept on the Bund front, where the verandah,
ings, etc. are of hard white and grey stone.
e roof framing and the frames of all the arches
oughout the building are of wrought iron,
le the construction of the roof over the dining
m, a spacious apartment without archway or
support below, and carrying some fourteen
ms above it, is also of iron. The wood-
k of the doors, and window frames is all
d wood, mostly teak. The flooring of the
tral hall and corridors is all tessellated in
y tasteful designs and colours, and the sky-
t in the roof over the hall is a very fine piece
ork, the glass being wired to prevent ac-
nts by earthquake, and coloured in special
ligns. The place of honour on the ground
r is given to the dining saloon, which extends
g the entire front of the hotel, opening by a
ber of glass doors on to the verandah,
affording a fine outlook over the har-
r. To allow of more height to counter-
uce the spacious area of this fine saloon and
utilize all the space at command, the floor has
n carried several feet below the level of the
tral hall and corridors, but on a level with the
ndah on the front. The flooring of the room

is of unvarnished Oregon pine in narrow boards
fitted criss-cross in short lengths. The decoration
of the ceiling and walls is most artistic and original,
and merits a close inspection. Access from the dining
room to the hall is obtained by ascending
a few steps and crossing an ante-room by a
wide archway. This ante-room is so designed
as to afford all the facilities for a stage for
music or theatricals, having other rooms on
either side for the wings and dressing rooms, while
the dining saloon would form the auditorium.
Both from the ante-room and the saloon the
central hall presents a very fine appearance, light
and spaciousness being particularly striking in
the effect, with the arched colonades on either side
and the wide and handsome staircase running
up to a landing in the centre, where it divides
right and left on to the galleries of the first
storey. Proceeding along the tight hand corridor
from the dining room are the drawing room,
hotel office, and main entrance in Odawara-cho,
a second drawing room, a private dining room,
capable of seating sixty guests, with ante-room
attached, a small bar and billiard room, with
lavatories, etc., opposite, and then the second
entrance, in Water Street, with two spare
rooms facing it. The kitchen department,
bakery, and domestic offices generally, take up
the space on the left hand side of the building
from the Bund, and are very complete and handy.
These include an electric light installation plant,
and heating apparatus consisting of half an
atmosphere of hot air, fitted throughout the build-
ing. On the two upper floors are sixty-four
bed-rooms, while the bath-room accommodation
numbers no less than ten rooms on each floor.
The furnishing of all the rooms is in every respect
suitable, combining elegance and comfort in
reception and bed-rooms alike.

Something more than a passing word of praise
is due to the architect, Mr. Richard Seel, who
has made such a grand success in the design-
ing and superintendence of the erection of the new
hotel, and the proprietors are to be congratulated
not only on having secured the services of so
thoroughly qualified an architect, but also on
their wisdom in having given him a free hand in
the execution of his work. Mr. Seel has the
advantage of experience in handling Japanese con-
tractors and workmen, having been for six years
in the Japanese Government employ, during
which term he designed and built the Court of
Justice and Law Court buildings in Tokyo,
among other works. Since leaving the Gov-
ernment service he has been employed
by the Russo-Chinese Bank in the con-
struction of their premises in Shanghai, Peking,
Tientsin, &c., in China, and recently on the
Bank's fine premises in Yokohama, besides having
designed the former Oriental Hotel. The Oriental
Palace Hotel is his last undertaking in the
Far East, as he leaves for his home in Berlin in
November next. A careful inspection of the
designing and finish of the decoration and con-
structive work in the new hotel will convince
any capable judge that Mr. Seel has put his
whole heart into this his last work in Japan.
Every detail in carving, moulding and decoration
generally has received his utmost care and skill;
and the happy result was seen by the numerous
guests who partook of Messrs. Muraour and
Dewette's hospitality on Tuesday evening.

FROM A RUSSIAN VIEW-POINT.

(FROM OUR CORRESPONDENT.)

Port Arthur, September 15th—28th.

It is believed here that a section of the Japanese
Press is at present strongly urging the Japanese
Government to interfere in Korea. In Russian
circles in Port Arthur this agitation is naturally
regarded with unfriendly eyes. An article in a
recent number of the *Novi Krai* quoted the
remarks of the *Tokyo Kokumin*, which paper
lately compared Korea to a thatched house that
was in danger of taking fire at any moment
owing to the carelessness of its inmates, and that
accordingly required to be looked after by the
neighbours, who would be sure to suffer from the
effects of such a conflagration.

All this excitement in the Japanese Press is

due, says the Russian paper I have already
quoted, to the simple fact that some Russians
recently rented a piece of land at Yong Am-pho
on the Yalu. But before we enter on this Yong
Am-pho question we should first like to say a few
words about the part which Japan has been play-
ing up to the present in Korea. Her first
object was to get hold of the rising generation,
and with that end in view she established
all over Korea a network of schools in which, of
course, a Japanese programme of studies was
taught. It must be admitted that she carried out
this vast scheme with exemplary perseverance.
Having got it into working order she calmly
proceeded to Japanize two important Korean
ports, Chemulpo and Fusan, which are now, prac-
tically speaking, Japanese possessions. From
that time up to the present, her enterprises have
been pushed in all directions. Japanese built the
Seoul-Chemulpo railway and are at present build-
ing the Seoul-Fusan railway. Fusan will be the
most southerly point of this railway system which
will be open throughout its entire length in
about eighteen months. Thousands of Koreans
are now working on this line under the direction
of Japanese, quays are being built and embank-
ments constructed so that ships will be able to
unload right into the railway waggons. Japanese
merchants have bought up the best portions of
land adjoining the railway line and close to the
railway station which is situated in the centre of
the port. A Japanese timber yard of considerable
dimensions has already been constructed in the
same vicinity. There is hurry and animation
and rushing to and fro throughout all this Japan-
ese quarter. Long, broad streets have already
been marked out by lines of stone foundations,
and at the present moment one cannot buy a
piece of land whereon to build a private house
or a shop—all the land suitable for the purpose is
already in the hands of Japanese. From time to
time the Korean Emperor wakes up and issues
edicts prohibiting the sale of land to foreigners,
but, as seems to be the rule in that strange
country, these edicts are not obeyed and the
sale of land to Japanese goes on as briskly as
ever. In Seoul the Japanese own about one
third the immovable property in the town, in
Chemulpo almost half the immovable property.
In other Korean towns their interests are almost
if not quite as important.

THE IMPECUNIOUS KOREAN.

As for the Korean, well, he is generally an
impecunious, easy-going individual, always wait-
ing like Mr. Micawber for something to turn up.
It is generally the Japanese money lender who
turns up to lend the expectant Korean money on
his house or land, with the result that in a very
short space of time the hapless Korean finds him-
self bundled out of his property which the Japanese
at once appropriates and proceeds, it must be
admitted, to work to the greatest advantage.

PRACTICAL MASTERS OF KOREA.

Thus the Japanese are fast making themselves
practical masters of Korea in an economic as
well as in an educational sense. As soon as an
opportunity presents itself Korea will become
Japanese in name as it is already Japanese in fact.
That this opportunity may come quickly is the
ardent wish of every Japanese.

THE YONG AM-PHO AFFAIR.

To return, however, to the question of Yong
Am-pho, the Japanese Press, both in the English
and Japanese languages, has inaugurated a regular
crusade against us on this question. The leasing
by some Russians of a few acres of land in the
Korean village in question is represented as an
attempt on the sovereign rights of Korea, and a
menace to Japanese interests in that country,—
may, more, it is even represented as a menace to
the independence not only of Korea but even of
Japan. But all these heated fancies of the Japan-
ese fail, we should think, to obscure the fact
that the question of Yong Am-pho is purely of a
commercial nature. The agreement regarding
the lease was concluded as far back as 1896
but conditions were not propitious at that
time for carrying out the necessary work. At
the present moment, however, a commercial
company has taken up this concession and is
working it. Where, then, is the reason for ac-

cusing Russia of aggressive conduct? Are there not tens of thousands of Japanese workmen in Korea, from Fusan to Gensan, and is the formidable onward movement of the Japanese in the Peninsula regarded by the entire Japanese Press as anything but strictly legal, consoling and satisfactory all round?

Is that onward movement regarded in Japan as a menace to the interests of other Powers in Korea or as a menace to Korea herself? Yet let once a few Russian timber merchants start a modest undertaking in northern Korea and the whole Press of Japan becomes frantic, asserts that this is a case of Russian aggression, and hints at war. Furthermore, that Press thinks that the time has come for Japan to interfere in *hopeless and helpless* Korea. (The italics are the *Novi Krai's*.)

THE BLESSINGS OF CIVILIZATION.

In another issue the *Novi Krai* translates from the *Japan Mail* a long article bearing on this same much discussed question of Korea. The article, which it is unnecessary to re-translate, is to the effect that Japan's patience is exhausted by Russia's latest move in Korea.

"As regards all these mournful lamentations," remarks the *Novi Krai*, "we must say that every impartial observer can see for himself that Russia's interests in Northern Korea are of a peaceful nature. We may add that no jingoistic Japanese clique can shake Russia in her determination to peacefully but firmly introduce the blessings of civilization among neighbouring nations, acting on the principles of justice and mutual esteem."

AN UNFORTUNATE INCIDENT.

If the *Daily Vestock* is to be credited, a very unfortunate and untimely incident took place at Vladivostok on Aug. 29th (R.C.). The *Ise Maru* which arrived at Vladivostok on that day brought on board General Akiyama of the Japanese army and his adjutant. The General was met at the landing place by a number of Russian staff officers who conducted him to the quarters which had been kindly placed at his disposal in the Officers' Club. While General Akiyama was thus being treated with every courtesy and attention, some countrymen of his were having a very rough time of it at the hands of the Russian authorities. These gentlemen, who included a tailor called Okomoto, had come by the same ship as the General and the object of their trip was to smuggle into Vladivostok a considerable quantity of silk. They were caught in the act of doing so, hauled before the Police and fined.

THE LAW COURTS.

LEI CHIEN HSIAN v. J. C. HARTLAND.

The hearing of this case was resumed in the Yokohama District Court before Judge Kano on Oct. 2nd when Ho-Kensing, a Chinese employee of Messrs. Jardine, Matheson and Company, was examined at a witness.

Witness said that he knew seven buildings in the compound of No. 97, Yokohama. He owned them once, and sold them in December 1894 to two Chinamen named Lei Chien Hsian and Kwan Ho Chong. The right of perpetual lease of the ground whereon the buildings stood belonged to a British gentleman, Mr. Shand, of No. 3, when witness owned the property. The ground rent was paid by Mr. Shand. The witness originally purchased the property from another Chinaman named Chu-kei Sei.

Cross-examined—Witness said he thought Mr. W. J. S. Shand was the owner of the lease.

Plaintiff's Counsel presented an objection to the effect that the power-of-attorney of the counsel for defendant was not properly signed by Mr. J. C. Hartland, and that the signature of Mr. J. C. Hartland on letters in the office of the Public Notary was different to that on the present power-of-attorney.

Defendant's Counsel proposed to present the signature again in the Court after endorsement by the Public Notary.

The Court adjourned the case till Oct. 9th.

P. SARDA v. GRAND HOTEL.

The hearing of this case, in which plaintiff

claims yen 3,407.16 as compensation for supervision of construction works, against which there was a counter-claim of yen 37,267.01, as damage for imperfect work, was resumed in the Yokohama District Court before Judge Kano on Oct. 2nd.

Counsel repeated the statements detailing their claims and the Judge then put some questions to both parties, after which the Court rose for tiffin.

After tiffin, as the case was about to be resumed, news reached the Court that the villa of plaintiff's Counsel, at Kamakura, where his family are staying, had been destroyed by a heavy storm. Counsel left the Court at once for the scene, and the case was adjourned *sine die*.

S. ISAACS v. M. ISAACS.

In the Yokohama District Court, the hearing of this case, in which Mr. S. Isaacs claims recovery of various mercantile books, began before Judge Kano on Oct. 2nd.

R. Isaacs interpleaded as intervenor.

Messrs. Masujima and Hiraoka were present for plaintiff, Mr. Ideura for defendant, and Mr. Sawada for the intervenor.

Plaintiff stated that the business books now held by defendant after the old firm had been wound-up, should be transferred to plaintiff, one of the partners of the old firm.

Defendant contended that he was keeping the books as manager of the wound-up estate and could not give them up to plaintiff. Defendant had no instructions from the other partners to do so.

Intervenor stated that the books must be given to him and not to plaintiff. If there was any necessity for Mr. S. Isaacs to have the books he, the intervenor, would give them up to him.

Plaintiff objected to the Power-of-attorney given to intervenor's Counsel by Mr. Max Isaacs, representing R. Isaacs, on the ground that it was imperfect in nature.

The Court decided to deliver an interlocutory judgement on Oct. 7th.

HALL v. STANILAND.

Judgement was delivered no below in Yokohama District Court by Judge Kano on Oct. 5th in the case instituted by Mr. J. W. Hall against Mr. F. Staniland, claiming yen 792 for auction commission and advertisement charges:—

- 1.—Defendant was ordered to pay yen 300 for commission and yen 42 for advertising charges to plaintiff and to bear two-thirds of the costs.
- 2.—Plaintiff would have to bear one-third of the costs.

The remainder of plaintiff's claim was dismissed.

ENCROACHMENT OF COPYRIGHT.

A criminal case brought by Mr. K. Yamakawa, President of the Imperial University, against a man named H. Okaya, on a charge of plagiarism is to be heard to-day (Oct. 7th) at 8 a.m. in the Tokyo District Court.

It appears, according to the complaint, that the defendant compiled a history of Japan and gave it the title of *Kwocho Henneshi*. This was published in 1899 by the Keigyo-sha, a publishing company. The materials of the book and the style of its compilation were all transferred from the History—vol. 1 to vol. 24—which has been compiled in the Bureau of Historiographers and edited and published by the University.

SENTENCES ON MURDERERS.

B. Miyamura (39), who strangled a friend named T. Suda, was sentenced on Oct. 5th in the Tokyo District Court to penal servitude for life. Z. Suzuki (28) who attempted to murder a woman named Shige, having inflicted severe injuries with a hatchet, was sentenced in the same court to three years' imprisonment with hard labour.

HONGKONG AND SHANGHAI BANK v. F. HERB.

A petition instituted by the Hongkong and Shanghai Banking Corporation against Mr. F. Herb for acknowledgment of his debt to the Bank, was dismissed in the Court of Cassation on Oct. 5th.

JOVANSEN v. CLUB HOTEL.

The hearing of this case, claiming refund of yen 90.48 over-deposited in the Hongkong and Shanghai Bank on account of the Club Hotel Ltd, while Mr. A Jovansen was in their service, was resumed in the Yokohama Local Court before Judge Kawamura on Oct. 7th. Two cash books, a bank pass-book, etc., were presented to the Court. Defendant's Counsel insisted that there was no over-deposit as claimed by plaintiff. The parties then retired from the Court for half an hour at the request of plaintiff's counsel, to investigate the cash books.

The case was then adjourned till Oct. 21st.

SENTENCE ON A LAWYER.

Mr. K. Hashimoto, a lawyer in Tokyo, who has been charged with embezzlement and fraud, was, on Oct. 6th, sentenced in the Tokyo District Court to one year's imprisonment with hard labour, a fine of yen 15 and six months' police surveillance.

GROSSER & CO. v. YAZAWA SHOTEN.

The hearing of this case, instituted by Messrs. Grosser and Company against the pepper merchants known as the Yazawa Shoten, claiming yen 6,070 for breach of contract to supply pepper, was resumed on Oct. 8th in the Yokohama District Court before Judge Yamaguchi.

Owing to a change in the Judge Associates after vacation, the parties had to repeat their statements, introduced at the previous hearings, after which plaintiff's Counsel, Mr. Sawada, asked the Court for leave to examine Mr. M. Kashiwagi, a Chinese named Cho-taku-ken, and a Japanese named J. Kawai, employee of plaintiff's firm, as witnesses. The Court decided to summon them on November 5th.

LIN PEH SENG v. NORWICH FIRE INSURANCE CO.

In the Yokohama District Court, the case in which yen 5,211.10 is claimed for losses caused by the fire in the building of the Chinese periodical, *Shing Yee Pao*, was resumed before Judge Yamaguchi on Oct. 8th, when counsel repeated their statements given in previous hearings.

Defendants' counsel asked the Court to examine Messrs H. V. Gielen and C. Glahn as witnesses. The case was adjourned till Oct. 27th.

LAST CRUISE OF THE "GOLDEN HIND."

On Thursday afternoon the yacht *Golden Hind* left Yokohama for a few days' cruise, with her owner, a friend, Mr. W. —, and three sandos on board. The wind was very light and about midnight anchor was cast about a mile or so to the Eastward of Koshiba. At midnight the barometer was falling, so the main sail was stowed. At about 2.30 a.m. on Friday it began to blow from the north with heavy rain, and with appearance of a gale from East and South. The anchor was got up and under head sails and mizen only, the yacht proceeded to the Eastward, with the idea of running for Uraga as soon as the lights on Kwanonsaki or the Fort could be made out. After sailing slowly to about an hour a brilliant white light suddenly appeared on the starboard bow. At first it was thought it must be Kwanonsaki, as it was so high and so big a light. But it was difficult to imagine that the tide had set the yacht so far to leeward as the conclusion arrived at was that the light seen was the electric light of a man-of-war anchored in the fairway. At this time the rain was so heavy it was impossible to see more than half the length of the yacht. When the light drew abeam the head sail who was steering, suddenly seemed to become aware of the presence of danger and luffed up. As he did so the yacht struck on the loose stones lying at the foot of the North wall of the No. 2 fort on Fushimi. As the bowsprit was found afterwards to have been driven home to the mast it is probable that the yacht ran right against the wall. What had been seen could not be ascertained till a lantern had been brought to bear on it, when the wall of the fort could be seen about fifteen or twenty feet away on the starboard side. Firing a gun and shouting brought a side with a lantern from a hut close by, who, after seeing out that everyone should come ashore, and before the blinding rain. As the yacht was materially damaged and not bumping very heavily the dinghy was launched and an anchor carried to windward from the stern. Heaving on this the wind drew the yacht off the stones, but with

stem to windward. The wind and sea now began to increase very rapidly and the anchor dragged until the yacht was again on the stones with her bows close to the wall. This must have been from half to three-quarters of an hour after first striking. It was now perfectly plain to all hands that nothing but a sudden shift of wind could save the yacht, and the attempt must be made to climb on to the fort. The head sendo went first, taking a rope, and succeeded in getting on to the parapet. Then another sendo was tied in a bight of the rope and hauled up, and in like manner the others followed. A few yards away shelter was obtained in a coolies' hut where the coolies built a big fire and brought out some dry clothes, which, if not elegant, were very acceptable under the circumstances. Shortly after this daylight broke and on sending word to the officials we were told to go to another hut where we were crowded in with a lot of coolies who, however, did all they could to make us comfortable. We then requested the officials to telephone to Yokohama which they kindly agreed to do, but later on in the day we were informed that owing to landslides all communication with Yokohama was cut off. In the afternoon the lighthouse-keeper, Mr. Tanaka Jun, found the slight we were in, and obtained permission to take us to his own house. Here we were well treated and made as comfortable as circumstances would allow. Mr. Tanaka provided us with his own clothes and bedding and did his utmost for us in the most generous manner. During the day the storm continued, and the officials apparently made no attempt to save any of our effects from the wreck, which was slowly breaking up. Offers of *sake* to the coolies, however, induced them to help our men to secure a few valuables, but the fittings inside the yacht having broken up were floating about inside and made it too dangerous to work much. The storm still continuing we spent the night as comfortably as might be at Mr. Tanaka's house. On Saturday morning the gale was still blowing and the steamer usually running between Yokosuka and the forts could not put out. The officials showed great anxiety to get us sent away, and suggested that if the steamer could not come, we should go in a sampan lying head at the fort. At this we protested as if the sea was too rough for the steamer it was hardly reasonable that we should risk our lives in an open boat. Moreover the sea was very rough, there was no question about that. As the sea would probably go down in the afternoon when we might be able to get across to Yokosuka, we requested the officials to send word to Yokohama so that clothing might be sent to Yokosuka in time to meet us there. This message sent in the morning, found its way to Tanagawa instead of Yokohama, and so late apparently that the clothing could not be sent off till after p.m.

In the afternoon the sea took off a little and the naval authorities sent off a big tug boat to fetch us. We anchored under the lee of the fort and were taken round to her in a sampan with sixteen rowers.

On arriving at Yokosuka we were requested to go to the Police Station in company with an official who would come with us from the fort. At the Police Station we were asked to wait in the front passage for reasons which were not explained to us. As we were only partly clad it was cold and we went into a general office and sat ourselves down; our poor clothes however were kept shivering in the passage. Assuming that some formalities, of which we were ignorant, had to be gone through we waited patiently some considerable time, but eventually hunger suggested that we should ask to be allowed to go to hotel to get some dinner. We were allowed to go to a policeman was sent with us, apparently to prevent our escape (?)

While at the hotel we ascertained that there was prospect of our clothes arriving before the departure of the last train (9 p.m.) for Yokohama, so we determined to leave in clothing borrowed from the hotel. Before doing so we requested our police attendant to inform his superiors that we wished to leave. He returned to tell us that they were engaged, but he begged us to wait. However, longer delay would have prevented us catching the train. So we told him that if need be he could arrest us after we had reached the railway station we left and left our train without further molestation.

As for the yacht, when we left the fort a quantity of wreckage, spars, planks, and rigging were to be seen at the base of the fort, and of course the lead, anchors, and chains are lying at the spot where the wreck was broken up.

ALAN OWSTON.

The case of Mr. Sumitomo, Osaka, who claimed *yen* 150,000 from Mr. S. Shirane, proprietor of the Shirane Shipbuilding Yard, near the Kure Naval Station, has concluded in the Hiroshima District Court. Judgement was given in favour of plaintiff.

LADIES' INTERNATIONAL READING ROOM.

The eighth Annual General Meeting of subscribers to the Ladies' International Reading Room was held in the Public Hall on Thursday, Oct. 1st, at 2.30 p.m. There were 22 members present. The following reports were read and accepted.

SECRETARY'S REPORT.

The 7th Annual General Meeting of Subscribers to the L. I. R. R. was held on Wednesday, Oct. 8th, 1902. Reports were read and the new Committee elected.

During the year 1902-3 there have been monthly Committee Meetings, except in August, and two Special General Meetings on Feb. 26th and June 11th.

The first of these Special Meetings was called to consider what steps should be taken to carry on the Reading Room to the end of the financial year, as it was evident there would be a deficit before the year was completed.

On the motion of a Subscriber it was decided to invite members to make donations to meet this deficit and this appeal met with such a liberal response that, as will be seen by the Treasurer's Report, we end the year with a balance of about *yen* 41, with *yen* 50 still to collect.

The Second Special Meeting was called to consider the possibility of carrying on the Reading Room in the future. It was evident that the present subscription was insufficient and volunteers were found to canvass the community with a view to ascertaining whether a sufficient number of subscribers could be counted upon, willing to pay a subscription increased to *yen* 12 a year.

The canvassing committee, having returned a favourable report, it is proposed to carry on the Reading Room on this basis. There has been during the year a membership of 85 against 105 last year and there have been 17 visiting members.

The number of magazines provided has been 28 monthly and 12 weekly, 6 of which were duplicated. They included 18 English and 22 American.

There were 3,804 visitors to the Reading Room during the year; 2,514 books and 4,200 magazines were circulated.

F. K. READ,
Hon. Sec.

STATEMENT OF ACCOUNTS FROM OCTOBER 1ST, 1902 TO SEPTEMBER 30TH, 1903.

RECEIPTS.		Yen.
Subscriptions	565.20

G. STEDMAN,
Hon. Treasurer.

The Book Committee reports a profitable year. The number of books in the Library at the present time shows 1,616 on the fiction shelves and 373 among the miscellaneous books. Nearly 100 have been added during the year. We have to acknowledge the kindness of several friends, especially the generosity of Mr. Otis A. Poole, who has so liberally added some of the latest books to the Library.

Mrs. Lowder before her departure, provided us with 50 *yen* for the new catalogue. The Book Committee undertook the compilation of the catalogue, but owing to unavoidable circumstances it still lies at the printers and we are happy to pass on this unfinished work to the incoming Committee.

After the reading of the reports the meeting proceeded to the election of new officers. The following were elected by ballot:—

President, Mrs. Eldridge.
Vice-President, Mrs. Merriman.
Hon. Secretary, Mrs. Dearing.
Hon. Treasurer, Mrs. Edwards.
Committee:—Mrs. Bellows, Mrs. Booth, Mrs. Coulson, Mrs. Dinsdale, Mrs. Field, Mrs. Frazar, Mrs. McArthur, Miss Abenheim.

A vote of thanks to the retiring Committee was proposed by Mrs. Merriman and seconded by Mrs. Bathgate.

The Meeting then adjourned.

NEWS OF THE WEEK.

Prince Kacho left Kobe on the morning of Oct. 6th for Saseho where he is expected to go on board a warship.

Prince A. Gagarine, Russian Consul at Nagasaki, who has been staying in Tokyo returned on Oct. 6th to his post.

Telegraphic news dated Oct. 3rd, from Mr. Midzuno, Japanese Consul at Chefoo, states that the cholera epidemic has entirely died out.

The Japanese standing squadron, which has been in Korean waters, returned on Oct. 5th, six battle-ships arriving at Saseho and the others at Imari.

Count Arco Valley, German Minister, paid a visit on the morning of Oct. 1st to the Foreign Office where he had an interview with Mr. Chinda, Vice Minister.

A man named S. Sakai (25), living at Tobo, Yokohama has committed suicide with a girl named Nochi Kitaoka in a brothel at Shin-Kaisei-Ro, Magane-cho.

Two cases of cholera were reported on Oct. 2nd at Kamakura. The patients are a farmer named Y. Kaneko (55) and his wife. The latter died the same day.

S. Tamura, an official of the Tax Office of Araiama village, near Matsumoto, was arrested on Oct. 6th on suspicion of having stolen over *yen* 3,000 belonging to the office.

The steamer *Okinawa Maru*, of the Department of Communications, arrived at Shimonoseki on Oct. 3rd with materials for a cable between Mutsure and Takenoko islands.

It is officially informed that Mr. Yang Su, the new Chinese Minister to Tokyo, will arrive at Nagasaki on Oct. 11th by the steamer *Kasuga Maru* from Hongkong.

A woman named Toki Ito (40), living at Minami-Ota, Yokohama, committed suicide on Oct. 7th by hanging herself in a wood near her dwelling. Temporary insanity is reported to be the cause.

A Shimonoseki telegram states that an American lady, Mrs. Towitch, who was attacked by cholera and placed under treatment in Hospital, is reported to be improving. She was removed on Oct. 7th to another room.

Five cases of typhus were reported in Tokyo on Oct. 7th, one of the sufferers being Princess Takatsukasa, living at Kami-Niban-cho, Kojimachi, and another being Mr. Yamauchi, police inspector of the Shiba Station.

According to the crew of the steamer *Kobe Maru*, which arrived at Nagasaki on Oct. 2nd from Vladivostok, there are no warships there now, and only one Russian Volunteer ship.

The Osaka Shosen Kaisha's steamer *Nampo Maru* has been completed at the Osaka Shipbuilding Yard. She will be employed on the Tadong River between Pyong-yang and Chinampo, and will shortly leave for Korea.

The Japanese tea traders in Yokohama entertained Countess Minto and her daughters at the Maple Club, on the evening of Oct. 4th. The

British Minister and Lady Macdonald, the British Vice-Consul at Yokohama and Mr. W. T. Payne, Yokohama agent of the Canadian Pacific Railway Co., and about thirty Japanese were present.

A Poetry-Party was held in the Imperial Palace on Oct. 5th at 10 a.m. The subject of the poem selected was *Aki-no-midzu* (Autumn water). The poets and poetesses of the Palace were present.

As a result of the proposed administrative reform, the two offices for Phosphate and Geological Investigation will be abolished and their business be amalgamated with the Agricultural Examination Office.

An official telegram from Hakodate states that a fresh case of suspected cholera has appeared among the crew of the Norwegian steamer *Oboe*, which is now at the Quarantine Station. The patient is a fireman.

A case of cholera appeared in Yokohama on the evening of Oct. 4th. The patient is a man named T. Muramatsu (34) living at Minami-Ota. He was removed to the hospital the following day where he immediately died.

A Seoul telegram dated Oct. 6th to the *Yorodzu* announces that Mrs. M. Brown, who is living in the compound of the Seoul Electric Railway Company with her husband, who is an engineer, have been assaulted by a Korean.

A soldier named H. Aiko (23) belonging to the Akabane battalion, who was recently arrested on a charge of having stolen yen 2,025 belonging to the office, committed suicide by hanging himself with a cord on the morning of Oct. 6th.

The members of the various Chambers of Commerce in the western cities held a meeting at Hiroshima on Oct. 6th when they discussed the subject of a proposed protective trade policy, after which they decided to oppose the Government's monopoly of tobacco.

Count Katsura, Baron Kodama and General Terauchi on the afternoon of Oct. 1st called at the official residence of the Premier. They are supposed to have discussed administrative reforms. The *fiji* states that another meeting was to take place the following day.

The funeral of the late Mrs. Whymark took place on Tuesday in Kobe and was very largely attended. The pall-bearers were Messrs. R. Hughes, J. L. Thompson, A. K. Evans, C. H. Lightfoot, A. Drewell, R. Kershaw, J. L. Richardson and L. D. Abraham; the mourners being Mr. Whymark, his nephew and Mr. H. Grimbale.

The committee of the Kihin-kai (Welcome Society) met on Oct. 6th at 4:30 p.m. when they discussed the publication of a revised map of Japan. Such a map is specially useful to foreign tourists. The Society intends to increase the number of guides and to establish offices in various its localities where only reputable guide can be engaged.

The union of Japanese insurance companies will entertain to-day (Oct. 9th) at 6 p.m. at the Maple Club, Shiba Park, Tokyo, Messrs. Shida and Awadzu who returned on the 5th by the steamer *Iyo Maru* from the United States, where they were present at the international meeting of insurance men as representatives of Japan.

The Nippon Yusen Kaisha has decided to accept insurance on passengers' luggage under a special arrangement with the Tokyo Marine Insurance Company. The first luggage insured belonged to Mr. Kagawa, Japanese Consul-General in London, who will leave Yokohama for his post by the steamer *Wakasa Maru*. He has valued his baggage at yen 7,000.

We can thoroughly recommend a small pamphlet entitled "What shall I take to Japan," which has been compiled as suggestions for new missionaries by Mr. George Gleason, Mrs. J. M. Baldwin, Miss Lucy E. Mayo, and Mr. R. B. Peery, and published by the League of Student

Volunteers in Japan. Thoroughly practical advice is given and the book should prove of great assistance to all intending to come to Japan.

The steamer *Gensan Maru* (registered gross tonnage 2,317 tons) went ashore off Nosappu, Nemuro, on Oct. 6th at 8 p.m. The Nippon Yusen Kaisha's steamer *Owari Maru*, which has been lying at Nemuro, was immediately despatched to the scene. The ship is owned by Mrs. Toshi Yamamoto, Osaka. The Imperial Marine Insurance Co. insured the hull for yen 35,000.

The marriage of Miss Blanche Abell and Mr. H. E. Green, of Messrs. Shewan, Tomes & Co., took place in Kobe on Tuesday and was of the quietest description, owing to the recent death of the bride's father. Mr. Peter, of the Chartered Bank in Yokohama, was best man, and the bride was given away by her brother, Mr. Jock Abell. The honeymoon is to be spent in Nikko.

We acknowledge receipt from Sr. Eduardo Higginson, Peruvian Consul at Southampton, of a fine map of Peru, which has just been published and forwarded to us at the request of Sr. D. E. Larraure Y. Unanue, Peruvian Minister of Foreign Affairs. On the back of the map is a lot of descriptive matter of a very interesting nature regarding Peru and giving one a very favourable impression of this great and rapidly progressing South American republic.

A goodly number of people interested in shipping and insurance matters paid a visit to the steamship *Seneca* on Wednesday to see the new fire detecting apparatus which has been installed on board. The system is most ingenious and should reduce the risk of fire on steamships to a minimum. We are of opinion that the time is not far distant when all steamships will be fitted with a similar apparatus. The *Seneca* is one of the Standard Oil Company's fleet.

The Junior Athletic Club has now got fairly under way, and its prospects seem bright. The following Committee have charge of the Club: Messrs. C. Thwaites (chairman); H. W. Kilby, C. E. Bruce-Mitford, C. E. Libeaud, and P. B. Clarke, and they have secured exceptionally favourable terms from the Y.C. & A.C. for the use of the Cricket ground. Permission has been accorded the members of the Club to use the ground on Wednesday afternoon and Saturday mornings for one year from the 1st inst. at the nominal rate of 1 yen per year per member.

The Messageries Maritimes' Mail steamer *Australien*, which ran ashore off Imaharu, is still on the rock. The Kawasaki Shipbuilding Yard, Kobe, at the request of the local agent, sent to the scene, on the night of Oct. 5th, two steel cables—one 8 inches in diameter and another 4 inches. An attempt was made to float her at high tide the following day but it proved fruitless. The raw silk and silk goods on board have all been removed to Kobe by Messrs. Nickel and Company's lighters and are stored in the godown of the Pier and Traffic Company. Much of the cargo destined for Hongkong is damaged.

Excavations by the Tyne Commissioners' workmen in the bed of the river at Newcastle, near the site of the ancient Roman bridge, have brought to light a tablet of grey millstone grit, which is flawless, and on which there is the following inscription of homage—"To the Emperor Antoninus, August Pius and Father of his country. This work is done by detachments of the Second Legion August, of the Sixth Legion Victorius, and Second Legion Valeria Victrix." The author of the tablet is recorded upon it as "Julius Veritas of the Augustan Legion and Proprietor."

An amusing story is going the rounds (says a provincial contemporary) of a smart young fellow and his prompt activity of mind. He was looking for an empty compartment on an excursion train which was nearly ready to start. All were full. Coming to the rear carriage, he flung open the door, and cried in an authoritative manner, "All change here; this carriage isn't going!" There was a scuffle among the passengers, and the whole carriage-full of people turned out grumbling, and

stowed themselves away forward. He then selected a compartment to his liking, and settling himself, "It's a grand thing for me that I was born clever. I wish they'd hurry up and start!" Presently the stationmaster put his head in at the window, and said, "I s'pose you're the smart young fellow who told the people that this carriage isn't going?" "Yes," said the clever young man. "Well," said the stationmaster with a grin, "it isn't. A porter heard you telling the people, and so he uncoupled it. He thought you were from the head office."

FIRES.

The Austrian Lloyds' steamer *Erzherzog Ferdinand*, which arrived at Yokohama on Sept. 30th from Trieste was found to have taken fire in the second hold, on Oct. 3rd at 4 p.m., when she was about to start for Kobe. The fire, however, was immediately put out before any extensive damage was sustained by the cargo. In consequence of the accident, the departure of the ship was postponed till the morning of the following day. It is stated that in the hold in which the fire occurred, cotton, hemp and small goods were loaded, and a very small portion of the latter was slightly damaged.

A fire occurred on Oct. 5th in the compound of Shimonoseki Prison, destroying two buildings. Some disorder appeared among the convicts, but the police prevented any attempt at escape.

THE COUNTY CRICKET CHAMPIONSHIP.

The following is the result of the County Cricket Championship for 1903:—

	Played	Won	Lost	Drawn	Points	Position
Middlesex.....(12)	18	8	1	9	7	1st
Sussex.....(2)	24	7	2	15	8	2nd
Yorkshire.....(1)	26	13	5	8	5	3rd

Figures in brackets represent position last year.

YOKOHAMA LITERARY SOCIETY.

The following is the report of the committee of the Yokohama Literary Society, presented at the annual meeting on Friday:—

The Committee of the Yokohama Literary Society, in presenting their report for the eighteenth season, congratulate the Society upon the flourishing condition of the Members' List, and the substantial balance it now has to its credit.

The Season 1902-1903 has been described in the local press as "the most successful in the history of the Society," and the Committee sees no reason why it should not endorse this statement. Twelve excellent original papers were presented; the musical programmes, in which some sixty people participated, were all exceptionally attractive, while the attendance at the meetings was uniformly good, particularly at the Christmas meeting, the Shakespeare evening, and the closing meeting, when Mr. J. P. Mellish gave a most delightful paper upon early days at Yokohama. It is hoped that other old residents may follow along this line, and contribute papers based upon their reminiscences, and thus increase the attractions of the Society's programmes. The Committee desire now to sincerely thank all who contributed by their ready services to the success of the musical programmes.

The Society has now in hand a balance of yen 603.76, and of this sum about yen 100 is proposed towards installing an electric light apparatus in the Society's lantern, which has to be procured from the United States. With regard to the lantern, the thanks of the Society are due to Mr. Clarence Griffin for his kindness in superintending all the Lantern Exhibitions throughout the season. Selfless, unselfish help deserves the heartiest recognition. Mr. Griffin reports:—

"The Lantern of the Society is in fairly good condition. Owing to the risk of operating the "lime-light" apparatus, it was considered preferable during the past season to use acetylene gas, and the results were, on the whole, fairly satisfactory. It is now proposed to arrange for electric light as the illuminant, which will be a distinct advantage in every respect. The cost of the appliances and their installation will not be exorbitant, and the resulting improvement in the illustrations will far outweigh the expense of the apparatus, besides which, the risk of cracking the lenses through the excessive heat of the gas at present used, will be minimised, and the 'running expenses' will not exceed the outlay incurred last season. The great desideratum of a strong, steady cool light is certainly best met by the electric appliance, and in every way it will prove advantageous to install the same without delay."

As the Society is continually growing, the work thrown on the Honorary Secretary becomes yearly more arduous, and the outgoing Committee suggest that the next Honorary Secretary be empowered to obtain and pay for such clerical assistance as he shall find convenient.

The out-going Committee further suggest that the by-laws of the Society be altered, so that the Musical Committee be increased to six members, and thus lighten the labour which now falls rather heavily upon this particular Committee.

The Committee also suggest, for the consideration of the Society, the advisability of setting aside the sum of yen 100 to be divided into prizes for a Musical Competition, open to children between the ages of 10 and 21 whose parents or relations are members of the Society. The sum of yen 50 could also be set aside for Recitation prizes, under similar conditions. In Yokohama, where foreign children have no incentives from the outside to special exertions such as are provided in the public musical examinations of Europe and America, the Committee think that a well-considered scheme of musical competitions, such as this is intended to be, should prove attractive to both parents and children; while there must be many young people in our midst who would like to enter a competition where prizes are given for the best recitations. The Musical Committee should have power to select examiners for the musical prizes; and similar powers should be given to the Literary Committee in regard to the Recitation Competition. By these means the Committee think that a new field of musical and intellectual culture can be profitably exploited, and eventually prove a source upon which the Society can draw in future seasons.

For the Committee,

A. W. S. AUSTEN,
Hon. Secretary.

Yokohama, October 1st, 1903.

YOKOHAMA LITERARY SOCIETY, SEASON 1902-1903 TREASURER'S ACCOUNTS.

RECEIPTS.		Yen.
To Balance from last Season		386.52
Members' Subscriptions—	Yen.	
148 Gentlemen at yen 3 each	444.00	
109 Ladies at yen 2 each	218.00	
11 Families at yen 10 each	110.00	772.00
Amount received from "Men's Reading Room" o/a crockery, etc., taken over	5.00	
Interest on Current Deposit a/c	4.11	
		1,167.63
EXPENDITURES.		
By Postages, Coolie hire, etc.	29.77	
Piano tuning and hire	45.00	
Printing, Stationery, Advertising, etc.	150.35	
Commission on Collecting Subscriptions, Clerking, etc.	25.00	
Upkeep of Lantern	32.50	
Expenses of Lectures, including c/o Lantern slides	102.62	
Rent of Van Schaick Hall	125.00	
Rent of Public Hall	40.00	
Insurance Premium on Society's property	13.63	
Balance with Chartered Bank of India, Australia and China	603.76	
		1,167.63

N. G. MAITLAND, Hon. Treasurer.
Examined with Vouchers and found correct.
A. H. ATKINSON.

CORRESPONDENCE.

MAILS VIA SIBERIA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Would you kindly insert the following information for the public in your valuable paper and I shall feel very much obliged to you.

As regards the transmission of Japanese Mails for Europe via Siberia, an arrangement is now negotiating between the Communications Department in Tokyo and the Russian Postal Administration in St. Petersburg, but it is not yet concluded.

In consequence, mails for Russia only can be forwarded by the said route for the present.

Yours sincerely,
T. AONUMA,
Superintendent of Foreign Mails.

Yokohama, Oct. 2nd, 1903.

A PEST HOLE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Passing down from the Bluff by the Kame-no-hashii, I notice that the houses at the corner are again enclosed and the place reeking with the smell of carbolic acid. This is the third or fourth time cases of plague have been found in this quarter.

Whilst apparently everything is being done to purify the infected houses, the filth barges of Yokohama continue to collect in the creek at this spot, and it is an extraordinary thing that the sanitary officials appear to disregard this important point completely.

This corner by the Kame-no-hashii has long been the filthiest place in Yokohama. To this place is conveyed the refuse and garbage of the city and it must necessarily be a breeding place for rats and pestilence.

It is astonishing how dwellers on the Bluff in the vicinity of Jizo-saka can have endured the stench in passing this bridge by Yoshihama-cho every morning on their way to or from the city. It is a spot to be avoided, and it is still more astonishing how the unfortunate Japanese living on this corner could have existed in such an atmosphere.

The authorities should do a little more than purify infected houses. They should give some attention to their filthy surroundings which exist all over this insanitary and dirty city.

I am, Sir, yours obediently,

Yokohama, October 8th, 1903.

PLAGUE IN YOKOHAMA.

A case of plague appeared at Yoshihama-cho, Yokohama, on Oct. 2nd and the patient died on the morning of the following day. The victim is an infant, two years old. The remains were cremated on Sunday morning at Kuboyama.

A fresh case of plague appeared in this city on Oct. 7th. The sufferer is a girl named Toki Takahashi, who was nursing the plague patient (a baby 2 years old) at Yoshihama-cho. The baby died on the 3rd instant. The girl has been removed to hospital.

THE WAR CONDITIONS TRIAL OF THE "EUROPA" AND "SPARTIATE."

Last week, says the *Engineer* of July 18th, the *Hyacinth-Minerva* Blue-book was on the tapis. Now that matter is eclipsed by the extraordinary performances of the *Spartiate* and *Europa*, more particularly the latter. That these trials have rehabilitated the Belleville boiler is roundly asserted by that by no means inconsiderable party amongst the naval engineers which professes itself perfectly satisfied with the condemned boiler.

These two Belleville cruisers, they point out, "have each made a 20,000 mile trip, the second half of which was done under trying war conditions in the tropics and against adverse weather. The ships are now lying in Portsmouth Harbour, with no defect worth mentioning. No other boilers have ever done anything like this."

There is no getting away from this fact. Other types may do it, but none so far have been so tested. Indeed, till this trial was made, no real "war tests" have been attempted. The Boiler Committee's exhaustive trials have been rather of a scientific nature than a rough-and-ready war test; and it is not impossible that now and again the scientific aspect of the question has come unduly to the fore. This has perhaps been most evident in the matter of water consumption; but of this later.

The *Spartiate* and *Europa* are usually spoken of as sister ships. This is incorrect, for the *Europa* is an earlier and inferior example of the *Diadem* class, to which both vessels nominally belong. Her designed horse-power is 16,500 and 20.25 knots her speed, against 18,000 horse-power and 20.75 knots in the *Spartiate*. The *Spartiate* has Bellevilles of the usual type; the *Europa* boilers are identical almost with those of the *Powerful* and *Terrible*, though economisers were added as an after-thought. She was engined by Clydebank; the *Spartiate* has

Maudslay engines. These last are particularly liked in the British Navy, especially in Belleville ships, though in the case of the *Spartiate* endless trouble was some while ago experienced in the engine-room before she could get through her trials. Her boilers, it should, however, be noted, never gave any trouble. She was reported in the daily Press as having been re-tubed, but this we find is incorrect. It was the condensers that were "doctored"—to use the phrase that Sir William Allan has recently made classic in another direction.

The *Europa* is—or was—the ship at which Sir William Allan used to launch his special thunderbolts. According to Sir William, she was known in the Navy as "H.M.S. Hell," on account of the tremendous heat below. The present *Europa*, however, is hardly the same ship in many ways, for her boilers were almost entirely re-tubed after that famous voyage which, more than any other, led to the doom of Bellevilles. It is certainly the irony of fate that this very vessel should now have done so much to revoke that doom! But a still more extraordinary fact is behind it. The *Europa*, after her refit, was examined by the Boiler Committee, and pronounced incapable of making the voyage to China and back. A Special Committee, however, gave a somewhat different verdict, and so the ship got sent. It can hardly be said, however, that many expected to see her return—except in tow. In the betting on the event—for there were innumerable bets exchanged—it was two to one against the *Spartiate*, it averaged ten to one against the *Europa*! The Boiler Committee appears to have washed its hands of the affair altogether—the programme having been arranged by the Controller of the Navy, Admiral W. H. May. The general idea was as follows:—"The two ships have been in commission for some little while. War suddenly breaks out, and before any repairs can be effected, they are in active service, cruising and chasing. Can they in those conditions steam 10,000 miles, touching harbour only to coal?" Of the excellence and wisdom of such a test there can be no question; and, the type of boiler having already been condemned as "unsuitable for the British Navy," the chance of breakdowns could be cheerfully faced. The general idea was not, however, exactly followed, for economy supervening, the ships were used as transports, and shipped fresh crews at Hongkong, which was manifestly a handicap to some extent. Otherwise the scheme was carried through.

The first part was accounted for by the voyage out. This the *Spartiate* did at an average of 13 knots, burning 2600 tons of coal. The *Europa* did her 10,000 miles at a mean of 10.75 knots, and burned 3600 tons. The best cylindrical record is that of the *Blenheim*—4000 tons, and this used to be regarded as very good.

The following are the details of the engine-room complements for the voyage out. In the *Spartiate* the chief engineer, Engineer-Lieutenant Gaudin, is, of course, the most experienced Belleville officer in the service. His reputation to a great extent was at stake. The senior engineer was also fairly experienced in Bellevilles; three engineer sub-lieutenants had had some Belleville training; another had never seen them before. Neither had the three artificer engineers. Of the E.R.A.'s four were experienced, half the remainder are entered as knowing something about them, the other half were absolutely raw to water-tube boilers. Seventy-five per cent. of the chief stokers were experienced men, and half the stokers slightly experienced. The other half were raw hands to stoking of any sort.

In the *Europa* the chief had had two years' experience in the *Hyacinth*, the senior engineer had done six months in the *Arrogant*, and the Navy List shows one A.E. with a year in the *Andromeda*—a successful Belleville ship. One artificer engineer, two chief stokers, and 20 per cent. of the stokers were experienced. All the E.R.A.'s had little, if any, Belleville training; 20 per cent. of the chief stokers had some little experience. Twenty-five per cent. of the stokers were the raw second-class variety. All told, therefore, she was a pretty raw ship. At Hongkong the *Spartiate* kept forty stokers, three chief stokers, and five E.R.A.'s. These, with six leading stokers, were permanent staff. About 80 per cent. of the new men came from the *Ocean*, and so had three years' experience. The *Europa* took the leaveings of the *Ocean*—thirty stokers—and drew the rest of her men from the small ships of the station, including men from the *Rosario*. She got no experienced petty officers at all, and again had an indifferent lot of ratings in the matter of training.

The ships left at once for home. Both did the same programme, except that the *Spartiate* had to abandon one trial on account of a hot bearing in the crank head. Speed was continually changed. The special runs included three 1-hour full power runs, a 54-hour $\frac{3}{4}$ power—which averaged 18 knots—a 32-hour at the same, and a $\frac{1}{2}$ from Gibraltar to Devonport, against a head wind, force 6–7. In this the *Spartiate* logged 18 knots and the *Europa* 17.6.

Each had about 5 knots better "engine speed"—the weather cut them down.

The average coal consumption in the *Europa* was 1.91, which is close to the fancy trial records. Though the cruise was mostly in the tropics, no single stoker fainted on 20,000 miles in either ship. Six deck hands fainted in the *Europa*'s bunkers, but soon came round. None fainted in the *Spartiate*.

At high speeds about a hundred deck hands went below to the bunkers. The *Spartiate* consumed 6 tons of water per 1000 indicated horse-power per 24 hours—the *Europa* about 5½ tons. Both ships easily made all the water that they required—a point of far more importance than the figure the consumption stands at. In the *Europa* one condenser leaked for a little while. The *Spartiate* had the hot bearing already mentioned, and one or two leaky joints, but she is without a single defect of consequence. The *Europa* had no trouble with either engines or boilers, and has no defects at all.

The total coal consumptions for all purposes during the 10,000 mile return journey were:—*Spartiate*, 4,500 tons; *Europa*, 5,600 tons.

It will be noted that the *Spartiate*'s consumption is the better of two, both on the easy voyage out and the hard one home. This, however, is in keeping with the first trials, on which the *Spartiate* was 25 per cent. better than the *Europa*. On the trip her superiority was 19 per cent. only, so the *Europa* did somewhat better with her own crew than in the contractors' trials which few ever look to see repeated.

A COMMENT ON LORD SALISBURY.

Nothing surely was ever so *jeune* as the personal accounts of Lord Salisbury which have appeared in the newspapers, remarks X in the *Westminster Budget*. Old stories about his neglect of his wearing-apparel, of his being turned away from his own park gates, or—as another more frivolous and equally fictitious version has it—from the Casino at Monte Carlo; his liking for Dumas, and his various means—clearly most successful—of dodging the public and the Press—this is about all that anybody seems to know. One hears a great many people—presumptuously or otherwise—claiming to be intimate with other statesmen, but I never heard anyone outside his own family circle claim to be intimate with Lord Salisbury. Perhaps I should say any man, for a few women, as is often the case with very shy men, appeared to break the barriers which were impregnable to the other sex, and if the public ever comes to know anything more of him than it knows now, some of its information will come from this source.

And yet it would be a complete mistake to suppose that he was an austere man, or that there was any affectation in this cult of anti-publicity. His own family spoke of him with the utmost affection, and though they respected him greatly, they did not stand in awe of him. Public men seem to be supremely fortunate as fathers of families; scarcely any avoid so well the chill of misunderstanding which so often sets in between parents and children as each grow older. Mr. Gladstone, Lord Salisbury, Lord Rosebery, Sir William Harcourt, and Mr. Chamberlain have this at all events in common. Never were there more united families or completer affection between fathers and sons than in their case. Let those who say that public life is fatal to home ties consider these examples. Lord Salisbury was completely happy in his own home, and here he was open, affectionate, confidential, warm-hearted, with never a trace of morosity or embarrassment. But to the stranger or even the comparative stranger he remained to the last inaccessible. It is hard to believe, but he was really a shy man, almost painfully shy. In later years he more and more shrank from the effort of making a new acquaintance, not from unkindness, but because it caused him embarrassment which no effort could overcome. He would write many letters rather than see a man whom he knew slightly, even though the fatigue of writing was infinitely greater than that of a brief conversation. It was, indeed, his scrupulousness in answering letters with his own hand which caused him occasionally to get behind his public work. He lived before the age of the shorthand-writer and typewriter, and had that fastidiousness about literary composition which abhors dictating. Here he belonged to the age of Mr. Gladstone, who left behind him some 80,000 selected letters to and from himself for the special attention of his biographers, let alone an incredible number more of minor importance. I do not suppose that Lord Salisbury has accumulated anything like as many, but there must be in existence a vast number of despatches, letters, and memoranda written in his own hand which contain a great deal of the inner history of these times, and which would, if published be much better reading than the correspondence of most public men. For Lord Salisbury was a literary man of a very high order, and his pen was as incisive as his tongue.

One naturally contrasts Lord Salisbury's relation

to the public with Mr. Gladstone's, and yet both had this in common, that it was absolutely sincere and arose naturally from their respective characters. The publicity which attended Mr. Gladstone and followed him into his private life and after his retirement was a natural result of his fervent and zealous character and was in no respect worked up or artificially produced. Similarly the barrier which kept the public from Lord Salisbury. It was the result of a character from which the element of popularity was wanting, which really regarded politics as an affair of the few, which was intellectual, sceptical, literary, but also extremely conscientious and laborious. The propagandist instinct was altogether lacking in him; it was an effort to him to pretend to desire to convert anybody to any views; he could talk caustically, satirically, incisively, but he seldom troubled to talk persuasively. The party system he regarded—much as his nephew does—as a system of double-shifts for the relief of public men, and he believed that it would operate mechanically when the public were tired of one shift to bring the other shift on to the scene. Oratorical appeals, therefore, and party programmes were not naturally in the order of his thoughts, and he conceived it to be the business of a public man to speak as seldom as possible and to say as little as possible. But all this was compatible with a really religious and conscientious temperament, and when his shift came he was at his best a tremendously hard worker. At the same time he sincerely believed that the aristocracy, and especially the House of Cecil, had a sort of right to govern the country; and the multiplication of Cecils and relatives of Cecils in high administrative places never struck him as offering any ground for criticism or complaint. He was certain they were more capable than other people, and quite easily persuaded that it would be moral cowardice on his part to pass them over for fear of popular clamour. A rather pleasing trait of which I heard at the time was his persistent refusal to pass over his eldest son for his younger brother. They might all stay out, but if any were to go in, seniority and son-and-heirship were to have their proper precedence.

A friend of mine tells me that he once had a conversation with Mr. Gladstone about Lord Salisbury. Mr. G. played the most glowing tributes to his great rival. "Most able, upright, conscientious, indefatigable," were the words he used. But, discussing him as a Foreign Minister, he made one very singular observation. "He doesn't attach enough importance to the influence of the Court," and thereupon Mr. G. enlarged at great length upon the power and value of the Court—by which he meant the Queen—in the hands of a Foreign Minister who knew how to use it wisely. The oddity of this comment, coming from Mr. G., whose own relations with the Court were supposed to be somewhat cool, struck me a good deal at the time. How much the influence of the Sovereign can really be used in foreign affairs is a question on which Prime Ministers and Foreign Ministers have differed, and in Lord Salisbury's case I have no special knowledge. But in the matters which interested him he was a hard and solitary worker who did the thing he had taken in hand by himself and according to his own plan. Anybody else might do the rest as they chose. Here, indeed, was his weakness as a Prime Minister. He could very seldom be persuaded that things were important when they did not interest him. The South African affair, for instance, did not interest him till it was too late. He thought with the rest that Mr. Kruger would give way, and he had very little interest in the commercial quarrels of the Rand, or the demand of Uitlanders for a more democratic franchise. I do not, of course, mean that he was at issue with his colleagues about the war or that he was willing to concede anything to Mr. Kruger when the quarrel got to the fighting point. But the affair was to him a necessary evil rather than a great enterprise, and though he was quite clear about the necessity of disposing of Mr. Kruger for fear he should dispose of us, he never concealed the sympathy which he felt for that dogged old Conservative in his conflict with the *nouveau riches*, or his admiration for the fighting Boer, of whom at certain stages of the war he could not say too much. The truth is, he liked high politics carried on in the old august diplomatic European fashion, and Mr. Chamberlain's Colonialism, with its idols of the market-place—if I may use that phrase with a difference—and its endless insistence on commerce and finance as the proper basis of Empire, had no natural attraction for him. In the last months of his life he watched the new fiscal departure with real apprehension, and spoke his mind about it and the manner of its introduction with some freedom to those whom he trusted.

It is assumed that a man who valued his privacy so highly must have slipped easily into private life, and have felt none of the reaction which afflicts the publicly minded statesman when he seeks repose. I am not quite sure that this was the case with Lord Salisbury. His departure, though long fixed, was attended at the last by a certain amount of tiresome

petty friction which worried him. He was too magnanimous to dwell on such things, but I think he had some cause of complaint. It is in any case a sharp change for a man who has been in the thick of affairs to know nothing more from day to day than he can read in the newspapers. It is always so, even when the greatest retire. Those who remain are immersed in business, they cannot share their responsibility with the retired chief, and, with the best will in the world, it is impossible for them to make him a party to the affairs which he has ceased to control. A man must be much more than human not to feel the change, and even Lord Salisbury, for all his love of privacy and the quiet life, missed certain things which had become second nature to him. On one point, however, he was absolutely determined—never to embarrass those who remained by putting in an oar. He had much ill-health, and one dangerous illness before the last, during his year of retirement, but he bore himself with great patience and fortitude, and "the dear old man," as they called him at Hatfield, leaves a void in the affections not only of his own children and family but of many humbler friends and neighbours.

EARLY IRISH POETRY.

How little we know of the sagas and songs of the Gaels! Recently scholars have awakened to the fact that a vastly interesting field of study is open before them in native Irish literature, and an article in the *Quarterly Review* is calculated to attract more general attention to the literary merits of these ancient tales, which carry us into "a world of barbaric grandeur, of unending strife, but a world also of noble though rugged ideals of chivalry, honour, loyalty, and love, of picturesque figures and scenes, and a world withal over which fancy has spread its magic. Nor is there any lack of themes of perennial interest to humanity: the struggle of the individual with his passions, or against the trammels of law, of social conventions, of religion, or against fate itself, conflicts and tragedies of love and duty, of friendship and loyalty. If there is one trait which distinguishes this early literature from that of other nations in a singular stage of development, it is the type of womanhood revealed in it. 'As it belonged to Celtic romance,' says Miss Hull, 'to impose upon the mind of Europe a new type and ideal of womanhood, the type of Iseult and Elaine, of Guinevere and Enid, so it belonged to Ireland to create some of the earliest love-tales of Western Europe, the love-tales of Deirdre and Emer, of Elaine and Graine. The love-tales of Ireland are not only among the most ancient in Western Europe, they have also a purity, a tenderness, and a charm hardly to be found elsewhere. They are indeed a special production of the Gael. These sprightly, winsome, very human maidens belong to an order of things as unlike the Titanic women of the Northern Saga, as they are unlike the morbid, luxurious ladies of Southern romance.'

"If the reader wishes to see how Irish maidens and youths of those early centuries loved, let him turn to the 'Woeding of Emer,' to the 'Children of Usnech,' to 'Dermot and Graine,' or to 'Liadain and Curithir.' The last tale, especially, by its pathos and its rare knowledge of the human heart, recalls the other great love-stories of the world's literature. It tells of the love of a poetess, who has taken the veil, for a young poet from whom her vows separate her for ever. Thus the plot is a conflict between love and religion. The lovers seek the direction of a saint, who gives them the choice between seeing each other without speaking, or speaking without seeing. 'Talking for us!' says the poet. 'We have been looking at each other all our lives.' So they converse, while one is enclosed in a cell, and the other wanders round it. Passionate words of love and longing and regret are exchanged:—

Beloved is the dear voice that I hear,
I dare not welcome it. . . .
'Tis this the voice does to me,
It will not let me sleep.

"At length the poet is banished by the saint, and, renouncing love, takes up the pilgrim's staff. The hapless Liadain follows, seeking him and wailing:—

Joyless
The bargain I have made!
The heart of him I loved I wrung,
I am Liadain
Who loved Curithir,
It is true as they say.

. . . . The music of the forest
Would sing to me when with Curithir,
Together with the voice of the purple sea.

But he crosses the sea, and Liadain returns to die on the flagstone on which he had been wont to pray. 'Her soul went to heaven, and that flagstone was put over her face upon her tomb.'

Irish scholarship is rapidly rendering it possible for the world in general to familiarise itself with the early

literary genius of the Gael. "From the few specimens of the purely lyrical poetry of ancient Ireland which have been made known it is safe to predict," says the *Quarterly*, "that, with wider knowledge, the interest in Irish literature will spread in ever wider circles. These songs possess many of the essential qualities of the best lyrical poetry. Nothing, for example, can exceed the pathos and beauty of the 'Song of the Old Woman of Beare.' It is the lament of Digid, the aged nun of Berehaven, who, for a hundred years, had worn the veil which St. Cummin blessed upon her head. She contrasts the privations and sufferings of her old age with the pleasures of her youth, when she had been the delight of Kings. She draws her imagery from the flood-tide and ebb-tide of the wide Atlantic, on whose shores she had lived and loved and suffered:—

The wave of the great sea talks aloud,
Winter has arisen.
What the flood-wave brings to thee,
The ebbing wave carries out of thy hand.

The glorious kings on whose plains she rode about in swift chariots with noble steeds have all departed:—

'Tis long since storms have reached
Their graveyards that are old and decayed.

And as for herself:—

I had my day with kings
Drinking mead and wine:
To-day I drink whey-water
Among shrivelled old hags.

"Other poems display that artistic faculty of detailed description which we have already noticed in the sagas. And here the nature-poems call for special mention as the earliest of their kind in European literature. They are permeated with that rapturous love of nature which is generally looked upon as a sentiment of entirely modern origin. 'King and Hermit' is a colloquy between Guaire of Aidne, a well-known king of the seventh century, and his brother Marban, who has become a hermit. The king renounces with him for leading a retired and simple life when all the pleasures of the royal court might be his. The hermit answers, not in an austere or ascetic spirit, as one might expect, but extolling the delights of his forest dwelling above that of the king's palace itself:—

I have a shieling in the wood,
None knows it save my God:
An ash-tree on the hither side, a hazel-bush beyond,
A huge old tree encompasses it.
Two heath-clad doorposts for support,
And a lintel of honeysuckle:
The forest around its narrowness sheds
Its mast upon fat swine.

The voice of the wind against the branchy wood
Upon the deep-blue sky:
Falls of the river, the note of the swan,
Delightful music!

Without an hour of fighting, without the din of strife
In my house,
Grateful to the Prince who giveth every good
To me in my shieling."

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

THE MACEDONIAN REFORM SCHEME.

London, October 2.

Bulgaria, Roumania and Greece have all notified the Porte of their objections to the composition of the new reforms commission.

MAILS VIA SIBERIA.

The British Post Office announces that letters to the Far East are accepted provisionally via Siberia.

DESPERATE STRIKERS.

A carmen's strike at Buda Pest led to sanguinary encounters between the strikers and the police. Sixty people were wounded, several fatally.

THE TWO EMPERORS.

Later.

At a luncheon given in Vienna, the Czar and the Emperor Francis Joseph exchanged cordial toasts emphasizing the accord existing between them with regard to the Balkan question, and expressing hopes that their joint effort will contribute to the general peace.

BRITISH POLITICS.

A conference of the Conservative Associations held at Sheffield was addressed by Mr. A. J. Balfour. The meeting received Mr. Chamberlain's name with vociferous cheering, but passed in silence Mr. Ritchie's and Lord George Hamilton's. The debate upon the tariff question has revealed the existence of a strong anti-revision element, especially with regard to the question of free food.

DEATH OF SIR MICHAEL HERBERT.

London, October 3.

The Rt. Hon. Sir Michael Herbert, K.C.M.G., C.B., Great Britain's Ambassador at Washington, is dead.

[*Who's Who* says:—Herbert, Hon. Sir Michael Henry, K.C.M.G., cr. 1902; C.B. 1896; British Ambassador, Washington, since 1902; b. 25 June 1857; 4th s. of 1st Baron Herbert of Lea; b. of Earl of Pembroke; m. Lelia, d. of Richard Wilson, 1888. Chargé d'Affaires, Washington, 1888-89; Secretary to H.M. Legation, Washington, 1892-93; at the Hague, 1893-94; Constantinople, 1894-97; Rome, 1897-98; Sec. to H.M. Embassy at Paris, 1898-1902.]

CABINET RECONSTRUCTION.

Lord Milner has declined the Colonial Secretaryship.

MR. BALFOUR'S POLICY ENDORSED.

Mr. Balfour's address at the Sheffield conference shows him to be in complete agreement with Mr. Chamberlain. His proposals are the inevitable and indispensable preliminaries to the adoption of Mr. Chamberlain's policy.

The Sheffield conference adopted a resolution cordially welcoming Mr. Balfour's fiscal policy.

SOMALILAND.

The Somaliland column is expected to advance at the end of the month. It has been arranged that the Abyssinians shall again co-operate.

THE BRITISH CABINET.

London, October 4.

It is understood that Mr. Balfour has completed the re-construction of the Cabinet, but the announcement is deferred until Monday.

Lord Selbourne, who is now regarded as the most probable successor to Mr. Chamberlain at the Colonial Office, has gone to Balmoral.

The King returns to London on Thursday, and there will be a meeting of the Privy Council on Friday or Saturday.

THE BALKANS.

Later.

A semi-official communication regarding the deliberations of the two Emperors says that the programme of Turkish reforms has been essentially extended and elaborated.

The Czar has left Austria for Darmstadt. Recent news from Bulgaria contradicts previous reports.

THE MACEDONIAN TROUBLES.

London, October 5.

It appears that while Turkey and Bulgaria are endeavouring to arrive at a direct understanding with a view to the pacification of Macedonia, Austrian and Russian circles in Constantinople disapprove of this as a derogation of their mandate. The Germans are dissatisfied at what they consider weakness on the part of Turkey. Greece has also intimated to the Porte its disapproval of the predominance of Bulgaria in Macedonian affairs, thus tacitly recognising the preponderance of Bulgaria as against the correct attitude assumed by Greece. Meanwhile the continuance of inaction in Macedonia and the re-iterated narratives of horrors in the Balkans by independent

European witnesses is producing a very decided impression in England.

NEW BRITISH CABINET.

London, October 5.

The Duke of Devonshire, Lord President of the Council, has resigned.

The new Cabinet has been constructed as follows:—

Prime Minister, Mr. A. J. Balfour. (First Lord of the Treasury and Lord Privy Seal).
Lord High Chancellor, Earl of Halsbury.
Lord Chancellor of Ireland, Lord Ashbourne.

Chancellor of the Exchequer, Mr. Austen Chamberlain.

Secretary for the Colonies, the Hon. Alfred Lyttelton.

Secretary for War, Mr. Arnold Forster.
Secretary for India, the Hon. St. John Brodrick.

Secretary for Scotland, the Hon. Andrew Graham Murray, K.C.

Postmaster-General, Lord Stanley.

THE DISTURBED BALKANS.

London, October 6.

An increasing number of refugees are entering Bulgaria all along the frontier, bringing reports of wholesale slaughter and pillage and burning. The districts of Banisko and Melnik where Zontcheff and Yankoff are directing the insurrection, are in flames. The Turks say 20 villages have been destroyed and 2,000 Turkish inhabitants of Banisko killed. Meanwhile Bulgaria is hurrying troops to the frontier.

DUKE OF DEVONSHIRE'S RESIGNATION.

London, October 7.

Correspondence which has passed between the Duke of Devonshire and Mr. A. J. Balfour shows that the former resigned on account of Mr. Balfour's Sheffield speech, which he regarded as a direct encouragement of the advocates of protection. Mr. Balfour considers that the Duke of Devonshire's action aggravates party divisions, and he reminds the Duke that he assented on the 16th of October to remaining in the Cabinet after the Government's policy had been fully and frankly discussed in every bearing. The Duke of Devonshire had since assisted in the formation of the new Cabinet.

JOURNALISTIC OPINION.

Later.

Except the *Standard*, which laments the disruption of a political party, the Ministerial press approves of the reconstruction of the Cabinet and the introduction of new young blood. Public opinion, however, is disposed to think the stability of the Cabinet shaken, especially by the resignation of the Duke of Devonshire.

MR. CHAMBERLAIN.

London, October 8.

An immense crowd gave an enthusiastic send-off to Mr. Chamberlain when he left Birmingham. He had a magnificent reception in Glasgow. Cheering crowds also assembled at the chief stations en route.

THE SAILORS AT LADYSMITH.

Sir Archibald Hunter, while he adheres to his former opinion, expresses his regrets and withdraws the expressions he used when referring to the marksmanship of the Naval Brigade at Ladysmith. Admiral Lambton has accordingly withdrawn the personal remarks he used towards General Hunter.

MR. CHAMBERLAIN'S PROPOSALS.

Later.

Mr. Chamberlain, speaking at Glasgow, roughly outlined his proposals, viz., a 2/-

duty on foreign corn, no duty on maize; a corresponding tax on flour; 5 per cent. on foreign meat and dairy produce; a substantial preference for the Colonies in the matter of wine and fruit; a reduction in the duty on tea of 3/4, and that on sugar by one-half; a corresponding reduction on coffee and cocoa. The scheme would cost £2,800,000 annually, which would be compensated by a system of retaliation, as a ten per cent. tax on foreign manufactures, which would yield £9,000,000 annually.

(RECEIVED AT THE LEGATION OF FRANCE.)

THE BALKANS.

Saigon, October 2.

It is telegraphed from Vienna that the two Emperors, in the toasts exchanged by them, declared the concordance of the Austro-Russian views, which would assure the success of the work of pacification pursued by the two Powers in the Balkans, and would contribute to the consolidation of general peace.

BRITISH FISCAL CHANGES.

Saigon, October 5.

Mr. Balfour, speaking at Sheffield, said that free exchange has become a peril for England. He demands liberty to negotiate advantageous treaties of commerce with other nations.

MOROCCO.

An official note denies the rumours persistently current as to the preparation of a French expedition to Morocco.

MACEDONIA.

It is announced from Salonika that 4,000 Bulgarian revolutionists have crossed the frontier. The village of Hosharina(?) has been burned and most of the inhabitants were killed.

BRITISH CABINET.

Mr. Balfour has completed(?) the reconstruction of the British Cabinet.

THE BALKANS.

A telegram from Sofia says that the Turks have destroyed the town of Mehanian; 200 of the inhabitants were killed.

MACEDONIA.

Saigon, October 6.

Russia and Austria have sent to their Ambassadors in Constantinople a *note identique* which is to be submitted to the Sublime Porte. The note announces that measures will be taken by the two Powers to assure security in the Balkan Peninsula.

BIG STRIKE OF WEAVERS.

Saigon, October 7.

Twenty thousand weavers of Armentières and the contiguous factories (in the north of France) have gone on strike. Bands of strikers moved yesterday morning upon Lille and Roubaix, putting a stop to work in the factories that they found on their way. There were some disorders and some arrests.

(FROM OUR CORRESPONDENT.)

THE "AUSTRALIEN" FLOATED.

Kobe, October 8, 4.15 p.m.

The M.M. steamer *Australien* has been refloated. I have been unable to gain particulars.

Mr. G. Abily, Acting Agent in Yokohama for the M.M. Company, informs us that the *Australien* was refloated at 11 a.m., with the assistance of the French flagship *Montcalm*. The *Australien* starts for Nagasaki this morning at daylight to be docked and repaired.

(FROM THE "JUJI SHIMPO.") THE BALKAN CRISIS.

London, October 1.

News is to hand that fighting is continuous in the Balkans. One town has been besieged and burnt and the inhabitants massacred. Telegraph wires are destroyed. The Porte has newly raised a levy of 50,000 recruits.

BRITISH TRADE POLICY.

Mr. A. J. Balfour, Premier, attends a public meeting at Sheffield to-night when he will declare his views with regard to the change in the country's fiscal policy. Anxiety is general.

The vacancies in the Cabinet are not yet filled up.

CONSOLS.

Consols which had fallen to the lowest point since 1860 are gradually recovering.

DEATH OF A BRITISH AMBASSADOR.

The Hon. Sir Michael Henry Herbert, K.C.M.G., British Ambassador at Washington has died at Davos Platz, Switzerland.

BRITISH TRADE POLICY.

London, October 2.

Last night a meeting of the Conservative Associations was held at Sheffield when Mr. Balfour, the Premier, made a lengthy speech in which he stated that to do away with the evils attendant on retaliative tariffs is difficult, but the matter will be approached by degrees. Conservatives wish that Great Britain should adopt means by which to secure equitable reciprocity from other Powers, that is to say, she is now bound up in a false policy popularly known as free trade, by which she is left in a disadvantageous position and can not choose a retaliative policy against the duties imposed by foreign countries.

The meeting showed demonstrative sympathy and approved of the policy of Mr. Chamberlain, except the proposed duty on food stuff and daily necessities. Such a duty is now thought to be premature, but it is recognized that the time has arrived to impose certain duties. It is generally believed that a protective policy is among the proposed changes in the Government's policy.

LORD MILNER.

London, October 3.

Lord Milner, Governor of British South Africa, has declined the position of Principal Secretary of State for the Colonies, for the reason that he wishes to stay on in South Africa until the many pressing questions there are settled.

BRITISH TRADE POLICY.

The effect of Mr. Balfour's recent addresses at Sheffield has been so good that the threatened disruption of the Government party has been averted and closer union is expected. The Premier concurs in the views of Mr. Chamberlain, and particularly on the point granting the Colonies special trade favours.

Mr. Chamberlain is expected to address a meeting on Oct. 6th at Glasgow.

BALKAN AFFAIRS.

Severe fighting has taken place at Meenik and in three other districts.

NEW BRITISH CABINET.

London, Oct. 6.

The resignation of the Duke of Devonshire has weakened the Cabinet. The papers in India do not cordially welcome the appointment of the Hon. St. John Brodrick as Secretary for India. The Hon. Alfred Lyttelton is well acquainted with conditions in British South Africa. Mr. Arnold Foster has always criticized freely the military administration of the late Minister.

BALKAN TROUBLES.

Turkish troops have been severely defeated at Radzlok and re-enforcements have been despatched to the scene. An engagement of four hours then took place in which the two officers, Zontcheff and Yankoff, narrowly escaped capture.

(FROM THE "ASAHI SHIMBUN.")

SERVIAN AFFAIRS.

London, September 30.

Capt. Novkowitz and two other officers connected with the assassination of King Alexander and Queen Draga have been sentenced by Court martial to two years' suspension from the service. It is believed that the new King will release them from punishment.

SUCCESSOR TO MR. CHAMBERLAIN.

Lord Milner, Governor of British South Africa, has interviewed Mr. Balfour, when the latter persuaded him to take the portfolio of Secretary of State for the Colonies. Lord Milner is considering the offer.

MACEDONIAN AFFAIRS.

The project to place Macedonia under the supervision of the Powers seems to be attributed to the result of the interview between the Emperors of Russia and Austria.

THE BALKAN CRISIS.

London, October 2.

Great Britain has pressed Austria and Russia to extend the scheme of Macedonian reform and to advance its course. The Sultan of Turkey declares that he has accepted the basis of the Austrian and Russian proposals and that he will endeavour to carry out the reform of Macedonia for which the Powers are pressing.

BALKAN AFFAIRS.

London, Oct. 7.

Russia and Austria have agreed with reference to the new scheme of Macedonian reform, to take steps of a more effective type.

THE SERBIAN CABINET.

The Cabinet of Serbia has been reorganized, General Genevitch being appointed Premier.

A SUSPECTED ASSASSIN.

An armed man has been arrested at White House, the official residence of the U.S. President in Washington.

(FROM THE "JAPAN GAZETTE.")

JAPAN AND RUSSIA.

Berlin, Oct. 3.

The English papers are again contemplating themselves with Russia and Japan. Despite press opinions, the relations between the two Powers are considered in Berlin to be normal.

LORD CURZON'S VISIT TO PERSIA.

Lord Curzon, Viceroy of India, is contemplating a visit to Persia in the near future. This visit is said to have some political significance. The Russian press regards with suspicious the English reports of the character of the Viceroy's approaching tour.

THE MOROCCO NEGOTIATIONS.

The negotiations in regard to the Morocco question are progressing very slowly owing to the reserve shown by England *vis-à-vis* the claims of M. Delcassé.

DEATH OF A WEATHER-PROPHET.

The well-known weather-prophet, Rudolf Falb, is dead. He was in his 66th year.

FRANCE AND MOROCCO.

London, September 28.

It is officially declared that the question of France proclaiming a protectorate over Morocco has not been raised between England and France.

An exchange of views has been proceeding, during which France has doubtless affirmed her claim to predominance in Morocco, suggesting certain eventual safeguards and compensations; but France does not contemplate any conquest of Morocco.

THE NEW POPE NOT AGGRESSIVE.

Berlin, October 6.

Pope Pius X has sent out his first Encyclical, which is merely on religious matters, and makes no attacks against heterodoxy or Protestantism.

REASSURING NEWS OF MANCHURIA.

The situation in Eastern Asia is considered in St. Petersburg to be safe. Baron Rosen having returned from Port Arthur to Tokyo bringing peaceful assurances.

THE BALKANS.

The Tsar and Emperor Francis Joseph have agreed in their interview at Muerzsteg (near Vienna) that some controlling authority must be established to carry out the reforms and the internal re-organisation of Macedonia. The conclusions arrived at in this meeting will be put in writing and communicated at once to the other Powers.

The Sofia and Constantinople governments have arrived at an understanding, which is considered a most satisfactory consequence of the conference of the two Emperors.

Later.

Austria and Russia have sent to Turkey a note of the same tenour. The two Powers communicate that they have agreed to establish some efficient form of control for the effective execution of the reform scheme in Macedonia, in order to check Turkish cruelties, to give relief to those rendered destitute by the riots, to facilitate their repatriation, and to show, by restoration of the demolished villages, churches and schools that they may feel assured a permanent and satisfactory restoration of order will be accomplished.

THE BALKAN CRISIS.

Berlin, October 8.

England, Austria and Russia propose that a Christian Governor-General be installed to rule over Macedonia. The Porte has not yet agreed to this proposal.

The attitude of the Bulgarian government is less disquieting since it is recognised that the Powers will protect Macedonian refugees.

The enhanced powers to be vested in Russian and Austrian consuls in Macedonia are not understood to comprise international authority.

The English press does not regard with favour the proposal made in an open letter published by the celebrated historian, Professor Theodore Mommsen, advising an *approchement* between Germany and England.

GERMAN WATER-WAYS.

The Prussian Government will introduce into the Diet a Bill for the general regulation of the river Oder and at the same time another one in connection with the commencement of the Rhine-Elbe canal. It is expected that this time these bills will pass easily.

[A Berlin telegram of Sept 9th said in regard to this latter project:—The Prussian Cabinet has decided again to propose to the Landtag the construction of a great cross-country canal to connect the Rhine, Weser and Elbe, thus completing the Emperor's proposed system of international waterways. Congressman Burton, chairman of the Rivers and Harbours Committee of the American House of Representatives, who has returned from his inquiry into the river and harbour improvements in Eastern and South-eastern Europe, says this is the only canal project seriously considered in Europe that compares in expense to the proposed Erie canal improvement. The Rhine-Elbe canal was estimated to cost \$60,000,000, though it is now thought it will cost considerably more.]

TREMENDOUS STORMS IN WESTERN EUROPE.

In Western Europe tremendous storms have caused much damage.

ELECTRIC RAILWAY DEVELOPMENT.

The trial made by Messrs. Siemens & Halske with electric railways near Berlin have resulted in a record of 201 kilometers per hour.

(FROM THE "N.-C. DAILY NEWS.")

MACEDONIA.

Mr. Hulman has been appointed on the Reforms Commission, with one Mussulman and four Christians, besides the president, Hilini Pasha.

Sir Nicolas O'Connor, British Ambassador at Constantinople, has informed the Porte that neither Turkey nor Bulgaria must expect any support from Great Britain if they resist the execution of the reforms.

A corresponding intimation has been made to Bulgaria.

London via Bombay, September 28.

Although there is a calmer feeling among the officials in Constantinople in the hope of a direct understanding between Turkey and Bulgaria, the Porte is continuing its preparations.

Sixty-four battalions are being mobilised in Asia Minor, of which thirty-five will proceed to Salonika, and the remainder to Adrianople.

Snow is already falling on the higher mountains in Macedonia, where thousands of homeless villages have taken refuge.

(FROM THE "SHANGHAI MERCURY.")

BULGARIANS UNSATISFIED.

London, September 29.

A deputation from Sunday's demonstration in Sofia waited upon the Bulgarian Premier and asked whether the Government would help the Macedonians.

The Premier replied that the Government would continue its present policy, which he conceived was for the best interests of the Bulgarians.

The deputation declared that this reply was unsatisfactory to the people.

THE NEW POPE AND CYCLING PRIESTS.

Most of the tastes and preferences of the new Pope with regard to minor matters connected with his office are as yet unknown. But, judging by the following pastoral letter which the then Bishop of Mantua wrote ten years ago to the clergy of his diocese, there is bad news for the cycling section of the Roman Catholic clergy. "The use of the cycle," wrote Monsignor Sarto, has become so general among laymen that they think life could not go on without it. As this innovation seems also to find favour with the clergy, I deem it necessary to give the order of abstinence from cycling to all men in orders. My seminarians know already what I think about this matter; I ask the priests to tell me of those students who disobey the order during the vacation. Of course I must prohibit to priests that which I have forbidden to the pupils, and indeed nothing seems to me more in contrast with the dignity of an ecclesiastic than to bestride a machine of this sort; the attitude is not in

harmony with the gravity of our office. Everything approaching the habits of laymen exposes us to the reproach of frivolity. I know the cycle has very hot partisans among the clergy, but I do not hesitate to forbid its use. Some people may think this subject a trifling one, but they have not to govern the Church; this is an affair of the Bishops, and as long as the Pope does not lay down rules on the subject my prohibition remains in force. It will be pointed out that the cycle has advantages, as, for instance, the rapidity with which by its means a priest can reach the bedside of the sick, the economy of this mode of transport, &c. These considerations, have, indeed their weight, but they must give way to the dignity and gravity which are the first duties of the priest." One wonders whether ten years have made a difference in the Pope's views regarding the "wheel."

HEADS AND HORNS OF INSECTS.

The trophies of the entomologist's wanderings are often exceedingly minute. They are always small, compared with those which fall to the lot of the big game hunter. Yet he also possesses his heads and horns, and they rank among the most weird and grotesque that the world can show. Indeed, writes Mr. Percy Collins in the *Illustrated Scientific News*, their appearance recalls the terrifying creatures of antediluvian epochs. Take, for instance, the Hercules beetle of tropical South America. It is a giant of its kind, for a fine male will measure as much as six inches in extreme length. Rising from the summit of its thorax, or ches, is a curved horn, in length very nearly half that of the whole beetle. A shorter horn is mounted upon the head, and both are somewhat notched and toothed, while the larger one is clothed with a copious growth of soft hairs—like the pile of velvet—upon its under surface.

Such remarkable horns as these would seem to exist for some very definite purpose, and the observer is at once led to enquire what this may be. To what use does the Hercules beetle put its fine horns? Unfortunately, no one seems able to answer the question at all satisfactorily. It is at once the strangest and the most tantalising fact in connection with insect horns that their use is, in most instances, a hopeless mystery. Of course, some more or less plausible theories have been advanced. In many cases it is the male insect which alone possesses these huge appendages, and this seems to lend colour to the suggestion that they may be useful as weapons of war. The beetles may fight with their horns, just as stags and bulls are known to do. There appears, however, to be very little evidence to bear out this theory. It is doubtful whether the beetles have ever been caught in the act of fighting, while their horns are invariably smooth and polished—without any scratches, such as might be looked for after rough or constant usage. That the horns may, in some cases, be used for wounding fruit or leaves, upon the juices of which the beetles may feed, seems a possible explanation for their existence. At the same time, it must be borne in mind that while one or more horns are immovably attached to the thorax, the opposing horns are fixed to the head. Thus, to make use of them as nippers, the beetle would have to move its whole head upwards and downwards. So that the horns would seem to be clumsy tools, at best, especially as the respective positions are often such that it would be impossible for them to be brought into anything like close contact.

Perhaps no utilitarian explanation for these horns exists. They may be merely incidental to excessive vitality. In Nature the male sex not infrequently possesses certain outgrowths, absent in the female, which are apparently superfluous. The beard of a man is a sufficient and familiar example. In the language of science, "the small and active sperm-cell with a more abundant vitality than the passive egg-cell, dissipates energy, while the egg-cell stores it up." So that it is not impossible that these beetle horns may represent the superfluous energy of their possessors. The fact that in the same species the horns vary enormously in size and development seems to strengthen the theory—for small, underfed insects might be expected to produce smaller horns than those which had enjoyed the advantages of abundant food and moisture. There are, of course, some horns which cannot be explained in this way. A case in point is the big Phanacus, or Dung Beetle, of Brazil. Both the males and the females of this insect have long spines or horns on the summit of the head; and these show such a uniform development, and are placed in such a position—directly in front of a deep cavity in the creature's thorax—that they almost certainly exist for some definite purpose. The insect's habits are exceedingly remarkable. It spends its time in forming immense balls of dung as large as

itself, in the centre of which it places an egg. These balls are rolled about by the beetles until the exterior is baked quite hard in the sunshine. The interior is thus kept in a moist condition, suitable for the food of the grub which ultimately hatches from the egg. It is, therefore, conceivable that the Phanacus makes use of its horn and the cavity in its thorax to collect and carry dung to the spot on which it is making its ball. There is a great group of beetles, comprising many hundreds of tropical species, known as "Longhorns," on account of the abnormal length of their feelers. The grubs of these beetles all feed upon decaying wood. They are, in fact, the scavengers of the tropical forests. Many of them are so large that their labours are sufficient to reduce a vast trunk of timber to powder in the course of a few weeks; and in this manner they literally prevent the forest from becoming choked by its own decay. The parent beetles of these grubs often possess feelers lengthened out of all proportion to their bodies. To look at them, one would imagine these appendages to be most unwieldy and burdensome. It is probable, however, that the beetles require them for searching the crannies in the wood—perhaps when questing for suitable holes into which they may drop their eggs.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCTOBER 17TH, 1903.

SUMMARY OF NEWS.

A SHOCK of earthquake was felt at Oita on Oct. 11th at 1.40 a.m.

COUNT T. NAMBU died on Oct. 9th from apoplexy. His age is given as 49 years.

MR. K. NAKAGAWA a famous player of Go who has been ill for some time past, died on Oct. 13th.

ACCORDING to the *Official Gazette*, two Chinese named Karyong-sho and Katong-yuen living in Kobe have naturalized as Japanese.

A CASE of cholera was reported in Yamaguchi Prefecture on Oct. 13th. The sufferer is a farmer living in the district of Yoshishiki.

THE Moji branch of the Nippon Yusen Kaisha was removed to Shimonoseki on Oct. 11th and a garden party was held to celebrate the occasion.

LIEUTENANT FRIEDRICH VON RIFFER, attaché of the German Legation, Tokyo, who has been staying at Shimonoseki left there on the morning of Oct. 8th for Tokyo by train.

THE marriage is announced of Mr. T. Akiyama, editor of the *Niroku Shimpō* and a representative in Parliament for Tokyo, to Miss Sada, second daughter of Viscount Naohika Nagai, whose ancestors were lords of Yamato under the

Tokugawa dynasty. The wedding entertainment will be held on Oct. 17th at the Maple Club, Shiba Park, Tokyo.

THE term of service of Mr. T. Yamamoto, President of the Bank of Japan, is to expire this month, when he completes five years. The *Nichi Nichi* predicts that he will be re-appointed.

A FUKUI telegram states that I. Teranishi, proprietor of the *Jakuyetsu Shimbun*, and two directors of the Hokkoku Silk Yarn Company were arrested on Oct. 9th on a charge of fraud.

A CHEFOO telegram dated Oct. 11th has been received by the *Asahi* to the effect that sixty Japanese residents in Port Arthur, having closed their business, left the previous day for Nagasaki.

THE contractors of the Dover Harbour state that the permanent works have not been damaged, and that only a temporary structure in connection with the construction of one breakwater was destroyed.

A MAN named S. Makino (48) living at Tansu-machi, Azabu, Tokyo, committed suicide on the morning of Oct. 10th by cutting himself in the throat with a knife. The cause is reported to failure in business.

THE Minister for Communications on Oct. 10th, ordered the authorities of the Nagasaki Post Office to make preparations for postal connection with the Siberian Railway, which arrangement will shortly be effected.

TRAINS collided at Kokubuji Station, Tokyo, on Oct. 9th at 7.25 a.m. Five or six passengers and several firemen and conductors were injured. The cause is reported to be negligence on the part of a pointsman.

A MAN named T. Sanami (31) was found on the morning of Oct. 11th to have committed suicide by cutting his throat with a knife, in front of the Nanko Statue, at Babasakimon, Tokyo. Temporary insanity is reported to be the cause.

THE chest containing the silverware of the 13th Regiment of Uhlans, in garrison at Hanover, has been robbed of 400 pieces of silver, among them being massive cups which were gifts of the Emperor William. No trace of the burglars has been found.

MR. MEISER, a German subject, who was charged with injuring the Japanese employee of a hotel at Sapporo with a revolver, while suffering from brain trouble, was sentenced in the District Court at Sapporo on Oct. 10th to 15 days' imprisonment with hard labour.

THE "Dictionary of the Ancient Egyptian Language," compiled by the Berlin Academy of Science, under the direction of Professor Erman, Germany's greatest Egyptologist, is nearly completed. It contains 280,000 words or subjects. The work is endowed by the emperor.

OVER 60 employees of steam launches in the rivers of Osaka who struck on Oct. 9th, held a meeting in the compound of the Tennoji Temple on the following day. The police authorities dispersed them and took three to the station. Traffic by the boats plying on the canals is still suspended.

MR. A. H. STEWART, Assistant Serjeant-at-Arms in the U.S. Senate, who has been visiting the Philippines to study the working of the Chinese Exclusion Act, is expected, when he returns to the States, to recommend the abolition of the Act as far as it concerns the Philippines. The

existing treaty between the United States and China expires next year and the question of exclusion is sure to receive full consideration before the new treaty is made.

IN consequence of intelligence received in Yokohama on Saturday last to the effect that the steamship companies engaged in the Pacific service have decided to restore the charges for freight to their former rate from November, a rise in the quotation of flour of 10 *sen* per bag is reported.

Two printers named G. Seo and J. Takahashi, of the *Minato Shimbun*, Yokohama, are reported by the *Asahi* to have removed a portion of the machinery on Oct. 10th and consequently work at the office was temporarily suspended. The workmen are said to have had trouble with their employer regarding wages.

ACCORDING to Manila papers, it is believed that Cardinal Gibbons has effected a settlement of the question of the Friars' lands in the Philippines. Governor Taft offered between \$5,000,000 and \$6,000,000, but the Friars claimed \$12,000,000, which the authorities thought unreasonable. What the sum decided on is likely to be is not reported.

A FARMER named Y. Yoshisawa (42) was run over by an electric tram car the other day at Omori, sustaining severe injuries on the head. The villagers, who have always been hostile to the tramway, became disorderly, stopping the traffic and complaining as to the danger caused by it. The police authorities of the Shinagawa station dispersed them.

A TELEGRAM from Allahabad dated September 17 says:—The Maharaja of Kapurthala is to leave Bombay to-day by a Messageries steamer for Hongkong. His Highness has lately undergone several operations at Mussoorie from which he has made excellent recovery, but it is considered that a sea voyage is desirable to restore his health. He is therefore leaving for Japan on a four months' tour.

THE *Asahi* reports that Mr. K. Inouye, a representative of Ibaraki prefecture, was arrested on Oct. 7th and his dwelling searched. The charge against him is said to be connected with the charges preferred against the headman of Ishibamachi and five others, who are detained in the police station on a charge of having contravened the Election Law during the elections to the Prefectural Assembly.

DURING the night of Oct. 9th, snow is reported to have fallen in north-eastern districts. It covered the Iwaki mountain near Hiromae, where the reading of the thermometer was 53 degrees Fahrenheit. It also lay on Iwate mountain near Morioka. The snow which visited Yamagata prefecture is said to be 22 days earlier than last year. In Awomori, extraordinary cold was felt and the thermometer fell to 34 degrees. The snow on Hachikoda mountain measured two feet in depth.

THE new addition to the Siamese Navy, the *Lycidas*, or the *Chamroen*, as she will probably in future be known, was built on the Clyde last year, and was for a short time used in the coasting trade, the *Bangkok Times* says. She is said by her present British officers to be a fine sea-boat, having encountered some very rough weather in the Indian Ocean, after passing Cape Guardafui. Her engines are right aft, and she possesses a good deal of deck space as well as a large carrying capacity in her hold. An upper deck is to be added from the bridge forward, in order to better adapt her to the purposes of transport for which she is intended.

CHINA.

Saturday, October 10.

Accounts from Peking indicate that the Chinese Foreign Office was fully cognizant of the purely formal character of the reminder addressed by it recently to Russia with regard to the obligations devolving on her at this moment. Nevertheless it complied with the dictates of official routine. In point of fact, however, China now clings to two last straws. One is the Russo-Japanese negotiation. She hopes that some solace for her wounded sovereignty may be found in the issue of that conference. The other is a plan she is said to have conceived; a plan of substituting Mongolian and Thibetan privileges for the interests Russia has acquired in Manchuria. Nothing, in our opinion, could be more futile than such a plan. Russia has already set in motion forces that will effectually operate for her final acquisition of Mongolia. The inclusion of that district in her catalogue of East-Asiatic provinces is as certain as was the inclusion of Manchuria from the moment of signing the Port Arthur lease, and to ask her to abandon what she already possesses in one place for what she is already certain of acquiring in another, would be merely to provoke her ridicule. As for the prospects of the Russo-Japanese negotiations from a Chinese point of view, there is not, we imagine, the remotest chance of China's sovereignty being considered, except in so far as its preservation conduces to the interests of one or other of the negotiators. She has cut herself off from all practical exercise of sympathy by her wretched incompetence to protect herself, and by the purblind infatuation which has held her for fifty years in grooves plainly destined to be her grave unless she speedily emerged from them. That she should in her present extremity found hopes on the accidental benevolence of a foreign Power is as futile as her forlorn conception of dissecting off one limb in order to avert the amputation of another.

The *Nichi Nichi Shinbun* has a curious telegram from Peking. It says that M. Lessar has conveyed to Prince Ching information that the Russian Government, replying to Japan's representations, declared the evacuation of Manchuria to be impossible. The Prince is of course depicted as reduced to despair by this intelligence.

The world of the West agrees that what the Yellow Peril wants to convert it from a bogie into a veritable menace is a competent leader. It might find that leader just as well in Russia as in Japan, with this difference that under Russian direction the peril would be directed eastward instead of westward. That is an apprehension which certainly presents itself to Japanese minds, though as yet it seldom finds open expression. Why should not Russia mould into an efficient thunderbolt the immense materials that will be placed within her reach when she is acknowledged mistress of Manchuria, Mongolia, and probably of Pechili, Shansi, Shensi and Kansu? Where then would the thunderbolt fall? One thing absolutely sure beyond all peradventure is that Russia's advance from central to southern Asia will not cease until it is effectually checked.

The stars in their courses work for the great Northern Power. Tung Fuh-hsiang, the turbulent patron of the Boxers, who has been little heard of for some months, is now reported to have collected his troops in Sinkiang, and to have perpetrated various acts of violence at Tih-hwa, several Russian subjects being among his victims. Tung

has now been a proscribed person for nearly three years, and the fact that he had taken refuge in Kansu at the head of a considerable body of soldiers was known early in 1901. Moreover, what that meant for the preservation of good order and tranquillity in Kansu was known also. Nevertheless to this day he seems to be as successfully defiant of Chinese authority as ever, and now he is creating on the borders of China's North-Western province a state of affairs which may quickly invite Russian interference. Kansu has on its north Mongolia and on its north-west Sinkiang, where Tung is now creating disturbance. Its area is 400,000 square miles, and its possessor would find himself on the borders of Szchuan and Thibet. The Boxer madness is still working to China's destruction. It has cost her Manchuria; it promises to cost her Mongolia, and if Tung Fuh-hsiang be suffered a little longer, it may cost her the three northern provinces of her empire, with her two northern capitals.

In the sequel of this news it is stated that M. Lessar at once presented to the Chinese Government a demand for redress, accompanied by a menace that if China were unable to protect the lives and properties of Russian subjects within her borders, Russia would take that function on herself.

News from Shanghai says that though the revised commercial treaty between China and the United States was signed duly on the 8th instant, a hitch occurred about the Japanese treaty, some discrepancies having been discovered between the English and the Japanese texts at the eleventh hour. It was hoped that these would have been corrected speedily so as to permit the signature of the treaty on Thursday afternoon, but in spite of strenuous exertions in that sense the signature had not taken place up to 6 p.m. on the 8th.

Monday, October 12.

It is reported from Peking by the *Nichi Nichi*'s correspondent that M. Lessar has announced to the Chinese Government the lapse of the evacuation treaty of last year, in consequence of the date for the fulfilment of the convention having expired, and has notified that if China desire evacuation she must conclude a new treaty. The people by whom this rumour was manufactured are evidently disposed to represent Russia in the worst possible light. That the deliberate violator of a treaty should give formal notice of the treaty's lapse because of its violation would be altogether too comical, and would be a worthy preface to the alleged sequel, namely, Russia's announcement, "Since I have disregarded one covenant, you must proceed to bind me by another." We do not believe that M. Lessar has done anything of the kind, but inasmuch as Russia stands before the world in the light of a colossal aggressor and breaker of covenants, she must expect to have a great many hard things said of her. We are sensible that she deserves much abuse, but history does not indicate any innocuous method of empire-building.

There have been three meetings, say leading Japanese journals, between Baron Rosen, and Baron Komura, and the *Fiji Shimpō* asserts that the Russian Representative is now awaiting a reply from Viceroy Alexieff before proceeding further with the negotiations which, however, are expected to reach a conclusion of some kind at an early date. Meanwhile an important correction has been made. Our readers doubtless

remember that the Prime Minister, when visited by a deputation of the *Tai-Ro Doshikai* on the morning of the 9th instant, was reported to have said that the Japanese Government had twice rejected proposals advanced by Russia. It is now officially denied that the Premier said anything of the kind. His words were that there had been an interchange of views once or twice between the Russian Representative and the Japanese Government. Mr. Hiraoka, who headed the deputation from the *Tai-ro Doshikai*, disavows all responsibility for the false report. He claims that he described Count Katsura's statement correctly as referring simply to an interchange of views, and that the mistake must have been due to some misapprehension on the part of irresponsible persons.

Japanese papers announce that the Empress-Dowager was to give a dinner party on the 9th instant to the Foreign Representatives and on the 10th to their wives. It sounds curious that Her Majesty should still adhere to the custom of dividing the sexes, but that is not the only strange feature of Chinese conservatism.

Newchwang telegraphs that the 8th inst. brought no change in its condition. The streets still continued to be patrolled by parties of Russian soldiers, and the Taotai, Li Ping-san, was quietly residing in Kinchau, evidently entertaining no expectation that the day appointed by treaty for the end of Russian military occupation and for the restoration of the administration to China would be marked by the fulfillment of either promise.

A report comes from Seoul, via the *Fiji Shimpō*'s correspondent, that the first regiment of the Nerchinsk brigade, which forms part of the Baikal Division, under the command of Major-General Pavlov (?), has marched to Feng-hwan-ting. The officers number thirteen and the regiment has with it four field-pieces and six machine guns. The Russian troops at Feng-hwan-ting are now said to number 600 men, so that with the addition of the Nerchinsk regiment they will be a formidable body.

Tuesday, October 13.

It is stated by the *Asahi Shinbun*'s Peking correspondent that neither Sir Ernest Satow nor any member of the British Legation attended the entertainments given at the Imperial Palace on the 9th and 10th instant. The reason of this marked abstention is alleged to be that the British Representative strongly disapproves the action of the Chinese Government in the matter of the *Supao* prisoners, and further that he does not desire to associate intimately with a Court capable of such barbarities as the beating to death of the unfortunate Chin. This attitude on the part of the British Legation is said to be much criticised in diplomatic circles in Peking, but if, as must certainly be assumed, Sir Ernest has indisputable evidence that Chin was executed in the brutal manner described by rumour, and that it was done by order of the Empress Dowager, Englishmen will certainly applaud his procedure. The question is, however, whether such alienation is compatible with the maintenance of international friendship. When is this stain on the moral character of Her Imperial Majesty to become invisible, and by what kind of act can she succeed in overcoming Sir Ernest Satow's repugnance? We can not think that any English gentleman should be required by his Government to associate on intimate

terms with a Sovereign capable of such outrages, but, on the other hand, the considerations suggest themselves that deeds just as shocking to the sense of humanity were commonly perpetrated in medieval Europe, and that, after all, these entertainments at the Chinese Palace are a mere formality. It is a difficult question, for if the British Legation's protest be pushed to its logical conclusion, international relations of an amicable nature would be altogether impossible with a country where penal administration exhibits such abuses as it does in China.

The same correspondent says that at the audience on the 9th instant the Emperor seemed hale and strong, but the Empress-Dowager showed symptoms of decrepitude.

A Japanese officer who has just returned from Tientsin by the *Nagato Maru* is said to have stated that in the event of war between Japan and Russia, General Ma proposed to lead his forces against the Russians, whether he obtained the consent of his Government or not. Even if Peking withheld its approval he reckons on being followed by fully one half of his soldiers. He also states, according to this not over-credible rumour, that he has taken steps to spy out the state of Port Arthur in view of such a contingency.

Much doubt will be felt about this story, but it suggests the question of China's attitude in general should war occur. She could scarcely sit quiet. Assuming her to be animated by any spark of patriotism, she must feel constrained to join hands with a Power fighting on behalf of her own integrity. But it may be said that the season has passed when Chinese troops could operate successfully from the direction of Chili against the Russians in Shingking. Another fortnight or three weeks will see the beginning of the winter season when military manoeuvres will cease to be possible for Chinese troops at all events, whatever might be the case with Russian or Japanese soldiers.

It is currently rumoured that when the Manchurian question threatened originally to involve a rupture between Japan and Russia, the Peking statesmen gravely deliberated as to the wisest and most becoming course for their country, and came to the conclusion that strict neutrality should be observed. One finds difficulty in crediting such pusillanimity and blindness. To leave another country to fight unaided for China's integrity would be the meanest kind of cowardice, and would also amount to effectual self-effacement, since if China passively suffered two foreign Powers to struggle for Manchuria, she could not expect to have any voice in the ultimate disposal of the place. Whatever the Chinese Government might do, however, there can be little doubt that a Japanese force entering Manchuria in opposition to Russia would receive all possible assistance from the inhabitants. The reputation gained by the officers and officials of this empire in the campaign of 1894-5 renders that forecast certain.

There is a rumour coming from Chefoo via the *Asahi's* correspondence that 500 men have been embarked in Russian ships at Port Arthur, and have sailed for an unannounced destination. Of course the inference is that they are bound for some place on the Yalu, but whether Antung or Yong Am-pho—if either—is matter of conjecture.

Another statement published by the same journal is that sixty Japanese subjects hitherto residing in Port Arthur have left

that place for Nagasaki. This also requires confirmation.

A Japanese residing in Wiju visited Fen-hwang-ting on the 8th instant, and is reported as confirming the previously circulated statements that 600 Russian troops are encamped there, and that General Pavlov is moving thither with a portion of the Baikal Division. He adds that the Russians in Fen-hwang-ting are convinced of the imminence of war, and have sent their wives and children to Liao-yang, whence stores of provisions are coming for Fen-hwang-ting. No Japanese subjects are allowed to enter Liao-yang.

Additional details as to the new China-Japan Treaty are published by the *Fiji Shimpō*. Peking, it appears, is to be included within the places accessible by inland waters, but as that description is scarcely applicable the telegram is not altogether clear. Possibly, however, it may be considered that the Peiho and the Tung-chou Canal constitute water approaches. As to the date for opening Peking, Mukden, Changsha and Tatung-kou, it is fixed at one year after the date of signing the treaty. The signature actually took place on the morning of the 9th instant, but since the date of the Treaty was left as the 8th, we may say that these places will be opened on October 8th, 1904. Concerning the export of rice, the arrangement is said to be that this staple may be exported from Shing-teh in Hunan, Hu-kow in Kiangsi, An-king in Anhui, and Sui-fu in Szchuan, but only in the event of a rice famine in Japan. The arrangements as to *likin* are to be reconsidered.

It is stated by the *Chuo*, with what truth we can not tell, that Mr. Tsuji, of the Mitsui Bussan Kaisha's Tientsin Branch, and an employee of the Kanagafuchi Spinning Company, proceeded to Manchuria some time ago on business, and are now in prison in Port Arthur on suspicion of being spies. They have been kept for some time in durance and there is no prospect of their being brought up for trial. The same paper says that a Japanese officer who was travelling in plain clothes in Manchuria has been seized by the Russians, and, after being subjected to torture, has been imprisoned in some fortress. These tales are probably the product of a heated imagination. Very likely the Russians are adopting precautions against Japanese spies in Manchuria just as the Japanese are against Russian spies in Japan, but as to torture being employed by the Russians, no one will credit it.

Wednesday, October 14.

It is reported from Newchwang by the *Fiji Shimpō's* Tientsin correspondent that since the 8th instant the Russian troops in that place seem to have relaxed their vigilance. They had previously erected a look-out at the head-quarters of the military and were keeping there a strict watch by day and night. They had also employed a hundred and twenty Chinese police to patrol the town. But these precautions were discontinued in large part on the 8th, and the flag over the look-out was taken down. The intelligence is of small importance except as showing that in some places at all events the doings of the Russians are very closely watched and reported.

In the *Nichi Nichi's* Peking correspondence it is stated that the Russian troops from Liao-yang are moving southward towards Port Arthur, their place being taken by

troops from Chita. The same writer alleges that things wear a very busy air at Port Arthur and Dalny, whence the wives of all the officers and soldiers are being sent northward.

The Russian squadron which took part in the recent manoeuvres at Port Arthur is reported to have left that place, bound, apparently, for some port in the Sea of Korea.

The *Fiji's* Tientsin correspondent says that the presence of a large number of Russians is observable between Newchwang and Shan-hai-kwan, and that they are closely watching the conduct of all travellers.

It is alleged that Chinese statesmen are beginning to awake to the fact that a new pack of troubles is quietly brewing for them in Sinkiang and Mongolia. They probably now commence to perceive that there are no limits to Russian progress, and that there never will be any limits until her advance is turned into retreat. This, too, is the old story. Nothing in nature is stationary. Waxing or waning is the universal law. The Russian shadow will continue to creep over Asia. It has already fallen upon Mongolia and Sinkiang, though as yet their condition may be described as penumbral.

Through the *Asahi's* Shanghai correspondent comes intelligence from Shanghai that journals published there are beginning to issue war extras, and that the effect upon the cotton market has been disastrous.

Thursday, October 15.

A telegram from Dalny to the *Fiji Shimpō* via Nagasaki says that the Russians are busily laying torpedoes in the harbour and its approaches at Dalny. Five vessels are said to be engaged in the work, and the rumour will of course be treated as a new evidence of the imminence of war. It has, of course, no such import. So long as the situation is uncertain the Russians merely obey the dictates of prudence when they place themselves in a state of readiness.

At Port Arthur also active precautions are said to have been taken. When the *Buyo Maru* touched at that place on the 3rd instant, she found that new forts were in course of erection and that beams had been laid out to protect the entrance to the harbour. Her people report that the Japanese residents of Harbin and Port Arthur are suffering from Russian severity, a very vague allegation indeed.

Friday, October 16.

According to the *Asahi's* Peking correspondent the unfortunate Prince Ching has now been deprived of his sleep and his appetite alike. Mr. Lessar addressed to him on the 9th instant a despatch upbraiding him with paying undue attention to the interference of other Powers, and urging him to reconsider his attitude towards the recently submitted proposals, since, in the event of continued obduracy Viceroy Alexieff would be compelled to take steps for the permanent occupation of Manchuria. This despatch was followed, we read in the *Nichi Nichi's* correspondence, by a long interview between M. Lessar and Prince Ching on the 13th instant, but no intelligence is wired as to the result of the discussion.

Of course the difficulties of the situation would be largely removed for Russia could she induce China to accept her recently formulated demands. Her policy is to segregate China as far as possible from the interference of outside Powers. If, one fine morning, she

could instruct her Plenipotentiary in Tokyo to inform the Japanese Government that everything had been settled in Peking and that, so far as Russia and China were concerned, the Manchurian problem had been finally solved, the Japanese negotiators would find themselves in an embarrassing dilemma. So obvious would be the advantages to Russia of such a consummation that we can well suppose M. Lessar to be very actively endeavouring to bring it about. On the other hand, that patent phase of the question must be quite apparent to China. She need not have read the Old Testament or heard the story of Bathsheba's child to know that if once she cease to fast and pray for her now very sick Manchurian offspring, the Japanese physician must throw aside the spoon.

Japanese travellers who have just returned from Manchuria to Peking, are represented by the *Asahi* and the *Nichi Nichi*'s correspondents in the latter city as reporting that there is a general movement of Russian troops southward; that they are evidently concentrating upon Talien and Port Arthur, and that provisions ample for one year's sustenance have been collected and placed in store. These writers add that the anti-Japanese feeling is growing rapidly among the Russians in Manchuria, and that Japanese residents there, convinced of the impossibility of war being avoided, are turning their faces homeward. Anti-Japanese feeling among the Russians reminds us of the fable of the wolf and the lamb drinking from the same stream. It is by Russia solely that the waters are troubled. She alone is the disturber of the peace of the Orient, and it is for the satisfaction of her imperial ambition that the whole of the Far East is kept in a state of unabated suspense grievously detrimental to the progress of business and the growth of prosperity. Under these circumstances it is quite in accordance with human nature that the Russians should be angry with the Japanese, for these latter constitute a disagreeable instrument for focussing the world's attention on the great Northern Power's doings. Very likely if we English were in the position where the Russians have placed themselves, we should behave similarly, though we do find it difficult to conceive on Great Britain's part such a retrogression to mediæval fashions as is involved in the flagrant violation of plain treaty engagements. The whole page of history reminds us how little progress the nations have made towards a high moral standard in their treatment of each other. Deception, disregard of promises, menace and brute force still occupy the foremost place in the catalogue of interstate relations.

It is stated that there are now fifteen thousand Cossacks assembled at Port Arthur and that the defences of the place are practically complete. Port Arthur would be indeed a hard nut to crack: ■ second Sevastopol. We trust that its garrison will be left in quiet enjoyment of their preparations for war.

From Newchwang also comes news that instead of any signs of evacuation, the garrison has been re-inforced by about 400 men, and that talk of war is loud.

There is a report that the travel of Chinese passengers by the Manchurian railway has been temporarily interdicted. Very likely the single line is fully engaged in carrying stores and troops.

To Moji comes intelligence that six hundred Japanese residents of Talien are making preparations for immediate departure to

Chefoo in the event of war, and that they will proceed by the *Nagato Maru*. At Port Arthur, on the contrary, it is alleged that, according to orders issued by the Viceroy, the Japanese residents will be collected and sent away by a foreign steamer in the event of hostilities breaking out.

KOREA.

Saturday, October 10.

Telegrams from Seoul to the *Asahi Shimbun*, the *Fiji Shimpō* and the *Nichi Nichi Shimbun* give the alleged gist of M. Pavlov's views as to the Korean Government's proposal to open Wiju and close Pyong-yang. The Russian Representative is reported to have said that Wiju offers no trade facilities such as to warrant its opening. Its situation is remote and the products of the neighbouring country are insignificant. Moreover, for many years it has been accessible to Chinese merchants, yet they have not succeeded in developing its trade in any appreciable degree. Pyong-yang, on the contrary, is comparatively central and has always been one of the chief trade marts of Korea. Yet even in the case of Pyong-yang, the experiment of opening it to foreign commerce has proved so futile, according to the views of the Koreans themselves, that they now propose to close it. Such being the facts of the case, the project of opening Wiju seems futile. Then there is the argument that the state of affairs in Manchuria has not yet been settled, and under those circumstances it is plain that to open Wiju would be to expose Korea to complications which might prove of a very troublesome nature. On the whole, therefore, Russia is opposed to the suggestion.

M. Pavlov, representing Russia, is just as much entitled as any one else to pronounce an opinion about the commercial expediency of opening Wiju. Nor can we be surprised that he endeavours to defeat the project. For if the interests of trade count for six in the scheme of opening, the interests of politics certainly count for half a dozen. Did not the spectre of Russian aggression throw its shadow over all these regions from the Gulf of Pechili to the sources of the Yalu, nobody would be in any hurry to forestall the natural development of trade. But against that aggression only one peaceful weapon is available, namely, the opening of marts which shall become foci of foreign interests. Russia objects, as a matter of course, and in order to hide the issue really at stake, she naturally indulges in economical analyses through the mouth of her Representative.

We read in the *Nichi Nichi Shimbun* that Japan's undertakings in the matter of railways and telegraphs in Korea are progressing. The Seoul-Chemulpo and Seoul-Fusan lines have been amalgamated; ■ charter has been obtained for a branch line to Masampo; a charter has also been obtained for the Seoul-Kaisan section of the Seoul-Wiju road, and a charter for the remaining section is likely to follow. Moreover, Japan is about to lay a cable from Yuen-san to Fusan and from Fusan to Tatung-kou, so that she will virtually have a line of telegraphs encircling Korea. These facts accomplished, says our contemporary, Russian doings at Yong Ampho and in the Yalu Valley may be regarded with comparative indifference.

It will be seen that there are three important items of news in the above. One is that concessions for a branch line to Masampo and for the Seoul-Kaisan section of the Wiju railway have been actually ob-

tained; another that Japan is working for the Kaisan-Wiju section; and another that she is about to lay a Yuen-san-Fusan-Tatung-kou cable.

Nevertheless, says the *Nichi Nichi Shimbun*, the sentiment of gravitation to the great (*jidai shiso*) still prevails in many quarters in the peninsula, and has the effect of turning men's eyes towards the huge shadow of Russia and away from the comparatively petty substance of Japan.

Further details do not add much to our knowledge of the riot in Seoul on the 30th ultimo. It appears that the death of a child of 13 or 14 years of age was the origin of the trouble. An American engineer, Elliot, was in charge of the electric car. He was dragged down and beaten by the mob into a state of semi-unconsciousness, but just then a Japanese letter-carrier, Kumagaye, happened to pass on a bicycle. Elliot seized the handle, and Kumagaye dismounted in surprise, whereupon the American mounted quickly and rode off without further scathe. What followed is known to our readers, but we may add that a photograph published by the *Yomiuri Shimbun* indicates that the shop of the Japanese haberdasher Asada, was literally wrecked. The picture reminds one of the interior of a house in Gifu after the great earthquake. What constitutes a grave feature of the affair is that six or seven out of every ten of the rioters are said to have been soldiers, and, further, that a party of soldiers and gendarmes under the command of officers passed when the disturbance was at its height but failed to adopt any repressive measures, a statement hard to believe.

Mr. Li Hwa-yong declines to take charge of Korean foreign affairs at this juncture. He does not want to put his fingers in the vice for squeezing by Japan and Russia. The resignations of Li Do-chai and Li Chung-ha and the refusal of Li Hwa-yong show what a miserable mood of vacillation and uncertainty must prevail in Korean diplomatic circles. The little empire's statesmen do not know which way to turn, to Japan or to Russia.

Monday, October 12.

There have been of late, remarks the *Fiji Shimpō*, indications that the people of Korea are pursuing a "weather-watching" policy. They are seeking to ingratiate themselves with Russia by a display of ill-will towards Japan. This phase of popular temper showed itself first—if we restrict our attention to recent events—in an attack upon a Japanese subject in Wiju. He received wounds which subsequently proved fatal. Then followed the Seoul riot, which involved the severe beating of a Japanese postman and the wrecking of a Japanese store, and which was much aggravated by the fact that the Korean troops and police took no steps to suppress the disturbance though they were cognizant of its progress. Now finally comes intelligence from Seoul to the effect that all the Korean subjects connected with Japanese business-men in Wiju have been placed under arrest. It is not probable that Japan will endure this kind of thing without taking some practical steps to provide a corrective.

Another item of intelligence from Korea is that Russian subjects at Kyu-yong-po are seizing Japanese timber rafts. The danger of the situation in the Yalu Valley is that it may at any moment lead to incidents which will over-tax the patience of one or other of the Powers concerned.

Since the above was in type news has been received of the release of the Japanese apprehended in Wiju, and it would seem from the second telegram that they were arrested originally by the Russians.

Tuesday, October 13.

The Governor of Seoul is stated to have called at the Japanese consulate in that city and offered expressions of regret for the disturbance on the 30th ultimo. Subsequently the Governor and the Consul went to inspect the place of the fracas, and agreed as to the proper steps to be taken. On the other hand, the demeanour of the populace towards the electric railway company has not improved. It is reported that stones have been thrown at the wife of Mr. Colbrandt and that she suffered some injuries.

It is announced from the upper reaches of the Yalu River that the Russians, with arms in hand, are taking possession of Japanese timber-rafts and cutting their own marks on the logs. The Japanese are said to be much excited.

From Wiju comes intelligence that the recent arrest of Korean subjects connected with Japanese residents had no sinister significance whatever. The men were apprehended as defaulters in the matter of tax-paying, without any reference to, or any knowledge of, their Japanese associations.

The problem of a site for the Seoul-Fusan Railway's terminus in Seoul has at length been satisfactorily solved owing to the exertions of Mr. Hayashi.

Wednesday, October 14.

A telegram from Seoul to the *Fiji Shimpō* says that, according to intelligence received from Wiju under date of the 12th instant, the Japanese residents disquieted by the doings of the Russians in that town, and its vicinity, have collected their wives, children and invalids and embarked them in the *Wakanoura Maru*, presumably for Japan. This news, if confirmed, is somewhat serious. The Japanese Government is bound to insist that its subjects residing lawfully in Wiju, shall be undisturbed by any doings of a foreign Power in a time of peace. There has for a long time been talk in Japan about the advisability of despatching a force of Japanese soldiers to Wiju for purposes of protection, but the Government has carefully refrained from taking a step which could scarcely fail to complicate the situation. In the face, however, of news like the above—supposing it to be authentic—it will be difficult for the authorities in Tokyo to maintain their attitude of forbearance.

It is precisely because the situation lends itself to these untoward incidents that its prolongation becomes daily more dangerous. When a state of extreme tension is established, something may at any moment happen to remove the whole question beyond the control of diplomacy. That is the danger of drifting.

The *Nichi Nichi Shimbun's* Seoul correspondent supplements the above intelligence with a statement that Russian soldiers are continually moving between Wiju, Yong An-pho and Antung, and that strict surveillance is exercised by them.

Thursday, October 15.

The news is confirmed that the Japanese residents of Wiju are alarmed by the situation and have sent away by ship to Chemulpo their wives and children and the two raftsmen injured some time ago in a collision with bandits.

It is reported from Seoul that the Author-

ities are much exercised about the alleged construction of forts by Russians at Yong-an-zan near Yong An-pho, and that they have issued orders to the local officials to take steps for the destruction of the works. But there is now great reason to doubt whether the so-called forts are anything more than a signal station which has been erected on an eminence, so as to establish communications with Antung. Whether wireless telegraphy is employed the latest statement does not make clear, but such a hypothesis seems very reasonable. We have always doubted the truth of this story about fort-building, and no explanation would be simpler than that the Russians, confronted by strong Korean objections to the laying of a cable between Antung and Yong An-pho, have resorted to the device of wireless telegraph stations. Such an expedient is so obvious that, assuming the necessary materials to be available, we should be surprised if the Russians did not resort to it. It is true that there remain the allegations of men who say that they actually saw the forts in process of construction, but many a civilian is not immediately competent to distinguish between the preliminary operations of fort-building and those of signal-station erecting. It is also true that very positive allegations have been made as to the despatch of guns to Yong An-pho for the purpose of being mounted in the new forts. But as to these guns we can not discover that any one has seen them, and so long as ocular evidence is not forthcoming we take leave to doubt their existence altogether. It appears to us that the Russians have turned the laugh effectually against the Koreans. They have simply said:—"Very well. If you won't allow us to lay our cables on the bed of your river, we shall communicate over your heads by means of the atmosphere which is no man's land." It will be happy if the whole affair of the forts ends in a laugh of that kind.

Friday, October 16.

Tokyo newspapers report that in consequence of the alarm displayed by Japanese residents of Wiju, five Japanese gendarmes have been despatched thither. That seems indeed a paltry measure, but it is consistent with the resolve evidently formed by the Japanese Government and hitherto studiously adhered to, the resolve not to take any step beyond what is imperatively demanded by the situation.

A remarkable story is published by the *Nippon* to the effect that Li Kon-thaik has conceived the idea of placing Korea under Russian guardianship, and that he is urging the Emperor to address an autograph letter to Viceroy Alexieff asking the latter to give substantial assurances that the tulleage shall be innocuous. It need scarcely be added that Li is supposed to be acting in collusion with Russian officials in this manoeuvre. The *Asahi* publishes a rumour which appears to have emerged from the same factory, namely, that a secret envoy has been despatched from the Korean Government to Viceroy Alexieff. Such tales will find little credence.

It is stated that the Russian Consul at Masampho has proceeded to Fusan, and is there purchasing timber to be used in the construction of the consulate.

The *Fiji* received information on Oct. 14th that the Indian Government intends to raise the duty on vacuum oil imported from Russia, in reply to the latter government's increase of the import duty on tea from India.

THE SITUATION.

Monday, October 12.

The correspondent of the *Daily Mail* in Japan is not happy as to the news he provides for that journal. On several occasions he has shown himself more sensational than accurate, and the consequence is that the well known journal for which he caters has suffered considerably in reputation. We do not suppose that the same man has acted continuously as correspondent for the past three years, and that he is to be held responsible for all the errors circulated. And neither do we suppose for a moment that the London newspaper prefers sensation to accuracy. Indeed we have reason to know that it inculcates the need of utmost care on the part of its correspondents. The explanation of its misfortunes seems to be that it sets too much store by expedition, and prefers to have doubtful news ahead of its contemporaries rather than trustworthy intelligence simultaneously with them. The last case is a bad one. The correspondent seems to have taken the *Chuo Shimbun's* recent stock-market extra as absolutely correct. He telegraphed it at once to London, and now Reuter's agency sends it back to Japan, which is carrying coals to Newcastle with a vengeance. We should have imagined that any one exercising ordinary discrimination would have apprehended the grotesque character of the proposals attributed to Russia by the *Chuo's* extra, or, at all events, that any one conversant with the respective qualifications of Japanese journals would not have accepted without query an item of such a nature coming from such a source. Under the circumstances no one will be surprised should it appear that the *Niroku Shimpō's* extra of the 9th instant has also been transmitted to the *Daily Mail*. The *Niroku* has now been trading for nearly two years on the reputation it acquired by being the only Tokyo journal to give any hint of the Anglo-Japanese alliance, but during that time it has published story after story, each of the most circumstantial nature and all utterly false, so that its name has now become a byword in educated circles, in spite of the respect felt for its editor and the ability displayed by its articles. Things have their compensations, however. We observe that if the *Chuo's* extra did great injustice to Russia by depicting her as rejecting all interference with the spoils she has already won, and proposing a fresh act of spoliation to Japan, the *Niroku's* extra does correspondingly exaggerated justice to Russia's love of peace and sense of moderation.

Thursday, October 15.

The second council of Elder Statesmen since the Manchurian question became acute, was held on the 13th instant at the Prime Minister's residence, and lasted from 1 p.m. until 7 p.m. including an hour for the evening meal. The previous meeting had been on the 23rd of June. This event has naturally given rise to much conjecture, chiefly of an alarmist nature, but it is easy to see that the secrecy hitherto observed is strictly maintained, and that beyond the fact of such a meeting having been held, the general public know nothing. Indications are not wanting, however, that the council arrived at a decision with unexpected celerity, and as Marquis Ito's intention of leaving for his Oiso villa on the 14th instant became known on the morning of that day there is some reason to infer a lightening of the situation. On the other hand the leading Tokyo journals write

in a very unquiet strain. The *Fiji Shimpō* says that in spite of the extreme patience shown by the Japanese and in spite of their sincere and earnest desire for peace, the conduct of the Russians renders an amicable settlement almost impossible. Excuses are made on the ground that the acts of the Russians at the front have not the approval of and are not inspired by the Central Government, but the *Fiji* avers that such a plea can not be seriously entertained. It is the duty of Viceroy Alexieff and of the Russian Representative in Tokyo to see that the proceedings of Russian officers and officials in Asia do not belie the policy of their country. Russia's attitude in this matter may be compared to that of a man who enters a conference chamber sword in hand. It is difficult to discuss amicably with such a person. There are limits to the patience of the most long-suffering, and Japan's patience is very nearly exhausted. She desires peace, it is true, but she does not desire peace that impairs her national honour in any respect. As to that the people are a unit, and the Government may rely on their unqualified support. "It is for our statesmen to push forward unflinchingly and direct along the line of their convictions, and to lose not a day in arriving at a settlement. The people's decision was formed long ago. Nothing is now desired except a speedy solution whatever it be." (*Waga tokyokusha taru mono wa yō chokuzen shoshin wo totte ichi nichi mo hayaku sono shinatsu wo tsugeshimu beshi. Kokumin no kesshin wa sadamareru koto sude ni hisashi. Ima wa isure ni shite mo tada sono kaiketsu ni suniyaka naru koto wo nosomu nomi.*)

The *Kokumin Shinbun* also abandons all circumlocutions and euphemisms and declares plainly that the nation has hitherto trusted its statesmen implicitly, but that if they abuse its confidence, they must expect something worse than merely public criticism. The country wants two things. It wants to have Korea brought completely within the sphere of Japan's protective influence (*sensen waga seikyoku no moto ni kogo suru*), and it wants to have the open door preserved in Manchuria under Chinese sovereignty, always with due recognition of the already established enterprises of Russia (*Rokoku no keiei no seikyoku wo minshiki suru*), in that region. Nothing more is desired. Nothing less will satisfy. To achieve that the people will not shrink from any sacrifice, and they know that they are strictly within their rights. They are not prepared to barter. What is here stated is the irreducible minimum of their expectations, and if the Government accepts less, it will have to fight the nation before it fights Russia. These words are addressed to the Elder Statesmen also, who, if they have a half share in the successes of the Cabinet, must also accept half of the responsibility. "Should there be any evidences of undue and voluntary yielding on the part of our officials, the just anger of the nation will be unappeasable by the force of even ten thousand oxen. And in that event, the country's agitation will be as that of a swarm of wasps whose nest has been broken." (*Moshi tokyokusha midari ni mizukara jōho suru keiseki araba waga kokumin no gifun wa bangyu to iyedomo kore ato ni iukimodosu koto katakaru beshi. Shibashite koto koko ni itaraba tenka sōsen hōsō wo tsukikuzushitaru ga gotoken.*)

The *Asahi Shinbun* also writes in a very strong strain, but as it takes for text a somewhat exaggerated view of the rumour

that 500 Russian soldiers have sailed from Port Arthur for an unknown destination, the force of its article is weakened. The import is that if there is to be any compromise, it must be reached by the route of mutual concessions. Japan can not go on perpetually yielding. "The other Powers have long recognised the circumspect attitude maintained by Japan. The decision of the nation has already been taken. It is certainly not too soon for our statesmen to dispose of the question by one resolute coup (*itto ryōdan*). That is our confident belief."

The *Jimmin* contends that every day's delay makes against Japan and for Russia. There is not the slightest hope that Russia will abandon Manchuria in obedience to any verbal representations. If the present Cabinet talking big, fail to put its declarations into practice, Russian aggressive enterprises will steadily be carried to completion, and when Japan opens her eyes, her case will be beyond relief. This is the moment to decide whether the country's prestige shall wax or wane.

Friday, October 16.

News Agencies and the leaders of the second-class company of journalists busy themselves with alleged accounts of the doings of the Cabinet and Elder Statesmen's Councils on the 13th inst. Obviously these statements are nothing more than clever conjectures. One story presents Counts Inouye and Matsukata as having strongly advocated peace on account of the cost of war, and Marquis Ito as having shown an unexpectedly resolute attitude. Another tale depicts Count Inouye as standing alone, but what ground he took we are not told. However these interpreters agree that Marquis Ito's views prevailed and that they took the form of the recognition of China's sovereignty in Manchuria as well as of Russia's acquired interests there; the withdrawal of Russian troops except railway guards, and the final guarantee of Korea against foreign interference. Such terms of settlement are merely a *réchauffé* of what the public have been saying for the past three months. For our own part, we fail to see why there should be any occasion to accuse Japanese statesmen of the belated improvidence implied in the hypothesis that they are only now making up their minds, or why each meeting of Cabinet Ministers and Elder Statesmen would require some special interpretation. The established fact is that negotiations of the highest moment are going on in Tokyo at present, and that Japanese statesmen would be behaving in a very singular manner if they failed to assemble from time to time for the purpose of considering and discussing the various phases of the conference.

POLITICAL NOTES.

We have already explained that at its recent general meeting the Society of Fellow-thinkers with regard to Russia appointed a committee to which was entrusted the duty of promoting the efficacy of the chauvinistic resolution adopted by the Society. This Committee, according to the *Fiji Shimpō*, waited upon the Prime Minister yesterday and inquired as to the progress of negotiations between Russia and Japan. Count Katsura is said to have admitted that the Cabinet had found itself obliged to reject two sets of proposals advanced by Russia, but that he considered it necessary to observe absolute secrecy with regard to all details. The Committee withdrew, and came to the

conclusion that the wisest course to pursue under the circumstances would be to adopt an attitude of the greatest circumspection.

The *Seinen Doshikai* is an association which may be described as the resuscitated National Unionists, or as an assemblage of the younger bloods of the *Tai-Ro Doshikai*. It claims to have a membership of 37,000. On the 9th instant it addressed a representation to the Prime Minister, wherein a great many very severe things were written about Russia, and wherein it was vehemently insisted that the season of negotiation is over, and that nothing remains but appeal to the sword. The *Seinen Doshikai* is not to be regarded very seriously, though its doings are among the straws showing how the wind blows.

To the number of the Seven Professors has now been added Mr. Tatebe, so that the group aggregates eight. They had a convivial meeting in the Maple Club on the 8th instant, and it appears that they have compiled a book of 170 pages setting forth their views as to the necessity of drawing the sword against Russia. We can not clearly distinguish whether this book has been actually published or whether it is now in process of printing, but the language of Japanese journals conveys the former impression. The Professors are not represented as contemplating any active movements for raising public opinion. They are content at present to ventilate their views through the medium of the printing press.

THE CHINA-JAPAN TREATY.

The revised commercial treaty between Japan and China was signed in Shanghai at 9 a.m. on the 9th instant, the corrections preliminary to signature having been made during the 8th and the night of the 9th. In the *Fiji Shimpō* we find a telegraphic summary of the contents of the Treaty; namely:—

- Art. 1.—Customs duties, supplementary customs duties, *likin* and consumption taxes shall be on the same basis as that arranged with other Powers.
- Art. 2.—The right of navigating the Yangtze between Ichang and Chungking shall be possessed by Japan and no objections raised by Chinese subjects shall be entertained.
- Art. 3.—The privilege of navigating China's interior waters may be enjoyed, independently of open port limits, by any Japanese subject giving due notice to the Imperial Maritime Customs.
- Art. 4.—Co-operative enterprises of Chinese and Japanese subjects shall be governed by the provisions of the Anglo-Japanese Treaty.
- Art. 5.—Chinese imitations of Japanese productions shall not be entitled to the privilege of trade marks or patents. All publications of an inflammatory character, whether printed in Japanese or in Chinese, shall be denied copyright.
- Art. 6.—Contains provisions the same as those of the English treaty with regard to the Chinese monetary system.
- Art. 7.—Contains provisions for the uniformity of weights and measures.
- Art. 8.—The present Rules for the Navigation of Inland Waters shall be amended.
- Art. 9.—The most-favoured-nation clause.
- Art. 10.—Peking shall be opened to foreign trade after the withdrawal of all the foreign Legation guards. Changsha in Hunan shall be opened within 6 months from the date of exchange of the Treaty's ratifications. Mukden and Tatung-kou shall be opened immediately after the exchange of ratifications.
- Art. 11.—Extraterritorial jurisdiction shall be abolished after China has remodelled her laws. (This Article follows the lines of the Anglo-Chinese Treaty.)
- Art. 12.—The Treaty is to be written in Chinese, Japanese and English, and the English version is to be conclusive in the event of disputed interpretation.
- Art. 13.—The exchange of ratifications is to take place in Peking within six months of the date of signature.

THE ASSOCIATION OF FRIENDS OF AMERICA.

The *Beiyu Kyokai* held a meeting in the Imperial Hotel on the evening of the 8th instant to welcome the new Representative of the United States in this country, His Excellency Mr. Griscom. About a hundred covers were laid. The healths of the President of the United States and of the Emperor of Japan having been drunk with enthusiasm, Baron Kaneko, President of the Association, proposed the health of the guest of the evening, His Excellency Mr. Griscom. The Baron referred to the close relations that had always existed between Japan and the United States, and mentioned the special honour conferred on the Association in connexion with the erection of the Perry monument; a project which, though it emanated from a private society like that over which he had the privilege of presiding, had been most warmly regarded by the United States Government, which sent two men-of-war to take part in the ceremony of unveiling the monument, and caused an officially prepared report of the proceedings to be presented to the Emperor and the Crown Prince of Japan. It was with sincere pleasure that the speaker invited them to drink to the health of the new Representative of a country which had always shown itself such a genuine friend of Japan.

The toast having been drunk with much enthusiasm, Mr. Griscom rose and said:—

Baron KANEKO and Members of the Friends of America Society.—You have been so kind as to drink my health and I feel that it would be ungracious on my part if I did not rise to say a few words in acknowledgment. Your distinguished President, Baron Kaneko, in proposing my health has referred to me personally in all too flattering terms. But when he spoke of the friendly relations existing between our two countries he used no exaggeration and it is to this part of his address that I wish to add my hearty endorsement. Indeed the difficulty is to find terms sufficiently strong in which to express the cordiality existing between us. No one knows better than you, gentlemen, what feelings exist in the United States towards Japan. Probably all of you have been in America and I sincerely hope that all of you have received kindness at the hands of my countrymen. I know at least that one of you (I refer to your distinguished President) has received very unusual honours. Harvard University saw fit to confer on Baron Kaneko an honorary degree, and to give you an idea of how great an honour this was I need only mention that Baron Kaneko's companions in receiving degrees on that occasion were Admiral Sampson, one of our greatest Naval Commanders, and Theodore Roosevelt, the present President of the United States. Harvard University very seldom gives degrees to foreigners, but it was delighted to honour one of its own sons who had risen to be a Cabinet Minister.

Baron Kaneko has referred to the purposes of your Society. The name "Friends of America" sufficiently explains its purpose. I believe the population of Japan at present is about 40,000,000. Well I don't see any reason why your Society should not have 40,000,000 members. If the Friends of Japan in America were totalled I believe they would be found to number nearly 80,000,000. I understand that from the start your Society was a success, as it well deserved to be. To be friends with America does not mean that you must be enemies of any other nationality. In stimulating the fraternal feeling between our countries you are bringing one step nearer the possibility of universal brotherhood, and you harm no one. A society without malice and with the highest philanthropic purposes well deserves the success which your society has met.

Its good effect has already been felt. If this society went out of existence to-morrow there is a monument which would perpetuate its memory. I refer to the monument at Uruga erected under the auspices of this Society, to the memory of that great Japanese-American, Commodore Perry. I hope that your society will last as long as that monument stands.

The friendship between our countries may be likened to a strong and rugged oak tree. The roots are firmly embedded and the tree is capable of standing many a storm. But like all trees it is all the better for a little attention and this help of friendly hands. Your Society can serve such a purpose

and play such a helpful part to the relations between Japan and the United States. In constructing the Perry Monument you have fanned the flame of our friendship. I hope that this will be the forerunner of other acts to come. I do not mean that we expect you to build monuments to other Americans. But there are many smaller and easier acts which you could do. For instance I wish your Society could rake away the ashes which have settled on the memory of Townsend Harris, the first American Minister to Japan. The truth is that the people of the United States are shamefully ignorant of the great services which he rendered to both countries. Even in Japan he is all too little known. I think he almost deserves to have his name coupled with Perry's whenever the illustrious Commodore is mentioned. The greatness of Harris's work lies in the fact that he accomplished it without a fleet and without even the encouragement of his own Government. The difficulties he encountered were enormous but he surmounted them all, and at the end of six years' work he had opened up diplomatic relations and placed them on a basis which made the work of his successors comparatively easy. He taught international law and diplomacy to the Government of Japan and it is recorded that he made himself extremely disagreeable on more than one occasion. But throughout it all he convinced the Japanese officials of his own absolute honesty and that the purposes of our Government were straightforward and harmless. Above all others it was he who established mutual confidence and laid the foundation for the warm friendship which sprang up between the U.S. and Japan. In reviving his memory you will strike the keynote of our relations and will be carrying out what I understand to be the fundamental purposes of your society.

And likewise in the field of commerce your society can find ample scope for its energies. What we want is a friendly rivalry which stimulates both parties to renewed and better efforts. We are embarked on an undertaking for next year whose whole success depends on the co-operation of the various nations of the world. I refer to the great International Exhibition which is to be held at St. Louis. The Government of Japan was one of the first to come forward and promise its support and a generous appropriation of guarantees that this Government will be most creditably represented. It is in the matter of individual exhibits that you, gentlemen, can do a great deal of good by encouraging your fellow countrymen to participate and pointing out to them the material benefit which is sure to ensue.

But your society will doubtless carry on its great purpose without further suggestions from me. All I wish to do this evening is express my sympathy with your work and my willingness to co-operate if occasion requires. At the same time I desire to thank you for the great honour you have done me in inviting me here to-night, and in closing I wish to propose the toast of "a long existence and great prosperity to the Friends of America Society."—(Loud Applause).

Mr. Hirata, a member of the Diet, then addressed the meeting as follows:—

GENTLEMEN:—I have been given to understand that there shall be no special speeches to-night. It is therefore incumbent upon me that I shall hold my tongue—at least in accordance with the unwritten law of the present gathering. But, Gentlemen, I spent many happy years in the "land of free speech," and owing to the good fare, excellent wines and brilliant eloquence of Minister Griscom, I find it impossible to prevent a speech escaping from my mouth. Yet in so doing, believe me that I will not, in any way, give either our guests or this honourable *Beiyu Kiokai* any offence.

Gentlemen, it affords me a very lively pleasure to have the honour of addressing a few words to this evening's assembly, and all the more so as we are here met to welcome America's latest representative in Japan. From the now far-off days of Townsend Harris, who did more than any man to awake Japan from her sleep of centuries; who was, in his way, one of the greatest benefactors our nation has ever had—down through the long line of ambassadors, ending with Judge Bingham, Mr. Hubbard, Mr. Dun, Mr. Swift, and that kind and good man, the late lamented Col. Buck, the United States has ever sent us men of sterling qualities, of noble character, and of a high grade of diplomatic skill. I am not here to-night, Gentlemen, to rehearse the many benefits America has done Japan, or to recount the innumerable ways in which her representatives in Tokyo have endeavoured to express to us that hearty feeling of friendship to Japan which is so peculiarly characteristic of the American people; I am here rather to give a welcome, a warm, enthusiastic welcome, to Minister Griscom, who, despite his comparative youth, has already shown himself in other lands a diplomat of unusual skill and excellence, and whose appointment to Japan has been welcomed by both Government and people. I believe, and most sincerely so, that both Japan and America are to be

congratulated upon the presence of so distinguished and learned a diplomat in our midst—particularly in these trying times, when Japan has the greatest need of such a disinterested friend as America has always been to her.

Our guest of this evening has still another hold upon us. He is the son of one of America's most enlightened and progressive money-kings, Mr. Clement Griscom, who has done so much to improve and develop the shipping industries of the United States. President of a dozen of the greatest companies and representing interests amounting to many millions of dollars, Clement Griscom has from first to last earned the respect as well as the thanks of his fellow-countrymen. We Japanese who are making such strenuous efforts to improve our mercantile marine and to foster and build up the industries connected therewith, can not do better than model our course of conduct on the lines so successfully inaugurated and followed by the father of our distinguished guest of this evening. And may I not express the hope that when Mr. Clement Griscom does pay us the expected visit, he will find Japan a field worthy of his profound attention? I wish I had eloquence enough at my command to ask our honoured guest to interest his noble father more closely in our country and its immediate interests. In any case, I know, and am glad to know, that Mr. Griscom is our friend, and let me express the hope that he will ever remain the same.

And so, Gentlemen, I would bid a cordial welcome to our honoured guest, and express the hope that his stay in Japan will be long, and redound no less to his credit than did his fine work in Turkey and Persia. We Japanese are slow to forget a friend; we have a very lively memory of a benefit. And so, in remembering the many benefits received at the hands of the United States, let us express our heartfelt thanks to this, the representative of the Great Republic.—(Loud Applause.)

The meeting broke up at 10 o'clock.

THE ELECTRIC RAILWAY DISPUTE.

Saturday, October 10.

At length this long protracted quarrel has been adjusted. The disputants have mutually agreed that the fare for the first section only shall be fixed at a uniform rate of 3 *sen*, and that so soon as the sanction of the Authorities has been obtained to that course, all the present Directors shall resign *en masse*. It is believed that the enterprise will now be carried on quietly.

Meanwhile the Municipality appears to have seriously entertained the idea of resuming the Company's charter and making the lines public property. The Authorities, however, have declined to endorse an act which would be very like spoliation.

Monday, October 12.

At length the dispute between the shareholders of this company has been settled. On the 9th instant a compromise was signed by all the Directors. It consisted of four clauses:—(1) That this Company's enterprise shall be carried on independently; that every effort shall be made to expedite the work, and that the first section shall be opened to traffic before the end of this year if possible. (2) That the system of fares shall be a uniform rate of 3 *sen*, but that the feasibility of such a plan shall be determined by the result of experiences obtained in connexion with the working of the first section. (3) That within one month of completing arrangements of a pressing character, the whole of the present Board of Directors shall resign. (4) That there shall be chosen for president a man of popularity and reputation who has not been connected with the present dispute.

This is only a preliminary arrangement. Its final ratification will take place in the presence of Marquis Ito. It is expected that the new President will be either Viscount Enomoto, Mr. Takashima Kayemon or Mr. Asada Tokusoku, formerly Minister of Home Affairs.

In consequence of this arrangement the shares of the Company have risen consider-

ably, the last quotation being 82.50 yen for 37½ yen paid-up shares.

Thursday, October 15.

The Electric Tram Company is prosecuting its work very vigorously, the workmen being incited by competitive rewards. It is anticipated that the conversion of the horse-trams into electric lines will be completed by the month of November as far as Ueno.

Meanwhile the application of the Street Railway Company to charge a uniform fare of 3 sen on the Kanda-Hanzo section of its line has been rejected, on the ground that if this 3 sen fare be, as alleged, a uniform rate, it is not just to charge it on one section of the line only. Our readers should be informed that the Street Railway Company will soon have two lines in operation, one running direct from Sukiya-bashi to Hanzo-mon, the other going from Sukiya to Kanda. The latter is already open and the fare is 2 sen. What the Company proposed was to charge 3 sen for a ticket direct from Sukiya to Hanzo, so that a traveller going round by Kanda would have to pay 5 sen. The application has now been amended in the sense of making the Sukiya-Hanzo fare also 2 sen.

A SELF-CONVICTED MUNCHAUSEN.

It seems that unmerited attention has been paid to the utterances of a mythical person quoted by the *Viedomosti* of St. Petersburg. We call him mythical because there exists no person in the world who answers to the description given of him. A man who had passed twenty years in Japan, who had filled the post of a foreign Minister there and who had been present at the dinner given in the British Legation to celebrate the conclusion of the Anglo-Japanese alliance—there is no such man. He is a fraud from the outset. And his display of ignorance is as remarkable as his false description of himself. For in his eagerness to discredit the Japanese, he avers that they are legislating to deprive the foreign residents of any land which may have already come into their possession. If that is all he knows about the Japanese and about the situation in Japan his years here must have been curiously squandered.

What has chiefly attracted observation is his statement that in the event of Japan's forces being defeated by Russia, a massacre of foreigners in this country would follow on a scale of unparalleled enormity. It were waste of time to discuss such an allegation seriously, but it reminds us of an interesting fact attested by Japanese history, namely, that this country has been, in all ages, curiously free from mob outrage. During the feudal era, the agricultural class occasionally had recourse to concerted demonstrations by way of protest against heavy taxes or despotic exactions. The bamboo spear and the mat banner used to be spoken of with some awe in those days, but they were inconvenient solely to oppressive officials, and never once, so far as our reading goes, was such a demonstration attended by wholesale destruction of property or life. In modern times similar displays have been seen: assemblages of complaining farmers or of persons with some grievance to press on official attention. The city mob, however, which kills, pillages, burns and wrecks is something that we do not find anywhere in this country's annals. The point is worth notice. No one can affirm with confidence how the people would behave in the presence of a crisis such as has never yet confronted them, defeat by a foreign Power; but of all

inconceivable things a massacre of foreigners or any destruction of foreign property by a mob seems to us the most unlikely.

There is no occasion to dwell further upon the tissue of falsehoods and misrepresentations put into the mouth of this imaginary personage by the St. Petersburg journal. Whether the man himself is a Munchausen or whether that epithet should be applied to his reporter in the *Viedomosti* we can not tell, but it must strike every one as supremely amusing that such a person as this ex-Minister should bring charges of deceit against the Japanese people. It will probably have occurred to our readers also, after perusing the *Viedomosti's* statements reproduced in our issue of the 13th instant, that however glaring may be the untruths thus ventilated they can not fail to deceive a great many Russians, and that, by thus creating a prejudice against the Japanese nation, they will contribute to prevent a peaceful issue from the present complications. We are glad to reflect that no such writing has ever disgraced the columns of a Japanese journal with respect to the Russians, and if the St. Petersburg newspaper diplomatist has any existence, we would ask him to reflect seriously whether men like himself are not mainly responsible for any anti-foreign feeling that may exist in Japan. Such calumnies and harsh criticisms as he utters must make Europeans disliked by every Japanese reader of his libels. This, however, is the old story. It has been frequently and truly observed that those who themselves hate and habitually traduce the Japanese are precisely the men most prone to accuse them of anti-foreign feeling.

With reference to the personage through whose alleged mouth the *Viedomosti* recently ventilated a column of anti-Japanese statements, our readers will remember that he was represented as having been present at a dinner given in the British Legation in Tokyo to celebrate the conclusion of the Anglo-Japanese alliance, and that he depicted Sir Claude MacDonald as much dissatisfied because the alliance had been negotiated without his knowledge, and the British subjects who were present at the dinner as equally disgusted that their country should have joined hands with a nation which never took any pains to conceal its dislike of foreigners. In commenting on this mythical diplomatist put forward by the Russian journal we did not think it necessary to allude to this particular part of his romance because the falsehood was sufficiently glaring, it being a matter of history that Sir Claude MacDonald was himself one of the original promoters of the alliance. But there may be some interest in now stating, as the result of direct inquiries made at the British Legation, that there never was a foreign Minister answering to the *Viedomosti's* description, and that there never was a dinner at the British Legation in celebration of the alliance. Doubtless the story invented by the St. Petersburg correspondent was intended for domestic consumption alone. The romancist did not imagine that his clumsy work would ever be exposed to the critical scrutiny of readers in Japan. Probably, too, he will never learn that his deception has been exposed. But if he can square accounts with his own conscience he is fortunate, for the only construction to be put on his writing is that he set himself deliberately to create an anti-Japanese prejudice in Russia and thus to increase the chances of war. We have no hesitation in saying

that his methods are just as distasteful to Russian gentlemen as they can be to Englishmen or Japanese.

FUNERAL OF MARQUIS ITO'S MOTHER.

The funeral cortege of Marquis Ito's mother left Shiba Sannai punctually at 1 p.m. on the 12th instant. The procession was of immense length, being formed by practically all persons of prominence in the capital and augmented by an almost interminable line of flowers. In spite of the constantly falling rain Marquis Ito walked the whole way as chief mourner. At the temple, Zuisho-ji, a large concourse of mourners had assembled, including nearly the whole of the Corps Diplomatique, and it may well be supposed that no little difficulty was experienced in finding accommodation for some three hundred carriages and about five hundred *jinrikisha* on the adjacent roads: only by most excellent arrangements was dangerous confusion prevented. The service was after the Buddhist ritual. Although Zuisho-ji is a tolerably spacious edifice, accommodation could not be found inside for more than a small fraction of the numerous mourners. A majority were obliged to wait outside, where a huge marquee had been provided for their accommodation, until, in due sequence, they entered the temple to pay the usual tribute of respect before the bier. The imposing dimensions of the affair testified the universal respect in which Marquis Ito is held.

MARINE INSURANCE.

The *Shogyo Shimpō* reports that rates of marine insurance on goods destined for Japan rose in London from 0.125 to 0.5 per cent. between the 11th and the 12th instant, and that this fact, taken in conjunction with the sharp depreciation of Japanese securities is regarded as showing that London has ceased to hope for a peaceful conclusion of the Russo-Japanese negotiations. Apparently this news refers to goods shipped in English bottoms, but why any additional risk should apply to such goods it is not easy to see, unless, indeed, the supposition be that England means to engage in the war. Even supposing the peace broken and even supposing England to be involved, what is certain is that from Port Said to Hongkong no danger would attend any English or Japanese ships, for all the coaling stations would be closed to the enemy's vessels.

Some of the foreign insurance companies of America are said to have instructed their Yokohama agencies that for the present no policies are to be issued on the lives of naval or military officers of China, Japan, Russia or Servia.

NOTES ON CURRENT EVENTS.

On the 8th instant the editors of the principal Tokyo journals were summoned to the Naval Department and advised, in the public interest, not to publish any items with regard to movements of Japanese war-ships, inasmuch as the most ordinary incidents connected with the Army or the Navy are apt to be misconstrued at a time like the present.

A disease called *Nosekizumaku-yen* is prevailing in Tokyo. It has its principal seat in the Asakusa district. We are unable to identify the original word, of which the above is a translation, but the disease is evidently a species of meningitis.

Mr. Inagaki, hitherto Chargé d'Affaires in Bangkok, has been appointed Minister, and the same course has been adopted in the case of Mr. Sugimura, Chargé d'Affaires in Mexico.

The *Official Gazette* of the 10th instant contains a long list of decorations granted by foreign Governments to Japanese officers and officials with the consent of the Emperor of Japan. Among the number we observe that Major-General Fukushima and Vice-Admiral Ijuin receive the K.C.B., and Colonel Shiba gets a C.B. Viscount Hayashi and the Viscountess are recipients of the Coronation Order. It is also noticeable that quite a number of Chinese decorations are bestowed on Japanese officers who took part in the campaign of 1900. It is somewhat singular to find a country granting such distinctions to the officers of an army which took part in the invasion of its territories. The Governor of Kyoto, Mr. Omori, and the Governor of Nara, Mr. Terahara, are also on the list of favoured persons. We do not know what they have done on China's behalf. Even sergeants and corporals are included in the recipients of Chinese decorations, doubtless on account of their services in garrisoning Peking. Major-General Fukushima gets a German medal, and Lieut.-General Yamaguchi receives the first class of the Red Eagle of Prussia. Russia gives the Second Class of the Order of Anna to Major-General Akiyama, now in command of the Japanese troops in Peking. Marquis Oyama and Lieut.-General Terauchi are given China's highest order of the Double Dragon.

The formation of a new insurance company is announced. Its projectors are Mr. Hadano Shogoro, of the Keio Gijuku, and Mr. Inouye Kakugoro, and it is called the *Chioda Seimei Hoken-kaisa* (Chioda Life-Insurance Company). The idea of its projectors is to make it essentially a mutual affair, and they propose to issue policies for fixed periods after the manner of American companies. The capital is 300,000 *yen*. Excellent names appear among the shareholders, as, Messrs. Masuda Ko, Hayakawa Senkichiro, Sonoda Kokichi, the two Fukuzawas, Takashima Kokinji, Ono Kokei, Obata Tokujiro, Kimura Riyemon, Otani Kahei and others. With such a backing the Company can scarcely fail to succeed.

The ceremony of unveiling the bronze statue of the late Prince Arisugawa, Chief of the Head Quarter Staff during the early stages of the China-Japan War, took place on the 10th inst. The statue was designed by Okuma Ujihiro. It was cast at the Koishikawa Arsenal and it stands in front of the Head Quarter Staff Offices. Field Marshal Marquis Oyama read an address after the statue had been unveiled by the son of the deceased Prince. Among the personages present was Prince Tokugawa Keiki, the last of the Shoguns, who delivered a speech highly eulogising the virtues and abilities of the deceased, and noting that the date of unveiling the statue was the anniversary of His Imperial Highness' appointment to the rank of general. What gave special interest to Prince Keiki's participation in the ceremony was the fact that Prince Arisugawa acted as commander-in-chief of the Imperial troops during their campaign against the Tokugawa adherents.

The projectors of the statue were Marquis Yamagata, Marquis Oyama, the late Marquis Saigo, the late Viscount Kawakami and Admiral Viscount Ito. The height of

the statue itself is 13 feet, and that of the stone pedestal 14½ feet, and the cost has been 66,919 *yen*.

In Tokyo journals frequent allusions are now made to a Russian officer whose name, so far as we can gather from its transliterated equivalent, is "Asbereff." He arrived in Nagasaki from Port Arthur the day after Baron Rosen's return to that port from his visit to Viceroy Alexieff, and proceeded thence to Tokyo, making, however, but a very brief stay in the capital. It was supposed that he would go back immediately to Port Arthur, but he remains in Nagasaki, and is regarded by the Japanese public as an emissary of the Russian Government. He is in constant telegraphic communication with Viceroy Alexieff.

The general feeling seems to be that Russia's Representative in Tokyo will leave no stone unturned to promote an amicable settlement of the complication, and it is the earnest prayer of all thoughtful persons that he may succeed.

The *Jimmin's* Nagasaki correspondent confirms previously received reports that the representative of Messrs. Ginsburg & Company in Nagasaki sent his family to Odessa on the 3rd instant, and himself withdrew to Port Arthur, closing his office and apparently abandoning business. In view of the important part taken hitherto by this firm in Russia's East-Asian enterprises, the news is considered sinister.

But, as a matter of fact, it shares with many other items of news now current the peculiarity of being made out of whole cloth. We have ascertained on indisputable authority that the firm of Messrs. Ginsburg and Co. in Nagasaki is not closing at all. What has happened is that the firm's Nagasaki Manager, Mr. Mess, is taking his family to Odessa in order to secure better educational facilities for his children. So far from abandoning business in Japan, Messrs. Ginsburg and Co., as our own advertising columns show, have just taken over the freight agency of the Russian Volunteer Fleet for the whole of Japan.

An interesting article appears in the *Fiji Shimpo* with reference to the sums sent to Japan by emigrants from this country. Our contemporary gives the following figures as showing the amounts now annually reaching Japan from the emigrants:—

	<i>Yen</i> .
Hawaii	5,248,615
U.S. America	3,067,303
Canada	1,918,902
Australia	108,849
Vladivostok	500,000
Korea	751,865
Saghalien	400,000
Elsewhere	195,000
Total	12,190,534

At first sight this table looks gratifying, but the *Fiji* rightly argues that the true spirit of colonization does not animate persons who, instead of employing their profits to promote new enterprises or open new fields in the land of their adoption, think only of saving money to get home to their native country. That is not the way to make colonization success.

Not until January 1, 1859, was the number of lunatics officially registered in England, remarks the *Lancet*. At that date there were 36,762 insane persons—a proportion to the population of 1 to 536. "To-day they number over 113,000—a proportion to the population of 1 in 293—and the tendency of much of the insanity which comes under treatment to-day is to end in dementia and

to become incurable. Melancholia has shown in recent years a considerable rise among the educated and private classes of the insane, and recovery is rarely the happy issue of melancholia, more especially in men. But relief may be at hand nevertheless, and may come from the same direction as the evil. The increased intellectual activity, which is now reproached for bringing in its wake a train of psychological ills, will become more disciplined in its working, when the mental health of the people will improve, and the blessings of the fuller life which modern education and modern invention have brought within their reach will be enjoyed with impunity."

On Monday the Emperor appointed Lieut.-General Baron Kodama to succeed the late Major-General Tamura as Vice Chief of the Head Quarter Staff. In order to accept this new post Baron Kodama resigns the portfolio of Home Affairs, which is taken temporarily by the Prime Minister. Baron Kodama's appointment to the Head Quarter Staff seems to be regarded with much satisfaction in view of the difficult duties that may at any moment devolve on the occupant of that office. It had been anticipated that Major-General Fukushima might succeed Major-General Tamura, but a special selection has evidently been made.

An official report of the recent experiment made in transporting the 124th Voronezh Regiment of Infantry from Kharkoff, in Southern Russia, to Chita, in the Far East, has just been issued. The experiment was made both to test the Siberian Railway, and also to see how far the troops could be fed properly while on the journey. The results were thoroughly satisfactory. The regiment arrived at Chita after a journey of 24 days; the time occupied would have been much less if the halts at many of the railway stations had not been so long. The internal fittings and arrangements of these halting-places leave nothing to be desired. Of course, as the troops journeyed eastwards, the facilities became less elaborate in many respects, and at a few points the commissariat buildings were not ready for use; thus, the soldiers' rations had to be supplied by special cooking-cars, which had been sent on expressly from St. Petersburg, in order that they might be tested. In the middle of these cars is a spacious room with two boilers, capable of making soup and porridge for 500 men, a water-tank, a table, and a cupboard for supplies. On each side of the central space are store-rooms and two third-class compartments for the cooking staff. The military authorities claim that they could despatch in case of need 12 military trains daily to the Far East without disturbing the regular passenger and goods traffic. However, railway experts say that this would be impossible in view of the state of the Siberian Railway.

In his article on the Japanese Navy in the *Nineteenth Century*, Mr. J. H. Longford says that in the year 1866 a party of 14 Japanese students were for the first time sent to England by the Shogun's Government. They were all young men of gentle birth, who had given evidence of ability and industry, and naturally were all scions of families devoted to the Shogun's cause. They returned to Japan two years later, just as Enomoto was on the point of sailing from Shinagawa after Yedo had fallen. One of them joined him, and was entered as a cadet on board one of the ships. He fought throughout the whole of the subsequent struggle, on board ship while a ship remained, and afterwards on

land. When the struggle was over, the common soldiers and sailors who survived were soon released, but the officers were imprisoned in Hakodate for a year and a half. The prisons were mere cages, with no protection against heat in summer or the long continued bitter cold of Northern Japan in winter. The prisoners were fed only on pickled radish and Chinese rice, the latter being as much an abomination to any Japanese as Australian tinned mutton is to a well-to-do British workman, and they were defrauded by a dishonest gaoler of half the allowance which the Government had sanctioned for them of this unpalatable food, so that to close confinement in heat and cold were added the pangs of constant hunger. The young ex-student who shared the whole of this imprisonment is now Viscount Hayashi, the Japanese representative at the Court of St. James, and the gaoler who defrauded them of their rations came to him subsequently for employment and assistance.

Baron de Favereau, Minister for Foreign Affairs in Belgium, cabled the news on Tuesday to M. Pierre Bure, Belgian Consul-General in Yokohama, that Princess Albert of Belgium has given birth to a son. Prince Albert is the direct successor to the Belgian Throne, and hearty congratulations have been wired to him by the Belgian community in Japan, upon the arrival of another son. The Prince and Princess have been married about three years, and their first son, Prince Leopold, was born on Nov. 3, 1901.

A curious light is thrown on a certain class of mining enterprise by a letter quoted in *The Engineering and Mining Journal*. Among other recommendations of a certain mine the writer states that "it is in a rough, wild country where inquisitive stockholders would never go." This naive recognition of the value of inaccessibility, written in good faith by a man who evidently considers the public at large merely as fair game, moves the editor of the paper mentioned to sarcasm. He writes:—

"In the past we have known various surroundings of a mine quoted in behalf of its value, and among these good dumping facilities, fine scenery, and a salubrious climate have had undoubted merits; but a locality 'where inquisitive stockholders would never go' has even more obvious attractions. The gentleman who states the case so frankly evidently presupposes that the poor stockholders will be deprived of the right of sending a mining engineer to examine this hole-in-the-wall eagle's nest of a proposition, and we have had our feelings touched with visions of stockholders floundering with the unfamiliar snow-shoe over desolate wastes or trying vainly to pull themselves up steep cliffs in the face of falling debris, which, likely as not, is being kicked carelessly over the edge by the promoter himself, annoyed by such inquisitive people. It takes but little of that kindly touch of nature to evoke our keen sympathy for the inquiring or irate stockholders who are balked in their desire to visit the mine to which they are not expected to go. But we warn the ingenious originator of this new departure that we know mining engineers who are accustomed to skip from the Malay peninsula to the Klondike, who climb mountains for fun and ride across creation for exercise. There are all the materials ready for a startling climax when any one of these athletic searchers after truth invades the distant fastnesses of that lonely canyon and swoops down upon that vein of conglomerate which was to yield \$6 to a ton amid the seclusion of that dreadful spot."

The Court of Cassation has rejected the appeal of Mr. Mizobe Korechika, formerly Governor of Tochigi Prefecture, who was condemned by the Tokyo Local Court to 4 months' major imprisonment, a fine of 10 yen, and to make restoration in the sum of 1,000 yen, in connexion with corrupt practices. This is part of the aftermath of the textbook scandal. The public found much diffi-

culty in crediting Mr. Mizobe's guilt but apparently the Court of Cassation has not found any difficulty.

Statistics collected on the 10th instant show that much money is lying idle in the banks of Tokyo. These figures are given:—

	Yen.
First Bank.....	3,233,690
Mitsu Bishi	2,758,007
Mitsui	2,397,446
Hundredth	1,299,507
Yasuda	1,171,507
Nakai	1,165,725
Fifteenth	1,137,696
Bank of Commerce and Industry ...	1,096,587

The Louvre is passing through an anxious ordeal. Another of its treasures of antiquity, and in its way the most important in the world, is attacked. In 1869 M. Clermont-Ganneau, then dragoman of the French Consulate at Jerusalem, found in the ruins of Dhiban, to the east of the Dead Sea, a lettered monument, which the first experts of the day declared to be the triumphal stone of Mesa, King of Moab, reciting his triumphs over the Jews and the wars between the two countries from the time of David to Jehosaphat. The monument is in black basalt, dates nine centuries before Christ, and as the oldest example extant of alphabetic writing is the precursor of our own A B C. Renan pronounced it the "corner stone of Oriental epigraphy." It is impugned by an Austrian savant, M. Leowy, deeply learned in Semitic philosophy; but M. Clermont-Ganneau, who still survives, contends that this iconoclast is not qualified to pronounce upon the authenticity of Semitic monuments.

Japanese securities continue to fall in London. A telegram received from London by the Specie Bank on the 13th inst, says that the four-per-cents touched £79 on that day, against £81 on the 12th, and that the five-per-cents were quoted at £90 against £93 on the preceding day. This unprecedented fall is doubtless due to the war rumours assiduously circulated in Europe.

The statue inaugurated to the memory of Vercingetorix, as reported in the telegrams, commemorates the great Gallic chief's resistance to the Roman forces led by Julius Caesar, his capture B.C. 52 and his execution six years later, Gaul meantime, 51 B.C., being made a province of Rome. Clermont-Ferrand, where the celebration took place, is the capital city of the department of Puy de Dome.

THE BOOKSHELF.

"*The Christian Dainyos. A Century of Religious and Political History in Japan (1549-1650).*" By M. STEICHEN, M.A. Yokohama: Kelly and Walsh.

READERS of the *Japan Mail* will remember that this book first appeared in these columns about a year ago. It has now been reprinted, at the Rikkyo Gakuin Press in Tokyo, and appeared in book form during the month of July last.

The period of which it deals, the introduction of Christianity into Japan, with its subsequent extirpation, is one of very great interest not only to Japanese but also to foreigners, and has already attracted a good share of literary attention. To say nothing of the past, in addition to Father Steichen's monograph, we hear that the second volume of Pfarrer Haas' book is almost ready for the press, and the publication of Mr. Murdoch's long-expected volume is now a matter of daily expectation.

Father Steichen has done conscientious work, and has written with scrupulous fairness with regard to both the friends and the foes of the Catholic Missions of the sixteenth and seventeenth centuries. He understands the Japanese temperament (a most important qualification for any one who undertakes to write impartially on Japanese topics), and he does not fear to give blame where blame is due. These qualities will always make the book a good one for the student who really wishes to get at the whole truth (as far as such a thing is possible) with regard to a period in which so many conflicting motives and interests were at work. A popular book *The Christian Dainyos* will never be. Father Steichen has nothing of the journalist or novelist about him: his book is not written or dressed out so as to captivate the eye. It will not commend itself much to the ordinary globe-trotter, or to that class of foreigners who are contented to live for years in the country with their eyes closed to all that is going on around them. It will always appeal to the genuine student, and, after all, it is the verdict of this class that is really of importance.

Lost in Blunderland, by CAROLINE LEWIS; pictures by S.R.: London, William Heinemann.

WITH the appearance upon the public stage of questions which have a vital bearing upon the future well-being of that mysterious personage, "the man-in-the-street," the art of political satire seems to have been revived in England. About a year ago we reviewed a very smartly written book called "*Clara in Blunderland*" which, owing to its cleverness, wit and humour, seems to have caught the popular fancy, for ten editions have been exhausted. The compilers of this excellent bit of fooling have followed up their success with a similar volume called "*Lost in Blunderland*," which continues the political history of Great Britain after "Aunt Sarum" handed over the business to "Clara." It is often dangerous to try and repeat a success, but the authors of the *Blunderland* squib have justified their daring, for their new book is even more amusing, even more diabolically dexterous—to quote the *Academy's* phrase—than in their original venture. One follows the adventures of "Clara" with an absorbing interest even at this great distance from the scene, and all the way along it is a case of "Laughter holding both his sides." On every page the allusions to current events in the political world are incisive and very much to the point, while we feel sure that none of the high personages concerned, even "the Unicorn," will take offence at the kindly satire of the writers. Mr. Stafford Ransome is again to be congratulated upon the exceeding clever pictures with which he has illustrated the volume. We heartily recommend "*Lost in Blunderland*" to our readers—they will get more than a half hour's amusement out of it.

PLAGUE IN YOKOHAMA.

A fresh case of bubonic plague appeared at Matsukage-cho, 1-chome, Yokohama, early on the morning of Oct. 9th. The victim is named Uta (37), wife of a tobacco dealer named Shimidzu. She was immediately removed to hospital and her dwelling and surrounding houses isolated.

Another case of suspected plague appeared at Matsukage-cho on Oct. 14th. The sufferer is a youth named S. Uyeno, 15 years old. He was removed to the hospital, where a medical examination will be carried out.

MUKDEN, ANTUNG AND TATUNG-KOU.

IT is now quite clear that according to the United States Revised Treaty with China Mukden and Antung are to be opened immediately on the exchange of ratifications, and that, according to the Japanese Treaty, Mukden and Tatung-kou are on the list, the net result being that three places will become new marts of foreign commerce, namely, Mukden, Antung and Tatung-kou. The geographical difference between Antung and Tatung-kou is not considerable. They both lie on the northern bank of the Yalu, Tatung-kou being nearer the mouth of the river than Antung is. Both places were occupied by the Japanese troops in 1894-5 during the invasion of Manchuria, and both are now understood to be in Russian occupation. Antung, being the larger town of the two, serves virtually as Russia's basis of operations in the Yalu Valley, and of course the opening of the two ports will expose to the full light of day her doings in the Valley and the nature of her enterprise at Yong Am-pho. It can not be denied that the signing of such treaties constitutes an international recognition of China's sovereignty in Manchuria. On the other hand, it can not be denied that the present condition of that sovereignty is altogether illusory. The *Kokumin Shinbun* writes as though the duty of seeing that the treaties are carried into practical effect devolved on the United States and Japan. It appears to us that such a use of terms is somewhat erroneous. The right to insist on the effective operation of the treaties certainly belongs to America and Japan, but the duty of giving effect to them rests wholly with China. Neither the Government of Tokyo nor that of Washington has incurred any new responsibility by signing these covenants. The two Powers have obtained new privileges. That is all. Should China show herself unable to carry out the promises she has now made, the United States and Japan will not be bound to furnish her with ability. Their natural course in such circumstances will be to exact from her reparation for a violated pledge. That is the cold, unsentimental view of the situation. But there is a dramatic element also. It is to be found in coincidence of dates. On the 8th of October Russia stood pledged to finally terminate her military occupation of Manchuria. She had not been relieved of that pledge in any sense. It is true that she had endeavoured to find relief by repeatedly formulating new conditions as essentially preliminary to the carrying out of her original promise. But China, resolutely declining those conditions, had stood firm by the original compact, and thus it resulted that the eighth of October found Russia absolutely without excuse other than the promptings of her own ambition for retaining military possession of Manchuria. There was no reason for other States to suppose that she would deliberately ignore her publicly made promises. They would have

insulted her by any such supposition. Therefore they chose the 8th of October as the date for signing treaties which depend for their operation on the hypothesis that Russia will keep faith. Of course it is a farce. Were the matter judged by the strict rules of equity, China would be convicted of making a promise which she is incompetent, wittingly incompetent, to carry out, and Japan and America would be convicted of exacting from her a promise which they know her to be incapable of fulfilling. The practical point, however, is that China is the party primarily responsible; which is quite as it should be, for though, humanely speaking, we may pity the decrepitude that results from vicious habits, we can not forget that its origin is vice. What seems most probable is that Russia will offer no opposition to the opening of the new marts. It is quite feasible that her armed presence in Manchuria should continue without any interruption of the new trade routes. But unless her designs in the Yalu Valley be of a much more innocent character than appearances indicate, the opening of two new ports near the mouth of the river, especially when one of them constitutes her basis of operations in the Valley, can not fail to affect the situation materially. We have always held that wisdom and the dictates of self-interest point clearly to one course for Japan; namely, the opening of such ports in Manchuria as would place between Russia and Korea the barrier of neutral settlements, and the acquisition of such concessions in Korea itself as would effectually establish Japanese influence in the peninsula. Things look at present as though both of these consummations were in sight.

NAVIGATION SUBSIDIES IN JAPAN.

THE *Niroku* and the *Asahi* are employing their pens to popularize the idea of cutting down maritime subsidies in Japan. They adduce comparative figures in support of their contention. Thus the following table is put forward as showing that Japan stands third among the Powers of the world in this particular kind of liberality:—

	Yen.
Great Britain's yearly subsidies are.....	9,295,000
France's	19,084,710
Germany's	3,475,000
Russia's	3,736,260
Austria's	3,159,880
United States'	3,462,660
Japan's	8,295,218

But although at first sight these figures seem to justify an argument for reduction in Japan's case, both of our contemporaries have apparently lost sight of the cardinal fact that Japan's maritime marine is an essential part of her national armaments. All the countries tabulated above, with the solitary exception of Japan, possess mercantile marines, and, in some cases, magnificent fleets of transports, upon which they can draw for purposes of military conveyance in time of war. Most of them, indeed, have little occasion to consider the problem of over-sea transport. For Great Britain

and France, however, that problem has much importance, and every one knows that both Powers have made ample provision for its solution in time of emergency, yet each pays out in the form of navigation subsidies a larger sum than Japan pays. The plain fact is that if Japan withdrew her subsidies and suffered her mercantile marine to decay, as it inevitably must, she should, to be logical and practical, reduce her army also by one half and limit herself strictly to a stay-at-home defensive policy. For she has no ships serviceable as military transports except the steamers which owe their existence to the bounty of the State. Marquis Iro and the framers of the 1896 post-bellum programme fully appreciated that fact and made due provision for it. They had to choose between two courses. They had to equip the State itself with a fleet of transports such as Great Britain and France possess, or they had to encourage private enterprise to supply the want. There can be no second opinion as to which method was the wiser. The one would have entailed heavy expenditure, not temporary but continuous, without in any way improving trade facilities. The other would encourage commercial development and promote the maritime education of the nation at a much smaller outlay of money. Nothing could be more short-sighted, in our opinion, than an outcry, simply on grounds of *yen* and *sen*, against the system inaugurated in 1896. We do not pretend to think that the maritime enterprises of this country are conducted on the most economical or efficient lines, but we do think that much aptitude and considerable ability have been displayed, and we further think that in view of the difficulties against which Japanese Shipping Companies have to contend in foreign waters, subsidies from the Exchequer are at present the only alternative to the effacement of all ocean-going services. If the advocates of economy merely for economy's sake paid intelligent attention to these points, their arguments would be more interesting and convincing. But so long as they ignore the essential fact that Japan's maritime marine represents her only instrument of military over-sea transport, they can not obtain currency for their doctrine.

KOREA.

IT has already been reported in these columns that Russian subjects were said to be erecting buildings at Tho-yong-po. Unfortunately these names of Korean places convey little information to the average reader of journalistic news. At one moment they hear of Yong Am-pho; at another of Yong-chong, and at another of Tho Yong-po. It may be well to explain, therefore, that Yong-chong is the name of a considerable town and its surrounding district on the southern bank of the Yalu near the mouth of the river; that Yong Am-pho is the principal port in the district—one of the ten best

harbours in Korea, indeed—and that Tho Yong-po is a hamlet in the vicinity of Yong Am-pho. The first news pointing to the formation of a Russian settlement showed the Russians as having arrived in Yong-chong, and when they were next heard of at Yong Am-pho, the impression conveyed to the general public was that they had moved to a new part of Korea. But the fact is that, arriving in the Yong-chong district, they selected Yong Am-pho with its excellent harbour as a place of residence, and proceeded to purchase houses and lands there without any previous reference to the Korean authorities. Subsequently came news that they had extended their residential sphere to Tho Yong-po, which merely meant that they had taken a larger area into their projected settlement. Considering, however, that their right to reside within the smaller space at Yong Am-pho is still in dispute, this calm ignoring of all troublesome contingencies and of Korea's competence to assert her sovereignty, has naturally perturbed the Seoul Government considerably. On the 8th instant, it is said, a strong despatch was addressed to M. PAVLOW by the Korean Minister for Foreign Affairs—Li the Third, we presume—pointing out the lawlessness of the Russian trespassers' conduct, complaining that the remonstrances of the local officials had been entirely fruitless, and that the representations of the Korean Government had failed to elicit any clear reply, and calling upon M. PAVLOW to take effective steps for the purpose of restraining such acts. What answer this despatch will receive we need not attempt to conjecture, but it is necessary to observe that if Russia's conduct excites alarm and suspicion, she can scarcely blame any one save herself. M. PAVLOW and his countrymen are not without some warrant for their doings in the Yalu valley. They have the concession of 1896, of which the Russian version is officially conclusive, and the Russian version appears to be capable of a very wide interpretation. A question of rendering may therefore account for their extending to the whole region watered by the Yalu and its tributaries a concession which the Koreans seek to interpret as applying only to the lower reaches of the river. But differences of interpretation can not possibly be held to justify the arbitrary settlement of Russian subjects at any place they choose to select in the Yalu Valley. At some place or places they might fairly claim, we think, the right to erect such buildings as are essential to the prosecution of the enterprise contemplated by the concession. But the right to settle anywhere without discriminating sanction from the lord of the soil, would mean nothing less than the absorption of the whole valley into Russia's dominions. No one can pretend to believe sincerely that any such issue was contemplated by the Korean framers of the concession, or that its language justifies any such construction. Thus, simultaneously with their very flagrant disregard of solemn

treaties in Manchuria, the Russians are pursuing in northern Korea a line of conduct which plainly ignores Korean sovereignty and would not be attempted for one moment in the presence of a Power capable of asserting itself. It is necessary to conclude, therefore, that Russia's doings in Eastern Asia are now inspired solely by the doctrine, "might is right," and that she looks to rebuild her national reputation on her imperial successes. Such dramas have been acted again and again by great Powers ever since human nature emerged from the factory of its strange production. But such dramas have never previously been played on a stage brought within easy ken of the whole world by the telegraph and the journalistic reporter. Russia's practices are old-fashioned affairs, familiar enough to careful students of history, but having their outlines softened even for such students by the haze of distance. To-day, on the contrary, we are invited to observe them at first-hand and at the very moment of their performance, and while watching the unsightly drama, we have in our hands a libretto of beautiful international codes such as did not distress the consciences of empire-builders or their audiences in mediæval days. Russia can not expect a lenient verdict under such conditions and we do not imagine that she expects it. Her argument probably is, "I am dealing with men and things that are just as far as ever beyond the pale of modern international morality, and I do not propose that my dealings shall be hampered by any code of premature ethics."

YACHTING.

A moderate to fresh northerly breeze with some easting in it, and smooth water, provided capital yachting weather on Saturday, though the air had a decided nip that made overcoats welcome to onlookers.

The event of the day was to have been a race between the schooner yachts *Yamato Damashii* (Mr. G. H. Scidmore, Commodore of the Yokohama Yacht Club) and *Tommy Atkins* (Mr. J. T. Hamilton), but it proved something of a fizzle. The latter craft, it may be mentioned, is auxiliary, but as the race had to be contested under sail alone it is allowable to suppose that her propeller was lifted prior to the start. The honour of beating the Commodore—apart altogether from the value of the stakes, a pipe of tobacco—one would think, ought to have dictated that course. Yet there was some doubt with regard to the point on Saturday. Our information, derived semi-authoritatively, is that the necessary steps to win victory had been taken.

The start was fixed for 1.30 p.m. and *Yamato Damashii* unmoored in time to reach the vicinity of the starting line in accordance with the arrangements. The course was: from a line between two flagboats outside the south breakwater, and more than half way in towards the Creek, round the Lightship, round the Kawasaki Buoy, again past the Lightship, and home over the starting line. As will be seen this involved an open reach to the Lightship, a close fetch to windward for the buoy, a run back to the Lightship and a wide reach in. *Tommy Atkins* was less prompt than her adversary, and in addition to casting off too late to allow of her being on hand at the prescribed time, lost minutes in the harbour waiting for a passenger. The yachts carried all lower sail, *Tommy* in addition wearing a large outer jib, and *Yamato D.* her main gaff-topsail. It was after two when they got away, the starting gun being fired at 2.06.30 noon half-time. *Yamato Damashii* in the lee berth was first across the line, and *Tommy* hesitated for some time to bear away for his first mark. Mr. Scidmore immediately set his

fisherman's staysail which, doubtless, over great part of such a course and with such a breeze was of great value, but on the wind cannot have helped much. At any rate he increased his lead somewhat to the Lightship as will be seen from the times below (kindly supplied to us by a yachtsman who accompanied the racers over the battlefield). They nipped in sheets to squeeze up for the Kawasaki Buoy, and shortly it became apparent that *Tommy* was settling down to leeward. As time wore on, too, it seemed that in addition to out-pointing her opponent the flagship was also out-footing her. The weather became thick as they drew to the northward and eastward so they could not from the land be seen rounding the Buoy, but the facts of that event are that *Yamato D.* all but fetched, finding it necessary to make but a very short board, while *Tommy* had to tack twice. As will be noted the latter had been badly worsted in the windward work. *Yamato D.* ran before the wind like a scalded cat to the Lightship, adding 8 minutes to her already long lead, and, content to have the valuable stakes practically in his pipe, Mr. Scidmore merely worked on 3 minutes more to the finish. It was a very tame affair, but being a novelty was watched with a good deal of interest from the shore. The Commodore was accompanied by Capt. Weston, and Mr. Smith (who usually sails *Maid Marion*) was at *Tommy's* tiller. The owner (Mr. C. M. Birnie) was also on board. *Yamato D.'s* sendoes had carefully trimmed her down by the head with her boat davits and all other available weighty material that they could stow forward, but it would appear that under any circumstances *Tommy Atkins* will have to lift a few more propellers before she can get on even terms with the Commodore's yacht.

Times are as follow:—

	<i>Yamato D.</i>	<i>T. Atkins.</i>
	h.m.s.	h.m.s.
Lightship	2.14.00	2.15.40
Kawasaki	3.03.40	3.20.42
Lightship	3.42.20	4.07.30
Finish	3.51.00	4.19.10

Mary, Maid Marion and Haidee raced over the Lightship-Widow Buoy course, the first named allowing the others 10 and 25 minutes respectively. *Haidee* got across first, to leeward, *Maid* and *Mary* to windward, the former blanketing the latter for a few moments. *Mary*, however, promptly shook off her opponent and the race very soon assumed the usual processional aspect of such contests. At the Lightship *Mary* only led, it is true, by a minute and fifteen seconds from the *Maid*, which in turn was two minutes ahead of the yawl, but the gaps between the craft steadily widened all the time. The result of the race is shown by the times:—

	Finish.	Corrected
	h.m.s.	h'cap.
<i>Mary</i>	3.45.45	3.45.45
<i>Maid</i>	3.58.20	3.48.20
<i>Haidee</i>	4.10.10	3.45.70

Haidee thus wins first prize by a bare 25 seconds on her allowance, *Mary* is second and gains 2 record points, *Maid* 1 record point.

The Mosquito Yacht Club had arranged a race for their 21-raters, the prize Mr. Kingdon's Cup, but *Winsome*, which was leading, with *Pek* and *Vixen* in second place, could not find the Tsurumi Mark—indeed it appears there was no mark in the locality—and came home, all the others following suit.

Eight "Larks" went over the usual breakwater course, but the other way about, and owing to a misunderstanding some boats which under ordinary conditions would have had a good lead, lost considerable time. No. 2 (Mr. Manley) distinguished herself in the lively breeze and finished easily ahead of every body. Times:—

Nos.	h.m.s.
1	3.32.20.
2	3.27.40.
8	—
9	3.33.30.
10	3.29.05.
11	3.28.15.
12	3.28.20.
14	3.27.20.

Nos. 9 and 14 were disqualified because they did not round the proper mark.

YOKOHAMA LITERARY SOCIETY.

The annual general meeting of the members of the Yokohama Literary Society was held in Van Schaick Hall on Friday evening. There was but a small attendance. The President, Mr. A. Bellamy Brown, moved that the minutes of the last annual general meeting be taken as read. This was seconded by Mr. H. J. Neville and carried.

On the motion of the Chairman the Report of the Committee and the Treasurer's accounts, which had already been printed in the local press and circulated among members, were also taken as read, the proposal being seconded by the Rev. E. S. Booth.

The CHAIRMAN said the Society was to be congratulated upon its flourishing condition as evidenced by the big roll of members and its balance at the bank. Since the accounts were closed *yen* 25 had been spent in putting the piano in thorough order and repair; and *yen* 100 had been invested in an electric light apparatus for the magic lantern, which should be installed within the next two months if all went well.

The Rev. Dr. DEARING then proposed that the following be the Officers and Committees of the Society for the ensuing year:—President, Mr. A. Bellamy Brown; Vice-President, Mr. N. W. McIvor; Treasurer, Mr. A. Marsh; Hon. Secretary, Mr. R. Wallace; Literary Committee, Mr. N. W. McIvor, Mr. R. Wallace, Dr. Dearing, and Miss A. Abenheim; Musical Committee, Mr. N. G. Maitland, Mr. W. Karl Vincent, Miss Mendelson, Mrs. Jas. Walter, Mrs. O. A. Poole and Mrs. N. W. McIvor.

The proposal was seconded by the Rev. E. S. Booth and carried.

The increase in the number of the Musical Committee necessitated a slight change in the By-laws, and these were duly sanctioned after they had been explained by the Chairman and seconded by Mr. H. J. Neville. The revised by-laws were ordered to be printed and circulated.

Regarding the forthcoming season, the President said that in answer to requests made by him on behalf of the Society, promises of lectures had been received from several members and friends. So far these included a lecture on Macedonia, by himself, which would be illustrated; a lecture on North Wales by Mrs. W. Kirkland Wilson; an evening with Sullivan, by Mr. W. Karl Vincent; a lecture on the French Canadian Habitant, by the Rev. C. L. J. Bates, special attention being given to the curious literature and customs of this little known people; a talk on the Antique Coins of Japan, by Dr. Munro; a lecture either on Browning or Balzac by Mr. T. Satchell; and, he hoped, a paper by Mrs. Jas. Walter on her trip out and home via Siberia; while Mr. H. J. Snow would probably, if he could find the time, tell of his experiences in the Frozen North; and Mr. T. Cowen a talk about China in Peace and War. This would carry them half way through the season and he hoped the members would favour the Committee with suggestions for filling the other dates; similar help he also hoped would be given with regard to discovering new talent for the musical programmes. With reference to the proposed musical competitions he wished to explain that these would have nothing to do with the regular meetings of the society. They would be entirely separate and distinct. The general idea was that a few subjects should be selected and given out to members and an examination would be held later in the season, such an examination being quite private. Of course should any of the competitors display marked ability the Committee might later on consider the advisability of placing such a one upon the programme, but that was a matter for the future. The ages ranged from 10 to 21 years, but this was with the intention of making Senior and Junior Divisions.

The Rev. E. S. BOOTH was glad to hear this explanation, for he for one would not approve of a competition in public. On the lines laid down by the President he thoroughly approved of the Society taking up such a work, for he felt sure it would act as a valuable incentive in the musical studies of the children in this community. The foreign children of Yokohama had too few incen-

tives, he feared, to prosecute their musical studies, and the Society, he felt sure, was inaugurating a very useful competition.

The CHAIRMAN having obtained the consent of the meeting to begin the Society's regular session on Friday, October 16th, so as not to clash with the Interport week fixtures, the meeting adjourned.

MACEDONIA, OR CRESCENT AND CROSS.

[READ BEFORE THE YOKOHAMA LITERARY SOCIETY, BY THE PRESIDENT, MR. A. BELLAMY BROWN, ON FRIDAY, OCTOBER 16TH, 1903.]

I suppose most children of European or American parentage make their first acquaintance with the word Macedonia when, in the course of their Bible lessons they draw near to the story of the missionary journeyings of St. Paul, and, reaching the sixteenth chapter of the Acts of the Apostles, read:—

"And a vision appeared to Paul in the night; There stood a man of Macedonia and prayed him, saying, Come over into Macedonia and help us."

Nearly twenty centuries have run their appointed course since that midnight cry was heard in the Grecian colony of Troas, and yet so strenuous has been its vitality that reverberating echoes, ringing down the corridors of time, still arrest the attention of the world and turn our thoughts very frequently in the direction of a much-distracted land. In the days of St. Paul, many Jewish colonies were planted in Macedonia, the principal among them being at Thessalonica, the modern Saloniki, or Salonica, which then lay on the great Roman Road, the Via Egnatia, running from the Adriatic to the Hellespont. I need hardly remind my hearers that two of the great Pauline letters are known to us as the Epistles to the Thessalonians; while an equally famous letter is that addressed by the mighty apostle to the Gentiles to converts at another early Macedonian town, Philippi, which stood near the head of the beautiful archipelago close to a pass in the Balkans. It was this town which gave its name to the battle in which Augustus Caesar (the young Octavius) and Mark Antony defeated the forlorn leaders of the republican oligarchy of old Rome—Brutus and Cassius—who are enshrined for ever in English literature by the genius of Shakespeare. Before the close of the apostolic age the fortunes of the town had begun to wane and to-day Philippi is but a grass-grown waste infinitely desolate in its sad loneliness—*sic transit gloria mundi*. Salonica, on the other hand, still exists.

Long before the Christian era, Macedonian history had begun, as most of us who have had to wrestle with the heroic age of the Greeks know to our cost. In the grey dawn of history the primitive tribes of Macedonia were welded into a kingdom by Caranus, who flourished about 814 B.C. At first the little state was hardly strong enough to run alone and was successively under the protection of either Athens, Sparta, or Thebes, until the day arrived when Providence raised up one of those leaders of men who appear ever and anon in the history of all nations. This was Philip, the father of Alexander the Great. Philip, by the force of great military genius and almost equally striking political abilities, raised Macedonia into an Empire. His victories were undoubtedly greatly favoured by the invention of the famous Macedonian phalanx, which revolutionized the art of war as then practised and helped in the course of a few years to spread the Macedonian name far across the fair lands of Asia Minor. But first he had to reduce Thrace, Illyria, Thessaly, and then the free cities of Greece, making them appanages of his empire, the decisive battle being fought at Cheronea, in Boeotia, in 338, B.C., when 32,000 Macedonians beat 30,000 Thebans, Athenians, etc. On the death of Philip, by assassination, Alexander as ended the throne and the golden age of Macedonian conquest set in; but into the details of those foreign wars I do not intend to go, as they would take us too far away from our immediate subject—the land and its people. Suffice it say that from the death of Alexander right down the ages Macedonia and her sons knew little of the blessings of peace, battles followed battles with a wear-

some monotony, for when her overlords were not warring with their neighbours, internecine strife prevailed. In 279 B.C. the Gauls first burst upon the unhappy land, and they repeated their visit ten years later, only to be swept back with heavy loss. In 168 B.C. Macedonia lost her freedom and became a Roman province, Perseus, the last of her kings, being forced to walk chained, in the company of his sons, before the chariot of Æmilius in his triumphant return to Rome. A few hundred years of fairly undisturbed quiet now pass by and then, in 482 A.D., Theodoric the Ostrogoth, plundered the province and left it a howling wilderness. Four hundred years later the feeble arms of the Greeks, who next kept guard there were beaten down by an irruption of Bulgarians, but in 1001 the Emperor Basil won back the province for Byzantium and a couple of hundred years of comparative peace followed. Then Boniface of Montferrat arose and carved the Latin kingdom of Thessalonica out of the greater portion of Macedonia, while the Old Servian Empire held the rest. This was in 1204 A.D. But the Turks were already hammering at the gates of Constantinople and the "last phase" was not long deferred, for in 1430 Macedonia was finally conquered by Amurath II, and the land and all its inhabitants were annexed to the empire of Turkey.

In our own day Macedonia has become the theatre of a struggle in which the many nationalities who call Eastern Europe their home are playing a strenuous part. All the peoples which dispute the reversion of the Turkish possessions in Europe are represented in this appalling drama, as I shall now proceed to show.

The Turks, the ruling race, deserve first notice. They form less than a quarter of the entire population, and their numbers are steadily declining. The Turkish rural population is quiet, sober, and orderly, presenting some of the best characteristics of the race. The urban population, on the other hand, has become much demoralized, while the official classes, from the gendarmes to the highest functionaries, are, as a rule, corrupt, and avaricious, and seem to have parted with all scruple in their dealings with the Christian peasantry. The Turks, though still politically strong, fall behind the other nationalities in point of intellectual culture, and the contrast is daily becoming more marked owing to the educational activity of the Christians. Originally a nomad race, they have never become rooted in the soil, and remigration to Asia Minor will probably be their ultimate destiny, at least so some keen observers think. They number about 500,000 souls.

Next in importance politically come the Greeks, whom I need hardly stop to describe, and after them the Vlachs. The Vlachs, also called Rumanians, are designated by some writers "Macedo-Rumanians" in contradistinction to the Daco-Rumanians who inhabit the country north of the Danube. They are in all probability the descendants of the Thracian branch of the aboriginal Thracio-Illyrian population of the Balkan peninsula, the pure Illyrians being represented by the Albanians. This early native population, apparently Hellenized to some extent under the Macedonian empire, seems to have been Latinized in the period succeeding the Roman conquest, and probably received a considerable infusion of Italian blood. The Vlachs are, for the most part, either highland shepherds or wandering owners of horses or mules. Their settlements are scattered all over the mountains of Macedonia; some of these consist of permanent dwellings, others of huts occupied only in the summer. The Vlachs who settle in the lowland districts are excellent husbandmen; and many have joined the town-dwellers, where they become expert, but wily, traders. The Vlachs of Macedonia number probably 90,000, of whom only some 3,000 are nominally Mohammedan. The next group in order of political merit is the Albanian. They have ever been the scourge of western Macedonia; even before the Turkish conquest these predatory mountaineers were accustomed to devastate the fertile valleys inhabited by the Slavonic population. After the first Turkish invasion of Albania many of their chiefs and beys adopted Mohammedanism, but

the conversion of the great bulk of the people took place in the 16th and 17th centuries. This change of faith was productive of serious consequences to their Christian neighbours. Professing the creed of the dominant Power and therefore entitled to bear arms, the Albanians were enabled to push forward their limits at the expense of the defenceless population around them, and their encroachments have continued to the present day. The indulgence extended to them by the Porte has been requited by constant rebellions; for with the decline of the Osmanli power in the 18th century the arrogance of the Albanian chieftains increased and their military energies were as often employed in combating the Turkish authority as in prosecuting local feuds or raiding the Christian peasantry. Indeed, at times they have been virtually independent. The policy of the present Sultan is particularly tender towards the Albanians, and he has reaped a plentiful crop of troubles in consequence. An invincible repugnance to the payment of taxes and an equally strong aversion to regular military service are the main causes of Albanian discontent. Meanwhile they escape both by remaining among their bare and desolate mountains, from which they sweep down when the humour seizes them upon the defenceless dwellers on the plains. The Albanians number, perhaps, 120,000. There are besides small colonies of Circassians, with predatory instincts as fully developed as those of the Albanians; but their numbers do not exceed 3,000. The great mass of the population—which I have left to the last—is principally Slavonic. The Slavs first passed the Danube in the beginning of the 3rd century of our era, but their great immigration occurred in the 6th and 7th centuries. They overran the entire peninsula, driving the Greeks to the shores of the Aegean, the Albanians into the Mirdite country, and the Latinized population into the highland districts. They were a primitive, agricultural and pastoral people, and towards the end of the 7th century those in the eastern and central provinces were conquered by the Bulgarians, a Ugro-Finnish horde, who established a despotic political organization, but being less numerous than the subjected race, were eventually absorbed by it. To-day the Slavs of Western Macedonia are of a lively, enterprising character; those of the eastern and southern regions are a quiet, sober, hard-working agricultural race, more obviously homogeneous with the population of Bulgaria. They number about 1,150,000, of whom about 1,000,000 are Christians of the Greek Orthodox Church.

I have now given some idea of the variety of races who inhabit Macedonia, and have mentioned all, with the exception of the Jews, an account of whom I defer till later. The embittered struggle of these rival nationalities has kept the Far Eastern question an open sore for many years and led to the Emperor Nicholas describing Turkey as the "Sick Man of Europe" and to Mr. Gladstone delivering many a stirring speech upon the "Bulgarian atrocities." Until the middle of the 19th century, the Greeks owing to their superior culture and their privileged position, exercised an exclusive influence over the whole population professing the Orthodox faith. All Macedonia was either Moslem or Orthodox Christian without distinction of nationalities, the Catholic or Protestant following being inconsiderable. Then came the Bulgarian literary revival and with it the establishment of an exarchate in 1870. This was followed by the starting of Bulgarian schools within the province, and after them came "commercial agents." Then the Servians, growing jealous, took a hand and started a similar propaganda, using the same instruments: schools, priests and commercial agents; next the Roumanians followed suit. The Bulgarians now have 762 schools, with 39,466 pupils and 1778 teachers; the Servians have 172 schools, including 15 gymnasia, with 321 teachers, and 7,200 pupils; while the Roumanians have 40 schools. The Greeks maintain 927 schools, including five gymnasia, with 1397 teachers and 57,607 pupils; but their influence owing to the upshot of the Turko-Greek war, is steadily on the wane. And now, to add to the Sultan's woes, his sweet pets, the Albanians, demand the establishment of schools in which their language may be

taught, but unlike the other nationalities they do not intend to put up the money themselves for this purpose. The effect of all these different schools has led to much disorder and to the greatest embitterment of feeling among the different races. Mr. G. J. Abbott, who was sent out last year by the University of Cambridge to enquire into the folk-lore of Macedonia, after a careful tour through the unhappy province writes:—

The struggle for racial supremacy between Greek and Bulgar, pervades and poisons all the relations of life, private no less than public. A Greek will on no account speak to or shake hands with a Bulgar. Nor will a Bulgar patronise a shop kept by a Greek. The antipathy between the two nationalities amounts almost to physical repugnance. It far exceeds any feeling of enmity that either of them may entertain towards the Turk, who has ground them both to the dust during five centuries of the most unmitigated oppression imaginable. Party passion from the market-place is often carried into the very bosom of the family. At Petritz, as in other parts of Macedonia, I found many a house divided against itself, some of the members of the family espousing one cause, while the others supported the opposite. Not that the division is always based on sincere discrepancy of political or religious views. Patriotism in too many cases can be described as purse deep. The Bulgarian propaganda spares no effort and no expense for the acquisition of proselytes and many of the adherents of the Bulgarian party at Petritz and other districts of Central Macedonia are in receipt of a monthly salary. But the strife of Christians does not end here. The Mohammedans claim the Vlachs, and others; the Servians make a vehement and a better founded claim for a portion of the population; and these the Bulgarian propagandists hate almost as much as their Greek rivals. The Bulgarians and the Greeks fight each other with every weapon. They endow rival colleges; they bid against each other for the conquest of rival souls; they have riots in the baths for the possession of a church; and sometimes they bring to the theological and racial dispute the old allies of the dagger and the rifle.

And this is the final result, as Mr. Abbott sums it up.

"The Macedonian peasants themselves—excepting those of the extreme south, whose Hellenic nationality has never been disputed—can hardly be said to possess any national soul, or, for that matter, any soul at all. If they are caught young by the Bulgarian propaganda, and reared in its schools, they are imbued with the idea that they are Bulgarians. If the Servians are first in the field they become Servians. The race is to the swift and to the rich. In one and the same household one will occasionally find representatives of all the branches of the human family; the father claiming for himself a Servian descent, the son swearing that nothing but Bulgarian blood flows in his veins, while the daughters, if they are allowed a voice in the matter, will be equally positive that Helen of Troy or Catherine of Russia or the Aphrodite of Melos was their ancestress. The old mother is generally content to embody her national conviction in the declaration that she is a Christian. A true comedy of errors, in which no one knows who is who but everybody instinctively feels that everybody is somebody else."

The Greeks are certainly the most intellectual of all the struggling races, and probably to them after they have lived down their present disgrace, the final victory will belong. A Macedonian farmer of Greek nationality and aspirations put the case of his people well in a simile he employed in speaking to Mr. Abbott. "We Greeks, sir," he said, "are like so many ears of corn standing in the midst of weeds and tares of all sorts. They do their best to starve and choke us, yet, by the grace of God, we somehow continue to shoot up and fruit."

And this leads me to remark that Mr. Abbott is of opinion that the Macedonian is the most heavily taxed of any peasant in the world. The Turkish official does not think he has done his duty properly until he has made the luckless wight drain the bitter cup to the dregs. Apart from land-tax and tithe, the Macedonian pays a tax for exemption from military service, which, as a Christian, he is not allowed to enter. He pays a tax for education he never receives. He pays a tax for roads and bridges which are never constructed. "In short, he pays a tax on everything he buys, on everything he sells, on everything he imports, on everything he exports, on everything he carries, on everything he weighs, on everything he possesses, and on many things which he does

not possess." There are always plenty of arguments at hand if he proves refractory, for the compelling powers of the bastinado and the thumb-screw are still recognised by the official class in Turkey. Can one therefore wonder that the population of Macedonia, at all times scanty, has undoubtedly diminished in recent years. The prevailing insecurity, the exactions of Turkish officials, the severities practised by the authorities in the repression of political agitation, the prevalence of brigandage, authorized and unauthorized, and the ravages of Albanian marauders in the Western districts have all tended to the smaller villages being abandoned by their inhabitants and the land being left desolate. Indeed, the general aspect of Macedonia to-day is bare and uninviting, for "man has warred against man among her mountains and left her valleys untilled," though here and there one comes across districts of surprising beauty and fertility. Yet for all that, in reading Mr. Abbott's lively account of his tour through the distressful country, one insensibly gathers a certain liking for the Turk whom fate has called to rule this portion of the Balkan peninsula. He really does not seem so black as he is painted by the Greeks, the Bulgars, the Servians, and the Roumanians. "The Mohammedans," says Mr. Abbott, "whatever may be thought of them as rulers, are generally acknowledged to be extremely honest in their private transactions—always excepting the Government officials, who have an immoral code of their own—and scrupulously careful in the handling of truth. The Turk is too strong to do a mean thing, too unimaginative to invent the thing that is not. His vices, great as they are, are the vices of a race conscious of its might, and proud of it." Like the Englishman, too, he is a man who reads, writes and speaks but one language, his own, therefore to most folk his trials and difficulties are a sealed book. It has not been sufficiently noticed, too, that the Turk "does not advertise." Periodically all the nations of Europe rail at him; but he never answers. Thus, as he seems by silence to assent to all the charges laid against him, perhaps he is not quite the fiend in human form which fancy depicts after reading the thrilling accounts of doings compiled by special correspondents for consumption by a public that likes to be horrified at times. Most of the general understandings to the Turk's discredit are matters of hearsay. Only a very few strangers ever think of sojourning in the Balkan States, and it is noticeable that those of the few who publish their impressions give surprisingly little sanction to the popular anathemas against the Turk. Mr. Abbott, though he may not deliberately intend to do so, conveys an impression very much in his favour. An excerpt from his pages will make this plain. In the villages inhabited by people of the subject races, fires are very frequent. Each village has eight or nine a week. "The flimsy material of which the houses are built would be sufficient to account for the conflagrations, were it not for one little thing: the house or the shop in which the fire originates in ninety-nine cases out of a hundred happens to be insured, and to belong either to a Jew or to a Christian. This circumstance, coupled with the fact that the property of Mohammedans—who do not approve of insurance, as implying a want of faith in Allah—seldom falls a prey to the flames, induces the thoughtful observer to shake his head. In fact, these 'accidents' may be said to throw a lurid light upon Hebrew and local Christian morality; and so seem to think the London insurance companies, which since the great fire of 1891 have abolished their Salonica agencies."

Again, take the question of cleanliness alone—the Mohammedan is immensely superior to the Christian and the Jew; as witness the following passage in Mr. Abbott's book—he is writing of Salonica, the most important town in Macedonia:—"The Turk's moral qualities are typified in a striking manner by the appearance of the quarters inhabited by Mohammedans. The streets are neatly swept, and the private dwellings, in point of cleanliness, present a wonderful contrast to the public offices. On passing from such a quarter to one inhabited by Christians, one notices a certain deterioration in those respects, accompanied by a corresponding inferiority in the

moral attributes which distinguish the Mohammedan. But it is only on reaching the Jewish quarter that one fully realises the depths of physical and other filth of which humanity is capable. The streets are littered with all sorts of rubbish in every stage of decomposition, and the air is fraught with all sorts of unwholesome odours."

Then here is a quotation from a chapter on "The Table-Talk of Hadji Demir Bey." I quote that fine old man's description of his fight with a band of forty brigands who assailed his house, and at last, when they could not break in, set fire to it. It well illustrates the Turk's strongest points,—his courage and scorn of death, his kindness to animals, his trust in Providence:—

"The flames were all round us, licking the walls and leaping up towards the sky. It was a dark night like this, but you could see yonder mountains by the light of the fire as clearly as you see the palm of your hand. We retreated to the stable below, and, throwing the gate open, whipped the horses out. How frightened the poor creatures were! By Allah the Compassionate and Merciful! methinks I can still hear their neighing. There was a bitch in the stable, too, lying upon the straw with her puppies. Oh, how they whined and howled, enough to break a heart of stone! When I opened the gate she lifted her children between her jaws, and one by one she carried them out through the flames. But as she was coming in for the last a bullet hit her, and she fell dead at my feet. Then I closed the gate again and digging a hole through the wall, made up my mind to fire my last shot and then perish beneath the ruins of my house. But Allah is great. He directed my aim. Off went the rifle, a scream came from without, and then all was silence. The brigands picked up their wounded and made off in haste. I had not prayed in vain. My last bullet had hit their chief. Praise be to Allah!"

It is sad to think that a race which can produce men like this should be mixed up in the bewildering racial muddle in Macedonia, where Greek and Bulgarian, Albanian and Servian, are all carrying on an active propaganda in favour of their own ambitions regardless of any known code of honour.

And what of the men who are in rebellion against the Turk? Well, the personality of Boris Sarafov, the leader of the present Macedonian revolt is interesting and typical of the movement he directs. The *Saturday Review* says:—"He possesses abundant courage, but when we have said that, we have exhausted his virtues. He doubtless believes in his cause, but that may be said of many miscreants. A master of disguises, an expert in bribery, and a born leader of men, he seems to be at once ubiquitous, invulnerable, and irresistible. He has established a reign of terror throughout three vilayets, the majority of whose population desire only to be let alone; he flouts pashas, outwits kaimakams, and eludes flying squadrons of zapkis; none ever knows where he is until an outrage is committed, and then, before the authorities have recovered from their surprise, he is probably a hundred miles away. When the bank was blown up at Salonica, he stood by disguised as a policeman. He has never ordered a crime which he was not ready to commit himself. He would make an ideal hero for a penny novelette."

Altogether it is a complex problem that Macedonia presents at the present moment and many statesmen incline to the belief that the final and only remedy would have long ago been applied if it had not been for the fierce divisions of the sections of the Christian races by which Macedonia is peopled; and, further, if it were not that non-Christian peoples, such as the Jews and the Gypsies, find such contemptuous toleration from the Turkish masters of the country that they look with disfavour on all attempts to liberate the nation. And, finally, it has to be acknowledged by even the most fervent enemy of Turkish rule that slavery on the one hand and mastery on the other, continued over centuries, have left in the conquered many of the vices of slavery, and in the conqueror many of the virtues of a ruling race.

But enough of this side of the question for the moment. There is a humorous aspect to the racial animosities of Macedonia which

Mr. Abbott manages to bring before our eyes. Here is a scene in a Macedonian marketplace between two peddlars. Mr. Abbott is making his way to the house of a friend, and what happens. "I found the entrance blocked by a crowd of peasants standing in a ring round two peddlars, who, with their wares spread before them in the street, were engaged in a loud disputation.

"I tell thee, He was a Bulgar."
"Christ a Bulgar! why, thou onion-headed simpleton all the world knows He was a Greek!"

This repartee, which I heard as I dismounted, gave me the clue to the subject under discussion.

As I elbowed my way through the crowd, the disputants caught sight of me, and both with one voice appealed to me to act as umpire.

"You are a stranger, sir," they said, "and a tchelebi—man of culture"—that was evidently a tribute to my Frankish dress. "So we shall leave the question to your decision."

A deep silence fell upon the assembly, and the whole countryside looked eagerly at me. I, finding myself suddenly called upon to pronounce an opinion on so weighty a matter, paused, stroked my chin meditatively for a minute or two and then slowly and deliberately said:—

"It is commonly supposed that He was a Jew."

A roar of laughter greeted my answer.

"Get away, sir, you are mocking us!" said one of the disputing peddlars, red with anger.

"You are a merry one," said the other, and he laughed loud and long to show that he was not too dull to see the point of the joke!

In quite a different vein is another glimpse of life in Macedonia, which I also take from Mr. Abbott's pages before passing on.

"I reined in beside one of the fountains, at which a tall willowy damsel was filling her pitcher. And the damsel was very fair to look upon, and I was very thirsty. So I said: 'Give me, I pray thee, a little water of thy pitcher to drink.' And she replied: 'Both drink thou, and I will also withdraw my pitcher that thy mule may drink likewise.' And I, carried away by the Biblical charm of the scene, and by the witchery of the damsel's large black eyes, asked her, not for information, but for the sake of hearing the music of her voice—'so soft, so sweet, so delicately clear'—and said: 'Whose daughter art thou?' And she answered: 'Mind thine own business, O stranger!' And I went away crest-fallen and corrected, pondering over the difference between Mesopotamia in the days of Abraham and Macedonia in my own. Thus I halted up the slope on which spreads the village of Provista. A church belfry and a minaret, rising side by side, showed in a striking manner that here also the Korean and the Gospel lived in hostile proximity. As I entered the village, a second damsel came forth with her pitcher on her shoulder. She was not fair to look upon. So I made bold to ask her to direct me to the house of the man to whom I was recommended. And she made haste and let down her pitcher from her shoulder, and showed me the way. And I bowed down my head and offered her a silver coin, which she declined. Thereupon I offered her a water-lily from my belt, which she accepted with a modest, maidenly blush, and forthwith ceased to look plain. Verily, 'tis not always the fairest vessel that contains the sweetest wine."

The most interesting city in Macedonia at the present day is Salonica, of which I have already spoken. It is the provincial capital of the vilayet of the same name, and yet, curiously enough, the bulk of the inhabitants are Spanish Jews. These are not descendants of the Jews who lived there in St. Paul's day, by-the-way, but the off spring of Children of the Promise who fled from persecution in the Iberian peninsula during the days when those most bigoted of monarchs, Ferdinand and Isabella, ruled in Spain. That was over four hundred years ago. The Turk received them, as always, with toleration, and there they have been ever since, preserving the rites and speaking the language of their fathers, for on the rock of Jewish tenacity the storms of time have beaten in vain. Mr. George Stevens, the well-known war-correspondent, who visited Salonica during the Turko-Greek war, has some interesting pages in his book "With the Conquering Turk," dealing with the Jews of Salonica. He says:—

The Jews of Salonica talk as they talked when they left Spain; they dress much as they dressed then; they keep themselves to themselves, and are proud to call themselves Spaniards. The less educated are convinced that they are the only Spaniards in the world. Out of the 120,000 people of the city it is computed that over one-half are Jews; Greeks are perhaps 25,000, and Turks a trifle less. There

are more Jews in Salonica than in Jerusalem. The Jews of Salonica are not of the black, Polish caste, which to most Englishmen is the type of the race. They came, as I said before, from Spain, and Spain under the Moors grew the flower of all Judaism, the *Sephardim*. Their faces are less fleshy and finer than those of the Polish caste; their foreheads and temples high; their silky beards often almost blonde, their noses thin and often almost straight. They move with a grave dignity, and though their faces express something of the weary pathos of their history, there is something of the patriarch and the philosopher in the look of the best of them. The Jewish women are the most gorgeous of Salonica. Their gala skirts are a wonder of stiff silk, embroidered with every flower that grows in a queen's garden. They must not show their hair; they conceal it, therefore, under a flat silk cap, rather like that of a German student, only with a yellow ribbon under the chin. The cap is all yellow, and cunning needlework; behind it falls a bag for the hair, likewise of green silk, its drooping ends embroidered with pearls. It sounds magnificent, but it looks ungraceful, destroying all the contours of the head. These women are said to be the most educated and cultivated of Salonica; many of them are also, in their youth the most beautiful.

Salonica has experienced many vicissitudes. One frightful massacre of the inhabitants took place in 390 A.D. by order of the Emperor Theodosius. The Saracens captured it after great slaughter on July 30th, 904; while the Normans, then the Lords Paramount of Sicily, besieged it in 1185; and Amurath tore it from the Venetians in 1430. Monastir, the next town of importance in Macedonia, has been the scene of more sudden takings-off than one, the Albanian Beys being massacred there after the revolt of 1843. Janina, too, has its associations with assassination. Ali Pasha and his two sons surrendered there in 1822, under the most solemn promises of safety that ever constituted the prelude to a firing party. Of Skopje, another town, I have heard a resident of Yokohama who visited the place, declare it to be the vilest place on earth.

Referring once more to Salonica, I can't help thinking that it should be considered one of the world's holy cities. Just think of it! Here one can almost realise the ideal of Weary Willie—a week of Sundays. Joking apart, in Salonica you can really have three Sundays in the week all the year round and find yourself strictly within your rights. The Turks, being Mohammedans, keep their Sabbath on Friday; the Jews, the principal portion of the town's population, keep their ancient Sabbath, as did their fathers in the Holy Land, on Saturday; while the Greek Christians keep the Christian Sunday. Each sect, too, has various solemn fasts and innumerable feast days, all of which, owing to the racial rivalry which dominates Macedonia, are most faithfully observed, and furiously insisted upon, so that at times a chance traveller finds it difficult to get a meal cooked or served; and so the wonder grows how the Salonicans ever manage to get through their ordinary year's work. But they do, though their commercial and moral reputation is not the most savoury in the Levant, for all their professions of holiness.

Despite its rith and turmoil Macedonia deserves to have more travellers upon its highways than they at present get. The very mixture of races renders it very attractive to a student of men. It is a land of many colours, writes Mr. Stevens:—

The Turk or his subject draw no rein upon the fancy in the matter of colours for his apparel. He clothes himself spontaneously in rainbows, and groups himself without affectation into spectroscopes. A blue shirt or a magenta jersey, a buff open waistcoat or a green fur-lined cloak, or a black or white sheepskin, a sash of scarlet touched with gold or green, either six inches wide or a generous two feet swathing all the body—you see them all in any knot of half a dozen. You will see breeches that recall the western groom, bags that recall a bicycle skirt, violet skin-tights, or the white kilt, and high white braided gaiters of the Albanian. If a man fancies the good embroidery on his socks he wears them outside his trousers; if he does not, they will do inside; if he has no socks at all, why, he does not pretend to have any, and gets on just as well. And each of these costumes stands for one of the jarring races whose feuds and clashing ambitions have made Macedonia the infernal machine of Europe. The gaiters of the Albanian; the knee-boots of the Servian; the dark blue kilt of the Vlach, the shoddy

reaches-me-downs of the Greek; the sheepskin cap of the Bulgar, and the fez of the Turk—from head to foot these people express in their very garments the elements of the problem of Macedonia.

And now to turn to lighter subjects. Englishmen will be interested to hear that among the Christian population of Macedonia, the popular Saint of early Spring is St. George, a mediæval knight who bears with him on his travels gifts, like Santa Claus. One Georgian ballad, which Mr. Abbott quotes in his book on Macedonian Folk Lore, is eminently Greek. A Macedonian maiden flies from a Turkish lover, and seeks asylum in a chapel of St. George. The pursuing Turk promises the Saint cartloads of candles, cartloads of frankincense, "and oil will I bring thee in big buffalo-skins. I will also be christened into thy faith, and my name shall be George." The marble walls are rent asunder and the maid comes forth. The Turk seizes her and speeds away. Clearly, to the Greek mind, no Saint could resist so big a "deal." But from this unpoetical story let us turn to May Day and the "blue Aegean" isle of Syra, which preserves a charming memory of the old connection between Aphrodite and the sea. There, on May Day eve, the women go down to the shore and wash their feet in the sea; while the admiring men look on amidst laughter and good-humoured horseplay. Other May Day customs are very like our own old English customs: the bringing home of May, the boys wreathed with wild-flowers, which they afterwards hang at their sweethearts' doors. A pretty custom is the welcome accorded to spring in the Swallow-festivals—the swallow being there, as in so many countries of Europe, the harbinger of spring. On the first of March the lads deck with flowers a wooden swallow and go-a-begging from door to door; returning thanks for trifling gifts in swallow-songs of immemorial antiquity. Another pretty superstition is for the mother to bind the child's wrist with a two-coloured thread, red and white, which it casts to the first swallow it meets. Or else it hides the thread beneath a stone; and if, when the stone is removed after some days, there be a swarm of ants beneath it, that is a token of health and a prosperous year. While on these lighter themes, I think the Macedonian spirits demand a hearing. They are many, and the most aristocratic of all are the Neraides. For they are largely of classic descent, akin to the Naiads, Hamadryads, and Oreads of old Grecian poetry; besides claiming a modern relationship with the Busalkas of Russia, the Serb Vilas, the Bulgar Samodivas. In Macedonia, indeed, they are often called Samovilas, uniting the Serb and Bulgar names. Tall and slim, white clad, their golden tresses flowing, divinely beautiful, they haunt fountains and trees—half Dryad, half Nymph, or Naiad, for they are associated with water. Would you supremely praise your Macedonian girl, tell her she is beautiful as a Neraida. Would you denounce her cruelty to you, call her a Neraida's off-spring. For they are cruel as fair, and to see them is fatal—you will, at least, lose your speech. A man near Nigrita, homing through the fields, saw, under a tree by the way-side, a young woman, decked with pieces of gold (as the peasant girls are in holiday trim). She "looked like a bride," and was exceeding fair. He spoke to her, and his "tongue was tied." Dumb he is to this day. You remember how Falstaff in the "Merry Wives" says, when he sees the fairies, "He that speaks to them shall die." You will see fountains in Macedon decked with parti-coloured threads. They are torn from the garments of wayfarers, who leave them, when they have drunk, as an offering to the Neraida, the Lady of the Fount. Nor shall you lie under a tree, save you wish a stroke from the offended Neraida. You must atone by sprinkling honey round the tree-trunk, and leaving there small sweet cakes, prepared for the purpose. Of the various national dances peculiar to the different races I have not space to speak, for the clock warns me that I must be reaching the limits of your patience, while yet remains much of interest to relate. I have dwelt rather long, I fear, upon the political aspects of the all-absorbing "Macedonian question" in these disjointed notes, but I hope you will pardon me if

I conclude with one last quotation from Mr. Steevens:—

There are at least six kinds of Macedonians. Each insists that it is the true and only heir, and must enter into the whole inheritance; and that is the beginning and end, and the perpetual imminent peril of the Macedonian question. Because of this the factious claimants establish consulates, endow bishoprics, organise schools and gymnasia, and provoke outrages, deliberately and with malice aforethought. Because of this each is ready to rush into war at any moment, to swallow up the whole cake before anybody else can have a bite at it. Many have been the proposed medicines for Macedonia; but one that will cure all discontents there never has been yet, and until six into one goes one there never will be.

PORT ARTHUR.

(FROM OUR CORRESPONDENT.)

A DIPLOMATIST ON RUSSO-JAPANESE RELATIONS.

Port Arthur, September 17th—30th. Writing from Vienna, a correspondent of the *St. Petersburgskiy Vedomosti* of August 19th (R.C.) sends his paper the following correspondence which may prove interesting to readers of the *Japan Mail*.—The Austrian and German Press has greatly interested itself of late in the Far East and in the relations subsisting at present between Russia and Japan. The Austrian Press is kind enough to point out that if Russia continues to concern herself as much as she is doing about the Far East, she will find it impossible to pay the necessary attention to the course of events in the Balkan Peninsula. Many organs of the Press point with malicious satisfaction to the fact that Russia would desire to help Macedonia but that on account of her hands being tied in Korea, she cannot risk entering on an aggressive policy just now for this reason that at the present moment such a policy would bring Russia no advantages. As you may see, the European Press outside Russia has, up to the present time, ill-understood the problems and the programme of Russian diplomacy. A short time ago these organs published the news that the Russian fleet had left for Turkish waters. At first they were disturbed by the news,—what had the Russian diplomatists been up to now? What about Korea? Japan? These omniscient newspapers were not long in discovering, however, and in solemnly declaring that the situation in the Far East had now changed, that General Kuropatkin, the Russian Minister for War, had on the occasion of his recent visit to Japan removed all cause of misunderstanding between the two countries, and that the Russian Government might devote its entire attention to the solution of the Balkan problem. So spoke the leading organ of the Press. But in the midst of these suppositions and paradoxes, and bold deductions it may not be without interest to readers of the *St. Petersburgskiy Vedomosti* to hear the views on the situation in the Far East of a gentleman who really knows what he is talking about. This gentleman, who was one of the European Ministers in Japan, in which country he resided about twenty years, spoke as follows:—

WHAT THE DIPLOMATIST SAID.

"I cannot say that I endorse," said the diplomatist in question, "the optimistic news that war between Russia and Japan is quite out of the question. On the contrary I hold this opinion that the slightest attempt on the part of the Russian Government to strengthen its position in Korea will meet with opposition on the side of the Japanese and may lead to war. The state of popular feeling at the present moment in Japan is thoroughly warlike and the Japanese are quite convinced that in case of war with Russia they will be victorious. In Government circles and elsewhere there are men like Marquis Ito who are strongly opposed to a war with Russia, foreseeing as they do crushing defeat for Japan. Unfortunately, however, the great bulk of the population and of the Members of Parliament are labouring under the influence of a chauvinist vision so that if the situation becomes at all critical this popular jingoism will carry all before it. And in this connection I should like to remark that you must take into consideration the peculiar character of

the Japanese. The Japanese is by nature an optimist. If he buys a lottery ticket he is convinced that he must carry off with it the first prize. Exactly in the same way every Japanese believes that, in case of a warlike collision between Japan and any other Power, no matter what Power it may be, Japan must, as a matter of course, come off victorious.

JAPAN AND KOREA.

"You ask me why Japan attaches such importance to Korea. I would answer you as follows. The Japanese consider that the independence of Korea is vitally bound up with the freedom of their own economic relations with that country. Korea is indispensable to Japan,—so at least the Japanese think, but I myself am of opinion that even if Korea came into the possession of Russia the Japanese would derive from it as many economic advantages as they do at present. Again, Japan finds it impossible to feed her 42 million inhabitants. The country is on the whole a poor and not a fertile country and if you saw for example the attention they have got to devote to their crops in Japan you would understand all the economic necessities of this nation. The farmers attend not only to each field but to every individual plant, and have to struggle hard in their contest with a rocky soil. In Korea, on the contrary, the soil is good; and at the present moment, hundreds, thousands, even millions of Japanese live in Korea or off Korea.

JAPAN'S FEARS.

"But the Japanese fear that if Russia takes possession of Korea, they will gradually be driven out of the country. I believe, however, that these fears are groundless. Take for instance the case of Vladivostok. There you have only got about half a score of Russian merchants, the remainder being Germans or Chinese. The servants and the small shopkeepers are, however, to a large extent Japanese and these Japanese are getting on excellently at Vladivostok. Now you must know that Russia has not enough human material at her disposal to people her enormous empire (and on that account of course the Japanese have a fine chance of settling in Russian territory). But in Japan they do not seem to look at the matter in this light, and any steps which Russia may take in Korea, and which can possibly be interpreted as an attempt to acquire Korea for herself, will be regarded by the Japanese as a *casus belli*.

ADMIRAL ALEXIEFF.

"What will be the upshot of all this I cannot, of course, say. I can give you, however, the opinion of the newly appointed Viceroy, Admiral Alexieff. Admiral Alexieff belongs to that school of Russian officers which makes of every officer a diplomatist, and is one of the most intelligent men of affairs whom I ever knew. In conversation with me he spoke as follows:—

WHAT RUSSIA WILL DO.

"In the event of a war with Japan said the Admiral, Russia will adopt a Scythian plan of campaign. As soon as war is declared the Russian soldiers will retreat, disappear, and it will be impossible for the enemy to locate them. The Japanese transports will then, we expect, land some two hundred thousand men, but such an army will mean, after a time, financial ruin for Japan. The Russian fleet, which the Japanese think that they can at any moment send to the bottom of the sea, will quietly retire to Port Arthur and will content itself with, later on, preventing provisions from being conveyed from Japan to the Japanese army in Korea, for, of course, such an army can only be provisioned by sea-borne stores. But when the Japanese have got tired of hunting about for us and are worn out by the trying climate of the Peninsula, (for, as you are aware, the winter in Korea lasts for about eight months in the year and the summer only about four months) then, and only then, will the Russians make their appearance on the scene, to be, I am persuaded, victorious, in a shorter space of time than they imagine. The result will be that the Japanese army will be defeated, nay, more, it will be annihilated."

MORE ABOUT JAPAN.

"I must say," continued the diplomatist, "that I quite agree with these views of the

Russian Admiral. The Japan of to-day is very different from Old Japan. Strange as it may seem, the introduction of civilization has had a deleterious effect on this nation. The Japanese even in the highest walks of life lies and is deceitful. He is also a confirmed chauvinist and his hatred for the foreigner grows in intensity every day. The anti-foreign spirit is indeed incomparably more intense in Japan than in China. Add to this the still bad financial condition of the country and the oppressive weight of the taxes, which simply crush the people. The Japanese pays, indeed, far higher taxes proportionately to his means, than for instance the Frenchman, and all the enormous amount of money derived from the taxes goes towards the up-keep of the army. Is it astonishing therefore that the Japanese nation should now wish to derive advantage from this expensive army? Undoubtedly the bulk of the people want war but, although from the Asiatic point of view the Japanese army might be reckoned a model army, it cannot be compared to the army of any of the European Powers. The Japanese will be beaten if they go to war with Russia and when that takes place there will be, in my opinion, such a massacre of the foreign residents of Japan as history has never before chronicled.

HOW JAPANESE HATE FOREIGNERS.

"You have no idea, I tell you, of how the Japanese hate the foreigners who are living in their midst, not only the Japanese people but Japanese moving in official circles. For instance, they are just now preparing to enact a special law by which Europeans will be forbidden to acquire real estate in Japan; moreover they desire to make this law retrospective so that Europeans who possess real estate at the time of its coming into force will be deprived of that real estate. The Powers are protesting against this but in my opinion their protests will be unavailing and the question must finally come before the Hague Tribunal.

ISOLATED JAPAN.

"If a Russo-Japanese war breaks out, the Japanese cannot expect help from outside. The Anglo-Japanese alliance is a one-sided arrangement, all the duties and obligations being on the side of Japan, all the advantages on the side of the English.

"Nevertheless the conclusion of this agreement caused a very painful impression on the English residents in Japan at the time it was announced. I happened to be present on the occasion of the conclusion of this alliance at an official banquet given by the English Minister, Sir Claude MacDonald. The Englishmen who were present did not conceal their disapprobation of the step which their Government had taken, as it ought not to have concluded an alliance with the Japanese who never took any pains to conceal their dislike for all Europeans. Add to this the fact that the Minister was himself discontented because, —astonishing as it may seem— he had no inkling of what was going on until the conclusion of the alliance was announced. All the preliminary negotiations had been carried on behind his back, the treaty was signed in London and the British Minister in Tokyo positively knew nothing at all about it. I recollect one funny incident in this connection. One of my friends drew the attention of the British Minister in Tokyo to the fact that negotiations for an Anglo-Japanese alliance were in progress just as that alliance was on the eve of being concluded, but Sir Claude MacDonald answered that his colleague was probably joking as there was no basis whatever for this 'fable'.

"I shall now give you a resume of my views. A war between Russia and Japan is pretty certain to take place at no distant date as, in the opinion of Russia, the possession of Korea and the control of the Gulf of Pechili are necessary for her establishment on the Pacific. Japan will undoubtedly fight to prevent that consummation taking place, but she will be completely beaten. The result of her defeat will be an unparalleled massacre of the foreign residents in Japan.

"Such is the opinion of one who knows Japan well."

JAPANESE GUESTS.

There is a considerable number of Japanese in Port Arthur and, although none of them seem to be doing business on a very large scale owing to that great drawback to all extensive Japanese enterprise in this part of Asia, lack of capital, they are not getting on at all badly on the whole and they are certainly not treated with disrespect or discourtesy. It is not often, however, that we see two such distinguished Japanese visitors as arrived here by railway the other day from the north. I refer to the Japanese officers who recently visited Khabarovsk and the Nikolsk-Ussuri district, Major-General Akiyama, Commander of Brigade and Major Oba, of the General Staff. These officers were accompanied to Khabarovsk by the following Russian officers of the General Staff, Kamensky and Tuchkoff, the latter commander of the 1st Company of the 1st Regiment of East Siberian Sharpshooters; and they first visited the commander of the district, then the 24th Regiment of East Siberian Sharpshooters, and afterwards the Cadets' School and the Girls' Gymnasium, after which breakfast was served in the Military Club, where they rested for some time. At eight o'clock in the evening on the day of their arrival a dinner was given in their honour by Lieutenant-General Lenevitch, Commander of the Military District of Preamorsk, the General in command of the Khabarovsk garrison being among those present on the occasion. The first toast was in honour of the Tsar, the second in honour of the Emperor of Japan. Russian and Japanese airs were played by the band throughout the course of the meal.

On the succeeding day the Japanese visitors inspected the 3rd Battalion of the East Siberian Brigade and the Museum. Breakfast was afterwards served in the Military Club and in the afternoon of the same day the visitors left for Port Arthur where they were met at the railway station by Captain Matusevich, of the General Staff, adjutant of the Commander-in-Chief of the troops.

RUSSIAN NAVAL MANOEUVRES.

On Sept. 15—28th Russian naval manoeuvres of a very interesting kind commenced at Port Arthur. A squadron from Vladivostok consisting of the *Poltava*, *Pobeda*, *Petropavlovsk*, *Retvizan*, *Peresviet* and *Sevastopol* began that day an attack on Port Arthur and the adjacent country as far as Dalny, which was defended by all the torpedo boats belonging to the Far Eastern fleet of Russia. Of course the forts played the principal part in the defence and the system of signalling the approach of the enemy and of massing troops to oppose him wherever he showed a disposition to effect a landing, was put to a thorough trial. It need hardly be remarked that the invading squadron represent the Japanese fleet and the defenders the Russians.

Early on the morning of the 15th inst. a long succession of cannon shots from all the shore batteries on Korean Bay awoke late sleepers; and on the same and the succeeding nights, the sight presented by the defending vessels searching the sea at the entrance of the harbour in all direction with their search lights was one which might be called grand if it were not for the associations which such proceedings called up. The latest intelligence is that the invaders failed to effect a landing north of 'Talien-wan, near Dalny, and in war time such an attempt would be even more impracticable as a battery will then command that landing place, the position of the guns having already been prepared. Most of the soldiers of the Port Arthur garrison are engaged in these operations and mounted messengers are continually riding to and fro at a breakneck pace, as if war was actually going on. The carriages of the military leaders on their way to and from the quarters of the General Staff are also a feature of the occasion, but a feature that is not peculiar to the present time for that endless procession of officers has been one of the sights of Port Arthur for a long time past. It is one of the many sights that make Port Arthur resemble a fortress which is about to be besieged or a town which is temporarily occupied by the Commander-in-chief of an army in the field. Admiral Alexieff sometimes takes part in this procession, being distinguished from the other

officers only by his Admiral's three eagles and by his escort of Cossacks.

The Russians are confident that the Japanese cannot take Port Arthur without the loss of at least 20,000 men—if even then—and they are sure that if it is taken, Russia will soon get it back again.

RUSSIA ACCEPTS THE CHALLENGE.

(FROM OUR OWN CORRESPONDENT.)

WILL NOT LEAVE MANCHURIA.

Port Arthur, Sept. 21st (old style). Russia—if the usually well-informed *Novi Krai* can be regarded as representing Russia,—has accepted the challenge of the Japanese Press that the non-evacuation of Manchuria on October 8th means war. In a violent article published in that paper to-day, Japan is defied and Russia's determination to remain in Manchuria at all costs is made known in very emphatic and unmistakable language.

Quoting the motto *J'y suis et j'y reste*, the Port Arthur paper says:—

"Yes, undoubtedly the fatal moment has come and it finds Russia still in Manchuria, armed to the teeth for the defence of her interests there, interests which are dear to her as her heart's-blood. No amount of threatening (on the part of the Japanese Press) will disturb the *status quo* there either on the 8th of October or afterwards."

I shall send you later a full translation of this important article, which is doubtless a semi-official announcement provoked by the recent tone of the Japanese Press.

RUSSIA READY.

In the meantime nearly every preparation to guard against a sudden descent on Liao-tung and especially in the vicinity of Dalny or Port Arthur, has been completed, only a few of the guns which recently arrived from Europe remaining to be put into position. There are 93 vessels of war of various kinds here (including torpedo craft, &c.), a boom of heavy logs has been stretched half-way across the mouth of the harbour and can be brought all the way across in about fifteen minutes; and the constant movement of troops, the transportation of military stores and provisions, the number of high officers and despatch riders that are constantly riding to and fro, gives the place the appearance of a fortress which is momentarily expecting the arrival of the enemy.

THE SCENE AT NIGHT.

The scene at night is peculiarly striking and animated owing to the continual signalling of the ships with the forts and with one another and the constant flashing of search-lights both from ships and forts. During the recent manoeuvres the narrow entrance to the harbour was a blaze of light owing to the number of flash-lights concentrated on it, perhaps by the attacking squadron which had to be on the look-out against the numerous torpedo boats with which the defenders were provided, and which will doubtless be of the greatest utility in case of a Japanese attack.

HORSES USED TO IT.

It is evident that this sort of thing has been going on for some considerable time past in Port Arthur owing to the fact that none of the horses with which the place is full, seem to mind in the least the search-lights as they flash with blinding brilliancy and perhaps with unnecessary frequency across the public road.

IN THE DAY-TIME.

In the day-time signalling of a different kind goes on, and frequently the eternal clatter of the *dropties* is drowned for an instant by the deep boom of one of the big guns from some of the neighbouring batteries, fired in order, I presume, to test its efficiency or for some other purpose unknown to me.

The *Hongkong Daily Press* hears that it is proposed to lay out in the near future a Peak Park, both for the cultivation of plants and for the benefit of residents on the higher level. The site has not yet been decided on.

HOW THE "WILLOW PATTERN" WAS PRODUCED.

From its legendary point of view we all know the pretty story of how the famous "willow pattern," beloved of china collectors, came into existence. Less well known is the more practical aspect of its origin which is told in an interesting illustrated article on the subject of the "Coalport Porcelain," in the new number of the *Windsor Magazine*. The writer says:—

About the year 1780 Mr. Turner visited France for the purpose of picking up knowledge on the porcelain manufactures of Paris and other places, and while residing in the capital is said to have had a regular laboratory fitted up at the top of his house in order that he might chemically analyse the beautiful foreign specimens of the ceramic art. He did not return home empty-handed, for he brought with him some skilled workmen whom he had tempted by high wages, and at once entered with increased spirit into the manufacture of porcelain at his own retired works. One result of this foreign trip was the production of the celebrated "willow pattern" and the "Blue Dragon." The "willow pattern" has undoubtedly been the most popular and had the most extensive sale of any pattern of china ever introduced. It has, of course, been made by many other firms, but the credit of its first introduction belongs to Caughley. The original copper engraving of the "willow pattern," bearing Turner's name, is still in existence at the works.

THE LAW COURTS.

DR. VAN DER HEYDEN v. H. L. STORNEBRINK.

This action, petitioning for the partition of joint-owned property, came up again in the Yokohama District Court before Judge Kano on Oct. 9th, when plaintiff's counsel asked the Court to examine Mr. H. Klingen and Mr. Leon van der Polder, Dutch Acting Consul, as witnesses.

The Court decided to examine Mr. Klingen only on Oct. 21st.

CLAIM AGAINST THE MINISTER FOR AGRICULTURE AND COMMERCE.

This case, instituted by Messrs. K. Ohara and Shimoda, against the Minister for Agriculture and Commerce, claiming yen 350,000 for damage caused through the Minister assigning a forest belonging to plaintiffs, at Hikawa, Tokyo, to the Government Preserving Forest, came up in the Tokyo District Court on Oct. 8th when defendant's counsel presented an objection to the Court that the plaintiff had no *locus standi*.

The Court held that plaintiffs were not properly qualified to sue, and subsequently the case was rejected.

LEI CHIEN HSIANG v. J. C. HARTLAND.

The hearing of this case, petitioning for the cancellation of the registration of certain buildings was resumed in the Yokohama District Court before Judge Kano on Oct. 9th when defendant's Counsel presented the power-of-attorney given him by Mr. Hartland, the signature being certified by a public notary. It may be remembered that plaintiff's counsel objected to Mr. Hartland's signature on this document at the previous hearing.

Plaintiff's counsel stated that he did not believe the document had been made and signed by Mr. Hartland before a public notary. The same counsel further introduced an objection against the official registration which had been made between Kwan How Chong and Mr. Hartland when the property was assigned to defendant as security, and he stated that the registration was not properly made. The Court declared that an official copy of the registry should be produced in Court in order to compare the signature of Mr. Hartland with that on the power-of-attorney.

This case, petitioning for the cancellation of registry of property, was resumed in the Yokohama District Court before Judge Kano on Oct. 14th, when a document signed by Mr. Hartland in the office of Mr. Tada, Public Notary, was presented to the Court.

Plaintiff's counsel urged that Mr. Hartland's

signature differed on every document so far presented to the Court. Counsel added that defendant did not appear personally to make his signature before the Public Notary. He asked the Court to examine Mr. M. Tada, Public Notary, as a witness, and to instruct an expert to compare the signatures and to give his opinion on the point.

The Court decided to do so. The case was then adjourned till Oct. 23rd.

CATHOLIC MISSION v. LIU JO-KEN.

The hearing of this case, brought by Rev. Jean N. Guerin, representative of the Catholic Mission in Japan, No. 80, Yokohama, against a Chinese named Liu Jo-ken, petitioning for the acknowledgement of the possession of the right to the perpetual lease of the ground at No. 185, Yokohama, which has an area of 536 *tsubo*, and on which six buildings are situated, began in the Yokohama District Court before Judge Kano on Oct. 12th.

On opening the proceedings, defendant's counsel presented an objection to the court as to the qualification of plaintiff as a legal person, his registry not having been entered in the proper Japanese judicial office, and he contended that plaintiff could not be recognized as a legal person in accordance with Arts. 33, 34 and 36 of the Civil Code as he had no power to bring a suit in law.

Plaintiff's counsel contended that the mission had been registered at the French Consulate, Yokohama, as a legal person in accordance with the French law, and after the enforcement of the revised treaty the official document regarding this registration had been transferred to the Japanese Government authorities. Counsel introduced before the Court several copies of evidence.

Both counsel entered on a brief discussion, after which the Court decided to give an interlocutory judgement on October 16th.

RAZA v. SARDA.

The hearing of this case, instituted by Mr. M. A. Raza, No. 175, against Mr. P. Sarda, claiming yen 52.89, came up in the Yokohama Local Court before Judge Awoyagi on Oct. 13th.

Plaintiff's counsel stated that defendant claimed in the same Court yen 50 as rent of a godown and on the other hand seized property of the plaintiff. The latter subsequently, after enforcement of a bailiff's order, paid yen 50 and yen 1.54 as costs on January 15. Since then plaintiff had paid 1.35 for presenting a petition to the Court for releasing the seized property.

Defendant's counsel expressed himself strongly regarding the case after which plaintiff asked the court to produce the documents offered in the previous proceedings. The Court agreed to this and the case was adjourned till Oct. 17.

PETITION FOR RESCISSION OF SEIZURE.

In the Tokyo District Court, a case instituted by Mrs. Nuki Nakamura against the Etablissements der Orosdi-Back, petitioning for rescission of seizure, was to be heard on Oct. 13th.

INFRINGEMENT OF CUSTOMS LAWS.

K. Machida (25), one of the crew of the Toyo Kisen Kaisha's steamer *Hongkong Maru*, who smuggled cigars costing yen 41.25, at Nagasaki on March 22nd, was sentenced in the Tokyo District Court on Oct. 13th to a fine of yen 383.62.

THE LIBERTY OF THE SUBJECT.

Mr. S. Tanaka, M.P., brought an action on Oct. 14th in the Tokyo District Court against the police authorities of Shitaya Station, alleging that the officers prevented the villagers in districts near the Ashio Copper mine from proceeding to the Department of Home Affairs to present a statement of their grievances. The complaint urged that the police officers violated the civil rights of the farmers.

A MURDERESS.

A woman, M. Tanaka by name, 22 years old, who murdered her natural child, has been sentenced to nine years' confinement with hard labour.

CUSTOMS DECISIONS.

The Director of the Yokohama Customs gave a decision on Oct. 5th on a protest filed by Messrs. Cornes & Co., No. 50. The firm imported on Sept. 10th 14 cases of woollen cloth, on which the appraisers imposed duty of *sen* 9.3 per square yard in accordance with No. 55-A of the Conventional Tariff between Japan and Great Britain. The importers protested, insisting that the woven goods were serge, for which a lower rate of duty should be imposed. The protest was not sustained on the ground that the goods are woven with worsted yarns in the warp and wool and the quality is thicker and heavier than common serge.

On the 7th inst. a decision was given on a protest filed by Messrs. L. T. Healing and Co. No. 74. The firm imported "overhead trolley machinery" to be used for an electric railway, on which the Customs authorities imposed *ad valorem* duty of 20 per cent. in accordance with No. 271 of the Statutory Tariff. The importers contended that the goods should come under No. 10 of the tariff at the *ad valorem* duty of 10 per cent. The protest was dismissed on the ground that the machinery is not comprised in the schedule of No. 10 of the tariff, which provides for only electric light apparatus, or instruments or parts thereof.

The same day, another decision was rendered by the Director of Customs on a protest instituted by Mr. A. Oestmann, No. 74, who imported worsted yarn on which the authorities imposed a duty of *yen* 9.69 per 100 *kin* (*kin*=1,322.77 lbs.) under No. 34 of the Conventional Tariff between Japan and Germany. The importer held that the yarn should only be subjected to duty of *yen* 8 per 100 *kin*, as the goods were to be used only in weaving. The protest was rejected on the ground that this worsted yarn is not only used for weaving but for several other things.

The Customs also gave a decision on a protest introduced by the China Export, Import and Bank Co. No. 93. The firm imported worsted yarn on which the authorities imposed *yen* 9.169 per 100 *kin*. The protest and decision were the same as in the case of Mr. A. Oestmann.

On Oct. 12th, a decision was delivered by the Customs on a protest brought by Messrs. Gysun and Schoeninger, No. 93, who imported ebonite plates. The appraisers imposed a specific duty of *yen* 17.905 per 100 *kin* in accordance with No. 412-B of the statutory tariff, against which the importers protested that the goods are rubber manufacture provided for in the conventional tariff between Japan and Great Britain or Japan and Germany and should be charged *ad valorem* duty at 10 per cent. The protest was rejected on the ground that the goods in dispute are a kind of raw material and not manufactured rubber goods.

NORTH CHINA INSURANCE COMPANY.

In presenting their report to the twelfth ordinary general meeting of shareholders of the above company the Directors state:—

1902.—An interim dividend of 4 per cent., aggregating Taels 45,283.02 was declared on the 1st May last, and after deducting this amount from the Balance of the Working Account, there remains a sum of Taels 148,357.25, which the Directors recommend should be appropriated in the following manner:—

A Final Dividend of 4 per cent. on Paid-up Capital.
A Bonus of 10 per cent. upon Contributory Premium.

Taels 40,000 to the Credit of the Reserve Fund.
And the Balance to be retained to meet further liabilities.

LIABILITY ACCOUNT.—As the balance of Taels 214,688.33 to the Credit of this Account is largely in excess of our estimated requirements, the Directors further recommend that Taels 100,000 should be transferred to the Reserve Fund. This, with the Taels 40,000 above referred to, will increase that fund to Taels 500,000.

1903.—The Balance at Credit of Working Account to the 30th June amounts to Taels 271,589.82.
Shanghai, 29th September, 1903.

THE INTERPORT WEEK.

SOME NOTES ON THE PLAYERS.

Next Monday the Interport Festival begins in earnest with the cricket match between Yokohama and Kobe. "An Old Hand" has kindly furnished us with the following notes upon the cricket team which has been selected to represent Yokohama:—

E. W. KILBY:—A fine, free bat with the best style in the team, an erratic bowler and a good field, but inclined to forget that he must pick the ball up before throwing it.

H. W. KILBY:—The mainstay of the batting, always to be depended upon for runs. An excellent field and a safe catch. Also makes a fair change bowler.

J. M. MOLLISON:—A good, free bat; should take more pains; the most successful bowler so far this season; his fielding, however, leaves a good deal to be desired.

P. A. COX:—If he would only not risk his wicket by trying to hit the ball out of the ground, would make many more runs, but nevertheless is a most useful man in every department of the game.

J. MANN:—Has a great Shanghai reputation but been seen little on the Yokohama Cricket ground, owing to his late arrival at this Port, but is undoubtedly one of the best all round men in the Team.

W. S. MOSS:—A very stiff bat, but hard to get out, makes the best use of his legs in guarding his wicket, and should make runs; a poor bowler and moderate field.

C. M. DUFF:—Still has no one to approach him as the stumper of the XI. and indispensable on this account. With any luck might be expected at any time to make a score.

A. KINGDON:—The most tricky bowler in the XI. but inclined to sacrifice pitch to pace. A good field and works very hard. As a bat he should not be so fond of trying to pull before he gets set.

E. B. S. EDWARDS:—Has done little so far this season, but is always a dark horse and may come off when most wanted.

DR. MOON:—A keen cricketer but a bit stiff in his joints; is however a useful all round man.

F. E. WHITE:—Still bowls and bats fairly; slow in the field and as a Captain has a good knowledge of the game, and deserves more support. Rather inclined to keep himself on too long when bowling.

AN OLD HAND.

The Kobe Eleven will probably be as follows, says the *Kobe Herald*, although if H. S. Thompson is able to get away he will find a place in the Eleven, vice Cornes. We append a few notes of the Kobe representatives:—

MURRAY, G. C.:—The skipper of the team. Is a good stylish bat and a quick run getter, likely to score well at any time; has been bowling very well latterly, and with Edwards and Hardy constitutes the regular bowling department of the team. Can field well in any position when not bowling.

BRAESS, W.:—Bats well when set, and is very cruel to loose bowling, but is rather too anxious to score in the first part of his innings. Good field anywhere, and can bowl well at times.

CORNES, A. J.:—A good "stonewall" player, likely to wear down any sort of bowling. We think he fully justifies his selection.

EDWARDS, W. D. S.:—Has not scored very well this season, but latterly has got his eye in, and should make good scores in the interport game. Bowls well, but must avoid getting rattled. Safe in the field.

GILLINGHAM, A. H.:—A very powerful and neat bat. Scores and keeps the off field very busy. Fields well anywhere.

HARDY, W.:—Bowls very well, and is especially dangerous on a bumpy wicket. Makes runs quickly when batting, but has not stayed in long enough this season to make a big score. A fairly good but lazy field.

JEFFREY, E. A.:—A very stylish patient bat, and should make one good score at Yokohama anyway. Very keen and good field.

LIGHTFOOT, C. H.:—A good "stonewall" bat, and good with the gloves. Is very safe on catches.

ELLERTON, F.:—His first appearance in an Interport Eleven—a remark which applies equally well to Hardy, Jeffery and Stephens. Plays a straight bat and has improved in the field.

LUCAS, C. J.:—A good bat, but nervous. We expect him to make runs. Keen field, but not safe.

STEPHENS, G.:—Strong bat, but should cultivate off-play more. Is too anxious to score in the beginning of his innings. Fields well.

THOMPSON, H. S.:—A steady bat, but has not had much practice this season. A very good man in the outfield.

NEWS OF THE WEEK.

Marquis Ito left Tokyo on Oct. 14th for Oiso.

Tokyo city loan bonds to the face value of yen 1,300,000 were redeemed on Oct. 9th at the Municipal Office.

The Empress on the morning of Oct. 13th paid a visit to the Shinjuku Botanical Garden, where she stayed till 4 p.m.

The English mail left Moji by the 2nd train (Sanyo Railway) on the 15th and is due here at 9.31 p.m. on the 16th Oct.

The third-class cruiser *Otoha*, which is under construction at the Yokosuka Naval Dockyard, will be launched on Nov. 2nd.

A telegram from Taipei, Formosa, states that three commissioners to the Philippines arrived there on Oct. 13th to investigate the opium trade.

A hundred and fifty emigrants to Manila left Kobe by the steamer *Shanmut* on Oct. 13th. They will be employed on civil engineering works.

M. Adalbert d'Ambro de Adamoc, Austrian Minister at Tokyo, who has been at home since December last, returned to his post on Oct. 14th.

Mr. T. Doi and over sixty other persons in Osaka have established an emigration office under the name of the Meiji Emigrant Company with a capital of yen 500,000.

Mr. Hugh Clifford, C.M.G., well-known as a writer on things Malayan, who is at present British Resident at Pahang, has been appointed Colonial Secretary at Trinidad.

The tobacco dealers of Osaka held a meeting at the Osaka Chamber of Commerce on Oct. 12th and decided to oppose the contemplated Government monopoly.

The Hoko Gikai's sailing vessel *Sawasaki Maru* is reported to have run ashore off Ebisu island, near Muroran, Hokkaido, on Oct. 7th. The crew were saved.

A man armed with a large knife entered a room in the compound of the glass manufacturing factory, Azabu, Tokyo, and stole yen 5 after threatening the inmates.

Mr. Dan Leno was re-admitted to Camberwell House Asylum, Peckham-road, on the 4th ult., having sustained a severe mental relapse at Bournemouth, where he was staying.

Baron Kiyoura, Minister for Agriculture and Commerce, left Tokyo on the morning of Oct. 15th for Nagano, to be present at a union meeting of industrial men to be held the following day.

The Crown Prince arrived at Matsuyama on the afternoon of Oct. 14th by the war-ship *Tukasago* from Fukuoka. He proceeded to the prefectural office where he stayed the night.

Fire took place at Ashiwo-machi, near the Ashiwo Copper Mine, on the night of Oct. 11th destroying 12 houses and damaging two others. A fallen lamp is reported to be the cause.

A Tientsin telegram states that Messrs. Inukai and Oishi, two of the leaders of the Progressists, arrived there on the night of Oct. 12th. They left on the following morning for Peking.

The Lord Mayor-Elect of London is Alderman Sir James Thomson Ritchie, K.B. He is a brother of Mr. C. T. Ritchie, who recently resigned the position of Chancellor of the Exchequer.

The Nara Railway Company will hold a general meeting on Oct. 23rd when the half-yearly dividend will be declared at the rate of 3.5 per cent. The net profits during this half-year amounted to yen 89,728.

The members of the Imperial Educational Society will, on Oct. 15th, entertain Mr. Y. Kubota, who was recently appointed Minister of

State for Education, at the Educational Club, when he is expected to make a speech with reference to educational administration.

According to the *Asahi*, an order convoking the Diet will be issued this month, as it is proposed to open the session in the beginning of December, a little earlier than in previous years.

Numerous executions, says the *P. & T. Times*, have been taking place in Peking of late, and after each execution the criminal's name, age and offence has been publicly posted up. This is a remarkable and commendable innovation.

The Ministers for War and Home Affairs, Field-Marshal Marquis Oyama, Chief of the General Staff Office and Major-General Fukushima, Assistant Chief, met on Oct. 8th at the official residence of the Premier.

N. Oku and two others living in Kyoto have been arrested on a charge of having forged Korean nickel coin aggregating 200,000 pieces. They packed them into bags and were carrying them to Osaka when they were arrested.

A Buddhist priest named T. Hida (28), living at Asakusa, Tokyo, was arrested on Oct. 12th on a charge of having embezzled yen 1,361 belonging to the mission office of the Hokke Section, while acting as clerk from January to August, 1902.

The Emperor and Empress presented on Oct. 12th two pieces of white silk and a quantity of incense to Marquis Ito as a mark of condolence at the death of his mother. The same day, the Crown Prince and Princess also presented incense.

A man named C. Fukushima (26) was arrested on Oct. 8th at the Kanda Post Office Tokyo, while attempting to draw money on a forged money order. At the police office, he confessed that he had several times stolen money by this means.

Oct. 17th being the anniversary of Confucius, the Chinese residents of Yokohama will give a dinner party at their Club, the Chukwa-Kwai-Kan, inviting Governor Sufu and other officials and Japanese business men aggregating over seventy persons.

The *Jiji* states that the 25th regiment of the 7th Division (Sapporo), and the 29th regiment (Sendai) and the 16th regiment (Shibata) of the 2nd Division will leave Ujina on Oct. 25th and Nov. 14th for China to take the place of the present garrison.

The *Asahi* states that the British steamer *Firth of Beauly*, whose Yokohama Agents are Messrs. Dodwell & Co., Ltd., and which arrived here on Oct. 8th from Nicolaivesk with salted salmon, is for sale at yen 130,000 or 140,000. She was built at Glasgow in 1888.

A Seoul telegram dated Oct. 10th was received by the *Niroku* to the effect that twenty Russian gunners, thirty cavalry and thirty-five infantry have arrived at Yong Am-pho. The construction of fortifications is almost completed. Two guns have been added to the original three.

A soldier, I. Takashima by name, belonging to the First Division, Tokyo, and one of his relatives were arrested on Oct. 14th on a charge of having entered a pawn-broker's shop kept by R. Ono at Kita-Toshima, early on the morning of the same day and robbed the place of a certain number of articles, after menacing the family.

A baseball match was played on the Recreation Ground on Saturday afternoon between teams representing the Y.C. and A.C. of Yokohama and the Waseda University of Tokyo. There was a very large crowd of spectators. The match was a clear victory for the students who, amid much cheering, won by 9 runs to 7.

An old lady in Melbourne, an octogenarian, who was in receipt of an old-age pension of seven shillings a week, has just received a legacy of £7,000. She promptly called at the Government Old-Age Pensions Office, had her name taken off

the list, and refunded the whole amount she had received from the State in the way of pensions.

A youthful (nine-year-old) pickpocket with an already large criminal record has been arrested for stealing a purse containing yen 15 on Sunday afternoon from a petty officer of the U.S. warship *Wisconsin*, who was at a bicycle race on the course near Maganecho. The money was at once handed back to the American sailor.

It is announced in Shimonoseki, says the *Asahi*, that three members of the Mitsui Bussan Kaisha, at Newchwang have been arrested by the Russian authorities at Harbin on suspicion of being military spies and are detained in the police station at Port Arthur and that a Japanese military officer is kept also in the same place.

The directors of the Bankoku Railway Company held a meeting on Oct. 13th when they approved the statement of account for the last half year. The net profits amounted to yen 47,482. The same day, the directors of the Nanao Railway Company met. Their net profits were yen 17,490. They decided to add yen 400,000 to the original capital.

According to the *Asahi*, the branch of the First Bank at Seoul, Korea, purchased gold bullion weighing 936.813 *kwamme* from native miners between the commencement of the year and the end of September. The bullion on being refined weighed 614.341 *kwamme* and was made into gold coins amounting to a little over yen 3,091,730 at the Osaka Mint.

According to the Captain of the steamer *Tatekuni Maru*, which arrived at Shimonoseki on Oct. 14th from Vladivostok, business at the latter place is very dull. The Japanese merchants are still doing business and there is no talk of their retiring from the port. A Japanese coolie who assaulted a Russian at Josiu was sentenced to six months' imprisonment by the Russian Authorities.

The appeal of Mr. K. Mizobe, ex-Governor of Tochigi prefecture, who was connected with the text book scandal was rejected by the Court of Cassation on Oct. 12th. He had been sentenced in the Tokyo District Court to two months' imprisonment and a fine of yen 7, but the punishment is increased by the Appeal Court to four months' imprisonment, and a fine of yen 10, and the bribe, yen 1,000, was ordered to be confiscated.

Three Americans broke out of Malahi Island prison the other day and swam across the lake to a point near Jalajala, Rizal Province, P.I., but fell in with a band of natives who, seeing them unarmed, attacked and captured them. One was killed, one escaped and surrendered to the U.S. authorities, and the third is missing. Constabulary and troops were sent in pursuit of the murderers.

The Russian second class cruiser *Ahnac*, which was built and recently finished at the Baltic Works, was commissioned on the 25th August. She will leave St. Petersburg during this autumn for the Far East. On the 29th the battleship *Slava*, one of the largest vessels in the Russian navy, was successfully launched from the Baltic shipbuilding yard in the presence of the Emperor, the Empress, the Empress Alexander, and the Hereditary Grand Duke Michel Alexandrovitch.

During her stay in Yokohama at the Pier the Boston Steamship and Towboat Co.'s steamer *Shatomut* was thrown open to the public in order that her fine new passenger accommodation could be inspected. The *Shatomut's* claims for passenger traffic certainly cannot be neglected, for her cabins are most luxuriously fitted up, and her cuisine is highly reported upon. She has now room for 42 first-class passengers, 40 second-class, and 250 steerage.

The death has to be recorded of a very old foreign resident of Japan, Mr. Francisco E. S. da Rosa having passed away at his residence, Omarudani, on Saturday morning. Mr. da Rosa was in Nagasaki in 1859 and had connection with the

first foreign paper of Japan and with the Takashima collieries, but in recent years made Yokohama his headquarters. The deceased gentleman was sixty-four years of age and leaves a widow and one son to whom his friends will extend their sympathy.

A widower called up for service as a Reservist in the 3rd Engineers, at Arras, arrived carrying a pretty little girl, and leading a horse. According to Dalziel, he explained that no one would consent to look after the child in his absence, and that he could not bear to leave his horse behind, which was the only thing of value he possessed in the world, and with which he earned a living for the child and himself by towing barges. The colonel gave orders that the child and the horse should be provided for. The soldiers at once christened the girl "The Daughter of the Regiment."

The directors of the Kwansei Railway Company met on Oct. 8th at Osaka when they decided provisionally to submit to the general meeting accounts showing that the net profit is yen 856,249 to which a balance from the previous account of yen 3,885 has to be added. Of the total, yen 43,000 is to be set aside as a regular reserve; yen 742,000 is to be paid as a dividend at the rate of 7 per cent. per annum (yen 1.75 per share); yen 5,150 is to be paid as rewards to employees; yen 20,707 is set a part for expenses connected with the Exhibition; and yen 25,227 is to be carried to the next account.

It is reported from Saitama Prefecture that a rice dealer named T. Haraguchi (28) living at Osato, who insured himself with the New York Life Insurance Company, for yen 10,000 intended to obtain the insurance money by means of fraud. It appears that the rice dealer fell suddenly ill on the night of Oct. 6th after his bath and was reported to have died the following night. Dr. T. Ohashi gave a certificate of death which was presented to the village office, but the coroner found on enquiry that the man was lying in bed shamming to be dead. The doctor and the rice-dealer were removed to the police station.

The *Shanghai Mercury* reports that on the night of the 7th inst. bands of bluejackets were scouring the vicinity of Hongkew looking for a negro bluejacket belonging to the U.S.S. *Monadnock* who had shot a Master at Arms belonging to the U.S.S. *Don Juan de Austria*. The men were in a very angry mood and carried ropes which they had secured from various places and were threatening to lynch the negro if they caught him, but he managed to elude his pursuers and got on board his ship. He was, however, shortly afterwards arrested by Detectives Sergeants Gilligan and Kingston and safely escorted ashore and lodged in the Hongkew Police Station.

Mr. H. Falk, (26) a native of Germany, in the employ of Messrs. Worch and Company, No. 154, Yokohama, was found to have committed suicide on the morning of October 13th at 7 a.m. when his Japanese servant entered his room to attend upon him as usual. The fatal deed was evidently done with a revolver, for a bullet had penetrated his brain from the right temple. The unfortunate man was still sitting on a chair and holding the revolver in his right hand, which rested on the knee, the body leaning on the back of the chair. It appears that the deceased was away from his rooms the previous night and returned only about two hours before his dead body was found. The deceased left a letter in which he asked his colleagues to send home news of the accident to his parents.

A home paper says that the sad news as to Mrs. Frederick Beer's mental health will surprise many of her friends as much as it surprised Sir Francis Jeune in the Probate Court. When Mr. Beer, who was the proprietor of the *Observer*, died in January of last year, it was understood that Mrs. Beer would continue to direct the *Sunday Times*, which her husband had bought from the late Sir Augustus Harris mainly for the purpose of providing his clever wife with a hobby. Mrs. Beer is a daughter of the late Mr. Sassoon D.

Sassoon. She offended her family irretrievably by her conversion to Christianity, and it was Mr. Gladstone who gave her away at her marriage with Mr. Beer. She had a rather advanced education, and for a couple of years acted as a voluntary nurse. It will be remembered that it was to Mrs. Beer that Esterhazy confessed the authorship of the infamous *bordereau* on which Captain Dreyfus was wrongfully convicted.

The Directors of the Sanyo Railway Company met on Oct. 12th, and discussed the half-yearly accounts to be submitted to the general meeting which will be held on the 26th. The report shows that the net profit for the half-year amounted to yen 351,996.05 of which yen 67,600 is to be set apart as reserve; yen 6,500 to be paid to employees as reward; yen 960,000 as a dividend of yen 2 per cent. share, 4 per cent. (8 per cent. per annum); yen 240,000 as a special dividend at the rate of yen 50 per share; and the balance of yen 8,556.05 to be carried to next account. The *Fiji* states that the railway company has sold ground in Takahama to the Tokyo Warehousing Company for yen 400,000 from which amount several expenses incurred hitherto on the property have to be deducted, leaving a net amount of yen 340,000. Of the temporary profit the directors recommended special dividends of yen 240,000 to be distributed among the shareholders. Of the remaining amount, yen 87,000 is to be given to the employers, numbering some 4,000. The paper adds that the Sanyo Railway Company intended to replace the 60 lbs rails with those of 70 lbs. The company will make its first purchase of the heavier rails to the extent of 42 miles before August next year.

While proceeding through Sunda Straits on the way from Singapore to Adelaide, the officers of the steamer *Fortunatus*, which arrived at Adelaide on September 7, sighted a large sailing vessel, apparently a hopeless wreck, on a reef in the middle of the Straits. The *Fortunatus* was six or seven miles from the wreck, and even with good glasses the name of the vessel could not be discerned. She appeared to be a fine new English four-masted barque. Her hull was painted lead colour, but was exceedingly rusty, and she had evidently been on the reef for a considerable time. Her spars were all standing, but the stern was sunk and the poop under water. Nothing could be seen moving about the deck. While the *Fortunatus* was approaching the vessel a steamer, which had gone round the coast from Batavia, was also seen to be making for the wreck, and as it was evident that the new-comer was bent on a salvage expedition, the *Fortunatus* passed on her way. The reef where the barque lay was marked on the chart as Transit Rock. It is about 400 or 500 feet in extent, with 12 ft. of water above it, but all around it the water is 30 or 40 fathoms deep, with no shoaling. The vessel is supposed to be the barque *Falls of Eltrick*, a well-known Australian trader.

FROM THE JAPANESE.

As in a little room, from day to day,
Like children, glad of heart, we laugh and play.
Few are the words our lips have learned to
speak;
Yet they suffice as long as we shall stay.
The short years come and go, frail, sliding
screens;
Fusama, touch'd with flawless blues and greens;
On every one some hieroglyph is drawn:
But none can truly tell us what it means.
And as they move before men's wistful eyes,
Now flecked with shimmer of unclouded skies,
Now softly flowered with the blooms of May,
Now reddend'd like the leaves when autumn dies,
We babble into song, and spend our toys,
That bear the simple name of human joys;
While over us the unfathomable blue
Weaves the dense veil no mortal's hand destroys.
—*Pall Mall Gazette*.

MATTERS AMERICAN.

Within a year it is claimed that through connection by electric railway will be established between Cleveland, O., and Pittsburg, Pa., a distance of 137 miles. The country to be traversed by the new lines is very rough, but its promoters hold that its success is assured.

The steam turbine engine is to be tried in the United States Navy as a substitute for reciprocating engines. Rear-Admiral Melville has recommended its use in one of the new 5000-ton scout ships, and the Naval Board of Construction has approved the recommendation.

Speyer & Co. have formed a syndicate to raise \$8,300,000, for the Mexican National Railroad by means of two-year 5 per cent. notes, secured by Mexican International stock, the notes to be issued at par less commission. The money is raised for the purchase of the International Railroad Co. of Mexico.

Customs Inspector Thomas P. Choates and Lieutenant Osborne, constabulary supply officers, both stationed at San Fernando, P.J., who were arrested recently on the charge of misappropriating government funds, have been tried and convicted. Lieutenant Osborne has been sentenced to 10 years' and Inspector Coates to eight years' imprisonment.

Captain Richardson Clover, recently relieved from duty as naval attaché of the American Embassy at London, will be the first commander of the battle-ship *Ohio* which will be completed by the Union Iron Works next summer. Captain Clover applied at the Navy Department for a battle-ship command and was promised command of the *Ohio*.

So many lives have been lost in Massachusetts on single-track interurban electric railroads that an agitation has been started in favor of legislation compelling the companies operating them to provide a second set of tracks. The same objections have been made to the steam railroads of the West, where most of the rail accidents and casualties have been attributed directly to the carrying of double-track traffic over single-track lines.

The U.S. Navy Department has issued an order declaring the "Star-Spangled Banner" the national anthem, and directing that whenever the composition is played all officers and men shall stand at attention unless they are engaged in duty that will not permit them to do so. It is required that the same respect shall be observed toward the national air of any other country when played in the presence of official representatives of such country.

How foodstuffs are adulterated is shown by some recent seizures by a Pennsylvania Food Commissioner under the new pure-food law, which has been in operation a little over two months. Ice cream bought in a Philadelphia park contained boric acid. Strawberry preserves contained a few strawberry seeds, but the body of the article sold under that name was composed mainly of coal tar dyes, starch and glucose. Sausage and Hamburg steak were loaded with formalin preservatives and aniline dyes, and a Baltimore quince jelly was found to be compounded of glucose, starch and pear juice.

The cost of living in the United States, as shown by Dun's index number, was higher on July 1, 1903, than at any time since 1884, but was little more than a year ago. The highest point reached since 1860 was in 1864 and is represented by the index figure 278.987, as contrasted with the lowest of 72.455 in 1897. This index number is an expression of the price of food, clothing, metal, and other articles of common consumption reduced to a common basis for purposes of comparison. Quantities of each commodity are taken in accordance with the annual per capita consumption, so that no article receives more or less than its relative position of importance. As the same quantities are taken of the same articles at each date, the record gives a faithful representation of the course of prices.

Fish Commissioner Kershaw, of Washington, purposes urging upon Secretary of State Hay the necessity for diplomatic action between the Washington and Ottawa governments, which will permit the state of Washington or the Puget sound cannery men in their private capacities to establish sockeye salmon hatcheries on the Frazer river, the exclusive spawning ground of that fish, which flows entirely through British Columbia territory. The extremely short runs of the last two years have convinced American and British Columbia cannery men alike that the species has been nearly exterminated, and that artificial propagation alone will save it from complete destruction.

The power-plant of the St. Louis Exposition will include a 3,000 horse-power gas-engine from Belgium, the largest gas-engine in service. The World's Fair power-plant will embrace more than 40,000 horse-power, "but by far the most interesting feature of this power-plant to Americans," says *The Scientific American*, "must be the gas-engine display. The 3,000 horse-power gas-engine, above referred to, has two cylinders, each having a diameter of 51 inches. The length of stroke is 55 inches and the revolutions per minute when developing 3,000 horse-power will be 85. The length over all of the engine is 67 feet 1 3/8 inches. The bed-plate or foundation proper will have a length of 77 feet 6 inches."

Commissioner Carrol D. Wright, who was some time ago named as umpire of the conciliation board appointed to adjust disputes between the coal miners and the operators, has rendered decisions upon several points, of which the most important is as to the right of the mine owners to discharge employees. This question arose upon the complaint of William Mowry that he was unjustly discharged by the Philadelphia Coal & Iron Company. Mr. Wright decided against the complainant, thus sustaining the action of the employing company. His decision is generally regarded as a far-reaching declaration of the rights of employers on the one hand and of employees on the other as affecting the maintenance or the severance of relations between them.

Judging from statistics recently made public, President Roosevelt has been somewhat more strict than his recent predecessors in his consideration of applications for pardons. During the last fiscal year 650 applications for executive clemency were made. Nearly one-half (316) of these applications were reported upon adversely by the federal judges and prosecuting attorneys, and the requests in these cases were not considered by the President. Of the remaining 334 applications 131 were denied and 134 were granted in some form, while sixty-nine cases were left over at the end of the fiscal year. The outright pardons were not very numerous, only thirty-nine in all, while commutations of sentence were made in fifty-seven cases. During the preceding fiscal year the President passed favorably upon 134 applications and denied 181 requests for clemency. In the fiscal year ending in 1901 President McKinley granted in some form 226 out of 343 applications considered by him, bestowing full and unconditional pardons in 107 cases.

CANTON INSURANCE OFFICE, LTD.

The following report will be presented to shareholders of this Company at the twenty-second ordinary general meeting, to be held at the offices of the general agents, Messrs. Jardine, Matheson & Co., on Thursday, the 22nd October.

1902 Account.—The result of the year's working is a credit balance of \$360,551.96, out of which, and with the approval of the shareholders, it is proposed to pay a dividend of 30% (= \$15 per share), to add \$50,000 to the reserve fund, raising the latter to \$1,300,000, to appropriate \$50,000 for the formation of a re-insurance fund, and to carry forward the balance of \$110,551.96 to the current year's account.

1903 Account.—The working of the office compares favourably with that of last year at a similar period.

BELLEVILLE BOILERS.

The *Shipping World* of September 2nd, says the late Naval Manœuvres should do something towards giving the Belleville Boiler a better name than it has received as yet, for 21 vessels of the fleet depended entirely on this form of generator for their supply of steam, and although these ships covered over 2,000 miles each, and many of them considerably more, not one of them was compelled to drop out of the manœuvres, even temporarily by reason of trouble with their boilers. They have shown themselves to be good reliable steamers, superior to ships fitted with the older type of generator, and possessing the great military quality that they are able to put on their full speed at short notice. The *Good Hope* increased her speed from nine to nineteen knots in a little more than a minute, and in a very short time she was travelling at 22 1/2 knots, maintaining this rate with perfect ease for four hours. The secret of success in working this new kind of boiler lies in the intimate knowledge by the engineers and the staff of its peculiar qualities. It is undoubtedly a type which needs careful handling and attention.

CORRESPONDENCE.

MATSUYAMA FACTORY GIRLS' HOME.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The wide interest of your readers in all forms of benevolent and philanthropic work for the Japanese, and especially in that which seeks to meet the growing industrial and social problems of the times, is so well known that we desire to call their attention to a work carried on here in Matsuyama. The accompanying copy of the first Annual Report of the Matsuyama Factory Girls' Home will give a fair idea of the aim and actual attainments of this enterprise.

The physical, economic, educational, social and moral conditions of the tens of thousands of factory girls in Japan is bad, in some cases beyond belief. The Government is not ignorant of the situation nor does it wholly ignore it. It has already done something and is planning for further effort to remedy the situation. But laws alone provide no adequate solution of the many and serious problems raised by the extraordinary industrial transformations which have overtaken the modern western world, and are sweeping over Japan. A new spirit must be evoked and new moral relationships must be established. This new spirit and life, however, cannot be produced by laws, but only by love and contagious personal example and endeavour.

Under especially favourable circumstances we have started a boarding house, or better a "Home," for factory girls where we make it a point to provide not only sufficient fresh air, nourishing food, adequate bedding and some recreation, but also some elementary education (very few of the girls who come to us can read or write, some of them even their own names) and some moral and religious instruction. We emphasize the need of faithful work in the factory and of absolute honesty toward the employers and in all relations of life. The results of our experiment of a year and a half are already exceedingly gratifying. The good-will and cooperation of the factory and of Government officials and their open commendation have been secured. The girls in the "Home" enjoy conspicuously better health, do better work and earn and send home more money than those in the other boarding houses, as careful examination has shown. In six months an average of 20 girls, in addition to paying their full board and other bills, sent to their homes 239.63 yen, whereas from the other boarding houses practically nothing is sent. But better than the money showing is the moral and educational, for all learn to read, write and sew, attainments which the factory girls in Matsuyama cannot secure elsewhere. The Christian hymns they are learning are displacing the immoral songs they used to sing while at work. In a word their womanhood is being raised. They will be much better fitted for life's duties and for motherhood than would otherwise be possible. Through this "Home" we are reaching the lowest strata of the working classes of Japan and providing them with ideals and motives and some degree of education, and this too in a way which does not tend to pauperize them. Each girl pays all her actual expenses.

Since the accompanying report was written six months have now elapsed. It seems desirable to add a few words to bring it down to date.

Just at the close of the three months' notice to vacate our first premises, we found a small house,

which, with considerable repairs and supplemented by an old tent, has provided us with tolerable quarters for the summer. The number of girls admissible, however, has been limited to 22. The expenses of repairs, of rental and of moving, quite exhausted our funds by the first of July; but thanks to the help of a few friends our immediate needs have been met. And if we may judge from the many expressions of interest in this form of work we believe our friends will still be found to help carry it on and put it on a permanent foundation. But the autumn has now come, and winter will be here before long. The tent which has done good service through the summer is daily getting older and will be wholly unfit when real cold weather arrives. Earnest, protracted search has been made for some larger house more commensurate with our needs, but in vain. It has become clear that we must either content ourselves with the present house, reducing the number of inmates to 15 or 16 and giving up the school for non-resident factory girls, or buy and build. Should we adopt the former course, our desire to make the "Home" self-supporting can never be realized. Only by having an average of not less than 40 girls can this be attained. With room for 70 it seems likely that the expenses of both the "Home" and the School departments can be met from the natural income of this "Home."

We feel accordingly that the time has definitely come to adopt the latter course. We therefore present the matter to all who are interested in the industrial, social and moral welfare of Japan, for their consideration. If our plan meets with approval we trust that we may be informed soon how much we may expect to receive. We do not ask that the funds be sent at once; any time during the coming winter will do. If the funds can be secured we judge it wise to buy land and build dormitories, recitation and other rooms at a cost of about \$3000 (gold). In case this sum is not fairly in sight, it seems to us imperative to put up at once a small two-story building to cost about \$400 (gold) in the place of the tent, as a makeshift until the funds shall warrant a more extensive and adequate plant. For even with this addition, the quarters will be entirely too cramped for the best work and for permanent occupancy. The sooner we can put this work into a suitable house on suitable grounds, the better will be the work accomplished.

Trusting that this Report and appeal will approve itself to all who read these lines, and that many will feel both inclined and able to help this "Home" with a substantial gift, and thanking you for your kindness in making room in your valued paper for this long statement as to this work and its needs, we remain

Respectfully yours

(Signed)

H. FRANCES PARMELEE.
SIDNEY L. GULICK.

Matsuyama, October 8th, 1903.

THE FIRST ANNUAL REPORT OF THE MATSUYAMA FACTORY GIRLS HOME.

The Japanese name for this "Home" is "Dojokwai," that is, Sympathy Society, but it is better in English to use a name which more accurately describes the way in which the sympathy shows itself. It seems desirable at this time to give a connected account of the way in which this interesting work began. For this purpose it is necessary to tell the story of the individual who has been the chief mover.

Mr. Shinjiro Omoto is now thirty-one years of age. Graduating from the common school at fourteen, he at once went into business, first as an apprentice and later with his father. Dissatisfied with the hereditary business, he at nineteen years opened a new business of his own which soon became so flourishing as to quite overshadow the older business. Money came in so easily that he soon entered on a course of licentiousness. For nearly ten years he was as famous for his drunken carousals as he had been for his early phenomenal business success. Matters became so extreme that his parents cut him off and cast him out of the house, and for many years he did not even speak to his father.

Some four years ago, we held a preaching meeting in the Komachi theatre, experiencing persistent rowdy opposition throughout the meeting. Mr. Omoto happened to be drinking in the saloon opposite the theatre and hearing that there was a Christian preaching meeting, he thought he would try to break it up. But the sermons on Pessimism and the New Life attracted his attention. The next day I received an anonymous letter asking for tracts. It seems that these produced a profound impression, particularly that entitled "Two Young Men," which told how two hardened prisoners were transformed by the Gospel and became highly useful and well-known members of society. He definitely set himself to learn more about Christianity, but privately, unwilling to make public his new hope. He bought and read the Bible entirely by himself, going to no meetings. Gradually he gained some idea of the Gospels, but he found he had no power

to conquer his passion for drink. After a while he went to Kobe and joined a temperance society; but he soon found that the society had members who broke their pledges, and he began to break his. He went to Okayama and tried to join himself to Mr. Ishii, but the latter told him to return to Matsuyama and become a Christian and join the church there in his old home; only so could he be saved. He returned much disappointed. He called on me shortly before I left for our annual Mission Meeting, held the first of July (1901), but he did not tell me at all fully about himself. He also called on Mr. Nishimura who prayed with him and told him that to be saved he must receive the Holy Spirit.

That summer, quite exceptionally, I returned in the middle of the vacation. He appeared at the Wednesday evening prayer meeting for the first time and was evidently in a state of great excitement, so much so that we could with difficulty understand his remarks and prayer. The gist of what he said was that he had that day received the Holy Spirit, that he was now saved, and that his joy was too great for utterance. Tears rolled down his cheeks as he talked and prayed. We too prayed for him, though we knew nothing of his history, and doubted somewhat whether he really understood the meaning of the words he was using. After the meeting I had a few words with him, and urged him to ally himself with our experienced workers. He was so excited, I feared for him. I wondered whether this might not be a tornado of emotion due in part to his nervous condition incident of his riotous life, an emotion which he mistook for conversion. Of course I said nothing to him of this, but urged him to begin at once to live the Christian life, cutting loose from all bad companions and bad habits. This he promised to do.

When I returned to Matsuyama in September, I found he had held out so far. To gain an honest living, he had entered the Cotton Spinning Factory. This required twelve hours of hard work daily, sometimes by day and sometimes by night, a hard pull for one who had not worked for ten years. He had attended the Christian services faithfully and had become quite intimate with two or three of our best Christians. In October he began to talk about the sad and immoral life of the factory girls. The majority of them could neither read nor write; their popular songs were indecent; they were crowded together in disease-breeding, immoral boarding houses, where they were deliberately tempted to spend more than they earned. Securing our assent, he gathered a group of them for study and singing and playing in our preaching place in Komachi. He called the group the "Dojokwai," or in English, the "Sympathy Society."

The girls work in two shifts of twelve hours, from six to six; they are required to clean up each day, so do not get out till 6.30 or 7 A.M. and P.M. On days when the shifts change, there is no work, but instead a special cleaning up is required and the girls who have worked all night are kept till about 1 A.M. The ages of the girls ranged from 7 up to about 25, the majority being between 15 and 20. The Sympathy Society began with the plan of giving the girls a chance to learn to read, write, and sew, and to have a little wholesome fun and play. These must of course be given after the twelve or more hours of work had been completed; sufficient sleep had also to be insisted on. The membership of the society rose rapidly, and soon numbered seventy girls, who attended more or less regularly in two groups, morning and evening. But Buddhist opposition began to show itself before long. A few of the parents refused to let their girls come. The most determined opposition, however, came from the manager in the factory who had charge of one of the shifts. Members of that shift were so treated that gradually they dropped out of the Dojokwai, and new members from that shift could not be secured. I may add here that the hostile manager was himself dropped some months later and all opposition to our work from within the factory ceased.

As time went on, Mr. Omoto was found to be more than usually faithful to the interests of the factory. He was rapidly promoted from one position to another. In December he was made the "hand-collector." This required him to visit the boarding houses and homes whenever the girls were absent, to find out the reason for the absences; it was also his duty to collect new girls when needed. To do this latter work he was sent off to neighbouring towns and villages with considerable sums of money with which to pay travelling expenses. He tried to decline this latter work; he said he could make no false promises to the girls or their parents, nor in any way delude them as to the nature of their work, the amount of their wages, or the conditions of the boarding houses. As he was a strict temperance man, he could not treat with *sake* (rice-wine) and so get into friendly relations, all of which things "hand-collectors" of all the factories always do. He had no expectations of gaining any one; the factory would better send some one else. They told him to at least try. To

the surprise of all, and of himself the most, from his first trip he brought back with him fifteen girls. He has been out several times now, and has always been successful. But what is more interesting perhaps is the fact that because of his refusal to touch liquor in any shape, his travelling expenses are very much less than those of any previous hand-collector, much to the satisfaction of the management; and the girls he has secured have on the whole remained longer and more contentedly at work, because he has always told the truth. This has made his position in the factory more secure and influential. I may add here that he has at this writing just been advanced from the rank of one who is paid for the actual days of work only, to that of those who are paid by the month; he is found to be so useful in his personal relations with the girls, that his time of official duty has been reduced to two hours each, morning and afternoon. This is striking testimony of the appreciation of what he has done on the part of his employers.

Shortly after he began his official visiting of the boarding houses, he began to say that without a Christian "home" for the girls it would be impossible to do for them what they need. But as the girls could board only in houses "recognised" by the factory, and all that were thought necessary had already been "recognised," he did not see how a Christian "home" could be started, to say nothing of the financial difficulties of doing so. In carrying out his duties as a "visitor" he found that the girls were crowded beyond the limits allowed by the law, and he told me of it. I passed on that remark to one of the active members of our Doshi Kenyukwai who was an official in the Police Department. Through him, an inspection by the police was instituted and soon the factory authorities were told they must "recognise" more houses. This was our opportunity. Mr. Omoto immediately put in an application and was "recognised." We thought when we began that if we could provide the initial outfit and rental for three months, about *yen* 200, the "Home" would become self-supporting. Miss Parmelee and I guaranteed *yen* 100 and thought the rest could surely be raised in some way; so we started. Many were our problems and consultations. From the time of her arrival in Matsuyama in December 1901, Miss Parmelee has taken active interest in this work for the factory girls, and has given it much valuable time both in direct work and in the many consultations. She has also given Mr. Omoto much help in his Bible study.

As Mr. Omoto was unmarried he manifestly could not take sole charge of the "Home." Provisionally, Mr. and Mrs. Kitagawa, Christians of long standing and experience and in hearty sympathy with the general plan and with Mr. Omoto personally, were so situated as to be able to give their whole time to the new enterprise. An exceptionally suitable house also was standing vacant just then. We were able to begin accordingly, March 27th, 1902, with 22 girls. We calculated that we could accommodate 40 girls, but that with an average of 35 the Home would be wholly self-supporting, which number we thought we would have no difficulty in securing. Experience has, however, taught us many lessons.

One was that the girls were not all so eager to be in a Christian Home. We of course forbade all drinking, all irregular hours, and more "irregular" friendships. Attendance on "prayers" night and morning, and on the "school," was also required of all. These rules were distasteful to some who had been assigned to us and they ran away. The rumour got out that every girl in our Home had at once become a Christian. I may explain that girls are not allowed to go from one boarding house to another at will, but must go only to the one to which they are assigned. Buddhist parents and friends, and the Buddhist manager mentioned above, worked against our Home, with the result that we were unable to secure the numbers we had hoped. Some parents at a distance, however, were so pleased with what they heard of our Home, that they would allow their girls to enter the factory only on condition that they might be in our Home. But it looked for a time as if we should fail for lack of girls to help meet the necessary expenses. Some of our Japanese Christian advisers became so discouraged after three months that they advised giving up the enterprise entirely. And we should have had to do so had not the Lord provided means even without girls.

Provisionally, in response to prayers and letters to friends, the financial problem was solved by the generous response of a few friends, the gifts for this work amounting last year to 504.14 *yen*; Mr. Omoto himself gave 35.95 being over one-third of his monthly income. Now at the close of the year we are able to make the following detailed report.

The expenses have been:—Rental, 180.00; Outfit, 158.60; School, 75.00 Running Expenses, 771.69; making a total of 1185.29.

The receipts have been:—From the Girls for Board etc., 761.69; From Mr. Omoto, 35.95; From friends, 504.14; total, 1301.78.

The balance in the treasury is thus, 116.49 at the beginning of April, 1903. Of this 50.00 is in Mr. Omoto's hands with which to pay the running expenses, leaving but 66.49 for future expenses; this will carry us for about three months under ordinary circumstances. I may add that we have increased our outfit slowly according to our need. We are now equipped to provide for about 25 girls. Should we increase our membership, we should have to increase our equipment.

In February Mr. Omoto found a young Christian woman who was ready to marry him, it being the desire of both to devote their lives to this work for factory girls. It was my pleasant duty to marry them not only, but suddenly to improvise a wedding march for the occasion! This marriage allowed Mr. and Mrs. Kitagawa to leave the work wholly in the hands of Mr. and Mrs. Omoto, which will lessen the running expenses somewhat.

I may state here that just before the marriage, a reconciliation with his father was effected, so that members of his family were present at the wedding. Immediately after it, the son with his young wife returned to the old home from which he had been so long cast out and were welcomed with joy and tears, both father and son weeping for mingled joy and sorrow. Mr. Omoto says that Luke fifteen exactly describes his case. Others who were present speak of the occasion as exceptionally touching. Since then the father has shown high appreciation of his son and of his work for the factory girls, even giving some financial help. I may also add at this point that one of Mr. Omoto's cousins joined our church the last Sabbath of March, the result in part of Mr. Omoto's influence.

In January, Mr. Omoto examined the books of all the boarding houses "recognised" by the factory in regard to the permanence of the girls, for the nine months during which our "Home" had been opened. Our Home led in every respect; the figures for cessation of work ranging from 72 per cent. in the worst home to 46 per cent. in ours. In regard to ability to read and write, all of our girls learn to do both, while few in the other homes can do either. No opportunities are given them to learn.

In February a representative of the Home Department of the Government came down from Tokyo to inspect the condition of labour in Western Japan. On visiting Matsuyama he heard of the Dojokwai, and was so interested in the report that he took time to visit it with several local officials. On looking it over he is said to have been greatly pleased. He knows of nothing just like this, particularly in its hygienic, educational, and moral advantages, in any other part of Japan, and expressed the wish that there be might many such.

During the late autumn and continuously through the winter, the difference between our girls and those of the other houses began to be recognised by the factory officers. The slackness in the sale of yarn rendered it unnecessary to seek for new workers so that attendance at all the boarding houses slowly ran down. Our "Home" dwindled to an average of 14.4 during February, and during the whole year it has been but 17.8. When the increase began in March we received 12 new girls and were asked if we would not make provision for 50. We have since been asked whether we would not take charge of all the factory girls' homes. This request indicates that we have won our place with the authorities. The parents too are showing high appreciation of what has been done for their girls. Many have particularly asked that their girls may come to our Home. Villages in the interior have quite changed their feeling toward Christianity on seeing how their daughters have improved in character and intelligence while being with us.

The spirit of the Komachi townsfolk also has undergone a marked change toward us in the past two years, due in part to our special meetings, in part to Mr. Omoto's conversion and transformation, and in part also to our Factory Girls' Home. In view of all these facts, we feel that the evangelistic influence of this Home has been great, even though no girl has yet received baptism.

As we face the future, however, we are confronted with a serious problem. The public school adjoining our Home must be enlarged. The city has accordingly bought the land on which stands the house we have been renting, and we are given three months' notice to move. This will involve us in considerable expense, which we can ill afford to meet; nor is any other suitable house in sight; it is entirely improbable that within the radius needful anything exists at all suited to this kind of work. We have begun to ask ourselves whether the time has not come for us to buy land and put up the right kind of buildings. Once equipped with land and houses, futon, and furniture, we have every reason to believe that the Home will be entirely self-supporting. We also have reason to believe that no form of work which we are doing or can do will give us and the Gospel such a hold on the working and farming classes in this part of Japan as this Home does and will do. Mr. and Mrs. Omoto are consecrated and energetic

and practical, members of these classes. He is continuously growing in spiritual life and in Christian knowledge. I think I have never seen a man more thoroughly converted or more enthusiastic for this kind of work. In view of all the above facts, has the time not come for us to appeal to friends for help sufficient to put this work on a sound financial basis?

In the meantime, the balance in hand is so slight that we again would ask those friends who feel interested in this work to give us another lift.

DRAWBACKS OF JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The *Kobe Chronicle* has opened its columns and asks the residents to give their opinion about the treatment of foreigners in this country. I followed the different critics with great interest, but came to the conclusion that all that had been said by Del Mar and friends are nuisances which you meet also in America or Europe. You find everywhere naughty school children, rude railway officials, nervous postal officials, and impolite policemen.

I think that the real drawback of Japan is a more serious matter of which perhaps very few residents are aware, and therefore I beg to give you my opinion as a globe trotter.

I am an old friend of Cook's (the well known Agency, Cook and Sons) and he told me while in Japan to find out and to listen to what the foreigners have to say about this country.

I am going to tell Cook: You can not come to Japan to make any arrangements with a railway company; if you do and many people come the railway officials will say: now we have plenty of people in the country, stop the reduction, let them pay full price, and people will blame you for it, just as they blamed the Welcome Society.

The Welcome Society has surely the best intention to give to foreigners a good reception and agreeable stay, but their job is doubtless not a very easy one, for the simple reason that they have no money to keep proper offices and a sufficient staff. Later on I beg to give my opinion about their institution.

They have an office in Tokyo but until a stranger finds this out he has been put already, in Kobe or Yokohama, into the fingers of a so-called well-educated guide, member of a money-welcome society.

As I pointed already out, you find everywhere nuisances as stated by Mr. Del Mar, but you do not find another country where Tourists Traffic and its movement is entirely in the hands of a well organized squeezing Society of Guides as well patronized as feared by the Japanese hotel and shopkeepers.

Is it not Guides who make them believe that they bring the foreigners; is it not the Guides who make the itinerary as soon as a family arrives in Japan? You make an arrangement with a guide, who will very likely offer himself to show you the country in 3 or 4 weeks. You accept and are bound to keep him but he is not bound. Before you leave Yokohama, he knows exactly whether you are a good cow to milk or not, he knows the price you pay at the Grand Hotel for your room and whether you pay your bill without grumbling.

Now the trip begins, either to Kyoto or Tokyo, and you have to show whether you came to Japan for sightseeing only or also to buy curios.

If you do not buy within the next 3 days you are in his eyes an ox; you have to find your way alone and you are reported to the members as a man who does not spend.

Your guide will simply tell you one of the favourite lies in this country, viz.: He is sick, or his grandmother died, or his wife is having a baby, or he has a law case, etc.

We had four different guides in three weeks and all left us with a similar excuse, and we found out that we could get along much better without. I am certain, there are some guides, who let their grandmother die 6 times during the season and others get as many children.

But the "comble" of impudence is that you meet the very day or the next day your famous guide with another party in the same place.

He had been informed by his office in Yokohama or Kobe that some other people have arrived who are likely to spend more money and he is going to try them.

The treatment of ladies is even worse and most of them do not get a guide at all, or are afraid to dismiss him if he is not suitable.

Ladies generally do not make a large hotel bill and do not frequent the teahouses, this is the reason.

When you come to a Japanese inn the guide is received like a *daimyo* with deep bows and compliments from the proprietor and his staff and you are his luggage. The Hotel people know already the price you are used to pay and accordingly you are overcharged even in the smallest inn.

I have been told by a former hotel clerk that nearly all the Japanese Hotels have to give 10 per cent. out

of your bills to the guide, else he will take his people somewhere else.

In the teahouses and shops it is even worse; he knows you do not bargain and that you do not understand anything about curios, and the guide arranges his commission according to your purse. The better you treat a guide the more you get bluffed.

As to temples, museums, antiquities, interesting factories, history of Japan, etc., most of the guides know absolutely nothing, they know only the places where they get a good commission, and have no interest to keep you in a place where nothing is to be got.

I have enough details to write a book on the above subject and the way foreigners are done in this country, as I asked nearly every stranger I met to give me his opinion and experience and there were not a few who left the country dissatisfied or disgusted and who shortened their stay for that reason.

Now who is to be blamed for all this? I do not blame so much the guides, they have been tolerated and not controlled by the Government, and gradually spoiled by the foreigners.

I would blame partly the Government, because it has not spent a cent to support, to facilitate, or to encourage the Tourist traffic, and partly that class of travellers who spend the money for show, who think it elegant and fashionable to pay higher prices than others, and whose education is generally on the same level as that of the guides.

This is the trouble and difficulty, and the result will be that Tourist Traffic will not increase in proportion, the average traveller will say that travelling in Japan is too expensive, owing to the fact that a guide costs you about 10 shillings a day.

Japan has to-day still a good name owing to the praising books which have been written, but a relapse and change will come if energetic measures are not taken in order to improve the present unsatisfactory state of travelling. Of course, the average tourist arriving in this country, having carefully studied his Murray's Guidebook, the *Itadecker* of Japan, will be under the impression, that the beauty of Japan is not open to him, unless he engages a guide in Kobe or Yokohama, who will travel with him right through the country. For is it not impressed upon him on page 5 and 6, that a guide is an absolute necessity to a person unacquainted with the language?

No doubt this recommendation was in its place about 12 years ago, when few people in the interior were able to speak or to understand any of the European languages, but to-day, even in remote little places you find a few Japanese speaking a fairly good English.

I think the paragraph referred to in the above would have warranted revision with the itinerary, but I think that if shop-keepers could be induced to mark their exhibits in plain figures and stick to one price only, exorbitant commissions, such as from 40 to 50 per cent., which we know as having been paid, would certainly be impossible.

Such shop-keepers should be encouraged by the Hotel-keepers, not only in recommending them verbally, but also by exhibiting their names at a striking place at the entrance of the Hotel.

Another improvement would be that shop-keepers should keep at least one English-speaking clerk to avoid the necessity of bringing an interpreter, as it is more satisfactory to the purchaser to treat direct with the seller, as I am informed by a first class merchant that the shop-keepers prefer your coming with a guide who is able to give a hint as to what prices to charge.

I for my part who have travelled with the assistance of Murray's Guidebook and seen a good deal of Japan can not see any necessity of engaging a guide in Yokohama to show me scenery in distant places, like Kioto or Nikko, etc. etc.

Local Guides, that is, men engaged at each different stopping place, are men who do nothing but go round in a certain district, they know what is going on and are therefore in a very much better position for furnishing reliable information.

Nobody arriving in Italy or Switzerland would ever dream of taking a guide from Florence to Rome or from Rome to Naples, from Bale to Geneva or from Zurich to Lusanne, for the simple reason that everywhere good local guides are to be found if really wanted.

When taking to such local man, you will not only save a nice amount, such as railway, hotel and jimriksha travelling expenses, but you have the opportunity of sightseeing at your ease, being not tied by a man who will hustle you away from any place, when his pocket can not be benefited. Besides, the local guide being engaged through the Local Office you have the satisfaction of making your complaints if dissatisfied and the hotel, if in respectable hands, will hardly recommend a guide again, if often complained about. The Guide, knowing that his future business depends entirely on the satisfactory discharge of his duties, will certainly be more careful, than a man taken away and engaged at a landing place for a fixed time.

As to the Commission business, we all know that it can not be abolished in the East.

The Welcome Society is an entirely Japanese institution which very likely lacks a foreign adviser; else many things might be done in a different way. The 20% reduction on railway fares was doubtless a very generous and benevolent act and work, but there was really no necessity for all that trouble, as the average traveller will not complain of high railway fares, but would with pleasure pay more if he was more comfortable.

The Welcome Society takes great trouble to make it possible to see interesting places, but there is no end of permits and applications, also questions, viz: who are you, why do you want to see this, etc., that you get so annoyed that you leave the office. Why should newcomers require the aid of a society to visit institutions like hospitals, university, art schools, etc., etc., and why should they be induced to become a life member of the Welcome Society and pay 5 yen in order to see the Arsenal Gardens?

True, for this 5 yen the W. S. offers a good many other things, but there are very few who will be interested in more than one or two such places, opened only for 5 yen, and only on certain days, and most people will fight shy of the payment of such a sum.

I happened to pass through Tokyo on the opening day of the fine art school. I was informed at the Welcome Society that besides the payment of 5 yen for life membership I would have to run to the further expense of taking an interpreter for 3 yen for the afternoon, which, with the necessary jinrikisha fares, would total up to 10 yen, or one sovereign. If Government at all is willing to open their different institutions to the foreign public, why not do so for a fee of about 25 or 50 sen, payable at the door of each individual building, as they do at the Museum in Ueno Park. This would save the tourist a great deal of trouble and decidedly bring in more money than the W. S. collects.

The same thing could be done for the different Castles at Kyoto and Nagoya.

The W. S. should direct their energies to assist new arrivals in giving to any foreigner calling at their offices reliable and gratis information of the country and its interesting resources, they should also take in hand the systematic advertising of Japan in foreign countries. Substitution of the Government and the Municipalities would be necessary and I have no doubt that railway and steamer companies as well as hotels and merchants will come forward with good donations, once they see that the Society is put on a proper working basis, which actually increases the influx of foreigners and foreign money.

As to the procuring of guides supposed to be controlled by the W.S. (vide their advertisement). This is decidedly detrimental to the good name of the Society, as long as they can not guarantee a less money-grabbing body of men.

A notice to the effect that guides are not an absolute necessity for tourists and if required can easily be engaged at almost every town, should be put up on each arriving steamer and the different landing places. It may do a good deal towards curtailing the guide nuisance as mentioned, and show the good intentions of the Government.

KOBE INTERNATIONAL HOSPITAL CASE.

The text of the judgment in this case was given out in the Kobe Chihō Saibansho on Oct. 13th. The judgment by default given against the Trustees of the Hiogo International Hospital (defendants) was quashed, and the Court thereafter dismissed the action, giving costs against the landlords (plaintiffs).

In the outset (we quote the *Kobe Herald's* translation) the Court considered whether the Hiogo International Hospital is a juridical person or not. On this point it finds that it is a juridical person possessing property in its own name for a charitable end. It is true that the hospital has not applied for registration of the fact that it is a juridical person (says the Court) according to Art. 19-2nd clause and Art. 20 of the Civil Code, but it is a juridical body all the same, as pointed out in the former Article. The Court decided therefore that it was reasonable of plaintiffs to sue Mr. Hall and other Trustees of the Hospital in this case. The judgment continues:—

Counsel for defendants protested against the assertion of plaintiffs that they do not hold the superficies of the lot in dispute. The Court finds that the Hiogo International Hospital has been using the lot even after the ownership was transferred to Mukai Isanda, who is not concerned in the dispute, by virtue of the contract produced as Exhibit B. No. 1 by defendants which was still in force. Isanda, therefore, did not lodge any protest against the use of the lot. Moreover, Exhibit B. No. 6, which is a document given to Isanda regarding the sale of the lot by the former owner, states that the lot is leased to the Hiogo International Hospital for a period of twenty-five years from October, 1873. Thus it is clear that he was aware of the existence of the lease in dispute. It was

only reasonable that he should be bound to respect the lease. The lease mentions that the English text shall be taken as the original in case of any dispute, and in the 4th clause it is stipulated that the lessees or successors may extend the lease for another twenty-five years at the same rental, at their option, on the expiry of the first term of twenty-five years. The contents of the lease show that the foregoing stipulation was not a mere provisional one; and it is reasonable to hold that it binds the lessors to consent to the proposal of the lessees when the latter expressed their wish to renew the lease. The Court therefore considered if defendants advised Mukai Isanda, the then owner of the lot, on the expiration of the lease of their intention to renew it. Exhibit B. No. 8 shows that Isanda on the 3rd October, 1898, that is prior to the expiration of the lease, wrote to the Kobe Municipal Council and asked for an increase of rent. It is thus clear that Mukai Isanda had laid the same application before the Hospital officials before he laid his application before the Municipal Council, which was not directly concerned in the matter. There is no reason to believe that the landlords would ask for an increase of rent before the lessees advised their intention to renew the lease, and the Court holds, after considering the foregoing point and Exhibits B. Nos. 8 and 2, that Mr. Hall, representative of the Hospital, proposed to the landlords a renewal of the lease prior to the expiration of the first term, as set forth in Exhibit B. No. 1. With this point decided, it becomes clear that Mukai Isanda could not object to the renewal of the lease, according to the stipulation in Exhibit B. No. 1, and the renewal of the lease was effected. Moreover, Isanda received the rent for six months in November, 1898, accordingly to stipulation in Exhibit B. No. 3. The amount was to cover the rent up to the 10th April, 1899, and it is clear that Isanda received the amount without making any condition at the time. This fact shows that Isanda himself consented to the offer of Mr. Hall and consented to the renewal of the lease in dispute. From any point of view it is clear that the lease has been renewed. Although counsel for plaintiffs deposed that the amount received by Isanda after the expiration of the lease was for damage only compensation for the use of the lot, it would be ridiculous to put any weight thereto as it is contrary to common sense. Counsel for plaintiffs asserted that the renewal of the lease was not effected and referred to Exhibits A. No. 5—A and Band No. 67, but it is held by the Court that these exhibits only relate to the increase of rent. Exhibit A. No. 5—A and B are documents regarding the application of defendants to Mukai Isanda to affix his signature to an amended lease in order to confirm the relation between them after the renewal of the lease. Exhibit A. No. 6 then is a note asking for an interview with Mukai, and it is unreasonable to hold that the renewal of the lease was not effected by virtue of these two Exhibits. Exhibit A. No. 7 is another document, which points out that the negotiations have fallen through because the landlord amended one clause in the lease to the effect that the land tax and other public charges were to be paid by the lessees. It may seem from this that Mr. Hall objected to the conclusion of the lease; but it is true he consented to pay the land tax and other public charges as far back as February, 1899, and there is no reason why the negotiations for the renewal of the lease should have failed by this single document. Moreover this Exhibit was written by Mr. Kashiwagi at the dictation of Mr. Hall and there may be some mistake in it. Still there is nothing in the Exhibit to support the assertion of counsel for plaintiffs. The Court considered next if the lease entered into between Mukai Isanda and defendants bound plaintiffs to respect the lease. The contract produced as Exhibit B. No. 1 does not particularly specify the "chinshaku" (lease) and the Hiogo International Hospital has been using the ground in order to own buildings thereon from some time before March, 1900. The lease, therefore, is to be classified as a superficies, according to the 1st Article of Law No. 72 of 1900. Neither of the parties concerned in this case disputes that the right has not been registered up to the present. Nor do they dispute the fact that plaintiffs came into possession of the lot on the 22nd April, 1900, viz., in other words, within a year of the time when the said law was put in operation and Art. 2 of the said law entitled defendants to claim that right against plaintiffs. Moreover, the superficies is still in force and the objection raised by defendants' counsel against the claim of the plaintiffs is held to be reasonable by the Court. The Court has, therefore, given the foregoing judgment.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

CHAMBERLAIN AND HIS CAMPAIGN.

London, October 9.
All, including his bitterest opponents, re-

cognize Mr. Chamberlain's ability in the presentation of his scheme, the sincerity of his appeal and the absence of rancour. The general feeling is that he has opened his campaign auspiciously. His proposals have been well received in Mincing Lane and Mark Lane and on the Stock Exchange.

RUSSIA AND JAPAN.

The *Daily Mail* states that the Russian Minister handed to Japan on October 4th a note declaring that Japan was not entitled to interfere regarding Manchuria, but proposing the partition of Korea, Japan to take the southern half. Japan's reply on Oct. 6th was a rejection of the proposal.

AN OBVIOUS BUNDER.

London, October 10.
The Japanese Minister to London, Viscount Hayashi, says that the *Daily Mail's* story to the effect that Russia has proposed to Japan the partition of Korea is unworthy of serious consideration.

TURKEY AND BULGARIA.

It is announced at Sofia that Turkey and Bulgaria have reached an understanding on the question of demobilization, Bulgaria releasing 20,000 and Turkey 40,000.

HOPES OF PEACE.

Diplomatic circles at Constantinople are convinced that war is now averted for the present year.

FRANCE AND MOROCCO.

Semi-official papers in Paris state that the Sultan instigated the recent Moorish attacks on French convoys, and that France demands explanations. This seems to imply forthcoming action.

London, October 11.

The French Cabinet has intimated that it will persevere in the policy with reference to Morocco already announced to the Chambers.

TURKS INVADE BULGARIA.

A Turkish battalion on Oct. 8th crossed the Bulgarian frontier in broad daylight near Kustendil, attacked a blockhouse and plundered a village, withdrawing on the approach of Bulgarian troops. The Turks had three killed, the Bulgarians one.

A LIPTON CUP.

Sir Thomas Lipton has offered a cup of the value of \$2500 for a Trans-Atlantic yacht race from Sandy Hook to The Needles, as a real test of seamanship.

CONTINENTS JOINED IN MID-OCEAN.

Signor Marconi, on board the *Lucania*, in mid-Atlantic, has communicated for the first time with England and America simultaneously.

THE BALKAN SITUATION.

London, October 12.

Although the negotiations are proceeding at Constantinople between Bulgaria and Turkey the situation on the frontier is serious. On the 10th instant the Bulgarian Government ordered the mobilization of the 1st and 2nd class reservists in the Kustendil district. The Bulgarian Government has complained to the Porte about the frequent violation of the frontier. There are now 20,000 refugees in Bulgaria.

BRITISH CABINET CHANGES.

London, October 13.

It is officially stated that the Marquis of Salisbury has been appointed Lord Privy Seal with a seat in the Cabinet.

Capt. E. G. Pretyman has been appointed Secretary to the Admiralty.

Mr. William Bromley-Davenport has been appointed Financial Secretary to the War Office.

Lord Balcarras has been appointed Junior Lord of the Treasury.

The Marquis of Hamilton has been appointed Treasurer of the Household.

These appointments involve bye-elections at Fareham, Chorley, and Londonderry.

AN IMPORTANT MEETING.

The Admirals of the China, Australian, and East Indian squadrons are to meet at Singapore to discuss questions of naval concentration and strategy.

THE FAR EAST.

The daily supplies of alarming rumours from Japan direct general attention to the Far East. It is only positively known that Russia has taken a determined attitude about Manchuria, but there is no reason to suppose that Japan and the Powers are disposed to force Russia in her desire to safeguard her own particular interests in Manchuria, provided that the treaty rights of other states be respected.

RUSSIAN WARSHIPS.

Two Russian warships have arrived at Port Said.

THE CHINA SQUADRON.

Mdel (Noel?) succeeds Sir Cyprian Bridge in the command of the China station.

BRITISH POLITICS.

London, October 14.

Mr. Austen Chamberlain, speaking at Birmingham, said the Government will not dissolve until the lessons of the War Commission's report have been applied and the War Office has been reorganized. He foreshadowed a reduction in the income tax.

THE FAR EASTERN SITUATION.

The Japanese Minister (in London) has received an official telegram indicating that there is no need whatever for alarm. It is believed that this message has been sent because of the alarmist rumours circulating in Europe which have reached Japan. It is generally felt that the postponement of the Czar's visit to Rome is due to the situation in the East, not to any fear of socialist demonstrations.

ANOTHER CABINET APPOINTMENT.

London, October 15.

The Marquis of Londonderry, President of the Board of Education, has been appointed Lord President of the Council.

CZAR AND KING.

The chief aide-de-camp of the Czar intercepted King Emmanuel en route to Paris, and delivered to him an autograph letter from the Czar regretting that His Majesty was compelled to postpone his visit to Rome.

Extraordinary precautions have been taken for the journey and the stay of royalty in Paris.

ITALIAN ROYALTIES IN PARIS.

Later.

Their Majesties the King and Queen of Italy have arrived in Paris.

ANGLO-FRENCH ARBITRATION.

The Anglo-French arbitration treaty has been signed. It stipulates for the submitting to the Hague Tribunal all questions of a juridical character and all interpretations of treaties, provided no vital interests or the honour of either side be involved.

(RECEIVED AT THE LEGATION OF FRANCE.)

PARISIANS PREPARE FOR ITALIAN ROYALTY.

Saigon, October 9.

Great preparations are being made in Paris for the arrival of their Majesties the King and Queen of Italy. The merchants of the Boulevards and in the quarters of the Made-

leine and the Opera are busily decorating the streets with flags.

LABOUR TROUBLES.

The bands of strikers from Armentieres have caused work to cease in several factories of Lille and Tourcois. There have been some cases of violence and some arrests.

FRENCH AFFAIRS.

Saigon, October 10.

The Council of Ministers has decided to convoke the Chambers on the 20th of October.

The Council has suspended the organization of the companies of infantry formed for the protection of South-Oran against the incursions of bands of pillagers.

It is affirmed that the treaty of arbitration between France and Great Britain is in a good state. The chief conditions have been settled in principle.

THE FRENCH FAR EASTERN SQUADRON.

Saigon, October 12.

Rear-Admiral Fauque de Jonquieres has been named Commander of the Second Division of the French Squadron in the Far East, in succession to Rear-Admiral Le Do (deceased).

[The new Commander is the youngest of the French Rear-Admirals, and is the father of Madame Boissiere, wife of the former Naval Attaché of the French Legation in Tokyo.—Ed. J.M.]

FRENCH POLITICS.

Saigon, October 13.

At the inauguration of the monument to Vorcinquegorix at Clermont-Ferrand M. Combes, President of the Council, made a speech in which he traced the programme of laws that the Parliament would have to vote on the reopening of the session; namely, first the budget which will be voted before the 31st December; next the military law, and finally the abrogation of the Law Falloux.

(RECEIVED IN TOKYO.)

MARKET REPORTS.

Lyons, October 10.

The silk market remains quiet. Prices are somewhat slack. Japanese machine-reeled silk sold on the 9th instant for 52 francs.

New York, October 10.

The silk market is quiet. There is no demand except for purpose of immediate use.

The cotton market has been quiet for the past week, and there has been no special fluctuation in price. Forward deliveries had ruled somewhat low owing to reports of fine weather in the producing districts and owing to a prospect of large stocks, but prices are now somewhat firmer.

Bombay, October 10.

Owing to continued weakness in the New York and Liverpool markets prices do not rise here, and sellers are weakening. Forwards show no special change.

(RECEIVED AT THE FOREIGN OFFICE IN TOKYO.)

RUSSIAN "ATTACHÉS."

Vladivostock, Japanese Consulate, October 10.

According to an order (No. 58) issued by the Viceroy of the Russian Far East on the 10th of October, all military and naval attachés of the Russian Legations in Japan, China and Korea are placed under the control of the Viceroy, as directed by Imperial Ordinance on the 30th of August, and these attachés will henceforth address all reports to the Viceroy.

(FROM THE "JAPAN GAZETTE.")

THE RUSSO-JAPANESE SITUATION.

Berlin, October 10.

The European papers are overflowing with articles mentioning that war between Russia and Japan is imminent. Germany, as before, is fully convinced that the conferences in Tokyo will do away with all danger of a war, if there ever was any.

THE CONGO.

The often-mentioned prospective visit of King Leopold of the Belgians to the Congo State has not been notified at Berlin, and is there considered unlikely.

THE SUGAR CONFERENCE.

The International Sugar Conference Tribunal will be inaugurated at Brussels on the 15th of October.

JAPAN AND RUSSIA.

Berlin, October 14.

The Japanese Minister to Berlin, Mr. Inouye Katsunosuke, has declared in diplomatic circles that the relations between Japan and Russia are not at all strained to any extent so that the outbreak of war might be expected. The negotiations regarding Korea, he said, will come in a short time to a satisfactory conclusion, and, concerning Manchuria, a peaceful settlement of the controversy is expected, as the pacific disposition of the Russian Empire is assured.

The Japanese Minister to Paris, M. Motono, also declared that the diplomatic relations between Japan and Russia are in perfect order.

To an English newspaper a communication has been wired from Berlin (said to be from an authoritative source) stating that in regard to Far Eastern diplomacy there exists a secret treaty between Germany and Russia. This statement is untrue. There are no arrangements governing German policy in Eastern Asiatic affairs, outside of the Anglo-German China convention, dated Oct. 16th, 1900, and the contents of this treaty are public and known to everybody.

THE TSAR.

The Tsar and his family will remain another six weeks at Darmstadt, the native town of the Tsarina.

GERMAN VIEWS OF THE CRISIS.

Berlin, October 15.

All Russian diplomats, following instructions of Admiral Alexieff, are opposed to a war with Japan. A delay of the conflict is considered to be the most elementary interest of Russia, the Russian navy not being sufficiently superior to that of the Japanese. All preparations, mobilisations and other measures have only the aim of intimidation and pressure.

The Foreign Office in London does not believe a war between Russia and Japan is to occur.

(FROM THE "JIJI SHIMPO.")

RUSSO-JAPANESE RELATIONS.

London, October 13.

The *Times* states that the present troubles are entirely to be attributed to the aggressive attitude of Viceroy Alexieff and M. Pavlov, Minister at Seoul. The paper adds that it has been by carelessness that the two allied countries (Great Britain, and Japan) are progressing toward a critical situation, and also that it is clearly to be seen from the conditions concerned that there will come a time when it will be impossible to continue any longer the present easy relations.

The *Morning Post* urges Mr. Balfour, the Premier, to make the necessary military preparations as there will probably come a time when Great Britain's interference will be required in the present troubles.

The *Norve Vremya* is convinced that Russia agreed upon certain conditions with Japan whose nationals will enter Korea, but in Manchuria there will be no admission for Japanese visitors. Mon. Chrisanoff (?) of the Greek Church, adds the same paper, reports that the Koreans are showing emphatic friendship towards Russia and many of them have been baptized.

JAPANESE BONDS.

Owing to a rumour that the Japanese troops have landed at Masampo, new Japanese 5 per cent. loan bonds have fallen by *yen* 3½. 4 per cent. bonds which had fallen *yen* 2 are now slightly recovering.

RUSSIAN WARSHIPS.

The Russian battleships *Cesarevitch* (13,110 tons) and *Bayan* (7,800 tons) which have been ordered to the Far East passed the Suez canal to-day.

THE BRITISH SQUADRON.

Vice-Admiral Noel is appointed to succeed Admiral Sir Cyprian Bridge, as Commander-in-chief of the British Squadron in the Far East.

(FROM THE "ASAHI SHIMBUN.")

RUSSIAN WARSHIP STRANDED.

Shanghai, October 14.

The Russian battleship *Asiatika* (12,674 displacement) which was on her way to the Far East, is reported to have gone ashore near an island off Greece and to have been sent to Italy for repairs.

**Bovril—
the food-
beverage.**

BOVRIL is food and drink combined. It is not only a delightful beverage, but a valuable nourisher and energiser as well.

Cooks find that BOVRIL doubles the value of soups, gravies, hashes, made dishes, &c.

MELLIN'S FOOD

For INFANTS and INVALIDS.

Purely Vegetable and Untouched by Hand.

MELLIN'S FOOD is free from Starch. When prepared is similar to Breast Milk.

Mellin's Food Works, Peckham, London, England.

HOLLOWAY'S PILLS

Cure Indigestion,
Bile, Sick Headache, Giddiness,
Palpitation,
and all Internal Disorders.

**THESE PILLS
ARE PURELY VEGETABLE;**

they contain no deleterious matter, and may be taken by the most delicate.

SWISS WATCH INDUSTRY. ONLY 20/-

To Every Commisariat, Post Office and Railway Servant, and Persons Requiring a Splendid Watch, we offer this opportunity of their obtaining this: "Original Swiss Watch" (Our Exclusive Property). The Watch in question is made on the World Renowned "HUBERT" SYSTEM, and received the Highest Award at the PARIS EXHIBITION IN 1900. IT IS THOROUGHLY REGULATED, A PERFECT TIME KEEPER, AND CARRIES WITH IT A THREE YEARS' WRITTEN WARRANTY. It has Three Heavy Cases (Savonnette, which are made of unbreakable Thin Metal, Electronically Gold Plated on the Inside Principle, and the finest Continuum, cannot detect THE DIFFERENCE BETWEEN OURS AND THE USUAL GUINEA WATCH. It seems like Real Gold and is the only Watch of its kind having that advantage. To introduce this Watch to the British Public and Colonists we will deliver FIFTY (FIFTY) OR (FIFTY) for 41 sh. 6d. post free (formerly costing £20.00), on receipt of Money Order for that Amount. (Formerly £20.00, on receipt of Money Order for that Amount.) Any Article bought and not approved of will be exchanged. The Exchange of our Film, according to our Daily Orders and Instructions. Testimonials, prove the Superior Value of our Advertisements. Post Office or Postal Orders should be made payable to MAMBOX BONHEUR, BAILE (SUSSEX).

Manufactured only at 78, New Oxford St. (1 to 233, Oxford St.) London. Sold by all Chemists and Medicine Vendors.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCTOBER 24TH, 1903.

MARRIAGES.

On the 15th Oct., at H.B.M.'s Consulate, and afterwards at All Saints Church, Kobe, by the Right Rev. Bishop McKim, HUGH VINCENT, youngest son of the late James Summers, of Tokio University, to FRIEDA JANE, eldest daughter of George Dell Clarke, of Kobe.

On Oct. 20th, at H.B.M.'s Consulate, Yokohama, before E. M. Hobart Hampden, Esq., Acting Consul, W. PEPPER, second son of Stephen Pepper, Liverpool, to ELIZABETH, eldest daughter of Fred. G. Woodruff, Yokohama. No cards.

At H.B.M.'s Consulate, Yokohama, and afterwards at Christ Church, on the 20th October, by the Rev. W. P. G. Field, M.A., JOHAN FREDERICK DRUMMOND, second son of the late James Drummond, Superintendent Captain N. Y. K., to FRANCES MADELEINE, eldest daughter of the late W. G. Cameron, (S.S. *Meiji Maru*) and Mrs. Cameron, of No. 72 Bluff.

Miss CHARLOTTE ENID DRAPER of Yokohama was united in wedlock to Prof. PERCY ALMERIN SMITH of the Higher Normal School, Hiroshima, in the chapel of the Bible School No. 221 Bluff, Yokohama at two p.m. of the 20th. The father of the bride was the officiating clergyman.

DEATHS.

On the 19th Oct., at the General Hospital, Yokohama, JAMES WINSTANLEY, aged 78 years.

At 3 a.m. on the 22nd October, at No. 11-9 Yamamoto-dori, Kobe, W. A. CRANE, of Yokohama, aged 70 years.

SUMMARY OF NEWS.

YOKOHAMA won the Interport Cricket match this year, beating Kobe by an innings and 12 runs.

TRAFFIC on the electric railway between Shim-

bashi and Uyeno is expected to be opened on Nov. 1st.

A CASE of cholera was reported on Oct. 15th at Yamaguchi.

THE British Legation at Bangkok has been burgled.

THE amount invested in the Siberian Railway is £80,340,000.

THE exportation of buffaloes from Siam is prohibited until notice owing to their scarcity.

PRINCES MICHI AND ATSU (sons of the Crown Prince) left on Oct. 20th for Numadzu.

THE U.S. transport *Thomas* arrived at Nagasaki on Oct. 19th from Manila en route for home, with 400 soldiers.

A NUMBER of gendarmes belonging to Tokyo left on Oct. 16th for Korea to take the places of the present guardians.

FIRE broke out at the theatre Tomi-za, Tokushima, on the morning of Oct. 16th. Incendiarism is reported to be the cause.

THE King of Siam's birthday was celebrated at Bangkok on the 21st September, when the Diplomatic Corps presented an address.

It is officially announced that medical examination enforced at Singapore on vessels arriving from Yokohama has been discontinued.

On the night of Oct. 14th, a workman committed suicide by throwing himself on the railway near Omori station as a train was passing.

MR. KANAI, a member of Nagano Prefectural Assembly, and three others were arrested on Oct. 15th on suspicion of having infringed the Election Law.

TYPHUS cases in Tokyo number 130 from Oct. 1st to noon of the 17th. During the same period, 58 cases of dysentery were reported in the same city.

SIR E. L. O'MALLEY, formerly Attorney-General for Hongkong, will probably be the Liberal candidate for Bury St. Edmunds at the next General Election.

A PASSENGER train collided on Oct. 17th at 10.45 a.m. with a goods train at Shinagawa. The damage was limited to two goods cars which were derailed and broken.

THE *Echo de Paris* states that Jacques Lebaudy, the self-appointed "Emperor of Sahara," has written a letter to President Loubet, in which he renounces his French nationality.

THE authorities of Kanagawa prefecture have compiled an estimate of the damage sustained by the tidal waves and floods in August, and September last. The sum is yen 551,762.

A TELEGRAM from Shizuoka states that an engine-boiler in the card-room of the *Jiji* Cotton Spinning Company exploded on Oct. 17th. Three of the workmen were killed and three others injured.

THE Russian steamer *Manchuria* lost cargo to the value of £25,000 in the recent fire on board at Port Said. Her hull was also badly damaged, but she reached Lisbon under her own steam and there put in.

AN old man named T. Sunakawa living at Asakusa, Tokyo, attempted, early on the morning of Oct. 17th, to murder his adopted son, Sotonosuke (37) inflicting severe injuries on his head and shoulders with a cooking knife while the other

was sleeping in his room. The culprit was immediately removed to the Court. The cause is reported to be monetary troubles.

SH. MITSUHASHI, a clerk of the Nagahama Tax Office, who was charged with fraud and forgery of official documents, was sentenced on Oct. 20th to nine years' confinement with hard labour.

FIRE is announced at Chemulpo, Korea, on the night of Oct. 6th, which destroyed thirteen buildings, including six Japanese dwellings. The *Jiji* reports that the whole damage is estimated at about yen 40,000.

COUNT YORITOSHI MATSUDAIRA, who has been suffering from brain-illness since the end of September, died on the night of Oct. 17th at Hakone. He was feudal lord of Takamatsu, Sanuki province. He was born August, 1834.

THE three sections of the Government Railway—Yatsubashi-Matsuzaki, 13 miles; Kure-Hiroshima, 12 miles; and Kofu-Mirazazuki, 7 miles—which are under construction, will be completed in December this year and opened for traffic.

Two sailors of the French cruiser *Bugeaud*, who attempted on Oct. 14th to get away by the steamer *America Maru*, were found as she left harbour. The stowaways were immediately delivered to the harbour police.

ADMIRAL ITO, Chief of the Naval Staff Office, Rear-Admiral Ijuin, Vice-Chief of the same office, and staff officers numbering 26 in all proceeded to the Palace on Oct. 15th at 10.30 a.m. where they had audience of the Emperor.

MR. K. TAKAGI, a lawyer and editor of the *Tainan Mainichi*, Fomosa, has been arrested on suspicion of embezzlement of yen 630 which was deposited in his office by subscribers to be donated to the poor people affected in the famine districts in Awomori.

THE plans of the harbour works of Mitsugahama, Iyo province, have been designed by Mr. Murakami, civil engineer, under the instruction of the Government Authorities. The cost is estimated at yen 370,000 and the work will be concluded within two years.

THE promoters of the proposed emigrant company in Osaka will meet on Oct. 27th at the Chamber of Commerce when they will fix the amount of capital. It is stated by the *Jiji* that wealthy merchants in Osaka, Tokyo, Hiroshima and other places are concerned in the enterprise.

MR. TSAI CHUN, Chinese Minister at Tokyo, is expected to leave Yokohama on Oct. 29th by the steamer *Kosai Ataru* for home. On the evening of the 27th Baron Shibusawa and other prominent business men in Tokyo will entertain him at a farewell dinner at the Maple Club, Shiba park.

A MAN named K. Kanamori and three others were arrested on Oct. 15th in Osaka on a charge of having forged notes of the First Bank which are being circulated in Korea. Counterfeited notes numbering over one thousand were seized in their houses.

ACCORDING to five Japanese emigrants who returned from Peru on Oct. 15th by the steamer *Duke of Fife*, says the *Niroku*, about three hundred out of over six hundred emigrants who were sent by an emigrant company, died after suffering several kinds of infectious disease. The remnants are in a most dangerous condition being attacked with pestilence, but they can not leave, being unable to pay their passage.

THE SITUATION.

Saturday, October 17.

The *Nichi Nichi Shimbun* quotes a well-informed diplomatist as saying that although there is undoubtedly an interval between Japan and Russia in their views as to the proper adjustment of present complications, it is an interval which each day's discussion reduces, and at any moment a settlement may be looked for, perhaps when least expected. When both sides have exhausted the devices and manoeuvres which always constitute the outworks of such a negotiation, and when they find themselves in face with the final issue, they will agree. As to the publicists that urge haste, they show a badly balanced judgment. Anything approaching haste is to be earnestly deprecated in connexion with a matter of such great importance and lasting consequence.

The same paper endeavours to allay the apprehensions of merchants and manufacturers by assuring them that, in the first place, there is no real reason to look for war, and, in the second, even if war did break out, its effect upon the country's trade would be comparatively insignificant. Large sums of money are lying idle in the Tokyo banks, a splendid rice crop is assured, business had just begun to show a brisker aspect, and now these rumours of war have paralysed everything. The whole tone of the *Nichi Nichi's* writing is essentially pacific and re-assuring, nor can we doubt that it will have a wholesome effect.

The *Shogyo Shimpō*, however, which devotes itself solely to commercial and industrial affairs, pleads strongly for some measure of frankness on the part of officialdom. All business men, it says, are afraid to stretch out a hand. They find themselves totally in the dark and know not what to think. It can not be doubted that up to a certain point the furnishing of information would allay their uneasiness.

Such is the *Shogyo's* view, but we take leave to question its justice. For what information is the Government in a position to furnish? Every one knows that negotiations are now actually proceeding in Tokyo, and beyond that assurance nothing could conveniently be published. It is not to be supposed that the details of the negotiations could be safely proclaimed. Whatever their nature they would be quite sure to create an immediate division of public opinion into two camps, and that result must exercise a more or less prejudicial effect. There is nothing for it but to possess our souls in patience. We think, for our own part, that the reticence so sedulously and successfully guarded by Japanese statesmen on this occasion deserves to be strongly applauded, and we congratulate them unequivocally on the self-control displayed by one and all of the officials who have access to the facts. We ourselves have never believed that war would be the outcome of this complication, and we do not now believe it, for it seems to us that the difficulty is entirely capable of pacific adjustment and we are quite convinced that both sides want to adjust it pacifically. But since that is only our own view, our readers must take it for what it is worth.

The *Kokumin Shimbun* devotes its leading columns to reproving the publicists who find fault with Japanese statesmen for want of craft and finesse. These critics imagine that deceit and cunning are the chief weapons of diplomacy. And indeed no one can deny that such has been Russia's creed and that

her empire-building processes have been directed by it. But her honour has suffered and she must set against material gains the loss of international confidence. It is true that history seems to show many instances of the failure of justice, but that is not because justice has ever been weak but because its exponents have been defective in their methods. The statesmen now in charge of Japan's affairs have only to stand firm on the ground of justice and right, confident that if they cling with single minds to those principles they can not but succeed.

The *Yomiuri* and the *Chuo* unite in urging the Government to adopt resolute measures for protecting the life and property of Japanese subjects in northern Korea. They represent that the negotiations in Tokyo have nothing to do with this question, and that such a step would be taken by any Western Power without hesitation. But they do not show how the lives and properties of Japanese subjects are menaced. Even if war broke out the Japanese in Wiju, who are peacefully engaged in commerce or industry would not have anything to apprehend at Russian hands, and there is no substantial evidence that anything menaces them at present. At one time it was feared that the rivalry of the timber-felling concessionaires might create a dangerous situation and that Japan might be compelled to adopt extraordinary measures for the protection of her subjects. But those fears were not realized, and happily the Government in Tokyo did not yield to the rash outcry of journalists and publicists who advocated the immediate despatch of a strong military force to the Yalu Valley. In order to appreciate how premature that advice was, we have only to consider, by the light of the present situation, how greatly it would have compromised Japan's attitude. Her statesmen have evidently kept before them throughout the laudable intention of maintaining a strictly correct demeanour and not allowing themselves to be hurried into any precipitate course. They deserve great credit, and will receive it when public judgment becomes calm enough to be judicial.

The *Nippon* has a characteristic article contending that Russia is essentially an international trafficker, and that every concession made to her is a tribute to her craft. She builds her empire with the Bible in one hand and a sword in the other. Viceroy Alexieff proposes to settle all Asiatic affairs from the saddle of his war-horse. Baron Rosen would rely on the gentle methods of diplomacy. The Baron is undoubtedly sincere, but, after all, he is Russia's Representative. The physician applies a poultice to a tumour, but finally takes his knife to eradicate the root of the evil. In this case the knife will be needed if future calamities are to be averted. Had Japan employed the resources of diplomacy only in 1894, Resident Yuan Shih-kai would probably have been still exercising China's futile and vexatious claims of suzerainty in Seoul. In a word, the *Nippon* believes that war alone can finally clear the atmosphere.

The *Fiji Shimpō* has sent a special correspondent, Mr. Ikeda Tsunetaro, to report upon the actual state of affairs at Wiju and in its neighbourhood. Our contemporary will establish another title to public gratitude by this step. We have had to rely hitherto on Seoul telegrams for information about the doings in the Yalu Valley, though no one could fail to see what importance the events occurring in that region were beginning to assume. It must be confessed that, on the whole, the Seoul correspondents

of Tokyo journals have shown themselves distinctly accurate, and have fully redeemed the bad reputation under which they once laboured. But we want news from the spot. We want to hear all the details of what is actually going on in the Yalu Valley, and we shall now be able to look to the *Fiji Shimpō* for supplying the want.

Monday, October 19.

The intelligent section of Japanese public opinion, as represented by the *Fiji Shimpō* and the *Kokumin Shimbun*, protests against the attitude of Russia who, while conducting avowedly peaceful negotiations, is simultaneously making palpable preparations for war. It is as though she threw her glove in Japan's face while, at the same time, tendering her the hand of friendship. The *Kokumin* regards this as hot-headed conduct, and anticipates a speedily altered demeanour when the occasion passes. But it further warns its own nationals against the error of counting Russia a natural enemy. Any country is Japan's enemy that seeks to obstruct her national policy. Such a country need not be Russia. The question of the day is whether this empire is to be progressive, active and great, or conservative, self-contained and small. Whatever Power endeavours to oppose the former consummation is Japan's foe. We (*Japan Mail*) have to observe that the *Kokumin's* article seems to lack incisiveness and directness. But its resultant tone is certainly pacific.

The *Jinmin* observes the same contradiction between Russia's acts and her language. It recalls the saying of the old Chinese philosopher Sung-tsz, "Strike when you hear gentle words and see warlike deeds." Japanese diplomatists aver that there is still a margin for deliberation. If, under present circumstances, there be still a margin, then every crisis under the sun has a margin. A man over whose head a burglar flourishes a sword may solace himself with the thought that there is a marginal chance of a constable's coming. So, too, Japanese diplomatists may imagine that a margin for surrender separates them from the final catastrophe. But the time has passed for such hesitation. The Ministry may be assured that none of its nationals will condemn it though it resort to the *ultima ratio*.

It is to be observed that the *Jinmin* is supposed to be the organ of the *Kwantō* section of the *Seiyū-kai*; the section formerly presided over by Mr. Hoshi Toru. It is certainly not the organ of the Party at large.

The *Chuo Shimbun* reminds its readers that there are 4,000 Japanese subjects in Manchuria, and that they may presently find themselves in a position of extreme peril, for the cruel disposition of the Russians in time of war is proverbial. Officialdom, however, seems to be blind to this phase of the affair. These 4,000 Japanese are left to their fate.

The writing in the *Chuo* is an exceptionally flagrant example of irresponsible giddiness. What would the critic have done? Does he recommend immediate recourse to the sword, in which event the unhappy four thousand would be at once exposed to all the horrors he foresees, or does he advise their compulsory withdrawal from Manchuria by way of preface to war? It is the idlest of idle talk.

Several of the second-class journals of Tokyo undertake to interpret the course of the negotiations now in progress, though it must be confessed that they do not go further than to offer their readers the choice of two or more versions. They are unable to say whether Russian proposals are under

discussion or whether Japanese proposals are being considered, but they sapiently opine that it must be one or the other, and valueless as the explanation is, they manage to invest it with mysterious importance. There is also a suggestion of intervention by two or three other Powers, notably France, but the sum of the matter is that all these stories are pure conjectures.

The *Kokumin Shinbun* urges the Japanese public to possess its soul in patience and not to be perturbed because the negotiations do not speedily eventuate. This country, it says, has stated the irreducible minimum of its requirements and has no margin for bargaining. But the same can not be said of the other side, and thus the final issue is necessarily delayed. There need be no doubt that every conference between Baron Rosen and Baron Komura brings the negotiators closer together, but there still remains a considerable interval to be bridged, and it may prove impossible to bridge it. There can be no second opinion, however, that Japan must exhaust all the resources of diplomacy before she has recourse to the *ultima ratio*. Her obvious course is to adhere to her minimum requirements and to make ready for all contingencies consequent on their rejection. That is what she is doing and those that would disturb the normal and proper course of action by petulant impatience are not working in the country's interests.

Tuesday, October 20.

Of course street talk continues to busy itself about the negotiations. The *Hochi Shinbun*, which has of late forced itself into a position of some eminence, prints in big letters and with great prominence an assertion that the Japanese statesmen have declared their wishes most distinctly; that the preliminaries of the discussion are now over; that the two sides have exchanged their positions of attack and defence, and that owing to a difference of opinion between the views of Viceroy Alexieff and the St. Petersburg Government, the latter is hesitating, which hesitation necessarily ties Baron Rosen's hands. We need scarcely repeat the comment that all these tales are invented, cleverly or clumsily as the case may be. Possibly among the varied versions published about the progress of the negotiations, some may approximate to the truth, but we are persuaded that should that be the case, it will only be by accident. Newspapers like the *Yomiuri* and the *Hochi* are conspicuous in spreading reports. The former now represents the Cabinet as much perplexed because of differences of opinion among the Elder Statesmen, and Baron Rosen as altogether calm in his conviction that whatever attitude the Ministers of the Crown may assume, the *Genro* will sway the balance towards peace. This latter idea inspires also the cartoonist of the *Fiji Shimpō*. He depicts Russia in the garb of a military officer who holds a demon's mask before his own perturbed face. A decrepit old man, the representative of the Elder Statesmen, cowers in a corner terrified by the apparition of the mask, but a lusty youth, the people of Japan, looks under the mask and jeers at the troubled countenance behind it.

Meanwhile the *Asahi Shinbun* continues to urge the necessity of speedily coming to a decision of some kind. It marshals the things that have occurred since Japan opened direct negotiations with St. Petersburg at the beginning of July; Russia's change of administrative system in the Far East; her despatch of a large military force to Man-

churia under pretext of testing the capacity of the Siberian Railway; the gradual concentration of her land forces in the south of Manchuria; the sending out of fresh ships from the Baltic and Mediterranean squadrons so as finally to bring her Far-Eastern fleet to the dimensions of Japan's; her proceedings in northern Korea, which have virtually converted the Yalu Valley into a new basis for her imperial enterprise; her building of forts at Antung; her complete disregard of her promise to evacuate Manchuria; her transfer of the negotiations to Tokyo, and her perpetual delay to come to any settlement the while she strengthens her position in the Three Provinces. Her situation continually improves, and that of Japan continually grows worse. The *Asahi* is very emphatic in insisting that this rate of affairs should be speedily terminated one way or the other.

The *Yomiuri* dwells on the fact that the history of the Japanese people shows them to be inflexible in their determination to avenge an injury. They swallowed the affront put upon them in 1895, but they did not forget it and will never forget it until it is expiated. Such a disposition may be more or less barbaric, but it is the disposition of the Japanese and nothing can alter the fact. The empire's statesmen had better take note of it, for if this latent force be unduly suppressed, it will beget an explosion.

Perhaps in quoting the *Yomiuri's* words we should observe that where Russo-Japanese relations are concerned, it disputes with the *Nippon* the palm of chauvinism.

Wednesday, October 21.

Everything written about the details of the negotiations now proceeding in Tokyo may be treated as pure conjecture. One or two Tokyo journals undertake, this morning, to lift the curtain partially and to disclose to public gaze some faint outlines of what is happening on the hidden stage. They avail themselves of the mouth of the proverbial anonymous diplomatist to ventilate their accounts, but their readers remain as ignorant as ever after listening to the explanations of this exponent. Nothing can be certainly affirmed except that the various conferences hitherto held have not furnished any ground for public alarm, or suggested that the negotiators are separated by an unbridgeable gulf. Unless we are to assume that Russia's disclosure of views is mere talk, the sincerity of her desire to find a peaceful issue must be believed, as we ourselves entirely believe it. And that the situation itself does not admit of amicable adjustment without much sacrifice on either side, can not be questioned. For the rest, various rumours are circulated as to great pressure of business in the Naval Department; as to a sudden stiffening of the Elder Statesmen's backs owing to a discovery that a "certain diplomatist" had reported their invertebrate condition as an effective obstacle to war; as to the opening of a conference in the Palace; as to the comings and goings of high officials, and so on. That the air should be full of such talk is natural. Indeed we should have expected a much larger outbreak of "extras," but considering the tension caused by this long-continued suspense the voice of the *gogwai-man* is remarkably silent.

Thursday, October 22.

Tokyo newspapers can scarcely refrain from commenting on a subject so vital as the country's present relations with Russia, but they are evidently perplexed to find any new manner of dealing with the

problem. The truth is that what has to be said has been said pretty exhaustively. The *Nichi Nichi Shinbun*, for example, makes the trite observation that it is Russia who stands at the bar of justice charged with failing to discharge her treaty obligations, and that she can relieve the tension at once and recover the world's confidence by the simple process of doing what she has solemnly promised to do. As for Japan, she may solace herself with the reflection that she is the mouthpiece of the nations in this matter. All the Powers of the Occident are of her way of thinking, though they may not be disposed to assist her materially, and Russia should therefore remember that in agreeing with Japan she will be agreeing with a great many countries. That is the gist of an article wherein many facts are marshalled and many dates tabulated.

Curiously enough the *Kokumin Shinbun* takes much the same line. It declares that the Powers, though their interests clash more or less, are unanimous in their desire to maintain the independence of China and the open door. The *Kokumin* enumerates England, America and France as holding that view, but significantly excludes Germany. Further, it declares that when there is talk of preserving the integrity of the Chinese Empire, Manchuria is necessarily included by all the Powers, but here again from "all the Powers" Germany is explicitly excluded. Having thus carried back its readers to what may be called the basic facts of the Manchurian problem, our contemporary concludes by observing that Russia, instead of persisting in a course which does open violence to truth, sincerity and good faith, can terminate the suspense at once by making good her promises.

The *Nippon* persists in its advice that not a day should be lost in coming to a decision of one kind or another. Each week that passes is so much loss to Japan. "Each hour is worth a thousand pieces of gold." Next year will see Russia stronger in these waters than Japan. Not that that matters much. The Japanese do not fear. They are fresh from the experiences of war and they will know how to profit by the lesson. Moreover England is taking steps to increase her naval force in the Far East, which may be interpreted to mean that she desires to preserve the balance of power. But the *Nippon* hopes that Japan will not rely upon any outside aid and that, single-handed, she will test her prowess, should an appeal to the sword prove inevitable. It concludes by urging the advisability of expedition.

From these epitomes our readers can gather a tolerably clear idea of the tone of the press. There is no excitement nor anything like violent writing, but there are a great deal of quiet determination and some impatience.

Friday, Oct. 23.

The *Nichi Nichi Shinbun* has received from its Peking correspondent under date of the 21st instant a piece of intelligence which, if trustworthy, is of cardinal importance. The correspondent alleges that M. Lessar has addressed to Prince Ching a long note setting forth the fact that the relations between Russia and her neighbour China have always been of a friendly character and that it is Russia's aim to preserve that amity, for which purpose her recent demands were formulated. Japan, however, though not concerned in the question, has interfered not only to prevent a settlement between China and Russia but also to

oppose the latter's exercise of her sovereign rights (*Nihon wa taida riyōkoku-kan no kōshō ni kwansho suru nomi narazu Rokoku jshu no kōdō wo bōgai su*). Under the circumstances, there is nothing for Russia to do except to appeal to the sword. (*Koto koko ni itatte wa Rokoku yamru wo yezu saigo no shudan ni yorazaru bekarazu*). If at this crisis China, unmindful of the dictates of amity, associate herself with Japan, Russia will be obliged to adopt exceptional measures towards her. The despatch concludes by advising the Chinese Government to reflect seriously.

The *Nichi Nichi Shinbun* makes no comment on this message, having probably received it too late for editorial purposes, but we have no hesitation in expressing absolute unbelief in the facts stated. It is perfectly plain that had the Russian Representative in Peking addressed such a message to the Chinese Minister of Foreign Affairs, nothing would remain for Japan except war, and for China also the alternatives would be to fight or to be finally dishonoured. To suppose that while taking such steps in Peking Russia is carrying on friendly negotiations in Tokyo with reference to the very same question, is obviously extravagant, as it would also be to assume that while constructively admitting by her attitude in Tokyo the right of the Japanese Government to have a voice in the settlement of Manchuria's fate, Russia is publicly denying that right in Peking. To discuss the telegram further would be to attach undue importance to it. We can only repeat our expression of complete incredulity.

KOREA.

Saturday, October 17.

Japanese newspapers state that Mr. Sugawara, Secretary of the Japanese Legation in Seoul, has been instructed to proceed to Wiju and is to start on the 17th instant.

The *Nippon's* Seoul correspondent alleges that although M. Pavlov is ostensibly pressing the Korean Foreign Office for its assent to the Yong Am-pho lease, he has really obtained the Emperor's sanction and can therefore proceed without any uneasiness. The same paper informs its readers that the hesitation about opening Yong Am-pho, as desired by the British and Japanese Representatives, is entirely due to opposition by the Sovereign. The Cabinet Ministers all approve of the measure, but dare not give effect to their conviction in the face of their knowledge of the Emperor's views. How much these statements may be worth we can not pretend to judge. It seems very probable, however, that M. Pavlov has sought refuge from the evasions of the Foreign Office in recourse to the Emperor. For we recall that on August 25th he repaired to the Foreign Office and pressed unsuccessfully for the signing of the lease agreement, and that on the 27th of the same month he remained at the Office from noon until 7 p.m. in the vain hope of meeting the Minister. Finally he declared his intention of abandoning all further reference to the Foreign Office in this matter and making direct appeal to the Emperor.

It need scarcely be said that the Korean Authorities deny the truth of the rumour that they have made application to Russia for troops to guard Seoul. Their denial will be readily accepted, for the story must strike every one as merely an outcome of the present state of tension and excitement.

The latest news about fortifications is that Russia is building such works at Antung, which is sufficiently probable. At the same

time, fortifications at Antung would be difficult to reconcile with the profession that should her demands be acceded in Peking she will evacuate the major part of Manchuria. Antung would not, in that event, fall within the area to be held.

The *Fiji Shimpō* reports that the first section of the Seoul-Fusan Railway having been finished, will be opened at a very early date. Trains will run as far as Su-won.

Monday, October 19.

If appears that the dispute at Yong Am-pho now is not with regard to the fundamental question whether any land shall be leased to Russian subjects, but that it relates solely to the area of the land. Some doubts having arisen in Seoul as to the procedure adopted by Commissioner Cho, two officials were recently despatched by the central government to make investigations *in loco*. Cho has accordingly forwarded an explanation, which appears to have been confirmed by the report of the examining officials. The statement is that Cho having taken exception to the dimensions of the land originally mapped out by Mr. Bojisco, representative of the Lumber Company, the boundary marks were altered and an amended map was compiled. Subsequently Mr. Bojisco returned to Russia, and during his absence Baron Ginsburg arrived, carrying with him the original map, guided by which he proceeded to change the boundary marks. Thus a fresh complication arose.

Commissioner Cho's integrity is thus re-established, so far as we can judge, but, on the other hand, these facts suggest a plain inference that the Korean Government has given its consent to the principle of Russian land-occupation at Yong Am-pho. As a matter of industrial expediency there can be no valid objection to the acquisition by Russian subjects of such lands in the Yalu Valley as the prosecution of their timber-felling enterprise may require. But their manner of arbitrarily selecting Yong Am-pho for the site of a settlement, and hastening to purchase land there without the previous consent of the Korean Government, was not defensible, and in giving *post facto* sanction the Koreans have shown curious weakness. They have deprived themselves of the right to complain though others adopt the Russian precedent.

There is a rumour that Russian troops have crossed the Tumen at Kyong-heung, a place which will be remembered as the scene of a Russian attempt to lay a line of telegraph from the Amur region to Yuen-san in Korea. The rumour is vague, and the Korean Government is said to have despatched officials for the purpose of investigation.

The news is confirmed that the Russians are building forts at Antung—another evidence that they have no intention of quitting Manchuria, unless, indeed, these forts be intended as a precaution against the contingencies of war with Japan.

It will be remembered that a detachment of 400 or 500 Russian soldiers recently left Port Arthur by sea, and that their destination caused some speculation. The incident still remains wrapped in mystery.

A telegram from Seoul to the *Nichi Nichi* alleges that there is a rumour of the advent of Russian troops and that the members of the Peddlars' Guild are once more *en evidence*. Such incidents are to be expected. On the other hand, denials are now published of the story that secret emissaries were despatched by the Korean Government to solicit the protection of Russia and France.

The Japanese Consul in Seoul has issued a notice to his nationals warning them against allowing themselves to be perturbed by idle rumours. This notice is said to have been considered expedient inasmuch as the Japanese were showing signs of sharing the alarm now beginning to infect the Koreans, many of whom are reported to be packing up their belongings and retiring from the towns to the country districts.

Wednesday, October 21.

Another rumour has reached Seoul to the effect that the Russians are very busy at Tho Yong-pho and in its neighbourhood. They are said to have taken Sok-jin, which lies on the river Yalu below Tho Yong-pho, and to be engaged in erecting forts there. This story will probably prove untrue as its predecessors of the same family have done.

Once more we hear of the British Representative in Seoul pressing for the opening of Yong Am-pho. Mr. Jordan is said to be urging that he must without delay make some definite report on this subject to his Government.

Certainly the contrast between the celerity of Russia's practical achievements and the infinite postponement of other country's aspirations is very striking. When Russia wanted to open Yong Am-pho for her people, she simply sent them there without asking any one's leave. Had she followed the orthodox path she would be still far from her goal. The thing is typical of Russia's whole progress. She is the one Occidental Power that now neglects all the *convenances* in her dealings with Oriental States, and the things she accomplishes are consequently incomparable with the petty successes of her circumspect rivals. Germany at Kiao-chou showed how to do it after a fashion that even Russia does not surpass, but Germany stopped short at that effort and evinces no disposition to repeat it, whereas Russia goes on all the time. We can easily imagine the kind of logic by which the St. Petersburg statesmen convince themselves. They doubtless argue that since the materials to be dealt with have not changed since mediæval days and since the results to be obtained remain also unaltered, the old roads may still be trusted to lead to the old bournes. Some glamour of modern refinement is thrown over the situation by making railways the pioneers of aggression, but for the rest we could easily imagine ourselves watching a spectacle of the sixteenth century. Of course the success achieved is remarkable, of its kind, and that, after all, is the main consideration. Before M. Jordan obtains leave for his nationals to trade in the Valley of the Yalu, Russia will have occupied all the eligible positions.

It will be remembered that the Korean Government vehemently remonstrated, some days ago, against the doings of Russian subjects at Tho Yong-pho where they were erecting buildings and otherwise exhibiting an intention of making themselves at home. On the 18th instant M. Pavlov is reported to have replied to the protest made by the Seoul Foreign Office. He said that without investigations *in loco* he could not undertake to give any definite answer. Such investigations were now in progress. Meanwhile he took occasion to point out that according to the second article of the timber-felling concession of 1896, Russian subjects have the right to erect buildings and take whatever other measures may be necessary for the prosecution of their enterprise at any place along the upper and lower waters of the Yalu or its tributaries and at any place in the neighbouring districts.

If M. Pavlov has really put his foot down so flatly as that answer would indicate, we have to conclude that he claims the whole Yalu Valley as a potential Russian settlement, and that when he speaks of the Yalu Valley he indicates a region with very elastic boundaries. For when it comes to interpreting a term so vague as "neighbouring districts" and when the interpreters are Russia and Korea, one can readily conceive the result. This now celebrated concession of 1896 has never been given to the public. If it warrants M. Pavlov's claims it must be a highly important instrument. If it does not warrant them, he must be a very courageous diplomatist.

There is an interesting article in the *Nichi Nichi Shinbun* about Japan's relations with Korea. The average Japanese, we read, is inclined to regard Korea as essentially within his country's sphere of practical influence. Nothing of the kind is true. Japan had considerable influence in Korea after the war of 1894-5, but Viscount Miura's blunders weakened her immensely and it was only by the exertions of Count Inouye and Baron Komura that she partially recovered her position. The Masampo affair of 1900 did much to rehabilitate her, since she succeeded in defeating Russia's attempt to gain a footing at that important place. The Northern Power is now busying herself in the Yalu Valley, *faute de mieux*, but the *Nichi Nichi* regards its doings there as mere child's play compared with the Masampo essay. The latter, following in the wake of the Komura-Waerber, Yamagata-Lobanow and Nishi Rosen conventions, greatly enhanced Japan's prestige and she now certainly stands higher in Korea than she did a few years ago. Moreover, her influence is extending every day, and it would be futile for Russia to think seriously of opposing it. Russia, however, has not by any means reconciled herself to effacement: she is struggling still to assert herself in the peninsula. The course of events has thus created an opportunity for the final settlement of this problem and the *Nichi Nichi* seems quite confident that it will be settled according to Japan's wishes, for appeal to force would be fatal to Russia with Japan and England in the field.

Thursday, October 22.

It is stated that on the 19th instant at 9 a.m. the cable between Fusan and Tsushima was suddenly interrupted. In the present state of public feeling there naturally arose a suspicion that this incident was not purely accidental, but independently of the fact that the Russians are not in the least likely to have undertaken any enterprise against a submarine cable, the property of a friendly Power, in time of peace, there is the further fact that no Russian vessel has been seen in the neighbourhood of the place where the injury occurred. In consequence of the very large number of messages now passing between the two countries this interruption, which is expected to continue for some ten days, is particularly inconvenient. Arrangements will probably be made by the Naval Department for organizing a system of wireless telegraphy in the interval.

Friday, Oct. 23.

As must have been long anticipated by impartial observers, Russia's doings in the Yalu Valley have begun to be considered intolerable by the Japanese. Many observers, ourselves among the number, have been surprised by the studied patience shown by the Japanese people and their rulers in this matter. But if M. Pavlov has mistaken

that patience for indifference he is greatly and unfortunately mistaken. We desire to judge his doings with the utmost leniency and to make every allowance for the sentiment of imperial expansion which seems to be epidemic among all Russian officials and officers now at the front. But the hard fact remains that M. Pavlov has adopted towards Korea methods too masterful and arbitrary to be for one moment reconciled with the attitude his country is pledged by convention to observe in the peninsula. If war should break out, a large part of the responsibility will rest on his shoulders. The *Kokumin Shinbun* discusses the subject very gravely. It declares that if Russia has any sincere intention of interpreting her conventions with Japan in a pacific sense, she must cease to make preparations which point only to war. Her procedure in Korea is emphatically of the nature of a challenge to Japan, and however strong may be this country's desire to preserve the peace, she can not always submit to be thus defied and to see her rights there violated. All countries recognize Japan's special position in Korea, and Russia herself has recognised it by convention. Nevertheless she continues her self-seeking and inconsiderate procedure (*obo myuenryo naru kôdô*) in the peninsula, and it is impossible for Japan to tamely suffer such treatment. She talks of peace but her acts are the acts of a Power seeking war. Japan is perfectly sincere in her policy as regards Manchuria and Korea. Her resolution is taken and nothing shall move it. She does not care for menaces. She does not care for demonstrations. She will not be the one to open the fight, but neither will she refuse her adversary's challenge. She wants peace, but not peace at any price. "We have heard that the doings of the Russian officials in Korea are not approved by the St. Petersburg Government and have not the sanction of Viceroy Alexieff. Why then does he not restrain them? If he looks on indifferently while those under his jurisdiction are obeying the dictates of their own volition and resorting to petty acts of aggression without restraint, a proceeding originally intended as a mere diversion may become the fuse that fires the magazine. In that event it will be fruitless for the St. Petersburg Government to disavow the acts of the man at the front. The world will not accept such an excuse."

THE WISHES OF THE JAPANESE PEOPLE.

At this crisis the *Fiji Shimpô* deems it wise to publish its interpretation of the wishes of the people of Japan in order that foreigners may not fall into any error about them. So far as concerns Manchuria Japan asks for nothing except that Russia should fulfil her treaty engagement by withdrawing her forces and that she should place no obstacles in the way of the opening of the Three Provinces to the commerce and industry of the world. That is her whole desire, and its execution ought not to present any difficulty to Russia since she has already explicitly declared her willingness to carry out both conditions. Concerning her tenure of Port Arthur and Dalny and the guarding of her lines of railway, the Japanese have nothing whatever to say. These are Russia's already acquired privileges which this country does not think of disturbing. So far from objecting to the building of Russian railways in Manchuria, Japan welcomes the act, seeing in it an effective contribution in the development of the material progress of the Far

East. But Russia's present action in retaining military possession of Manchuria, thus doing violence to Chinese sovereignty and insulting the nations by flagrant disregard of the assurances she has repeatedly given them, that is a course in which Japan can not tamely acquiesce. Russia must not forget that when the Japanese, in the sequel of a victorious war, took possession of a portion of Manchuria, she insisted on their evacuating the territory on the explicit plea that their presence there would disturb the peace of the Orient. She herself is now holding military possession of the whole of Manchuria and is doing so by force in defiance of solemn treaties. Can anyone justly pretend that Japan is not entitled to protest against such a conjuncture? Japan fully recognises all the privileges legitimately acquired by Russia in Manchuria, and asks nothing more than that Russia on her side should discharge her treaty obligations. As to Korea, Japan will not consent that any foreign Power lay even a finger upon that country. The war of 1894-5 established her title to make that declaration and she will not suffer it to be ignored. Unfortunately it can not be said that Russia shows respect for Japan's position in Korea. On the contrary, Russia's acts in the Yalu Valley show that she does not shrink from recourse to the most arbitrary measures for establishing her enterprises in the peninsula, and that Japanese life and property are menaced by her presence. It would have been within Japan's legitimate right long ago to despatch a force to Korea for the protection of her people and her position, but she has carefully refrained from every act capable of being construed in an unfriendly sense. Russia, on the other hand, has plainly exhibited her disregard for her conventions with Japan, and has made it clear that so far from avoiding interference with the development of Japanese enterprise in the peninsula she is determined to promote her own by methods lying entirely outside the realm of normal procedure. Can such conduct be interpreted as in any sense conducing to the preservation of peace in the East? The world recognises Japan's position in Korea and her aspirations with regard to the peninsula. In Manchuria she seeks only an equal position with that of other Powers and equal access to its markets. Under these circumstances "should the negotiations between Japan and Russia fail and should an unfortunate issue be precipitated between the two empires, we entertain no doubt that the opinion of the world will at once and unerringly adjudicate the rights and wrongs of the situation."

VISITS OF RUSSIAN OFFICIALS TO NAGASAKI.

One of the subjects that exercise Japanese journalists is the visits of Russian Secretaries or Interpreters of Legation to Nagasaki. A few days ago M. Arsenieff went thither and it was immediately conjectured that he must be the bearer of important despatches for Port Arthur. But in three days he reappeared in Tokyo. Now M. Trautschold has been sent to the southern port and there is the same crop of hypotheses about the cause of his journey. The most intelligent explanation seems to be that the Russian Representative, desiring to secure complete secrecy for his most important communication with Viceroy Alexieff and St. Petersburg, is sending them by hand to Nagasaki and thence by steamer to Port Arthur. The delay thus caused would not be material.

RUSSIA AND CHINA.

In the *Nichi Nichi Shimbun* appears a thoughtful and well reasoned article dealing with Russia's economical position towards China. The great Northern Power is spending immense sums ostensibly for the development of her commercial relations with the Far East. Her outlays are said to total already eight hundred millions of roubles and she must defray two hundred millions more before her plans are complete. Considering the immense extent of the Chinese empire and the enormous numbers of its population, one can easily appreciate the spirit of enterprise shown by Western peoples in seeking access to its markets. But the question is, what has Russia obtained for her money. Have results thus far warranted her outlays? Looking at statistics, it appears that her total trade with China during the five-year period 1893 to 1897, inclusive, amounted to 219½ millions of roubles, out of which her purchases from China represented 168½ millions, so that her sales totalled only a paltry 51 millions. Again during the three-year period 1898 to 1900 her total trade was 150¼ millions of roubles, no less than 109¼ being purchases against only 41 millions of sales. Altogether in the ten years from 1891 to 1900, her imports from China stood for 63 per cent. of her total trade with that country and her exports for only 37 per cent. In the year 1900, she sold six million yen worth of goods to China, whereas the United Kingdom of Great Britain and Ireland sold 53 million yen worth, the United States 26 million yen, and Germany 20 millions. Turning to Japan, on the other hand, the records show that whereas her exports to China were 7¾ million yen in 1893, they rose to 46¾ millions in 1902, and the corresponding figures for imports were 17 millions and 40½ millions. In other words, her trade grew from a total of 24¾ millions in 1893 to 87¾ millions in 1902; the latter figures being nearly the quadruple of the former. Statistics with regard to the Korean trade are equally remarkable though the gross figures are smaller. Thus:—

	1893 Yen.	1902 Yen.
Japanese Exports to Korea ...	1,300,000	10,500,000
Japanese Imports from Korea ...	1,990,000	7,950,000
Total.....	3,290,000	18,500,000

The Japanese have sunk very little capital in these trades. That is a reproach to the nation; are proach which ought to be removed, and its removal would surely exercise a marked effect on the figures. But at any rate the contrast between the petty development of Russia's trade and the enormous disbursements made by her, on the one hand, and the marked development of Japan's trade in spite of her failure to exploit it liberally, on the other, is well worthy of notice.

ATTACK ON MR. SHIMADA SABURO.

Saturday, October 17.

An abortive attempt seems to have been made on the life of Mr. Shimada Saburo. On the 14th instant a man calling himself Ora Tomitaro telephoned to Mr. Shimada saying that he wished to see him on urgent business. Mr. Shimada, thinking the request curious, asked for particulars, but Ora merely explained that he had met Mr. Shimada formerly in the Diet, and that the matter he desired to communicate was in the interests of Shimada. Next day Ora presented himself at Mr. Shimada's house in Naka-rokubanchō. The man who answered

the door declined to admit him unless he stated his business. Accordingly, he wrote something on a card, and then, instead of waiting for a reply, followed the porter to Mr. Shimada's study. Rebuked for such discourtesy he urged Mr. Shimada to read the card. Mr. Shimada sent the porter to fetch his spectacles and Ora took immediate advantage of the situation. Drawing a short sword from a bunch of flowers that he carried, he sprang upon Mr. Shimada. Happily one of the *shoji* happened to be open, and Mr. Shimada was thus able to leap into the garden before receiving any hurt. Ere Ora could follow, the porter had returned and seized him from behind. Meanwhile Mr. Shimada took refuge in the neighbouring house. On examination of what Ora had written on the card, it was found to be a declaration that although Iba Sotaro's hand had slain Hoshi Toru, the spirit that nerved him was Shimada Saburo's abuse and slander. The writer disavowed all personal motive, but affirmed that the death of Shimada was demanded by justice. He proved to be a former graduate of the Normal School in Kyoto, a great admirer of Mr. Hoshi Toru, and subsequently a member of the *soshi* band. Mr. Hoshi's violent death appears to have preyed unceasingly upon his mind.

Monday, October 19.

The attempt to assassinate Mr. Shimada Saburo has led to a singular *dénouement*. Mr. Shimada's assailant declared that he was inspired by an undying recollection of the part played by the *Mainichi Shimbun*. Mr. Shimada's journal, in inflaming public opinion against Mr. Hoshi Toru, and that he held Mr. Shimada indirectly responsible for Hoshi's murder. Shimada's accusations had nerved Iba Sotaro's arm. But now there steps forward in the columns of the *Hochi Shimbun* a Mr. Ishikawa, who declares that he and two or three other youthful penmen were the writers of the inflammatory articles in the *Mainichi Shimbun* in 1900; that Mr. Shimada was then confined to his house by sickness and took no part in the editing of the paper; that he nevertheless warned them several times against the intemperance of their comments, and that, consequently, the whole responsibility rests primarily on Mr. Ishikawa, and in a comparatively remote degree on his associated editors. If anybody is to be killed it is Ishikawa, and he publicly invites Mr. Hoshi's avengers to turn their daggers against himself, telling them that he is now a member of the *Hochi's* staff. He does not believe that the *Mainichi* was responsible for Hoshi's murder, and he profoundly regrets that crime; but he strenuously exonerates Mr. Shimada and takes the whole blame on his own shoulders.

This is very curious. We have no right to question Mr. Ishikawa's sincerity, but the memory inevitably recurs to us that if Mr. Shimada was not in sympathy with the writings in the *Mainichi*, his manner of treating the letter addressed to him by Mr. Hoshi Toru requires more explanation than our ingenuity can suggest. Mr. Hoshi challenged him to say whether he accepted responsibility for the articles appearing in the *Mainichi*. Mr. Shimada declined to give a straightforward answer, but took refuge in a suggestion that Mr. Hoshi should inquire from his own conscience as to the justice of the *Mainichi's* strictures. That was the time for Mr. Shimada to speak a word of disavowal. He did not speak a word, and public opinion certainly condemned his want of frank-

ness. There is the possibility that he sought to shield the writers of his articles; that he considered himself bound to protect them even at the expense of the own reputation. We take pleasure in accrediting him with that generosity, for we have always regarded him as a highly honourable and a rarely gifted man. This, however, we must say that if, as proprietor and editor of the *Mainichi Shimbun*, he had not sufficient authority to control the tone of its leading columns, he must plead guilty to the charge of singular incapacity for the sake of acquittal on the count of sanctioning dangerous slanders.

CHINA.

Monday, October 19.

The *Fiji* publishes a telegram from Peking saying that the Japanese employees of the dock-yard at Port Arthur have been discharged; that the naval manoeuvres have been interrupted and that the Russians seem to think war inevitable. The *Kokumin* supplements this by affirming that the Russian ships are receiving a war-colour coat of paint.

It is stated that great numbers of Chinese are arriving at Chefoo from Liaotung by every steamer, and that a rapid exodus of Japanese subjects from Port Arthur and Dalny was also taking place until the representations of their Consul at Chefoo re-assured them.

Messrs. Oishi and Inukai are now in Peking, where they have been welcomed by the Japan Association of that city. They openly affirm, it is alleged, that their travels in Manchuria and Korea have convinced them that they had previously been labouring under a great misconception. No clue is given as to the nature of the misconception, but inasmuch as these two politicians have hitherto led the so-called "strong-foreign-policy" section of the Progressists, it seems a reasonable inference that they have seen reason to modify their obduracy.

Tuesday, October 20.

A Chefoo telegram to the *Asahi* says that all landing of Japanese subjects at Yong Am-pho is strictly forbidden. Forbidden by whom we are not told. As to why this canard should have flown hither via Chefoo, our contemporary says that it was carried to the Chinese port by a steam-boat passenger from the Yalu and that he himself saw what he describes. Another sensational item of the same sightseer's intelligence is that Russian men-of-war and torpedo-boats are carefully guarding the estuary of the Yalu and the line of communications from Port Arthur to Tatung-kou.

Viceroy Alexieff is said to have informed Governor Tso in Mukden that on the 29th of this month the Russian troops in Ying-kou, Feng-hwang and An-tung will be withdrawn. The Governor is reported to be making preparations for taking over these places. It is a doubtful rumour.

The Chinese Foreign Office is said to have received a message from the Governor of Manchuria to the effect that extensive purchases of provisions by the Russians at Liao-yang, Ying-kou, Mukden and Teh-ling have caused a marked appreciation of price. He also reports that, in accordance with orders issued by Viceroy Alexieff, all the Chinese soldiers in Manchuria have been obliged to hand into store any ammunition held by them over and above 25 rounds per man.

Rumour continues to allege that the Rus-

sian ships at Port Arthur are receiving a coat of war-paint and that all the Japanese employees at the docks have been dismissed.

The *Nichi Nichi* has a Peking telegram renewing the reports current some months ago as to possible interference by France in South-Chinese affairs. Our contemporary's correspondent represents the French Minister as having informed China that it would be impossible to maintain inaction if the Chinese Government continued to show its present incompetence in quelling the Kwang-si insurrection, inasmuch as the disturbance must inevitably extend across the border into French territory. Unless some speedily effective measures were adopted by China, France would have to employ her own forces to restore order. This item of news is supplemented by an interpretation that the French Government entertains the design of assisting China to quell the insurrection and thus extending French influence to Kwang-si. That is a very old suspicion, but although such an ambition may possibly, if not probably, be entertained by many Frenchmen, there is little reason to apprehend that French statesmen will engage in any arbitrary enterprise of empire-building.

Friday, Oct. 23.

Telegrams to the *Fiji Shimpō* from Tientsin report that the building of torpedo-boats at Port Arthur is proceeding apace, no less than to having already been constructed. Additional barrack accommodation for forty or fifty thousand men is also being provided.

The same journal publishes from the same source a statement that according to latest advices the total number of Russian troops in Manchuria does not exceed sixty thousand, of whom fifteen thousand are distributed along the line of railway and ten thousand are at Port Arthur. The frequently published statements that a much larger force is collected in the Three Provinces are emphatically denied by this correspondent. But considering the preparations that Russia has been making for the past six months, it is hard to credit this estimate. A total force of sixty thousand men would mean that not more than one half of that number could be put into the fighting line at any given moment.

THE ANONYMOUS DIPLOMAT.

The proverbial anonymous diplomat now speaks through the columns of the *Shogyo Shimpō*. He affirms that there have been four meetings of the negotiators since Baron Rosen's return from Port Arthur. At the first meeting Russia submitted a draft agreement the gist of which was a species of exchange between Manchuria and Korea. At the second meeting Japan definitely rejected this proposal and advanced a programme of her own which has been under discussion ever since. Each meeting has brought the disputants nearer to agreement, but they are still separated by a wide interval, the principal obstacle to concord being Japan's demand that she shall have a concession for a railway from the Yalu River to Yin-kow (Newchwang). That is a test question, for unless Russia is determined that the whole of Manchuria shall remain permanently in her hands, she should have no valid objection to another Power taking part in the development of the district by railway-building, nor can she, if she be sincerely resolved to terminate her military occupation at some future date, deny the right of the Chinese Government to grant such a concession to Japanese projectors.

She is nevertheless most unwilling, according to this anonymous diplomat, to agree to any such proposal, and Japan is equally reluctant to abandon it. He goes on to say that France, which is profoundly interested in Russian affairs from a financial point of view, is using all her influence in the cause of peace, and that in consideration of the conditions with which Russia has to deal at present at home and abroad, independently of the Manchurian complication, she is likely to make some sacrifice, temporary at all events, in the cause of peace.

We re-produce this story because the *Shogyo Shimpō* is essentially a sober paper, and because, in the absence of anything resembling accurate information, all statements not plainly absurd, have some interest. But we are very confident that Japanese officialdom has not taken into its confidence any foreign diplomat, and that if, by some indirect process, information reached such a person, he would not be at all likely to share it with a newspaper. Each day that passes without a settlement begets fresh rumours, inspires additional alarms and invests every new incident with portentous significance. Nevertheless we must be content to wait patiently, observing, meanwhile that the Japanese Government has of late departed from its rule of reticence to the extent of endeavouring to check warlike rumours.

"SHAMROCK III."

The *Shamrock* failed, says her captain, Mr. Robert Wringe, because she was round bottomed, whereas the *Reliance* was of scow model. In all other respects he claims that the English boat was quite as good as the American. The telegraphic news of the race suggested that *Shamrock III* was outmanoeuvred, but Captain Wringe alleges that his crew "did splendid work, clean, swift, excellent," and that "in some respects they made records." But her model beat her. Up to recent times the American cup-defenders were all centre-boarders. Then they borrowed the fin keel from England and now they have gone ahead with the scow shape. Captain Wringe claims that only in one respect is the challenger at a disadvantage: he has to name his boat before she is built and he has to abide by his choice however it may turn out, whereas the defenders may build any number of boats and take the best of them when they are finished. Thus in one year the *Vigilant*, *Columbia*, *Pilgrim* and *Navahoe* were all constructed, and the *Vigilant*, proving the best, was taken. We learn incidentally from Captain Wringe that boats like the *Vigilant* and the *Reliance* would be penalized out of all chance of winning if they entered for English races, for the new rules now applied in the United Kingdom aim at preserving a type of yacht which, while tolerably swift, will be safe and comfortable, and at excluding the mere racing machine. At the same time he denies that the cup races are useless. "They comprise a series of experiments on a grand scale, and one that could not otherwise be had. They have taught us a great deal about ship-building, rigging, strength of materials, and so on." Finally, he thinks that there is no reason to despair of lifting the cup. "They can build good ships on the English side, and with the lesson that the *Reliance* has given them taken to heart, they may next year produce a winner." But it is evident that the discrimination practised by the British Clubs against yachts built for racing purposes alone must greatly tend to keep cup competitors out of the field.

THE TOBACCO MONOPOLY.

Monday, October 19.

The reasons underlying the Government's resolve to monopolise the tobacco-manufacturing industry in the interests of the State and the procedure that will be followed, have been published. It is contended by the Authorities that at present the state of the industry has many unsatisfactory features owing to the supremacy of the large manufacturers and owing to the despotism of capitalists. Moreover, the enterprise has been invaded by foreign capital which threatens ultimately to secure a complete monopoly. Hence, and for other reasons, it seems to the Government that official control will make for the general benefit, as well as for placing the States' finances on a secure basis. The programme contemplated is to take over for immediate use the factories now in private hands, and in 1904 to commence the construction of new and better suited edifices at selected spots—probably about 40 in number—this work being concluded by 1908. With regard to the machinery of distribution, wholesale dealers (*moto-urisabaki-nin*) and retail-dealers (*ko-urisabaki-nin*) will be appointed, a prior title to such appointments being reserved for persons now engaged in the industry. Similar care will be taken to transfer to the uses of the official industry all workmen engaged in the present factories. Further, all the plant now employed will be bought up and appropriate compensation will be given to those that are deprived of their occupation by the change. As for the tobacco prepared for sale at the moment of the new system's operation, complete freedom will be granted for purposes of sale, and, finally, special rates will be allowed in the case of tobacco intended for export.

Tuesday, October 20.

It is the opinion of the *Fiji Shimpō* that the Government's project of monopolizing the manufacture of tobacco will not correct the abuses it is intended to remedy. The trouble of the present system is that taxpayers manage to evade it. The system itself is simple enough. It demands only two operations on the part of the Authorities: the purchase of the leaf *en bloc* and its sale to the manufacturers. But owing to collusion between the latter and the producers, large quantities of leaf escape the payment of tax altogether, and the Government has no recourse except to take into its own hands the manufacturing business. That step will deprive the people of one of their important enterprises. The direct sufferers are to be compensated, it is true. But what will then happen? Will they devote themselves to some other bread-winning occupation and leave the Government in undisturbed possession of its monopoly? Nothing is less likely. Those that have been capable of evading the requirements of law under the old system will find some way of doing so under the new. They have been manufacturers of tobacco for years, and instead of abandoning their old trade, they will continue it clandestinely. Thus the net result will be that while the Government has exchanged a comparatively simple system for an exceedingly complex one, the Exchequer will be victimized just as much as ever.

All that may be very true, but the pity is that the *Fiji Shimpō* does not suggest some method of its own for meeting the situation. It appears to us very plain, so plain as to be beyond dispute, that when all the operations connected with the purchase of the leaf, its manufacture and its transfer to the dealers are

in official hands, the opportunities for smuggling will be inevitably reduced. At present the Government sells to the manufacturers, and has virtually no means of checking the quantity of prepared leaf that ultimately comes out of the latter's hands. But under the new system all operations of non-official manufacture will be illegal.

POLITICAL NOTES.

The *Tai-Ro Doshi-kai* has adopted a final draft of advice to the Cabinet, and has appointed a committee to present the document. The points insisted on are these:—First, that the intervention of a third Power must not be admitted. Secondly, that Russia must be asked for an answer by a fixed day. Thirdly, that troops be sent at once to Korea to re-establish the balance of power between Japan and Russia. Fourthly, that no precautions must be neglected to perfect the country's military and naval preparations.

Some of the sections into which the House of Peers is divided seem disposed to depart from the wise attitude of reserved expectancy which has hitherto characterized the nobles. The *Doyo-kai* (Thursday Society) appears to be taking the initiative in this matter, but we do not gather that its leaders have given any clear indication of their views. Viscount Tani is the chief figure in the *Doyo-kai*, and it will be remembered that in an exposé of policy recently published he strongly advocated a peaceful settlement of present complications. Possibly he was wrongly represented, but we have no warrant for thinking so, especially as he did not take any step to correct the opinions attributed to him.

THE PHILIPPINES.

The impression gains ground that as an investment—as a market for American goods and a producer of profitable exports—the Philippines have so far turned out badly. Exports to the islands have increased largely, but it seems that a large part of the increase is due simply to the fact that Americans are spending their own money in Manila and elsewhere in the islands. As the *New York Evening Post* says, "We send thither men and ships, and cash to pay their wages and expenses, and millions of dollars besides to save the natives from the miseries attendant upon war, and when these things are translated into the form of exports and imports the Bureau of Statistics supplies us with glowing accounts of our increasing traffic." This paper's attitude is of course coloured by its violent opposition to what it variously calls the "Philippine infamy," "our degrading departure," etc., but its remarks are given for what they may be worth:

The prospect of individual profits other than those which flow from government disbursement is fading away. As a correspondent shows, our only importation from the Philippines of any importance is hemp, and our only exports are goods for Americans living there. The experience of persons who have gone thither to exploit the country by investing their own capital and putting in their own time, is far from encouraging. They have met two difficulties to which they had not given much thought. The first of these is the labour question. The exploiters have found, to their cost, that labour can not be obtained by a mere show of cash. There is no such thing as a labour market in the sense in which we understand the term. The other difficulty, even more insurmountable, is that the would-be exploiter can not stay in the islands long enough to "make his pile" without losing his health. Any white man who remains there longer than three years is in danger of complete breakdown.

"When it is sufficiently demonstrated,"

the *Post* concludes, "that investments of capital in the Philippines are insecure, and that Americans can not live there permanently, we shall be able to take a more sober view of our duties and responsibilities to the islanders and to ourselves."

According to the *London Times*, which is quoted by *Public Opinion* as a less prejudiced authority than either the *Post* or the Bureau of Statistics, "The reports of the British consular officers in the Philippines on the trade of the archipelago for the past year disclose an unsatisfactory state of affairs."

The islands have not yet recovered from the effects of the war and insurrection; the lack of capital and labor have hampered agricultural and commercial development, for American capital has not yet been attracted thither, while Chinese immigration is prohibited; rinderpest, cholera, and marauding bands have affected particular districts; and, lastly, the abnormal fall in silver has interfered with the import trade. The sugar industry suffered last year for the want of capital and labor, as well as from the rinderpest (the water buffalo being indispensable for the cultivation and transport of the cane), so that instead of an average export of 200,000 tons, the export was only 91,870 tons, of which the Hongkong and Japan refineries took the bulk. The imports last year were over six and one-half millions sterling in value, the share of the United Kingdom being less than one and one-quarter million, while those of China and the United States were less than one million, those of India and Ceylon China being over half a million sterling each. The cotton imports, mainly those from the United Kingdom, declined largely, owing to the impoverished state of the country and unsettled state of many districts, which practically close them to trade. The United Kingdom holds the first place in the import trade, especially in cotton and metals, while the bulk of the carrying trade (including practically the whole of that with the United States) is under the British flag, although the coasting trade is under that of the United States.

AN "INSPIRED USE" OF THE PASTE-POT.

Charles Reade, whose "The Cloister and the Hearth" has been pronounced by many critics, among whom may be mentioned Sir Walter Besant and Sir Arthur Conan Doyle, to be the greatest historical novel ever written in the English language, adopted literary methods, we are told, in which the paste-pot and scissors played a remarkably prominent part. A writer in *T. P.'s Weekly* after speaking of Reade's "inspired use" of the paste-pot, quotes an interesting outbreak which occurred on the novelist's discovering in the columns of a newspaper a certain harshly worded charge against his methods of work. The incident is given as follows:—

"'Plagiarist!' he roared on one occasion, crushing a newspaper. 'Of course I am a plagiarist. Shakespeare was a plagiarist, Molière was a plagiarist. We all plagiarize, all except those idiots who are too asinine to profit by learning from the works of their superiors! Surely to God every blockhead out of a lunatic asylum (except those idiots) must know that, since Homer's time, all authors have parodied his incidents and paraphrased his sentiments. Molière 'took his own where he found it.' 'The thief of all thieves was the Warwickshire thief,' who stole right and left from everybody; but then he 'found things lead and left them gold.' That's the sort of thief I am!'"

The writer goes on to describe the systematic manner in which this novelist dragged the morning paper for material. We read:—

"Reade took the newspapers as the grand record of human life as it is lived from day to day, and used them as a vast reservoir of fact and suggestion. He devoted one day a week to his scrap-books. These were his vessels which, like the widow of old, he filled with oil from a supply that never failed. Scores of papers and periodicals came to his home at Albert Gate, like sheep to the shearing. I am aware, of course, that there is a great deal to be said about the danger to a literary artist of what is called the 'documentary' method; but that is far too big a question to discuss here."

"I should require much time and many pages in which to show how full Reade's novels are of matter

which first presented itself to him in form. The very purposes of his novels, every story he wrote was a crusade borne against the abuses of private lunatic as 'Foul Play' his prey was the rascally ship in 'Put Yourself in His Place' he tilted unions; and in 'A Simpleton,' if I remember presented a powerful indictment a feminine folly of tight-lacing. For all that he found material in the newspapers; were inspired by what he read there after voracious breakfast."

TOKYO FINANCE.

The finances of Tokyo receive so much attention at the hands of the *Fiji Shimpō* is the capital of the empire, yet it need of large improvements which no funds to carry out. The total now collected is 1,988,121 yen, but a part of that amount is obtained from municipal property and other sources independent of taxation. Thus the sum raised by imposts is 1,700,307 yen made up of the following items:—

Land Tax.....	54,187 yen, being of the nation one-thirtieth of the total income.
House Tax.....	566,863 yen, being a rate of 4.5 yen on the average of the whole revenue.
Income Tax	360,000 yen, being national tax: total income.
Business Tax (National).....	281,250 yen, being national tax: total income.
Business Tax (Urban) ...	27,095 yen, being national tax the whole income.
Miscellaneous Taxes	190,907 yen, being national tax: total income.
Special Taxes	220,000 yen.

It will be observed that the sum from the land tax is only 54,187 yen, fact, the urban lands are supposed to be assessed for taxation, to yield to their total income of only 866,900 yen they actually yield four times. The *Fiji* contends that the country could obtain a large increase of revenue by assessing these lands at somewhat their just value. This is a point upon which we insisted again and again in these some years ago. The discrepancy between theory and fact was largely bridged by a system of increased taxation. The House of Representatives abolished the system, for although by that system the assessment of urban lands was not the rate of tax was made 5 per cent. against 3.3 per cent. for rural land.

NAVAL INCREMENT.

It is very justly observed by the *Shimpō* that the Japanese people are learning a bitter lesson just now at the increment. Probably there is not a Japanese who does not to-day wish that his country had just one or two more months must elapse before the iron-clads to be ordered under the programme can be completed, a when, eleven years hence, the whole fleet they will represent an addition of one thousand tons to the navy. There is a considerable ratio between the country's requirements and such a scheme.

Assuming that the present crisis is pacifically, we wonder how much

useful though disagreeable lesson Japan will be found to have laid to heart. It is in the very fibre of human nature to despise risks even on the morrow of sufferings entailed by them. Not until a man is old and well stricken in years does he begin to adopt, in the days of health, precautions against maladies which experience has taught him to dread. It will be so with the Japanese. They will forget the danger when it is past. We hope that journals like the *Jiji* will endeavour to jog the national memory.

THE BANK OF JAPAN.

There is talk of a change in the presidency of the Bank of Japan. Mr. Matsumoto, who now holds the position of President, has completed his term of service and his re-appointment was anticipated. But for some unexplained reason it is alleged that his place may be given to Mr. Matsuo, Director of the Economic Bureau in the Department of Finance.

Public sympathy, if we may judge from the newspapers, is almost unanimously with Mr. Yamamoto, the President of the Bank of Japan, who has just been removed to make way for Mr. Masuo of the Finance Department. The *Nichi Nichi Shinbun* alone takes the part of the Authorities in a half-hearted kind of way, by explaining that Mr. Yamamoto's views constantly clashed with those of the Minister of Finance, and that the former exhibited on several occasions a desire to resign. The Bank of Japan and the Treasury must necessarily be in close accord if the financial affairs of the country are to be properly managed. Hence Mr. Yamamoto's removal seems natural. The *Jiji Shimpō*, however, leads a powerful chorus of condemnation. It points out, though not with much insistence, that the President of the Bank is something more than a servant of the Finance Department, since he has most important public duties to perform as a banker, and it further hints that in his disagreements with the Finance Minister the President represented a wise and conservative policy. The latter argument, indeed, comprises, so far as we can see, the whole gist of our contemporary's contention. In a word, the *Jiji* evidently thanks that the tendency of officialdom is to convert the Bank of Japan into an instrument of the Treasury, that Mr. Yamamoto resisted that tendency and that he is now suffering for his courageous action in the interests of the general public. It is true that his legal term of service—five years—had expired, but every one looked to see his re-appointment, and the *Jiji* thinks that his services fully merited such recognition, instead of sudden and unforeseen removal. The *Shogyo Shimpō*, organ of the commercial and industrial classes, takes much the same view. It anticipates dangerously close relations between the Treasury and the Bank in the sequel of the present change. But we find, on carefully reading its article, that its views are mainly influenced by admiration for Mr. Yamamoto's services, which certainly have been conspicuous. For it was largely owing to his clever management when he filled the office of *Eigyō-kyoku-cho* under President Kawada, that war bonds were successfully floated in 1894-5, and it has been under his able direction that the Bank's position has acquired great strength and that judicious assistance has been lent to the mercantile and manufacturing classes. The *Asahi*, like the *Jiji*, contends that though the office of

President of the Bank of Japan is in the gift of the Government, the views of the shareholders and of the business public at large ought to be consulted in such a matter and that, had they been consulted, Mr. Yamamoto's re-appointment would have been assured.

The sum of the matter is that the public has learned to regard Mr. Yamamoto as a really able banker, and that it strongly resents any cavalier-like treatment of a man entitled to the nation's confidence.

The events of the past few days seem to have been interpreted in an alarmist sense by the business section of the Japanese public. The appointment of Admiral Toyo to the command of the Standing Squadron; the substitution of Mr. Matsuo for Mr. Yamamoto as President of the Bank of Japan; the frequent goings and comings of high officials, civil naval and military; a rumour that the Nippon Yusen Kaisha, the Osaka Shosen Kaisha, and the principal railways have been instructed to hold themselves in readiness for the conveyance of troops and horses; a statement that the preparations of the Kokura Division (Eleventh) for immediate embarkation have been completed, and a story that a certain colonel has been dispatched from Kokura to arrange for the despatch of troops to Korea—all these things have greatly disturbed the public mind, and there has been a marked depreciation of securities, as the following quotations will show:—

	1st inst	2nd inst
Japan Railway	77.70	78.00
Sanyo Railway	59.60	60.10
Kwansai Railway	42.15	42.80
Kiushu Railway	56.20	57.50
Tanko Railway	75.00	77.10
Keihin Railway	62.00	63.50
Electric Railway (Tokyo)	52.85	54.70
Electric Railway New Shares	16.20	17.20
Street Railway	102.80	106.30
Yusen Kaisha	79.20	81.05
Toyo Kisen Kaisha	31.00	32.30
Dento Kaisha	83.50	86.00
Kanagafuchi Cotton Spinning Co. ...	37.85	40.15
Tokyo Stock Exchange	158.80	166.30

Such a sharp depreciation indicates the existence of much uneasiness but if the causes of the feeling be carefully analysed they will be found to be either unconnected with international questions, or to be merely such measures as any ordinarily prudent Power would take by way of precaution.

NOTES ON CURRENT EVENTS.

The new Chinese Representative, Mr. Yang Shu, accompanied by Secretaries Ma, Wang and Wu, as well as by the new Consul-General and a staff of some forty persons, reached Yokohama on the 13th instant, and proceeded to Tokyo on the following day. The *Asahi Shinbun* says that Mr. Yang served formerly in the consulate at Nagasaki and afterwards in the Legation at Washington. He is about 56 years of age, and he speaks English with facility, Japanese with some difficulty.

The autumn exhibition of pictures by the students and associates of the Bijutsu-in is now taking place in the hall of the institute at Hatsunecho, Yanaka. It commenced on the 10th instant and will remain open until the 15th of November. We need scarcely remind our readers that the pictures shown by the Bijutsu-in artists always present many interesting features. It was stated a few days ago by a public writer that the paintings of this school are in the pure style of old Japanese art. That they certainly are not. They are rather an attempt to adapt Japanese art to modern conditions.

There is a rumour that a state of siege has been declared at Vladivostock, but as no official news of any such measure has been received, we think the story may be dismissed as a pure canard. There is no apparent reason whatever for proclaiming a state of siege at the northern port, or for establishing any special military control there.

The *Hochi Shinbun* gives the names of twelve Russian officers now in Nagasaki all of whom it declares to be suspicious characters. We can not discover what particular kind of enterprise these gentlemen are supposed to be prosecuting. One of them is said to absent himself frequently from his hotel at night, but we have heard of young men doing such things without incurring the accusation of being spies. Probably this item of the *Hochi's* should be attributed to the dearth of all political information, for there is to-day (Sunday) a marked absence of the usual crowd of telegrams relating to Manchuria and Korea.

The latest piece of news is that a small body of Russian officers have held what the *Hochi Shinbun* describes as a *senshō yoshūkukai*, or a meeting to celebrate coming conquests in war. Inasa was the scene of this novel ceremony and the celebrants commenced operations at 3 o'clock one afternoon, keeping them up until 10 o'clock the following forenoon. Our contemporary is shocked at the notion that thanks should be rendered to the powers above for a victory not yet achieved. Such procedure indicates that Russia makes very little of Japan, and from that inference it is easy for the *Hochi* to pass to a fervent threnody about the incompetence of the officials now charged with the direction of Japan's affairs. It is pleasant to find that there are some compensations for the worry and anxiety caused by this war scare. We have to thank the *Hochi* for giving us a laugh, albeit at the expense of its own reputation for sanity.

Incidentally to the talk of war we find interesting statements as to the number of Japanese subjects settled in Eastern China and Far-Eastern Russia. Apart—so far as we can judge—from Japanese in Newchwang, there are supposed to be some four thousand in Manchuria, and with regard to the Japanese element in Vladivostock, it is put at three thousand in the town and as many more in the immediate vicinity, or six thousand in all. The Vladivostock residents appear to have been recently in a state of considerable excitement about the prospect of war. The great majority of them are said to have been preparing to return to Japan when the Japanese commercial agent issued, on the 3rd instant, a notice re-assuring them and preventing the threatened exodus. A similar step has been taken with regard to the Japanese residents in Manchuria.

It is stated that the Emperor has appointed Field Marshal Marquis Oyama to be second in command at the approaching autumn manoeuvres, the Emperor himself being commander-in-chief (*Tōkwan*). The umpires (*shimpan-kan*) are to be Lieut.-General Baron Oku, Lieut.-General Baron Kodama, Major-General Fukushima, Major-General Yejichi and others. The date of the manoeuvres is from the 12th to the 16th of November and their place is the neighbourhood of Himeji. Lieut.-General Baron Kuroki will command the review (*kampeishi*) on the 16th prox. after the manoeuvres.

The Directors of the Street Railway Company and the mediators by whose exertions

the long and unsightly contest was finally compounded, have agreed to several things. The first is that the new President shall be chosen by the arbitrators. The second, that the new Directors shall be chosen by the new President and the arbitrators. The third, that before selecting the Directors, the arbitrators shall consult with the principal shareholders. The fourth, that the various proxies of the shareholders shall be placed in the hands of the arbitrators for the purposes of a general meeting.

It appears that there is another insurance trouble about a man called Saito Otokichi of Nara prefecture. Through the assistance of Matsuoka Hotaro, an agent of the Manufacturers Company, he obtained a life policy for 8,000 yen. Leading as he did a hand-to-mouth existence, he could not possibly pay the premium on such a sum. Accordingly, the money was put up by Matsuoka and four others, who, on the death of Saito—which seems to have happened very soon—divided 7,800 yen of the money among themselves, handing 200 yen to the widow. They claim that it was a legitimate transaction, but the law does not yet admit the claim. Presumably Saito was in broken health when the insurance was effected, but concerning that important phase of the matter we do not find any particulars.

The Chinese of Yokohama held a meeting on the 17th instant to celebrate the 2454th birthday of Confucius. Apparently the faculty of the Daido Gakko took a leading part in organizing the affair. Many Japanese were present, including the Governor of Kanagawa. Mr. Tang, Principal of the School, delivered an eloquent address, in which he dwelt on the close relationship between China and Japan, insisting that the union of their strength to repel the wave of Occidental aggression was demanded by the time. It must be confessed that these disquisitions upon a common literature, a common script and community of interest such as that existing between the lips and the teeth, sound sadly impractical in the face of events such as those now actually happening in Eastern China.

Vice-Admiral Togo, hitherto in command at Maizuru, has been appointed to the command of the Standing Squadron, vice Vice-Admiral Hitaka who goes to Maizuru. Tokyo papers are disposed to attach importance to this exchange. They observe that Vice-Admiral Togo is known, in the Navy as the "fighting admiral" and that he laid the foundations of his reputation in the war of 1894-5.

In the *Shogyo Shimpō* outline figures are given of next year's Budget. Our contemporary says that the appropriations demanded by the Departments amounted to a total of 192,820,000 yen on the side of the Ordinary Expenditures and 98,220,000 yen on the side of Extraordinary, which totals the Cabinet has cut down to 184,240,000 and 68,860,000, respectively, the reduction of Ordinary Expenditures being 8,580,000 yen and that of Extraordinary 29,360,000 yen, a total of 37,940,000 yen. Compared with last year's budget, there is an increase of 3,300,000 yen in ordinary outlays and a reduction of 44,500,000 yen in extraordinary, the net result being a reduction of 41,200,000 yen.

Twenty-five states and territories were represented in a national irrigation congress which met at Ogden, Utah, in September. No act of the national legislature since that

providing for the construction of the original Pacific railways, said Mr. Clark, President of the Congress, has meant so much to the west as the one providing for the reclamation of the public lands. It opens a new era of prosperity for sixteen states and territories. Mr. Clark estimated that there remain in the arid and semi-arid zones about six hundred million acres of vacant public land, and that there is sufficient water available under the storage system to irrigate about one-sixteenth of it, or 37,502,000 acres. To quote Mr. Clark again: "If in the next thirty years the Government should provide reserves sufficient to reclaim twenty million acres at an expense of \$10,000,000 annually, which is a very conservative estimate, as that amount will easily be realized from the sale of lands, the reclaimed will provide homes for from twelve million to fifteen million people, which with the immense property value necessarily created, will constitute a magnificent contribution to the wealth and glory of the nation." According to the *St. Louis Globe-Democrat*, "The necessity for irrigation is shown by the large numbers of Americans who are going across the line into Canada for farms. The presumption is that very few of them would go out of the country if they could get the sort of lands in our western states or territories which they want, at reasonable prices." "The law," says the *Portland Oregonian*, "sets aside the proceeds of the sales of public lands in the regions covered for general irrigation work. Up to the close of the last fiscal year the money thus set aside for this work amounted to about \$15,000,000. The annual receipts showed a steady increase. The total for 1901 was \$3,144,861; for 1902 it was \$4,565,516, and for the year ending June 30, 1903, it was equal to the proceeds of the two former years."

It would be a great mistake to look upon business conditions in the United States with distrust because of the exceptionally heavy liabilities of insolvent concerns during July or the severe decline that occurred in prices of securities, remarks *Dun's Review*. Trade advices from all sections of the country tell a very different story, and they have the support of large bank exchanges and railway earnings. These are much more reliable barometers of the industrial atmosphere than the vagaries of speculation. While it is true that liabilities of bankrupt firms during July were much greater than in the corresponding month of any recent year, it must be noticed that most of the excess above normal mortality was supplied by a few suspensions of stock-brokers who were lacking in conservatism and deeply involved in the promotion of a few undertakings for which the money market was not sufficiently easy to carry through plans made earlier in the year under different circumstances. One or two other failures were due to special conditions produced by strikes. Twenty-two large failures provided \$10,000,000 out of the total of \$16,000,000 for 937 defaults, leaving little more than the ordinary disasters in the leading lines of trade and industry. Equally remote from legitimate business was the collapse in securities, the average of prices falling to \$84.20, compared with \$116.27 in September last year. Doubtless the level was much inflated a year ago, and with equal certainty the recent low point was abnormally depressed. With the gradual return of confidence there has since appeared an advance in quotations, and investors have secured attractive bargains.

It is noteworthy that Europe is puzzled even to-day about the real meaning of M. de Witte's translation from position of finance minister to that of president of the Council of Ministers. It imagines that by this time some information should have leaked out, but the St. Petersburg Government has succeeded in keeping and compelling silence. *Daily News* rashly pronounced the a brilliant promotion, whereas *The Times* pressed the opinion that the ex-minister had been given a "first-class political funeral." Similarly in France the *Figaro* believed M. de Witte would wield large influence in his new position, whereas the *Temps* imagined that he had been "got rid of." The incisive and picturesque comment we seen came from the *Neue Freie Presse* in Vienna, as quoted in the *Literary Digest*.

"At first glance it might appear that M. de Witte for ten years the holder of honours, power, and influence in Russia, had advanced a step by his promotion to the position of president of the Council. In reality the elevation in rank means a complete annihilation. De Witte, the energetic, resourceful man of modern Russia, filled the whole range of the wide empire with his influence, this wonderful combination of Cossack and Potemkin, has become a merely ornamental figure, a bureaucratic arabesque, a shadow of himself. Until a few weeks ago the brain of Russia suddenly transformed into a fearful and wretched mummy. This is the usual procedure for those who are too much alive for their position. Those who are too much alive are put to a shining sinew, and thus honorably and effectively consigned to political death. De Witte was, indeed too 'live.' He is at man's most prime, in that time of perfect maturity, at the height of his strength and enterprise of youth attained by the caution and insight of experienced strong head, resting upon powerful shoulders have evolved and put into effect many ideas. The agrarian element had long regarded him with disfavour. The conditions of his fall were shaped. Two years ago, when a great crisis began to sweep over the empire, an opening in the ground upon which he stood. At that time preparations were at their height for the celebration of M. de Witte's departure from office, a manifestation of the Czar's approval of his services. Now the condemnation of the fall has been made public. The fall of De Witte is the victory of the Muscovite tradition over the reform."

As the date (April 1st, 1904) for the opening of the St. Louis Universal Exposition approaches, the committee issue more and more attractive volumes showing the progress of the buildings and their decoration and describing their contents. From the illustrations in the last publication—a fully printed and most attractive pamphlet—we infer that the various halls and pavilions will be fine specimens of architecture that they will contain or support numerous noble examples of sculpture. Many architectural types appear to be representative of the Renaissance, the Corinthian, the Greek, the Ionic, the Roman, the Tudor-Gothic, Egyptian and so on. Japanese architecture will be shown by a model of the Nijo Castle, and Chinese by one of the palaces of Prince Pu. Landscape gardening is undertaken on a large scale, and there will be water effects of unprecedented size. It must be assumed, of course, that the painting has not been spared by the planners of this brochure, but when deduction is made on that account, still remains a substantial residuum.

We may supplement the informal pamphlet by saying that one of the beautiful among the exhibits will be a sample of Japanese art as applied to the decoration of an interior. The great silk weaver of Kyoto is engaged in painting the embroideries, gobelins, wood-carvings and other elements of the decoration. The hall thus treated will be some 50 feet by 35 wide, and one half of the heavy

involved is to be borne by the Nippon Yusen Kaisha, which will have the use of the place for the display of its exhibits. We have not the least doubt that as an application of decorative art this building will attract great attention, and if some wealthy American do not purchase it as it stands for transfer to his residence we shall be much surprised. The designs may justly be described as the highest type of Japanese art.

Two books called *Rokoku Tobatsu Gunka* (War songs for the expedition against Russia) and *Washi Taiji Gunka* (War songs of the Eagle's quelling) have been interdicted by the Authorities on the ground of tending to disturb public peace.

The usual demand notices have gone round in Yokohama with reference to the House Tax, and one property owner has called our attention to an instance that seems to require explanation. Some property held by him has for years paid a tax of yen 5.50 but on this occasion he has received a demand note for yen 20.50. On writing to the authorities for information he was informed that the heavy cost of dealing with the plague has made it necessary to increase the house tax by nearly four-fold. As the whole matter is in dispute we print the facts without comment.

The Diet has been convened to meet on the 5th of December. Unless there be a collision with the Cabinet a fair amount of business ought to be done before the New Year.

The proceedings instituted by Mr. Osada against the Telegraph Agency which called him "a dog of Russia," do not seem to be going well for the plaintiff. On the 22nd instant the case came up for hearing. Colonel Uchida, of the Gendarmes, was called as a witness for the defence. He deposed that Osada had been an object of suspicion during the war of 1894-5; that he had subsequently been employed by the Russian Legation; that his expenditures far exceeded his apparent sources of income, and that the Authorities regarded him as a suspicious character. Mr. Katsumi, head of the Peace Preservation Bureau, was also called, but he declined to make any conclusive statement as to particulars which had come to his knowledge in the discharge of his official duties, though he admitted that the plaintiff had at one time applied to be relieved from police surveillance. Altogether the case went ill for Mr. Osada. The hearing was resumed on the 22nd.

Complaints are rife as to the quality of the gas now being supplied to the public of Yokohama. We gather, however, that the gas is not bad but that the company are not making enough gas to meet the present demand, and therefore that the pressure is insufficient. The gas company not merely awaken the resentment of consumers but cheat their own pockets by having in operation an amount which fails to register properly in the meters the number of cubic feet of gas really consumed.

We have to acknowledge receipt of the *Financial and Commercial Annual of Japan*, No. III. issued by the Department of Finance. The work is a very compendious compilation of matters in reference to Japan, the various tables dealing with population, finance, agriculture, industry and commerce, foreign trade, banking and the money market, communications, and Formosa.

WEDDINGS.

The engagement is announced in Tokyo of Miss James, daughter of Mr. Thomas James of Saint James, Missouri, to Mr. Huntington Wilson, Secretary of the United States Legation in Tokyo.

The 20th was a day of weddings. At Christ Church in the afternoon, Mr. J. Drummond and Miss Frances M. Cameron were joined in wedlock. The Rev. W. G. Field officiated, and Mr. W. Karl Vincent ably presided at the organ, rendering "The Voice that breathed o'er Eden," "Oh perfect love," and the wedding march from Faust. The bride was given away by Dr. Wheeler, and Mr. W. Carst acted as "best man."

There was also celebrated on the 20th the union of Mr. W. Pepper and Miss E. Woodruff. This was performed at the British Consulate, and though the ceremony was of the simplest nature considerable interest was taken in it because of the popularity of Mr. Pepper, who is in the C. P. R. office, and of the bride's father, Mr. F. G. Woodruff, who is one of Yokohama's oldest residents.

The marriage also took place of Professor P. A. Smith, of the Higher Normal School, Hiroshima, and Miss Charlotte Draper, the ceremony taking place in the chapel of the Bible School, No. 221 Bluff, the bride's father being the officiating clergyman.

RUSSIA'S DEFIANCE.

(FROM OUR OWN CORRESPONDENT.)

Port Arthur, Sept. 23rd-Oct. 6th.
The following is a translation of the warlike article in the *Novi Krai*, to which I have already referred. Needless to say, it has caused much excitement here, every copy of the number of the paper containing it having been sold. Its importance is increased by the fact that the *Novi Krai* is edited by a Russian officer,—Colonel Artemieff (not Mr. Levitoff who is only a contributor to the paper)—who is in close touch with the Viceroy, and who on many occasions proved himself to be the exponent of the Viceroy's views. The article runs as follows:—

THE PHANTOM OF WAR.

"The phantom of war with its obscure but menacing outline again hovers over the befogged heads of the Japanese Statesmen, the Japanese 'Genro' and the Japanese journalists, keeping them in a continual nightmare and depriving them of all possibility of exactly understanding even their own policy. The mental frame of mind of all Japan is expressed in the curious question, asked by the Japanese with palpitating hearts: 'What will happen on the 8th of Oct.?' But this matter which troubles so much the 'young great Power' which longs so ardently to try its strength and its luck in the arena of war and which is forced, so much against its will of course, to discard its pacific tone for a warlike one,—this matter, we say, cannot ruffle in the least the ordinary calm with which events in the Far East are regarded by the 'mature, great Power' whose path is straight before it and whose intentions are clear and plain. Only a sense of the righteousness of its actions and a confidence in its strength gives Russia the right and the ability to calmly witness the noisy vanity of Japan.

"What does Japan want in this connection? Has she any advice to offer with regard to this agreement between Russia and China?"

"Russia is at present in Manchuria because she is the owner of a gigantic railway undertaking carried out in conjunction with China. Russia occupies Manchuria because she has a right to protect her interest there in consequence of the unfriendly action begun by the Chinese at Blagoveshensk. Russia retains her troops in Manchuria because she is not certain that tranquillity can be preserved in that country without the help of these soldiers; and she does this in spite of all the hostile feelings of other countries in this matter, but principally of Japan. All these courses lead Russia to desire to conclude an agreement with China and only with

China. The observance of this agreement will be guaranteed only by the mutual confidence of contracting parties, Russia and China, and will not admit of any guarantees being offered or any friendly services tendered by other Powers. What right has Japan to raise her voice in this affair which concerns only China and Russia?"

"The economic interests of Japan in Manchuria? But these interests can be made to play the same rôle wherever Japan is at liberty to dump her surplus population, whether in Formosa, Korea, the Philippines, Australia, etc.,—in a word in every country which Japan may choose to send her emigrants to. Formosa! Here is a territory to which Japan may legitimately send the overflow of her population, but there it is necessary to work, there money is required, and it is not therefore the kind of country the 'youngest of the Great Powers' wants. It would be more convenient for her to send her sons to a country that has been made ready for them and opened up by Russian money, Russian blood, and by the sweat of Russian brows. We refer to Manchuria.

"To Korea, Japan is also free to send her emigrants. Russia will not hinder her so long, of course, as she does not proceed to make slaves of the Korean sovereignty. Let Japan try to put forward her plea of economic interests created by the emigration of her people in the Philippines or in Australia and she will find how, contrary to the hospitable practice of Russia, other nations receive uninvited guests.

"The sensible portion of the Japanese Press, the *Kobe Chronicle* for example, already sees this, and the European Press (*Berliner Tageblatt*, *Munch. Allg. Zeitung*) clearly points out that Russia can now say apropos of her position in Manchuria, *J'y suis et j'y reste*.

"Yes, undoubtedly the fatal moment has come, and it finds Russia still standing firm in Manchuria, fully armed for the protection of her interests there, interests which are dear to her as her life-blood. No threat will be able to disturb the *status quo* in Manchuria on or after October the 8th."

YOKOHAMA LITERARY SOCIETY.

The Yokohama Literary Society began its nineteenth session on Friday evening, when Van Schaick Hall was filled with a large assemblage of members and friends. The President's lecture dealt with Macedonia, treating the subject from historical and ethnological points of view. This was followed by a series of lime-light views taken from photographs, pencil-sketches, water-colours, etc., placed at the compiler's disposal, and which gave a general idea of the types of races in Macedonia, and of the soldiers forming the Turkish Army; scenes from Salonica and other big towns, some of the monasteries on the Serbian and Bulgarian borders, etc. The second half of the programme introduced three singers who made their first bow to a Yokohama audience. Their efforts were each and all highly successful, and encores were the order of the evening while Mrs. Bathgate's performance on the piano and Mr. C. H. Thorn on the violin were both very dainty and highly appreciated.

PROGRAMME.

PART I.

Lecture... "Macedonia, or Crescent and Cross"
Mr. A. Bellamy Brown. (Illustrated).

PART II.

Pianoforte... "Hochzeitwig and Noldhagen"...Grieg.
Mrs. J. H. Bathgate.

Song..... "Sir Reynard".....Godfrey.
Mr. A. H. Windett.

Songs—(a) "Myself when Young" (From
"In a Persian Garden").....Lehmann.

(b) "Violet".....Wright.
Mr. B. C. Foster.

Violin..... "La Serenata".....Tosti.
Mr. C. H. Thorn.

Song..... "The Banderero".....Stuart.
Mr. J. Mann.

THE "SEIYU-KAI."

THE leaders of the *Seiyu-kai* are adhering strictly to the policy of leaving the Cabinet to pursue its diplomatic course undisturbed by criticisms or suggestions from without. That is a very wise and sensible policy. It is indeed the only plan that responsible politicians can adopt under the circumstances. Were the Diet sitting and were it possible for its members to address questions to the Government, then the latter's replies might furnish legitimate material for attack. But as matters stand, neither the *Seiyu-kai* leaders nor any one else outside the very small circle of those directly answerable to the Throne, has any knowledge of the facts of the case, and to attempt to be critical in spite of ignorance would be the act of an agitator or a fool. If any politician desires to lead an assault against the Ministry, the only point at which his attack may be delivered is the secrecy that has been maintained by the latter throughout. We question whether the people of any other country would have been equally content to abide in silence the outcome of negotiations which vitally concern the nation's welfare. The Japanese are to be sincerely congratulated upon their force of self-restraint. One of the lessons taught by modern experience is that public opinion can not be admitted to a council chamber without running imminent risk of banishing reason and introducing prejudice. Public opinion is swayed by so many necessarily conflicting factors that its unanimity can never be looked for except where passion shows the way. We have some pride in the thought that Englishmen recognise this fact, and that at an international crisis they appreciate the importance of not harassing their officials by immature clamour and discordant views. But it is doubtful whether even Englishmen would have shown so much patience as the Japanese have displayed on the present occasion, and to this we must add our tribute to the power of reticence exhibited by Japanese officials. Probably the two qualities have their origin in the same mental equipment: if the man in the street can constrain himself to wait in silence, the man in office can be trusted to preserve silence. It has all been very remarkable, and as it is the one unequivocal feature of the situation, so it is the one subject admitting of intelligent assault if any one cares to assail it. There have been, indeed, a few half-hearted criticisms. The mouth-piece of the commercial and industrial classes has pleaded for greater frankness, on the ground that men of business dare not stretch out a hand in the thick darkness enveloping them. But in uttering such a complaint the *Shugo Shimpō* did not appear to speak with much conviction. It merely yielded to a passing impulse of impatience, and when we consider how greatly all enterprise is hampered in Japan by this long-continued uncertainty, we can not wonder that a mien of absolute impassivity is not always pre-

served by the suffers. The Government has doubtless recognised that something is due to the people in this matter, and that, so far as the course of the negotiations is not prejudiced, a general statement of the aspect of the situation is permissible. Hence the official declarations that have just emanated from the Japanese Legations in London and Paris; declarations which, while calculated to reassure men's minds, leave the negotiations themselves as far removed as ever from the eyes of the curious. It might be extravagant to conclude that the mood displayed by the nation throughout this complication is an index of character. Still, when we supplement present experience by a retrospect of Japan's conduct during the Boxer troubles, and of her behaviour during the war of 1894-5, we seem justified in crediting her people with an exceptional degree of moral balance in great affairs, though it must be confessed that in small matters of fancy or sentiment they have occasionally shown themselves very impressionable.

MR. CHAMBERLAIN AND AMERICAN OPINION.

AMERICAN public opinion seems to view Mr. CHAMBERLAIN's new departure with a great deal of disapprobation. That is not altogether what might have been expected, for the people of the United States having themselves flourished mightily—so at least they allege—under the protection system, ought not to condemn as mental aberration a leaning on the part of British statesmen in the same direction. We have to remember, however, that this question touches America very closely. Because she closes her own markets to British products and manufactures, it does not at all follow that she should be gratified at seeing England close her markets to American manufactures and products. In fact there are few things less palatable than to be fed with one's own sauce. "Absolute unrelenting trade war on the United States" is the way the *Boston Advertiser* describes "Joe's break," and the *New York Commercial Advertiser* says that he has raised "an issue which concerns every great commercial nation in the world." Of course these things can not be gainsaid, and it may probably be added with truth that no one factor makes more powerfully for the unpopularity of Mr. CHAMBERLAIN's programme among Englishmen than the possibility of its hurtful effect on their relations with America. Yet, after all, when one reads the history of the past fifty years, one is forced to recognise that "every great commercial nation's" hand has been against England since the days of BRIGHT and COBDEN, and one naturally asks whether it is entirely just that England's first display of an inclination to raise her own hand in defence, should be denounced as fiscal folly and international vindictiveness. The English are a people with a well-proved tendency

to let religious, political and economic doctrines grow into the very fibre of being. To the average inhabitant of the British Isles an atheist is scarcely a shocking creature than a protectionist, a very large measure of courage must be possessed by any publicist who avows himself a pervert from the gospel of free trade. It will be easy for historians to speak of JOSEPH CHAMBERLAIN as a man of parties. He shattered the Liberals' disaffection from Home Rule—which, indeed, he had never advocated—and he probably be found to have shattered the servatives by his disaffection from trade. It will be easy, too, for us to say that his retaliatory tariffs are founded on personal ambition not on imperial vision, and that he pulls down his ladder not for the sake of cementing the colonial union but in the hope of building a CHAMBERLAIN premiership on the ruins. To us, however, the striking feature of the situation is the grand courage of this statesman. Free trade has stood so long and so immovable on a divine pedestal to suspect it of having clay feet is a stuporous sacrilege. Nevertheless a man may be excused who doubts whether the conditions essential to the infallibility of free trade can ever exist outside the realm of theory. The prime postulate of free trade is that each nation should devote itself wholly and solely to the development of its own special productive capacities, abstain from competition in any direction where another nation is better qualified. Nature has not made any strict delimitation of the various nations' specialties. There are indeed distinctions more or less clearly marked, but there are also numerous identities, complete or partial, and where opportunities and faculties are equal, competition must always be inevitable. The nation should tax its consumers generously to make competition easy for its producers is plainly fallacious. But that is not Mr. CHAMBERLAIN's kind of protection. He proposes to discriminate between things which England wants from outsiders and things which she can produce herself or obtain from her colonies, and by recouping retaliatory tariffs within these limits he hopes to break down the barriers which protect foreign lands against the goods of Great Britain and her colonies. Perhaps England is too old an apostle of free trade to be converted to any heterodox view. Perhaps Mr. CHAMBERLAIN is too old to undertake the task of converting her. But he is undoubtedly a man with the courage of his opinions.

The death is announced of Mr. L. C. Balfour the age of 52, formerly in the Hongkong Shanghai Bank, who had been Agent in Hong Kong and Agent at Manila. His father, Mr. Mackenzie Balfour, was one of the oldest employees of the Bank of Bombay, where he was very highly esteemed, and was a personal friend of Sir Thomas Balfour.

THE INTERPORT FESTIVAL.

YOKOHAMA KOBE CRICKET MATCH.

The Yokohama Interport Festival began on Monday with the cricket match between the Y.C. and A.C. and the K.C.C. The day was overcast, a heavy pall of bluish-grey clouds shrouding the sun from view. But the temperature was fairly high, for the time of year, and though the air was surcharged with moisture, conditions for players and spectators were, all things considered, very agreeable. After the heavy, soaking rains of the past week it was only to be expected that the wicket would be heavy and after a while bumpy, but this was, on the whole, in favour of the batter as against the bowler. Yokohama went in first and at 3.45 p.m., when the last wicket fell, had knocked up 352. Of this total Harry Kilby's finely played 101 was the top score. He was in grand fettle and has never played, we think, a prettier game. Next to him stands J. M. Mollison, with 88. One would have liked him also to have reached the century, and at one time it looked as though it was coming, but the accident of a bumpy wicket put an end to his chances just as he looked firmly set. E. W. Kilby made the next best score, 33, and deserved the applause he received on his return to the Pavilion, for he gave a capital exposition of cricket. With regard to the visitors, it was generally acknowledged that their fielding was good all round, but their bowling was weak. The Captain of the team, G. C. Murray, did not appear at all in his old form, and W. D. S. Edwards has also been seen to better advantage. Between them they accounted for seven wickets.

During the morning there was a fair attendance of spectators, among them quite a bevy of ladies from Kobe, but after tiffin the numbers of both sexes quickly increased and the close of the game was watched by a very large assemblage. As usual the Pavilion was gaily decked out in the colours of the Club—blue and white—with sporting trophies, shields and flags, while hundreds of gaily-coloured lanterns were disposed all over the place, running if we may believe one committee-man's statement, into the thousands in point of numbers. This part of the work was in the capable hands of Mr. C. Murray Duff and as usual he exercised a considerable amount of ingenuity in devising the mottoes which adorned the various buildings. These were in many languages, including that of Old Ireland—a delicate tribute to the President of the Club, Dr. Wheeler. They included the following: "Carn Na Cuimhne," (The rock of remembrance); "Cead Mille Failte!" (A hundred thousand welcomes); "Hunc Veniam Petimusque Damusque Vicissim," (We both give and receive this indulgence in turn); "Kobe Hoc Tibi," (Kobe, this is for thee); "Labor Omnia Superat," (Labour overcomes all things); "Sua Cuique Voluptas," (Every man has his own pleasures); "Tempus Ludendi," (The time for play. Sport); "Ut Quocunque Paratus," (Prepared for every event. Sport). Right across the Pavilion ran the device, "To the Kobe teams Yokohama extends its heartiest welcome." Other mottoes were, "Welcome is the best cheer; Welcome the coming, speed the parting guest; Right happy may we be. And happy meet again; May the pleasures of sportsmen never know an end; and 'Tis not in mortals to command success: Yet we'll do more. We'll deserve it."

During the afternoon the fine band of the U. S. F. S. *Wisconsin* played a capital selection of music, while at the close of play tea was served in the Pavilion, Mrs. Wheeler, Mrs. Bonar, and Mrs. James presiding.

THE GAME.

At 20 past ten the Kobe team went out to field and were followed on to the ground by the umpires, Messrs. J. H. Bathgate and F. E. Wilkinson. Yokohama sent out H. W. Kilby and W. S. Moss to face the bowling of G. C. Murray (Pavilion) and W. Hardy (Settlement), the first ball going down at 10.23, from the Pavilion end. Kilby cut it for a single, and Moss made a run off the next, but the rest of the over was unproductive. A maiden over followed. The first boundary was hit to leg by Kilby, off Murray—first ball of the

over, and two balls later he got him away to the same place, and ten went up on the telegraph. Just as the clock reached half-past ten, Hardy dismissed Moss, taking his middle stump with the first ball of the over—10-1-1. E. W. Kilby now joined his brother and opened with a single, first ball. H. W. Kilby with a pretty cut added another run, and then E. W. Kilby made his first boundary. The over had produced 6 runs and seen the loss of one wicket. Following this pretty piece of sport came a maiden over from Murray. E. W. Kilby made a 3 off Hardy in the next over, and a single off Murray, bringing the score to 20. The runs had come so far at about one per minute. H. W. Kilby was the next to score, cutting Murray for two. A 4 by H. W. Kilby—a very neat cut—and a single by E. W. K., enlivened Hardy's over; then a bye in the following over brought 30 on to the board. A four, by H. W. K., and two singles were scored in the next over, after which Murray had a couple made off him by either brother. So far the most successful strokes had been cuts to the fence and the field was altered a bit to meet the case, but the batsmen were equal to the emergency and the score slowly rose. At 46, Edwards went on to bowl in place of Hardy, and had two singles made off his opening over. At three minutes to 11, the half century was reached and the brothers were now well-set, hazarding nothing and getting in some pretty snicks as opportunity presented. A change of bowlers was made at 52, W. Braess relieving Murray. His first essay cost but one run, made by H. W. Kilby. After a maiden over from Edwards, Braess sent down a wide, was then cut for a single, and next bowled a bye, costing 2, after which E. W. Kilby drove him for 3, and 60 went up. The first ball sent down by Edwards in the next over was sent to the fence by E. W. Kilby for 4, he next made a single, while H. W. Kilby cut a 4—the most expensive over so far: 70 went up at eight minutes past 11. A smart piece of fielding by Lucas, which saved a run, was followed by a boundary to the Bazaar fence by H. W. Kilby, off Braess. A pretty stroke by H. W. Kilby added 3 to the score, Hardy smartly preventing a boundary, and 80 was telegraphed. Kobe's fielding now became commendably smart, for they had settled to the ground, while Lightfoot's work behind the wicket was very good, nothing slipping past him; as a result two maiden overs went down on the score. Then H. W. Kilby got Edwards away to the Pavilion, and 90 was hoisted. A couple by E. W. Kilby were followed by 3 from his brother before the over closed. Another couple of maiden overs now came along, and then H. W. Kilby varied the monotony with a neat cut for 3, Edwards being the bowler. At 29 minutes past 11, E. W. Kilby drove Edwards to the Bazaar fence, and the century was reached and passed. H. W. Kilby had made 65 runs out of the 100, and his brother 31. Hardy now went on to bowl again, taking over the leather from Braess at the Pavilion end. H. W. Kilby promptly punished him for 4. By five and twenty minutes to 12, the score had reached 110, but the partnership was drawing to a close, for E. W. Kilby lofting a ball from Edwards was smartly held in the slips by Murray—115-2-33. Dr. Moon now joined H. W. Kilby—who's score stood at 74—and run-getting still continued, 130 going up on the board at 18 minutes to 12. The newcomer began his score with a single off Edwards, the last ball of the over, and he next made 3 off Hardy, sending the ball down towards the Pavilion. A boundary to the Settlement fence by H. W. Kilby was followed by a 4 by Dr. Moon—the over producing 12 runs. A pretty snick by H. W. Kilby added another 4 to the score, but nothing else was made in this over. Then Murray went on to bowl again, relieving Hardy, and Dr. Moon sent him away to the Bazaar for 3, bringing the score up to 140. With 2's and 3's the total gradually rose and at five minutes to twelve 150 was reached, towards which H. W. Kilby had contributed 89. Dr. Moon's career was cut short after a short but merry innings, by Murray's fifth ball—153-3-19—at 2 minutes to 12 o'clock. J. M. Mollison filled the vacancy and opened with a single, snicking the last ball of Edwards' over. By noon-day, H. W.

Kilby had scored 90 runs. A maiden over by Edwards; a single by Mollison off Murray, and then 3 by Mollison off Edwards were the next items of interest. Mollison scored his first boundary off Murray, sending the ball to the Bazaar. A pretty snick by H. W. Kilby brought 170 on the board, and himself to 99, sometimes a fatal number, but the next ball he reached and passed his 100, amid loud applause from the Pavilion. It was now ten minutes past 12. A good drive by Mollison to the entrance gate produced another boundary and 180 was hoisted. At a quarter past 12 Braess went on again, changing with Murray. His second delivery was cut for a single by Mollison, but the change was destined to prove disastrous to H. W. Kilby, who, skying the fourth ball, was held by Edwards, standing just behind the wicket keeper—182-4-101. Kilby was deservedly cheered as he returned to the Pavilion; his score included twelve 4's and five 3's. Mann, the old Shanghai player, took his place, partnering Mollison. He began warily. But his chance came at last and he opened with a boundary to the Pavilion off Edwards. His next hit, off the last ball of the over, produced 2. Then Mollison punished Braess for 4, and followed it two balls later with a similar stroke. The second century was now reached, and the partnership looked as though it had a long life in front of it, runs coming "frequent and often." For all that the Kobe fielders did not let much pass them, Jeffrey winning applause for a particularly smart piece of work. At 12.30, the telegraph announced that 210 runs had been made. Another boundary was made by Mann, and then at 214, the game stood adjourned for tiffin, Mollison's score being 30, and Mann, 19.

Tiffin was served on the ground, the President of the Club, Dr. Wheeler, presiding. On behalf of the Y. C. and A. C. he extended the heartiest of greetings to the Kobe visitors.

Play was resumed at six minutes past 2 o'clock. Murray began the bowling from the Settlement, with Edwards at the Pavilion end. The second ball was driven to the scorer's box by Mann, but the rest of the over was unproductive. Runs came slowly, but at 13 minutes past two 220 went up. Mann had some luck, it must be acknowledged, being missed in the field, and then almost run out. Edwards at last found his stumps with the fifth ball of the over, and Mann retired—221-5-24. Another new player for Yokohama, P. A. Cox, filled the breach and made a mighty swipe at the last ball in Edwards' over, but nothing resulted. In the next over he got Murray away to the fence for 4, and repeated the stroke next ball—230 was put up. The batsmen were allowing nothing to get past them and once or twice it looked as if one or the other would be put out, but luck was with them and together they took the score along with singles and occasional boundaries, so that by 2.24 p.m. 250 was knotted. Two minutes later Edwards disposed of Cox, catching him behind the wicket—252-6-17. White now partnered Mollison and opened with a single off Edwards. For a while things were dull, White taking no chances. At last Mollison got a ball away to the Pavilion for 4 and White scored off the next delivery. A change in bowlers was made when 260 went on the telegraph, Hardy going on in place of Edwards. White cut his fourth delivery for 3. Some quiet play followed, but at 2.45 p.m., 270 was signalled. The next ten runs came slowly, it wanting but three minutes to 3, when 280 was reached. Things brightened a bit after this, White opening out a little, and at three o'clock the score stood at 286. Kobe put on Edwards to bowl after 290 was passed, and Gordon Stephens went on at the Settlement end. The latter's first over cost 2 runs, made by Mollison. The score reached 300 at 14 minutes past three. Edward found White's stumps three minutes later—303-7-27. Mollison at this time had knocked up 65 runs. He now received Kingdon as a partner. The new comer broke his duck with the last ball of the over. His stay was short, however, for after another couple of singles he was caught and bowled by Edwards—309-8-3. Upon E. B. S. Edwards joining Mollison the pace was forced a bit, Mollison scoring 2 and a single, and then Edwards a couple,

off successive balls. Very soon 310 was reached, and then 320 just as the clock struck 3.30 p.m. Braess replaced Stephens at the Settlement end and was hit for two and a single off his first two balls. Runs continued steadily and 340 was knotted at 22 minutes to 4. Murray now tried his hand at bowling again, taking over the leather from Edwards. Yet still the runs came, despite many smart bits of fielding by the visitors. At last the partnership was broken, Mollison putting up a bumpy ball from Braess, which Murray held in the slips—350-9-88. Mollison had played an exceedingly pretty game all through and he was deservedly cheered as he returned to the Pavilion. His score included 9 boundaries and two 3's. Edward was the next to go, being bowled by Murray—352-10-20—and the innings closed at 3.45 p.m., Duff having no chance to open his score.

W. Braess	16	2	54	2	1
G. Stephens	5	0	26	0	1

Kobe began their innings at 4.10 o'clock, F. Ellerton and G. J. Lucas facing the bowling of Mann at the Pavilion end and Kingdon at the Settlement, with C. M. Duff at his old place behind the wicket. Lucas opened with a single, and Ellerton was within an ace of being stumped in running up, the ball being loosely thrown in. Cox, by a smart piece of fielding, prevented anything further being scored this innings, while a maiden over fell to Kingdon. Ellerton broke his duck with a single off Mann, and Lucas followed with one. After another maiden over, Ellerton cut a single, Lucas snicked the next ball for a similar number, while Ellerton made another single, all off Mann. At last the procession of singles was broken by Lucas, who sent Kingdon to the Bazaar fence for 4. Ten was hoisted. The light was beginning to fail and the aim of the batsmen was evidently to play out time. Cox was put on to bowl at the Settlement, relieving Kingdon, and he had a maiden over, which also befell Mann. At half-past four, White went on to bowl, Mann going off. Ellerton cut his first ball for a single but at the close of the over stumps were drawn for the day, Kobe having made 14, of which each bat had contributed an equal number.

Scorers: Rev. G. H. Davies (Kobe) and O. Strome (Yokohama).

The second day's play in the Yokohama-Kobe Interport cricket match was conducted under glorious conditions of weather, the sun shining the whole day long from an almost unclouded sky. The damp, muggy atmosphere of the preceding day was replaced by the exhilarating air which we usually associate with early Autumn in this part of Japan, and as a consequence spectators were early on the ground, among them many ladies. After tiffin the numbers quickly swelled and the Pavilion was thronged by large crowds of gaily dressed ladies, for whose further delectation the Town Band discoursed a pleasant programme of airs.

Kobe began by scoring very slowly, taking an hour to compile 35 runs, but by twelve o'clock the game smartened up considerably, Gillingham and W. D. S. Edwards hitting out freely, but 150

had not been reached when an adjournment was made for lunch. After this meal runs came more freely and at 17 minutes past 3, when the last Kobe wicket fell, 199 runs had been scored. This left Kobe in the position to follow-on and their second innings opened somewhat disastrously, Lightfoot Thompson, and Jeffery being quickly dismissed. Stephens and Braess, however, made a stand, and when Gillingham joined the latter, runs came more quickly. When stumps were drawn for the day the visitors' score stood at 59.

The most difficult bowler on the home side proved to be Mann, the visitors seldom getting him away. His fielding was also excellent and his catches played an important part in the day's outturn. Mollison took the greatest number of wickets, however. He sends down a capital ball, gets plenty of work on it at times, and varies the pitch. He is shaping well. White had hard luck with the leather, and his performance was better than the score reads. On the whole, the fielding of the home team deserves commendation.

During the afternoon tea was served in the Pavilion by Mrs. Wheeler, Mrs. Dodds, and Mrs. Stuart Edwards.

THE GAME.

Play began at sixteen minutes past ten o'clock on Tuesday. The ground, under the influence of a brisk, drying wind and a bright, autumnal sun, was in excellent condition, giving promise of developing into a fast wicket. Kobe's overnight score was 14, of which Ellerton and Lucas had contributed exactly 7 apiece. They faced this morning the bowling of P. A. Cox (Settlement) and Mann (Pavilion), and Lucas opened proceedings by cutting Cox for 2, fourth ball. Mann began with a maiden over, the field letting nothing slip through, and Cox had similar luck: then Mann followed suit. At last Ellerton knocked up a single off Cox, breaking what was becoming a wearisome monotony. The first quarter of an hour's play had produced 3 runs. Ellerton made a single off Mann next over, and another off Cox, before Lucas began to score. The latter at last got a chance and snicked a single with the last ball of Cox's over—20 went up on the telegraph. The six runs had taken just 20 minutes to get. A maiden over by Mann was followed by a run being made by Ellerton, off Cox: but "things were mighty slow." At length Ellerton cut Mann for 2, and then, next ball, and the last of the over, he was given out l.b.w.—23-1-15. Thompson partnered Lucas at 19 minutes to 11. Cox bowled him a maiden over. He broke his duck next over with a single, off Mann. Lucas was playing very carefully, hazarding nothing, and sometimes throwing away the chance of an extra run, at least, so it seemed to on-lookers. He broke away at last with a drive toward the outer fence, which, however, was capital fielded by Harry Kilby and only 2 resulted. Thompson was the first to make a boundary, getting Cox away with a leg hit to the Pavilion, and 30 went up, 36 minutes after the start of play; these 16 runs had come very slowly. Three more singles were made and then the last ball of Mann's over found Thompson's stumps, the ball breaking in—33-2-5. The vacancy was filled by Braess, and Mollison went on to bowl in place of Cox. He trundled down a maiden, and Braess, next over, broke his duck with a single to leg, off Mann. The last ball of the over cost 3—a wide and a 2-by. The very first delivery from Mollison, next over, carried away Braess' middle stump—a really beautiful piece of bowling—37-3-1. The newcomer was Gillingham, a left-handed bat. He snicked the first ball sent down to him for a single, but nothing more was made until he cut Mann for 3 and 40 went up. It was now eight minutes past 11. Up to this time Yokohama had been playing a substitute in the field (Hardy), but the missing man, who had been unavoidably detained on duty, now put in an appearance. Soon after, Lucas, with a pretty drive, made 4 off Mann, and next over Gillingham cut Mollison for 2. Runs came very slowly, it taking an hour to make 35; but at length the half century was reached, for at 20 past 11, Gillingham hit a boundary, at the expense of Mollison, and the telegraph boy hoisted

the long-desired numbers. Cox, by a smart piece of fielding, prevented Lucas from making more than a single off a neat leg-hit from a from Mollison an over later. At half past even the score stood at 58. The home team shaping up better in the field than even most fervent admirers could have expected, several good bits of stopping won applause from the Pavilion. By singles the score mounted and 60 was eventually hoisted five-and-twenty minutes to 12. White at point replaced Mann at the Pavilion end. Gillingham got his first ball away for 2; the next delivery he made a single, but the of the over saw no further increase. Mollison had one made off him in his over; and Gillingham cut White for a single. A quart twelve saw 60 put up on the board, Gillingham sending Mollison to the Bazaar fence for 4 and thus bringing in the necessary runs. A fine stroke was followed by a maiden from White. A couple by Gillingham varied monotony of the next over, while Lucas cut from a delivery of White's. A change in bow was next made, Harry Kilby taking over the leather from Mollison. He trundled down a maiden in his first essay, Kobe treating deliveries with respect. When midday at Kobe had just 78 runs to their credit. A couple of singles brought 80 on to the telegraph, the applause which greeted the figures evidently stimulated Kobe to greater efforts, for White's over cost 14 runs, which included two boundaries and a couple by Gillingham, the rest put on by Lucas. Another maiden over Harry Kilby followed, his third in succession. Gillingham made one off White, and a similar number next over, off Kilby, after which Lucas drove the ball to the scorer's box for 4. Another boundary by Gillingham, off White, the score past the 100 mark at 12 minutes past 12. A couple by Lucas, off White, completed the over, and White stood down, King going on in his place. Gillingham snicked a single off his first ball, but it was the only run in that over. A drive to the Settlement fence Gillingham, off Kilby, enabled 110 to be telegraphed, and he followed this two balls later a single; then Lucas had a chance and drove Kilby to the fence. Gillingham began the over with a cut for 4, off Kingdon, and went up. Four-hits were becoming more frequent now, Gillingham punishing Kilby to extent next over. Another stroke earned a couple, and he followed it up with a cut for a similar number. Kingdon was now taken by E. W. Kilby relieving him with the leather. Nothing was made off his opening essay. E. L. Edwards took over the ball at the Settlement end, H. W. Kilby retiring. His second over found Gillingham l.b.w.—129-4-73. The ring batsman's score included eight 4's, and 3, and it was well-played throughout. W. I. Edwards now partnered Lucas, whose score stood at 28. A leg bye brought the figure to the board to 130, and then Lucas cut a 3 at expense of E. W. Kilby. Edwards opened with a hit to mid-on, off his brother, and after made a single. Then he almost lost his wicket through over-eagerness, E. B. S. fielding smartly and returning the ball with determination to the wicket. A miss by Edwards at square leg enabled Lucas to score a boundary off Kilby, and he hit another 4 with the following ball. The over cost 11 runs before it closed. The game was adjourned at ten minutes to 1 for tiffin, the score standing at 148, to which Lucas had contributed 36, and Edwards 28. The game was resumed at eight minutes to 2 o'clock. Edwards began by driving White to the fence for 4, and 150 was signalled. Three balls later he repeated the stroke and Yokohama Town Band appropriately struck up some "slow music." The last ball of the over was cut by Edwards for 2. Edwards took the leather at the Settlement and trundled a maiden over. W. D. S. began the next over with a 3, Edward Kilby neatly saving the boundary. Edwards secured a single off his brother next over. Lucas' stay was now growing short, White finding his stumps with the second ball of the over—163-5-36. Lucas had played a steady

patient game from the beginning, and deserved the compliments he received on his retirement. Edwards and Lightfoot were now partnered. Duff missed an excellent chance of stumping Edwards in this over, the second "life" this bat had received so far. But immediately after Mollison, at long on, caught Edwards off White—a splendid catch—166-6-23. To the stirring strains of "The Minstrel Boy to the war has gone," G. C. Murray, the Captain of the Kobe Eleven, went in to bat. He opened with a couple off White and then drove Edwards to the Pavilion for 4. The score now totalled 170. The next excitement was a 3 by Lightfoot, rather unexpectedly cut off White. Then Edward Kilby smartly picked up a ball driven by Lightfoot, off Edwards. At a quarter to three the score stood at 185. Some singles followed and then Lightfoot got White away for 2. Mann soon after replaced Edwards at the Settlement end and Murray drove him for 2, third ball. A change was also made in the bowling at the Pavilion end, Mollison relieving White. The fourth ball from the newcomer was put up by Lightfoot and passing over Duff's head was held by Mann in the slips—190-7-14. Jeffery partnered Murray and the latter cut Mann's first ball for 4, but with the fifth ball of the over, Mann caught and bowled the Kobe captain—194-8-17. It was three minutes past three, when Stephens filled the vacancy and began with a couple off Mann. The next over saw Jeffery dismissed, being caught by Mann off Mollison, first ball—196-9-0. At ten minutes past 3, Hardy joined Stephens, the last to go in, and he made a single off the last ball of the over. He made another single off Mann next over, but then put up an easy one from Mollison, to H. W. Kilby at short leg, which was held. This terminated the Kobe innings, with a total of 199, at 17 minutes past 3 o'clock. Score:—

Under the follow-on rule, Kobe had to go to the wickets again. They sent out, at five minutes to four, Lightfoot and Jeffery. The bowlers were Mann (Settlement) and Mollison (Pavilion). Lightfoot cut Mann, fourth ball, for 2, but with the fifth of the over, he received his quietus, the leather breaking in—2-1-2. Stephens now joined Jeffery, and began with a single off Mollison. He punished the same bowler for 2, and followed it with a single. A maiden over from Mann came along, and then Mollison, with his second delivery, dismissed Jeffery, with a clean ball—8-2-1. The next man in, H. S. Thompson, had but a short life, playing the fifth ball of Mollison's over on to his wicket—8-3-0. Stephens now received Braess as partner and made a single off Mann in the next over, while two balls later he cut a couple, and 10 was hoisted. Braess opened with a lucky snick to the boundary for 4, off Mann. A couple of singles, one by Braess, the other by Stephens, closed the over. Stephens cut Mollison for a couple off the first ball of the next over. With another single by Stephens, off Mollison, 20 went up, but the next ball was excellently fielded by Mann. Stephens sneaked a single from Mann's next over, and Braess got one off the same bowler. A boundary, to the Pavilion, by Stephens was made off the fifth ball of the over. The next ball trundled

down by Mollison cost 2, Braess sending it to leg, and he drove the second for a similar number, while the third produced 3 and the fourth 2, Cox saving splendidly. A 3 to the Settlement side closed the over—11 runs in all. A change in bowlers was effected, Cox going on at the Settlement, and Dr. Moon at the Pavilion. Braess made a single off Cox and Stephens 3, and 40 went up. A boundary by Stephens signalled the appearance of Dr. Moon with the leather, and the same batsman followed it with a single, but the next ball was skied and he was held by Cox—47-4-22. Twelve minutes remained for play when Gillingham went in to bat, partnering Braess. At 23 minutes to 5, 50 was telegraphed, Braess having made a couple and a single off Moon. Gillingham began with a boundary drive for 4, off Cox. Soon after he received a nasty knock on the knee and the services of a runner had to be requisitioned, W. D. S. Edwards kindly undertaking the duty. Gillingham snicked a single, off Moon, and Braess lifted the next for 1; after which stumps were drawn for the day, Gillingham being 8, and Braess 22, and Kobe's full score 59.

"THE CHIEFTAIN."

In the evening the first of the social fixtures on the card came off at the Public Hall, being a performance of Burnand and Sullivan's "The Chieftain," by the A.D.C., kindly assisted by Ladies. Since "The Chieftain" was last seen there have been several changes in the *caste*. There was on Tuesday evening a new *Jose*, Mr. O. M. Poole, replacing Mr. E. W. Kilby; a new *Blazzo*, Mr. G. W. Brockhurst, in place of Dr. Norris; a new *Juanita*, Miss F. Mendelson, filling the part taken before by Mrs. Thwaites; while the Spanish dancers had new recruits in Miss Fox, a dainty little fairy; Mr. Somerton and Mr. Poole. There is little to be said, however, except in praise of the performance. The large audience were enthusiastic in their plaudits and as a consequence the company were spurred to do their level best—and they did it. There was in both scenes far more action than we have noticed before, imparting greater vivacity to the operetta all through, while the chorus worked excellently, even in the trying "Bustle, bustle" number. The principals were all in excellent form, Mrs. Mollison being seldom seen to better advantage, and she was ably sustained by Mrs. Brockhurst, Miss Poole and Miss Mendelson, who made a charming *debut*. But the greatest success of all was *Grigg*. New songs, new patter, new action, all seemed at his ready command and seldom has he been funnier or got off more popular jests. We have not space to give his new topical song, or his Macaroni-gram; nor the hundred and one good hits he made at the expense of himself, the rival teams, or the company generally. Laughter and applause punctuated his progress from the start to the close. Of the other male parts, Mr. Maitland, as usual, sang well and secured recalls, in company with Mrs. Mollison; Mr. Cain, who was suffering from a heavy cold, carried out his unthankful part well; while Messrs. Somerton and Poole made right excellent Brigands. Mr. Skrimshire was again a successful expounder of the *Leges de Ladrone*. We append the full *caste*.

DRAMATIS PERSONÆ.

Count Vasquez de Gonzago	Mr. N. G. Maitland.
Peter Adolphus Grigg (a British Tourist in search of the picturesque)	Mr. G. G. Brady.
Ferdinand de Roxas (Chieftain of the Ladrone, disguised as Pietro Slivinski, a Polish Courier)	Mr. J. W. Cain.
Sancho (1st Lieutenant of the Ladrone)	Mr. S. H. Somerton.
Jose (2nd Lieutenant of the Ladrone)	Mr. O. M. Poole.
Pedro Gomez (Consulting Lawyer, Astro-	

loger, and Keeper of Archives of the Ladrone) Mr. E. P. W. Skrimshire.
Blazzo Mr. G. W. Brockhurst.
Escadero Mr. S. Wheeler.
Pedrillo (a Goatherd) Master Neville.
Inez de Roxas (Chieftainess of the Ladrone) Mrs. Brockhurst.
Dolly (Mrs. Grigg, Peter A. Grigg's wife) Miss Poole.

Juanita (the Dancing Girl of the Ladrone) Miss F. Mendelson.
Anna (a Camerista) Mrs. Wilson.
Zitella Mrs. Bellamy Brown.
Nina Miss Ross.
Rita (an English lady engaged to Count Vasquez; and in and Act The Countess de Gonzago) Mrs. Mollison.
CHORUS:—Mrs. Bellamy Brown, Mrs. Kenderdine, Mrs. W. K. Vincent, Mrs. W. K. Wilson, Miss Giggay, Miss R. Cameron, Miss M. Sharp, Miss Ross, Miss Carst, Miss Kenderdine, Miss Waddilove, Miss Neville, Miss B. Sharp, Miss Bagnall, Mr. S. E. Unite, Mr. G. W. Brockhurst, Mr. C. Niac, Mr. F. Pollard, Mr. N. T. Marquetti, Mr. J. H. C. Goodban, Mr. W. K. Wilson, Mr. B. J. Jackson, Mr. A. W. Read, Mr. C. A. S. Palmer, Mr. Waddilove, Mr. Murray Mollison, Mr. W. Sidney and Mr. L. E. McChesney.

MUSICAL DIRECTOR—Mr. W. Karl Vincent.

ACCOMPANIST—Mr. A. Mason.

PROPERTIES—Mr. F. J. Hall.

STAGE MANAGER—Mr. E. Beart.

Scenery Designed and Painted Specially for this Production by Mr. E. Beart.

By kind permission of Rear-Admiral Cooper, U.S.N., the Captain and Officers, the Band of the U.S. Flagship *Wisconsin*, under the direction of Mr. Kopf, played the following selection of music:—

Overture..... "Stradella" Flotow.
Selection..... "Il Trovatore" Verdi.
Finale..... "A Little Boy in Rule" Morse.

A WIN FOR YOKOHAMA.

Wednesday broke gloriously fine, though the northerly breeze had a nip in it for those not actively employed. But the bright sunshine soon brought the interport teams and their admirers on to the ground, and when the match was resumed there was a considerable number of spectators in and around the Pavilion, including the British Minister, Sir Claude Macdonald, who, by-the-by, had been present at the performance of "The Chieftain" the previous evening. Kobe's chances looked roseate in the glad, morning sunshine, but alas, their wickets soon began to fall, W. D. S. Edwards going down for nothing, Lucas, the steady bat, failing to pass 3, Murray just reaching 10, Ellerton 9, and Hardy 6. The only big scores were compiled by Gillingham, who knocked up a splendid 56; and Braess, who made 23 ere succumbing to a fine ball from Moon. The whole side were out at eight minutes past 12, for 140, thus leaving Yokohama the victors by an innings and 12 runs. This victory greatly atones for the defeat sustained on their own ground two years ago.

The bowling of the home eleven on Wednesday was excellent, and Dr. Moon is to be complimented on his five wickets, which he secured at the cost of 34 runs. It will be noticed that all the Yokohama bowlers on Wednesday began their names with M. — surely there must be luck in a letter.

In the afternoon a match was played between "Born in Japan" versus "The World," each side having an hour and a half to hit for all they were worth. "Born in Japan" did not use up all their time but had compiled 141 when their last wicket fell, while their opponents, playing a man short, made 115.

Tea was served by Mrs. Wheeler, Mrs. J. P. Mollison, and Mrs. E. J. Moss, and the Pavilion was thronged throughout the afternoon. The Town Band was in attendance.

THE GAME.

When play started on Wednesday morning, Kobe had still 94 runs to get to equal the Yokohama score of 352 runs. With the weather all that could be desired, the ground in splendid condition, and with a fair number of spectators to urge them on with generous outbursts of applause, the task certainly did not look formidable, but as matters turned out the bowling and fielding proved too strong for

them. Proceedings were resumed at half-past ten, Braess (22) and Gillingham (8) continuing their over-night's innings. The bowlers were Mann, at the Settlement, and Moon at the Pavilion end. A single from Braess, off Mann's third ball, opened the business, and 60 went up on the board. Smart fielding prevented anything further being added that over. Dr. Moon, in his first over, dismissed Braess, the third ball finding the middle stump—60-5-23. Gillingham now joined Edwards as a partner, and almost lost him second ball, but White failed to hold, the leather coming up at a terrific pace. A leg bye from Mann cost a single and then the last ball of the over was lifted by Edwards and Harry Kilby held him at mid-off—61-6-0. Two pretty bats were now paired—Gillingham and Lucas. At a quarter to 11, Gillingham cut a single, opening his score, and added 3 more in the next over, while Lucas followed the tactics pursued by him on the previous day, hazarding nothing. He snicked Moon for a single, next over, but nothing else resulted. The first four of the day was scored by Gillingham, Mollison failing to reach the leather, and he repeated the stroke next ball—Mann's over had cost 9 runs, the most expensive so far. A single by Gillingham was the only point made off Moon's next over, and at five minutes to 11, the score had reached 70. Then by singles and a couple the score mounted and at 11 o'clock 80 was hoisted. Lucas, next over, after making a couple off Moon, was smartly held by White in the slips—82-7-3. The Kobe Captain filled the vacancy and played out the over. He got his chance with Moon and cut him for a single. Two maiden overs followed in succession, and then Murray pulled a ball from Mann round to the scorer's box for 4, while the next delivery earned a single, the fielder fumbling the return. A couple were made by Murray, off Moon, next over, and then a 2-bye was trundled by the same bowler, after which Murray punished him for 2. Gillingham drove Mann to the Settlement fence for 4, but his next hit was smartly fielded by Kingdon, saving what looked a certain boundary. The next two overs were marked by cautious play, neither bat taking any chance. A three by Gillingham, which were made at the expense of the field, the ball being badly over-thrown, brought the century on to the telegraph board just at 25 minutes past 11. But the next minute saw Murray dismissed by a dandy ball from Mann, the last of the over—101 8-10. Kobe's prospects were looking decidedly gloomy when Ellerton joined Gillingham, but things brightened speedily. A single off Moon was made by Gillingham with the opening ball of the over, the rest produced nothing, but in the next over Gillingham cut a 2, and then a boundary to the fence, following this with a fine drive to the Settlement end. At half past eleven 110 was signalled. For awhile the fielding was loose, several balls slipping through. A neat cut by Gillingham earned a boundary, and the next ball he sent in the same direction for 3, both off Mann. Still hitting out freely, Gillingham drove Moon for 4, first of the over, and with the third, made a single, the leather being well saved. Mann now handed over the ball to Mollison, the register marking 120. With the last of the over Ellerton broke his duck, hitting Mollison for a couple. Gillingham's career came to a sudden close at a quarter to 12, Moon, with a ball of beautiful length, disturbing his middle stump—127-9-56. The retiring bat was loudly cheered on his return to the Pavilion for his very sportsmanlike display. His score included eight boundaries and three 3's. The last man to go in was Hardy. The new-comer opened with a snick for 3, off Moon, and 130 went up. Soon after Ellerton drove Mollison for 3, closing the over. Moon trundled a maiden, and then Hardy snicked a single off Mollison. He made a couple off Moon, next over, and at midday the score stood at 137, Kobe having still 15 runs to get to avert an innings defeat. Mollison was sent away by Ellerton for 2, and he successfully hazarded a run two balls later, bringing 140 on to the telegraph. With the last ball of the over Ellerton put up a ball from Moon and the match con-

cluded, Kobe's score being 140. The visitors were thus beaten by an innings and 12 runs.

THE RECORD.

Below we print the record of the matches to date:—

Date.	Where played.	Won by	How many.
1884	Kobe	K.C.C.	1st match, by 7 wickets. 2nd match, by 77 runs.
1888	Kobe	Y.C.&A.C.	1st match, by 8 wickets. 2nd match, by 50 runs.
1889	Kobe	K.C.C.	1st match, by 1 run. 2nd match, by 49 runs.
1890	Yokohama	Y.C.&A.C.	1st match, by 120 runs. 2nd match, by 3 wickets.
1891	Kobe	Y.C.&A.C.	1st match, by 122 runs. 2nd match, by 106 runs.
1892	Yokohama	Y.C.&A.C.	162 runs.
1893	Kobe	Y.C.&A.C.	Innings, and 124 runs.
1894	Kobe	Y.C.&A.C.	8 wickets.
1895	Yokohama	Drawn	1st ins. and ins. Y.C.&A.C. 129 147=276 K.C.C. 159 7 for 4 wickets=228.
1896	Kobe	K.C.C.	Innings, and 129 runs.
1897	Yokohama	Y.C.&A.C.	Innings, and 43 runs.
1898	Kobe	K.C.C.	Innings, and 65 runs.
1899	Yokohama	Y.C.&A.C.	One Wicket.
1900	Kobe	Drawn	1st ins. and ins. Y.C.&A.C. 125 185 for 2 wickets=310. K.C.C. 110 98 for 3 wickets=308.
1901	Yokohama	K.C.C.	137 runs.
1902	Kobe	K.C.C.	5 wickets.
1903	Yokohama	Y.C.&A.C.	Innings, and 12 runs.

"BORN IN JAPAN" V. "THE REST."

This game was arranged merely to pass the afternoon. Dr. Wheeler captained the Born in Japan, and went in to bat with Gillingham. The President kept up his end well, compiling nine runs before a ball from Murray disturbed his wickets. Meanwhile Gillingham had been treating the bowling of Murray and Edwards with great freedom and 38 were placed to his credit before he retired from a stiff delivery from Edwards. Mollison and Stephens were next partnered but the latter did not stay long, being given out l.b.w. for o. Lucas joined Mollison, but after compiling 3 was stumped by Duff—74-4-3. Mollison was scoring freely, and upon Moss joining him, the total was taken to 80, when the new-comer retired, stumped by Duff. He had made two singles and a boundary in less than five minutes—83-5-6. Run-getting continued and 90 was hoisted at ten minutes to 3, while the century went up in less than four minutes after. Just then Duff received a nasty hit on the forehead from Braess, who was making a big swipe at a ball sent down by White. He had to give up and Thompson took his place at wicket-keeping. Braess was the next to retire—105-6-12. Edward Kilby had a short but merry innings for five, then growing reckless was stumped by Thompson—114-7-5. The next to go was Ellerton when the score had reached 124. At 130, Harry Kilby stepped out to meet a ball from Murray and was stumped—130-9-6. Kingdon, the last man in, had a short stay ere Murray dispersed his balls—141-10-6.

BORN IN JAPAN.

THE CRICKET DINNER.

The annual Cricket Dinner was held Club Hotel on Wednesday evening, whe 80 sat down in the old billiard-room former Y.U.C., under the genial president E. W. Wheeler. The Vice-chairs were Mr. J. H. Bathgate and Mr. W. Y. respectively. The following Menu was d justice too:—

Olives.	Sauconsin.
Consomme Florentin.	
Turban de Crevettes a la Normande	
Vol au Vent a la Toulouse.	
Filet de Boeuf a la Moderne.	
Galantine de Volailles a la Gellee.	
Haricots Vert.	Pommes de T
Roast Snipe.	
Salad.	
Bavaois Montmorency.	
Glace au Marasquin.	
Fruit.	Nuts.
Coffee.	

The CHAIRMAN gave "The Rulers Respective Countries," and the time-l toast was received most enthusiastically.

The second toast of the evening w Health of Our Kobe Visitors," which w by the Chairman. He said:—The seco which I have the privilege to propos health of our Kobe Visitors. At the last contest held in Yokohama, my esteer eloquent predecessor, Mr. Mollison, f an interesting and circumstantial ac Cricket here from 1884 till 1901, taking the wind out of my sails quarter.—(Loud applause.) It is un

for me to expatiate on the present match as the Captains of the respective teams are better qualified to do so than I.—(Loud applause.) The interport matches make a pleasant break in the monotony of our lives here; (hear, hear), serving as they do a double purpose, namely, in furnishing an incentive to the practice and improvement of our national games—cricket and baseball—and also, in affording us an opportunity, of meeting our Kobe friends.—(Loud applause and, "Good old Football!") Without further preamble, I will now ask you to join with me in drinking to the health, wealth and prosperity of our Kobe visitors. (Long continued applause.)

Mr. Atkinson having sung the Toreador song from *Carmen* (Mr. Mason providing the accompaniment),

Mr. G. C. MURRAY rose to reply. He was greeted with an outburst of applause. After thanking the company for the enthusiastic way in which the toast had been received, he said that it now became a part of his sad duty—(laughter)—to hand over a flag—(cheers, amid which a few groans were sadly mingled)—to the captain of the victorious Eleven. Kobe had had the flag made some three years ago and had treasured it fondly ever since, but it now gave him exquisite pleasure—he meant severe pain—to hand it over, this well-loved flag, to the safe-keeping of Mr. White.—(Loud cheering). Kobe had had an excellent time, they had enjoyed the game, and though sorry that it had gone against them, yet felt that the result would prove useful to them in the future. As Captain of the team he could but repeat the admonition of their scorer, if they wished to succeed in the next interport match they must have a little less golf and a little more cricket next year.—(Hear, hear, and applause.) Speaking next as an individual he would like to say that there was nothing he enjoyed so much, or looked forward to more eagerly than these interport dinners. He did not know whether it was because he knew he should hear the old favourite songs once again: the "Farmer's Boy" from Mr. Mollison; "Sweethearts and Wives" from Mr. White, and "Dear old Pals," from his old friend Showler: he enjoyed hearing all these things very much; but he thought what endeared the cricket dinners so much to him and others was the flood of happy recollections which they brought back. The recollections of the good times spent together; the good fellows one first met and knew upon the cricket field, or met around the dinner-table, these were the things that appealed. Turning back five, seven, twenty years, what a host of good men the Interport matches had brought together; and what good friends and staunch comrades many had become.—(Applause.) This was the cement which bound the men of Kobe and the men of Yokohama so closely together, and long might it continue.—(Hear, hear.) It was now his pleasure and privilege to propose the health of the Y.C. and A.C., and he called upon all the Kobe men present to rise and do full justice to the toast. Yokohama, as usual, had done them very well indeed, and he hoped that Kobe would be able to emulate their example next year.—(Applause.)

Captain DAVIS, U.S.N., after a few preliminary remarks, next sang a topical song introducing many incidents of the Interport week, which went down well.

Mr. F. E. WHITE, replying on behalf of the Y. C. and A. C., thanked the Kobe Captain for the nice things he had said of them. He hoped the visitors had enjoyed themselves and that they didn't mind Yokohama capturing the flag. He was proud to have led such a team as he did this year into the field. It was entirely owing to the good work of all the Eleven that they had at last got hold of Kobe's flag and he hoped that they might long keep it. He would like to compliment the visitors upon their fielding: it was very good. Even Yokohama had won some applause for the manner in which they worked in the field, but as Captain of the team he must acknowledge that there were two or three misses. These misses must not occur next year.—(Laughter.) He wished to express his gratitude to the members of his team who came under the title of Born in

Japan. They had proved the mainstay of the eleven, of the match, in fact. Harry Kilby's 101, Murray Mollison's 88, and Edward Kilby's 33, were scores which any Captain might be proud of, and he felt very proud of them and of the style and form which these youngsters had shown in the match. Many of his eleven were old "crocks," he was sorry to say, he need not mention names, save only that he was a "crock" himself, but although they were getting past their prime it did not prevent them from admiring the good play of the youngsters. In his opinion the 101 made by Harry Kilby was one of the finest displays of cricket that he had seen in any interport match.—(Hear, hear)—and he was exceedingly sorry that he and his brother could not be with them that evening. In conclusion he could only say that Yokohama was always glad to have Kobe up here, and they only wished that they would come oftener.—(Loud applause.)

A violin solo by Mr. H. A. Poole followed. The next toast was given by Mr. F. G. Wilkinson, "The Umpires and all who have assisted, etc." and after dismissing the Umpires as not worthy of wasting time over, owing to the fact that he had himself filled one of the offices, he paid a well deserved compliment to the scorers and then passed on to praise the artistic manner in which the ground had been decorated by Mr. C. M. Duff. He also wished to thank the Ladies of Yokohama and Kobe for the way they had patronised the match, turning up early in the day and remaining till the end of play. The beautiful costumes and lovely smiles which had been seen on the Yokohama cricket ground during the past three days would, he thought, be among the pleasantest memories of the Interport Week.—(Loud Applause.)

Mr. Duff having expressed his thanks for the compliment paid him, modestly deprecated any special merit being attached to his work. He had done it in the interests of good sport, good fellowship, and for the furtherance of the harmonious relations which exist between the sportsmen of Kobe and Yokohama.—(Applause.)

Mr. MOLLISON next sang "The Farmer's Boy," which he had sung at the first interport dinner at Shanghai 36 years ago. The chorus went right lustily.

The Rev. G. H. DAVIES, in the course of a witty reply on behalf of the Scorers, remarked that he recollected, in 1808, "Yes, they might laugh, but the date was correct; in 1808, when the Irish Bank Bill was passed it was solemnly enacted that the profits should be equally divided and the Directors should receive the residue.—(Laughter). Well, Yokohama had taken all the profits of the batting and bowling, and Kobe returned home with the residue.—(Laughter, and applause). But the best side had won, as he could acknowledge having watched every ball trundled and every hit made."—(Hear, hear.)

Mr. BATHGATE, for the Umpires, said he could but re-echo the sentiments of an evening journal which he had just read, which said that, whatever the result of the matches, there were no heart-burnings afterwards. All of the players of Yokohama and Kobe went into the various games to play good cricket, good football, good baseball, and whatever was the result of a game did not so much matter so long as the best team won.—(Hear, hear.)

Mr. SHOWLER having sung "Dear old Pals," proposed the toast of "The Press," to which Mr. A. Bellamy Brown replied.

The last formal toast was proposed by Mr. White, who called upon the company to drink the health of the President, Dr. Wheeler. This was right royally given and the Chairman in response sang his song, which has a refrain running, "You can't go wrong in a nautical song," which went with a fine swing.

Other songs included: "The Choir Boy," Mr. B. C. Foster; "Sweethearts and Wives," Mr. F. E. White; "Sunshine Above," Mr. Hardy; "John Peel," Mr. J. P. Mollison; "Mr. Dooley," Mr. C. H. Thorn; "Oh promise Me," Mr. H. Sykes Thompson; "Summertime," Mr. Freeman, U. S. N.; "Auld Lang Syne" concluding the proceedings.

YACHTING.

A yacht race was arranged for Thursday afternoon between the 21-raters of the Mosquito Yacht Club, the boats being drawn for and the Kobe visitors having first draw. The result of the draw was as follows:—

Winsome, Gillingham; *Yugao*, Schellenberg; *Edna*, Gunn; *Vixen*, J. Carst; *Sunbeam*, McGlew; *Chochō*, W. Carst; *Pele*, Murray.

The course was round the Lightship (P), round the Quarantine ship (S.), again round the Lightship (P.) and home. The prize was a handsome cup presented by Mr. H. P. Wadman.

Edna was ahead in crossing the line, *Vixen* and *Chochō* closely following, but *Chochō* was first out of the harbour entrance, *Edna* second, with *Winsome*, *Pele* and *Vixen* in the order named. Though overtaken by *Edna* on the leg to the Lightship *Chochō* got round that mark first by 35 seconds and held the lead home, beating *Edna* by about a minute and a half, *Winsome* third and *Pele* fourth. The prize therefore goes to Kobe in the person of Mr. W. Carst.

THE KING'S DAUGHTERS' DANCE.

On Thursday evening the King's Daughters gave an enjoyable dance at the Public Hall, in aid of the Emergency Fund, and the smart function passed off most successfully, the fun lasting till a late hour.

PLAGUE IN YOKOHAMA.

On Oct. 17th, a case of plague appeared again at Yoshihama-cho, (adjoining Matsukage-cho, 1-chome) Yokohama. The sufferer is a woman (53), a curio-goods dealer. She was removed to the Manji hospital and nineteen houses adjoining the dwelling of the patient were isolated. Over seventy residents living in the enclosed buildings were all removed to a place of isolation at Minami-Yoshida-machi. It is added that the cases which appeared since Sept. 5th at Matsukage-cho and Yoshihama-cho number eleven.

In consequence of the prevalence of the epidemic in Yokohama, Mr. Adachi, Inspector-General of the Tokyo Metropolitan Police Board, issued a warning on Oct. 17th advising the citizens to take precautions.

Three cases of plague appeared at Kanagawa on Oct. 19th and all the persons affected died before the evening of the same day. The victims are a man named K. Kuramoto (29) employed at the railway station and his two children—one 5 years old and another 3 years. The houses adjoining their dwelling were isolated after disinfection.

Another case is reported to have appeared again at Yoshihama-cho, Yokohama, on the same day. The patient's name is Kayo (23) the wife of a jinrikisha coolie, A. Kato by name. She was immediately removed to the hospital.

It is officially reported that a case of plague appeared on Oct. 15th at Taipei, Formosa.

YACHTING.

The weather was almost threatening on Saturday forenoon, rain falling steadily and a freshening breeze coming in from the north. But towards tiffin time the sky lightened and by 1.45 p.m., when the first race, for cruisers of the Yokohama Yacht Club, was started the conditions were quite favourable.

Dainyo was across first, *Nina* being made to muddle the start by the aberration of a stop watch. Both these craft tacked over to the Pier, but *Wanderer* passed out through the shipping and had to tack at the breakwater. *Dainyo* passed out of the harbour first, over a minute ahead of *Nina*. The latter closed up somewhat on the run down to the Widow Buoy but *Dainyo* held her lead and passed the Lightship on the return trip four minutes ahead. Reaching in to the harbour *Nina* again closed up a bit, was not more than three minutes astern at the Lighthouse, and ran up on the leader thence to the finishing

line, where she was only a minute and a half late, winning the *Daimyo* Cup on handicap. Times:—

	Handicap.	Corrected.	
	h.m.s.	m.	h.m.s.
<i>Wanderer</i>	4.28.30	15	4.13.30
<i>Nini</i>	4.05.40	6	3.59.40
<i>Daimyo</i>	4.04.10	2	4.02.10

Eight "Larks" raced twice round the Eastern Breakwater, the result being that No. 10 (Drummond) was once more victorious by quite a distance; No. 5, was second; No. 12, third; No. 4, fifth; No. 14 sixth.

Six of the Mosquito Yacht Club 21-raters raced for Mr. Kingdon's cup, the contest for which was not decided the previous Saturday. *Winsome* led round the course but *Pele*, *Vixen*, *Sunbeam* and *Edna* hunted her closely, with the result that *Sunbeam* won by a minute and a half on her handicap of five minutes. Times.

	Finish.	Corrected.	
	h.m.s.	h.m.s.

<i>Sunbeam</i>	3.46.55	3.41.55	

DEATH OF MR. WINSTANLEY.

We announce with much regret the death of Mr. James Winstanley. The deceased gentleman was one of the earliest visitors to Japan, coming here in the late sixties and spending some years in association with the late Mr. W. Bourne. He leaves a grown-up family with whom deep sympathy will be felt.

The funeral took place on the morning of Oct. 21st from Christ Church. The services were conducted by Rev. W. Field. The chief mourners were Mr. W. B. Mason, Jr., and Mr. Fred G. Woodruff; and the following officiated as pallbearers:—Messrs. James Dodds, James Walter, George Booth, E. Powys, John W. Hall, Captain James Martin, Messrs. Isaac Bunting, W. N. Wright.

DEATH OF REV. H. C. HODGES.

The death took place in Shanghai, very suddenly, on the 16th October, of the Rev. H. C. Hodges, M. A., for 17 years Cathedral Chaplain at Shanghai. He was only in his 56th year. From the *North-China Daily News* we learn that Mr. Hodges came to Shanghai in succession to the Rev. F. R. Smith in May, 1886. During the whole of his chaplaincy, he took an active part in the good work of the Foreign Settlement, and his name was connected with many of the useful and charitable institutions in its midst; with school and mission work he was particularly identified, and his devotion to the cause of the Thomas Hanbury School produced most beneficial results. His interest in the Shanghai Public Library, and his sympathy with the efforts of the Society for the Prevention of Cruelty to Animals were shown in many useful ways; every movement which had as its object the advancement of the moral good of the community received his support. Amongst his other duties he included that of chaplain to the local Volunteer force, and it was only in August last he received the China war medal at the hands of Sir Ernest Satow. Associated with him in all his labours was his wife, for whom the keenest sympathy is felt. A genial, kind-hearted man, always ready to oblige and broad-minded, he made hundreds of friends during his service in Shanghai and not one enemy. He will be long regretted.

THE LATE MR. W. A. CRANE.

A large circle of readers will learn with deep regret of the death of Mr. W. A. Crane, which took place at Kobe early on the morning of Oct. 22. The deceased gentleman came to Japan in the early sixties, being first an accountant in the Bank of Central India, at No. 55 Main Street, and when this establishment closed, he started business as a photographer

on Lot No. 36, being perhaps the first foreign photographer to practise in Japan. After this he went into the service of Hansard and Black, auctioneers, and proprietors of the *Japan Herald*. His next move was to Hakodate, where he was engaged as book-keeper by Capt. Blakiston. Later he joined the late Mr. O. Keil in business, the two carrying on a piano selling and tuning concern, and subsequently he visited the United States, returning to occupy important positions in various mercantile firms. He also established himself in Chefoo in connection with the sale of musical instruments, etc., and coming back to Yokohama entered the employment of Messrs. Bowden Bros. & Co., in which he has since remained. Mr. Crane was well-known in all the foreign communities of Japan, his musical aptitudes rendering him exceedingly popular in all circles.

He had been a very prominent Freemason, and doubtless his obsequies will be marked by the respect due to his position and his merits by the Kobe brethren. Mr. Crane had been in feeble health for some time and the news of his death was not altogether unexpected. He leaves a widow and a large family, with whom the deepest sympathy will be felt. The deceased gentleman was a member of one of the best known families in the Far East. We reproduce from "An Anecdotal History of Singapore" the following references to it:—

Mr. Thomas Owen Crane came to Singapore in 1824 or 1825. He had left England on his way to India, but the vessel was wrecked off the coast of Spain. He managed, with a few others, to swim to a barren rock, where they remained for over a month, eating shell-fish, rats, and chewing shoe leather. They were reduced to such straits that some of the sailors wanted to cast lots, as has been done in similar extremities, but a vessel sighted them and they were rescued. The ship was bound to Singapore, and so Mr. Crane remained here, and started in business as Thomas O. Crane in 1825. About 1842 his brother William came up from Australia, and they carried on business together as Crane Brothers, as auctioneers and land agents. William returned to England about 1857, and Mr. Crane continued in business as Thomas O. Crane & Co. His name is frequently mentioned in the old papers; he was a Justice of the Peace, a member for many years of the Raffles School Committee; was one of the Wardens of the first Freemason's Lodge and assisted in many useful undertakings.

He commenced planting in May, 1836, and at the end of that year had seventeen acres planted with cotton at Tanjong Katong. The undertaking was abandoned, because the crops failed, owing, as he considered, to the want of a regular season, together with the variability of the weather, so that the crop instead of coming forward at one time of the year, continued scantily all the year round, and was thus damaged by rain, beside causing expenses in gathering in small quantities. He had the soil analysed in Calcutta, and it was reported to be of the best kind for the plant in its native localities. He then planted coconuts, and had a large plantation at Tanjong Katong in 1850. About this time, Mr. Crane sent some copra to a firm at Marseilles, which had asked him to prepare a small quantity as a trial, which he did. The cost was said to be too high, and nothing was done in the article for over twenty years, when it began to be a principal article of export.

Mr. Crane married, as has been said, one of the many daughters of Dr. d'Almeida, in 1826, and had a family of fourteen children. The eldest son, William, went to Japan in 1861 and has resided there continuously up to the present time. Mr. Crane retired from business about 1864. He had lived for very many years at his large house at Gaylang, the only house near there at that time, a little beyond the Police Station on the right hand side, where the family had been brought up. He remained in Singapore for thirty-five years, when he made a short visit to England; and left here for the last time in 1866, dying in London in the following year. The business was carried on under the name of Crane Brothers, by sometimes one, sometimes two, of his sons, until July, 1899, when his son Mr. Charles Crane retired to England and the business was closed after seventy-four years. Mr. Henry Crane is the only one of his sons now in Singapore.

On the morning of Oct. 21st, a fire broke out at Hongko, Yushima, Tokyo, destroying two houses. Another fire occurred at Honjo a little earlier on the same morning, burning down two houses. A man named T. Kobayashi (51) was afterwards arrested on a charge of incendiarism.

"FRENCH SONG."

A large audience gathered in the salon Oriental Palace Hotel on Sept. 21st on invitation of the Yokohama Committee of Alliance Francaise to listen to an add Comte M. de Perigny on "Les Char Francais." M. C. Pravioux presided and introduced the lecturer, whose speech was appreciated. The subject was treated in widest sense, French song being reviewed the earliest days to the latest times. In the evening Madame Lacroix sang "La Neuve," Pierre Dupont; "Ton Nes," Paul and "Dors, Mon Gas" Theodore Br vote of thanks was cordially passed to the in proposing which the Chairman dwelt entire absence of racial or political feeling in connection with their society, and expressed delight of the members to see so many present.

We are desired by M. Pravioux, who on Wednesday evening at the address by Comte M. de Perigny on "Les Char Francais," to express the thanks and appreciation of the Committee of L'Alliance Francaise to Muraour and Dewette, for their kindness in their fine Salons at the disposal of the and audience, and to Mr. Karl Vincent for composing a special accompaniment to "La Musette Neuve," so admirably rendered by Madame Lacroix.

THE LAW COURTS.

MOURILYAN, HEIMANN & CO. BANKRUPTCY CASE.

This case, instituted by creditors of Liquidator of the bankrupt estate of Mourilyan, Heimann and Co., came up the Yokohama District Court before Judge on Oct. 16th, when Mr. H. C. Pigman, manager of the firm, was examined.

He deposed that he was only an employee of the firm and not a partner. Mr. Arthur then living at Kobe, instructed him at 1900 with regard to releasing the security-right which had been laid on the buildings situated on Nos. 33, 34 and 35, The instructions were formally put down in writing and he communicated them to Litchfield. He held a power-of-attorney of Mr. Groom, and this was given to Mr. The credit of Mr. Groom in the bank amounted to £10,000, bearing interest of 7 per cent per annum, but without knowing whether the firm had redeemed though he thought that the firm paid for a portion of the interest on this remembered that the loan was entered in the "Private Ledger," which was used by the partners of the firm. During 1900 drew many cheques on the Hong Kong Shanghai Banking Corporation, but in October or December of that year, transactions with the bank were suspended because the firm had drawn its account by over yen 300,000 and was unable to refund at the due date. He had interviews with Mr. Bekkey, Manager of Specie Bank, Ltd., in order to open with that bank under instructions. Several times witness disclosed the property of the firm to Mr. Bekkey, and remembered to be about yen 300,000. Having offered the property to the bank as security, the firm obtained a loan. This having been effected, witness wrote a letter, under the signature of Mr. Mark Baggallay, in Kobe, to asking him to release the mortgage. In 1900, he wrote a letter to Mr. Groom concerning an estimated profit of on the Camphor Monopoly business. The bankrupt firm expected to receive from Messrs. Samuel, Samuel and Co., not remember the exact amount. He never seen copies of letters from Mr. Groom in which the firm requested the release of the mortgage held by the property. Witness and Mr. M.

well knew that a portion of the profits gained in the camphor business belonged to Mr. Groom, but witness did not remember whether a portion of the profits were paid to that gentleman. Mr. Pigott did not know whether Messrs. Samuel, Samuel and Co. paid any of the profits to Mr. Harris in December, 1900, as witness had resigned from the firm before that time. He did not know what was done with the money the bankrupt firm received from Messrs. Samuel, Samuel and Co., or in what book of the firm the amount was entered. He thought that the rent of the Kobe office of the firm was still unpaid. He knew that in 1901 Mr. Groom loaned yen 5,000 to the firm and he remembered that the debt was paid on the due day. Mr. Groom held the buildings on Nos. 33, 34 and 35, Yokohama, on lease at yen 6,000 per year, and the rent was later increased to yen 7,000. The expenses, fire insurance, etc., were borne by the owners.

The examination of Mr. Pigott being concluded, the Court ordered him to be examined as an expert as to the signature of Mr. E. W. Gringham. Witness expressed his opinion that the signature was Mr. Gringham's, and subsequently certified his knowledge in writing.

Mr. G. E. Gregory was called to give his opinion regarding the signatures of Mr. Harris which appeared on several letters introduced in the Court as evidence. He was asked to compare them with those in a copy-book brought by the liquidator. The expert retired to another room to examine the signatures and the case was adjourned *sine die*.

RUSO-CHINESE BANK v. YUEN SIH SONG.

In the Tokyo District Court a case instituted by the Russo-Chinese Bank against Yuen Sih Song, former compradore of the bank, claiming yen 170,000 on the ground that certain monies under the guarantee of the Chinaman were not collected, and a counter-claim for yen 530,000 by defendant against the plaintiffs on the ground that the bank had sold land in Shanghai which belonged to him, was resumed on Oct. 15th.

Plaintiff's counsel presented a contract which defendant made with the bank when he entered their service. Defendant's counsel refused to recognize this document on the ground that the signature differed from that on the Power-of-Attorney given by the Chinaman to counsel. Plaintiff's counsel asked the Court to summon defendant himself in order to have him sign his own name in the presence of the Court.

The Court decided to do so and the case was adjourned *sine die*.

INFRINGEMENT OF THE PUBLICATIONS LAW.

In the criminal section of the Tokyo District Court, a case bought by Baron Kanda against T. Nishimura, Sh. Koidzumi, and K. Kiuchi, book publishers in Tokyo, who published over 50,000 copies of "A Guide to Kanda's English Grammar," without the consent of the author, was begun on Oct. 15th. The Court issued an order restraining the publishers from selling any more copies of the book.

CATHOLIC MISSION v. LIU JO-KEN.

Judgement was given on Oct. 16th in the Yokohama District Court before Judge Kano on the case instituted by Rev. Jean N. Guerin, representative of the Catholic mission against a Chinaman Liu-Jo-ken petitioning for the acknowledgement of possession right to perpetual lease on ground at No. 185 Yokohama, dismissing the petition of plaintiff and ordering him to bear the costs.

CLAIM FOR SHIPPING DAMAGE.

The hearing of a case instituted by the American Trading Company against Messrs. Robert M. Sloman and Co., claiming yen 485.36 for damage caused to hats brought by the steamer *Verona*, was resumed in the Yokohama District Court before Judge Kano, on Oct. 19th, when Mr. Alfred Ernest Pawsey, of Messrs. Lane, Crawford and Co., was examined as a witness.

Mr. Pawsey deposed that his firm purchased in March, this year, a case containing 113 hats from the American Trading Co. He did not observe what mark was on the case, but the in-

voice of the sellers showed that one bore a triangle No. 407, "A.C." and "Yokohama."

The case had originally contained 220 hats but almost half the number were found damaged when they were landed at the Customs compound, where, before taking delivery of them he examined the goods, after which he received 113 pieces. He refused the remaining number. He paid yen 435.83 for 113, which price comprised the charges for insurance, freight, etc., besides commission. For thirteen pieces 25 per cent. discount was allowed in consequence of slight damage. There were two kinds of hats—one at yen 45.87 per dozen and the other at yen 76.45. He had originally ordered from the American Trading Company 250 pieces.

The case was again adjourned till Oct. 23rd.

P. SARDA v. GRAND HOTEL.

In the Yokohama District Court, this case, brought by Mr. P. Sarda against the Grand Hotel claiming yen 3,407.16 as compensation for supervision of construction works, against which there was a counter-claim of yen 37,267.01 as damages for imperfect work came up again before Judge Kano on Oct. 19th, when counsel for the parties were heard. The case was then adjourned till Nov. 2nd.

ALLEGED SILK FRAUD.

The trial of Mr. Le Prevost and others which has been fixed to take place on Oct. 21st is postponed till the 28th (Wednesday) at 9 a.m.

THE JOVANSSEN DIVORCE CASE.

This case, instituted by Mr. Adolphe Jovanssen against his wife, Rachel Jovanssen, petitioning divorce, began in the Yokohama District Court before Judge Kato on Oct. 20th.

The petitioner was represented by Mr. Ideura, but the defendant was absent.

Plaintiff's Counsel stated that Mr. Jovanssen married the defendant on March 20th, 1890, in Sweden in accordance with the provisions of Danish laws. Since then, they had been living together at several places abroad. In September, 1901, the couple arrived at Yokohama, and were living at the Club Hotel, Ltd. No. 5, the husband being employed by the hotel as manager. They lived there together in harmony till February, 1902, when the relations between his wife and Mr. R. G. Hopkins, a clerk of the hotel, appeared. The misconduct of his wife subsequently led to her being prosecuted by her husband in the criminal section of the Yokohama District Court, where Mr. Hopkins and Mrs. Jovanssen were sentenced to punishment according to the Japanese Criminal Code. They appealed to the higher Court against the sentence, and the wife disappeared from the dwelling of her husband before the judgement of the Appeal Court.

Counsel then asked the Court for leave to examine Mr. Victor H. Gielen, Danish Vice-Consul, as an expert witness with regard to the laws of Denmark on the point of whether the conduct of Mrs. Jovanssen furnished ground for divorce. The Court decided to do so on Oct. 27th at 1 p.m.

LIBEL CASE.

The appeal in the libel case brought by Mr. A. Hofmann, of Messrs. H. Ahrens and Co., Nachf., Kobe, against three Tokyo papers—the *Niroku*, *Hochi* and *Yorodzu*—in which case the Tokyo Local Court on May 15th sentenced the nominal editors of the papers to 15 days' imprisonment with hard labour and a fine of yen 50 each, was tried in the District Court before Judge Mochizuki and Public Procurator Hasama on Oct. 18th.

Mr. Miyake and six other lawyers appeared for the accused. After the examination as to the facts, the representatives asked the Court for leave to examine a woman named Toyo, who is alleged to have been concerned in the affair charged against Mr. Hofmann, and also to examine S. Kobinata a member of the *Yorodzu* and F. Kawakami, foreman of the *Niroku*, as witnesses. The Court decided to do so.

The trial was adjourned.

ATTEMPTED ASSASSINATION.

The preliminary trial of T. Oyashi, who at-

tempted to assassinate Mr. S. Shimada, M.P., being concluded, he was committed for trial on Oct. 19th in the Tokyo District Court.

INSURANCE FRAUD CASE.

The trial of T. Suzuki, and three others living at Hadano near Odawara, who were charged with attempting to obtain yen 8,000 by fraud from the Yokohama branch of the Manufacturers Life Insurance Co. of Canada being concluded, sentence was passed in the Yokohama District Court by Judge Suzuki on Oct. 20th. They were sentenced to from seven months to eight months' imprisonment with hard labour and a fine of from yen 8 to 10, and six months' police surveillance each.

DR. VAN DER HEYDEN v. H. L. STORNEBRINK.

In the Yokohama District Court, this action, petitioning for the partition of jointly owned property, was resumed before Judge Kato on Oct. 21st when Mr. H. Klingen was examined as a witness.

The witness deposed that Mr. Van der Heyden went home in June, 1894, and returned about four or five years ago. The property on No. 270, Bluff, Yokohama, was registered at the Dutch consulate at the request of Dr. Van der Heyden and Mr. H. L. Stornebrink as their joint possession. During the absence of plaintiff the house was leased. Witness did not know what the conditions of contract were between the parties with reference to the joint owned property, but each half of the rent collected from the leased building was divided between the parties, after having written off the several expenses. The late Mr. Mees collected the rent.

Plaintiff's counsel asked the Court for leave to examine Mr. Leon van der Polder, the Dutch Acting Consul, as witness, but the Judge rejected the application.

Counsel for both parties entered a into brief discussion, after which the case was adjourned, the Court reserving judgement till October 28th.

CLAIM AGAINST THE MINISTER FOR AGRICULTURE AND COMMERCE.

In the Court of Administrative Litigation, a case instituted by Mr. K. Suzuki, headman of the village of Saimyoji, Akita prefecture, against the Minister of State for Agriculture and Commerce, claiming restoration of a forest of 25 *cho* (*cho*, 0=176½ sq. ft.) in area, with the lumber thereon, which the authorities of the Department have entered on the list of national properties without obtaining the legal consent of the villagers by whom it had been owned, was heard on Oct. 21st. The Court delivered judgement in favour of plaintiff.

LITERARY GOSSIP.

Mr. George Moore, the novelist, has left the Church of Rome and become a Protestant, because Archbishop Walsh attended the King's levee at Dublin upon the occasion of his majesty's recent visit to Ireland and because the King was received at the Catholic College of Maynooth.

Mr. Heinemann published on September 15th "The Correspondence of Emperor William I. of Germany and Prince Bismarck." The correspondence covers the years from 1852 down to Christmas 1887, the last of the Emperor's letters being dated within three months of his death.

The writings of Thomas Love Peacock, after fifty years of unaccountable neglect, are gaining at last widespread appreciation. A recognition of this fact has induced Messrs George Newnes (Limited) to bring together the whole of his novels in one volume of their thin paper classics.

According to the September number of *Japan and America* Japan has more translations of American books than of any other foreign works. This is attributed in part to the fact that the United States copy-right does not extend to Japan. Among the books recently rendered in Japanese, this publication mentions Professor Giddings's "Principles of Sociology," Mayo Smith's "Stati-

stics and Sociology," and Mrs. Burnett's "Little Lord Fauntleroy."

Dr. Alexander Whyte has two volumes in the hands of Messrs. Oliphant, Anderson, & Ferrier. One is an appreciation of Bishop Butler, with a selection of the more striking passages in his writings. The other is a study of St. Paul, in the form of sixteen papers, which originally appeared in "Bible Characters."

This month Messrs. Jack of Edinburgh are to issue a volume with the title, "The Blood Royal of Britain." It appears that there are twelve thousand people now alive who are descended from Edward IV. and Henry VII. of England and James III. of Scotland. A good many of these people may be unaware of their high lineage, and no doubt, on the other hand, a good many lay claim to a descent which cannot be proved. The volume should provide fine material for genealogical bickerings, and genealogical bickerings have a way of being particularly acid, remarks the *Academy*.

Publishers agree in saying that this has been a bad year for novelists, but they do not agree in the reasons they give for this abnormal dulness. One authority on such matters declares that the most likely explanation is that some of the publishers have overdone the advertising of poor books, the puffery of mediocre books. As very few people are broad enough to realise that they are a part of "the public," the notion that "the public is an ass" very slowly if at all declines in popularity. Yet demonstrations of the falsity of this notion are as frequent as efforts to prove it true. And as for the reading public, it is not in the least an ass—though it calls itself one when it buys a book that in no respect answers to the advertised description of it. In dealing with men of sense, whether publicly or privately, it is never other than foolish to overstep, and it is usually wise and always prudent to understate.

Student and literary man though he was, remarks the London *Outlook*, the late Marquis of Salisbury never saw fit to enroll himself in the ranks of statesmen-authors. We read further: "His name is identified with no book—no 'Defence of Philosophic Doubt,' no 'Impregnable Rock of Holy Scripture' or study of Homer, no 'Diderot and the Encyclopedists,' no 'Coningsby' or 'Lothair.' The only booklet, in fact, in the British Museum catalogue bearing Lord Salisbury's name is a revised copy of his address on 'Evolution,' which evoked unstinted admiration from scientists on its delivery before the British Association at Oxford. He preferred to remain among the anonymous of the reviews and newspapers. It was very seldom that anything appeared in print with his name appended." When asked if it was true that he was writing a novel, he whimsically answered, "Certainly not. I want my old age to be as honourable as possible."

Of the sailor embalmed in literature *The Academy*, London, says:—"Nearly all men have known the sailor, for the sailor, even the old sailor, is an elemental type and has grown but lightly in complexity since Homer saw him on his oar-bench, plowing the wind-dark water to an old tune. Chaucer knew him, and saw in him a knavish alien with the vices of a strong man, with a merry heart and a foul tongue, and a body made comely by the sun and the salt air. Shakespeare knew him, and saw in him a boisterous, irreverent brute with a sense of duty. Cervantes knew him and thought him a pleasant person with a somewhat low sense of humor. An old writer of the time of Queen Anne has painted him in the manner of Hogarth as 'a rare dog, whose thoughts reach not much above the topmast head.' And more recent writers, such as the excellent Marryat, the good Dana, the wise and scholarly Scott, have not found in him either sign of change or operation of improvement."

Mr. Jack London, whose remarkable story, "The Call of the Wild," is all the vogue in England and America, is one of the small band of fortunate young writers who have turned their early experience to almost instant account. Mr.

London is now only in his twenty-eighth year, yet he has unmistakably secured his public, which is much, and legitimate success, which is more. His father was a nomadic trapper, and the boy was born to poverty and hard work. In his tenth year he came within reach of books, and when he was not at school he was searching out in books the printed secret of romance. But soon he faced life and its possibilities of romance in earnest, and found both in the marine scum of San Francisco. Since then he has done many things, including that journey to Klondike which is the background of "The Call of the Wild." Mr. London was fortunate in his early experience; there are many of us who would give twenty years of Europe for five of his earliest years.

In "Charles Reade as I Knew Him" Mr. John Coleman tells us of the discouragements that the great novelist and playwright met with in his earlier years. This is how his affairs stood in 1851:—

Item—My family had brought me up, and educated me, till I was sixteen.

Item—I earned my demyship, eighty pounds a year, at seventeen.

Item—At one-and-twenty I obtained my fellowship, beginning at two hundred and fifty pounds per annum and ultimately rising to six hundred and fifty.

Item—Eighteen years devoted to the study of dramatic art.

Now let us see what I had gained for this outlay.

Item—"Ladies' Battle," nil.

Item—"Masks and Faces," half of one hundred and fifty pounds; seventy-five pounds.

Item—From Bentley for book of "Peg Woffington," thirty pounds.

In all, one hundred and five pounds. That is to say about half-a-crown a week for eighteen years—not enough to pay for pens, ink, and paper, leaving copying and shoe leather out of the question.

Mr. Joseph Skipsey, the Northumberland "Pitman Poet," whose death is announced, was best known by his "Carols from the Coal Fields," but his earlier and less mature work gained the high approbation of some of the most competent judges, notably of Dante Gabriel Rossetti, and William Morris and Mr. Swinburne. Skipsey's early life was one of hardship. He was only seven when he was sent to work in the coal pits, and as his hours of labour extended to sixteen hours a day, it is astonishing how he ever came to find time to teach himself how to read and write. Mr. Skipsey, as a matter of fact, learned to read by committing to memory the appearance of the big letters on the placards that used to be stuck up on the hoardings near the pit mouth. As a trapper-boy in the pit he wrote and ciphered on the "trap-door," in the intervals when no wagon was passing through. He then laboured through grammar, and by slow degrees and some keen native instinct found out and became acquainted with the great masterpieces of our literature. He began to compose songs and lyrics at an early age, and some of these youthful pieces are among his pleasantest work.

Mr. H. B. Marriott Watson, in the course of an "appreciation" of Robert Louis Stevenson, contributed to *The Fortnightly Review*, comments on the attitude of those people who condemn "style" in literature:—"There are some people, intelligent and industrious and well-meaning people, who fly into hysterics at once at the very sound of the word style. But what is it in reality but a way of referring to technical skill in language? No one is foolish enough to despise technical skill in any other art or craft. Why then should it be looked upon with suspicion or scorn in the sphere of literature? The school which does so regard it goes in for what I have heard vulgarly described as 'throwing it off your chest,' that is, of getting your thoughts on to paper anyhow. The thought is to this class of writer the only valuable thing; the language, the medium in which it is conveyed, is nothing, and he who should waste consideration on so paltry a matter is unworthy of the name of artist. He is a trifler. And yet I do not suppose for a moment that these same people would declare that a painter's conception was everything and his colors and lines nothing,

or that a musician's conception was and his notes and harmonies nothing is, of course, as is easily seen when relation to these analogies, that language equivalent of color and line in paint in musical composition, and that a li can only fulfil himself properly by use of words to interpret and embellish

NEWS OF THE WEEK.

Twenty-two Japanese arrived at Nagasaki on Oct. 20th by a Russian steamer.

The dead body of a woman was found on the railway near Senju Station.

Since Oct. 16th, the Russian Legat has hired three Japanese police office the premises.

K. Yokota who was sentenced to (Awamori District Court on a charge was executed on Oct. 21st.

It is rumoured that Mr. Yamamoto, member of the Bank of Japan, will be member of the House of Peers.

Military officers in reserve held a meeting at the Kaikoshu on Oct. 18th. The 1st War and other high officers were present.

Vice-Admiral Togo, the new Chief of the Standing Squadron, left Oct. 21st for Sasebo where he succeeded Admiral Hidaka.

Two trains collided on Oct. 18th between Kashiwabara and Mure. The goods train were broken and injured.

The following appointment is: Sydney R. Fremantle, to the *Albion*; Captain to Rear-Admiral Hon. A. Howe, C.V.O., C.B., to date Sept. 20.

A case of suspected cholera was: Hiranuma, Yokohama, on Oct. 2 sufferer is a man named Y. Fujii, who immediately removed to hospital.

Mr. Makino, Japanese Minister to Mr. Inagaki, Minister to Bangkok, left Oct. 20th by the Nippon Yusen European liner *Wakasa Maru* for their posts.

Mr. K. Sato, member of the Oita Assembly, who has been charged with infringement of the Election Law, was on Oct. 19th to a fine of yen 20 and suspension of civil rights.

An official telegram from Taipei states that about thirty savages attacked on Oct. 20th cutting off the heads of residents. The police killed four of them.

The *Bayeki* states that Mr. F. S. French Consul-general at Yokohama, to have left Marseilles by a French steamer on Oct. 18th, and is expected here 25th.

The *Tablet*, the official organ of the Catholic Church, announces that the R. H. Benson, son of the former Archbishop of Canterbury, will be received into the Church at the Dominican priory at W.

Mr. Makino, Japanese Minister who has returned from his visit to (he left Kobe on Oct. 19th by the *Wakasa Maru* for his post), informs that the statements of Japanese regard to the condition of Dalny generated very much.

An attempt at murder is reported to have occurred in Yokohama on the evening of 18th when a man named S. Yamaguchi was released from prison on the 11th months' imprisonment on a charge of the murder of a man named H. Fukushima (29) who

knife, inflicting severe injuries on his head and other parts. The victim is in a precarious condition, and the culprit has disappeared.

A London telegram says:—*The Times* reports that a good many of the soldiers at Ladysmith contend that the actual execution done by the naval guns was a good deal less than that by two obsolete howitzers brought from Port Elizabeth.

The U.S. flagship *Kentucky* and the two other warships, *Albany* and *Oregon*, left Nagasaki on Oct. 20th for Yokohama via Kobe. Admiral Evans is on board the flagship. The *Jiji* states that they are expected to start from Yokohama for North China waters.

According to the *Official Gazette*, the Minister of State for Home Affairs prohibited on Oct. 19th the sale of two books entitled "Songs prophesizing war between Japan and Russia," and "Songs of Russo-Japanese military war," and the copies published were ordered to be confiscated on the ground that these were injurious to public order.

A man named M. Tamura (24), who was detained in Negishi jail on a charge of having attempted to murder a charcoal merchant, H. Murose, by name, after menacing him with a sword, and who was undergoing preliminary examination in the Yokohama District Court, committed suicide on Oct. 16th by hanging himself with a belt.

Prince Kanin had audience of the Emperor on Oct. 19th. The same day Baron Sone, Minister for Finance, proceeded to the Palace also to have audience. Tokyo papers state that the Ministers for Communications, Navy and Foreign Office, the Vice-Chief of the General Staff Office and the General-Inspector of the Metropolitan Police Board paid a visit the same day to the Premier.

An official telegram has been received in Tokyo to the effect that Mr. A. Sato, Japanese Minister in Mexico, is now calling the attention of the Government of that country to a breach of the treaty between Japan and Mexico, the Mexican Government having prohibited the arrival of Japanese immigrants except at Manzanillo, in accordance with the provisions of the quarantine regulations.

Vicomte Raphael de Bondy Piario has been appointed and approved as French Consul at Singapore. He has Consular jurisdiction over the islands of Singapore and Pulo Penang, the territories of Malacca, Dindings, and Wellesley, the State and Territory of Johore, the Federated States of Perak, Selangor, Sungei-Ujong, Negri-Sembilan, and Pahang, the British Island and Territories of Labuan and North Borneo, the Sultanate of Brunei, and the Rajahlik of Sarawak.

Lady Minto and suite paid a visit on Oct. 15th to the ancient ruins at Miitera and Karasaki, and then returned to Kyoto. She witnessed a tournament in old Japanese style, at the Butokuden. The following day she paid a visit to the well-known temples of Kiyomidzu, Sanju-Sangendo and Chionin, after which she was present at an entertainment at Hiranoya, Maruyama, provided by members of the Kyoto Tea guild. On the 18th she was expected to proceed to Kobe and thence to Miyajima by train.

Capt. S. Iwai and four other of the crew of the sailing ship *Daikei Maru*, owned by Mr. Kitamura, of Osaka, which was wrecked on Sept. 23rd off Kii province, who were rescued off Mikura Island, Izu while drifting about in a boat, arrived at Yokohama on Oct. 18th accompanied by a Chinaman whom they found during their wanderings. The Chinese it is reported, belonged to a British steamer which left Yokohama on Oct. 21st. Three days after her departure, the steamer was wrecked at a point which the Chinaman could not describe. He jumped into the water with a plank and a few days later he was rescued by the Japanese. The Chinese did not remember the name of the British steamer.

MONTHLY SUMMARY OF JAPANESE CURRENT LITERATURE.

In a recent issue of the paper, the *Jiji Shinbō*, under the title, "The Publishing World," draws attention to a leading feature of Japanese modern literature, namely, the predominance of biography, sketches of the careers of successful men and books relating to women. Many of the books that have appeared, says the *Jiji*, have been highly instructive and stimulating to the youth of the country. But there have been exceptions to this rule, and occasionally we have come across writers who take delight in dwelling on the weaknesses and even the vices of the men and women who form the subjects of their biographies. This class of writing is apt to prove injurious to young readers whose characters are still unformed and who are too ready to excuse their own failings by the recollection that even great men have had their weak points. In Western countries modern biography is supposed to give a faithful record of every part of a man's life and there have been from time to time writers who, out of a desire to tell the whole truth, have refused to draw a veil over incidents and traits of character which detract somewhat from the greatness of the men whose lives they are writing. But others there are who have no object in discoursing on the frailties of great minds but to win popularity for themselves by supplying the public with food for gossip and scandal. Among the men whose lives have appeared in Japanese there are American millionaires whose fortunes have been made by successful speculation. Their careers are paraded before us under the title of "Successful Business Men," with the implication that the Japanese youth has only to pursue similar methods in order to succeed, an entirely mistaken notion. Success that is the result of steady, honest sustained effort is worthy of being cited as a model for imitation, but success which has come by gambling in various stock-markets is not the sort of thing to be held up to admiration in Japan today, where there is already too much inclination to depend on luck rather than on personal effort for success. . . . The books that appear on women are mostly bad and some steps should be taken to check or suppress their circulation. Their authors skillfully avoid bringing themselves within the meshes of the press laws, but it is within the power of various local bodies to forbid the circulation in their districts of contaminating literature. It is of little use for educationists and parents to be complaining of loose morals while improper books are exposed for sale in the chief book-stalls throughout the country, says the *Jiji*.

Mr. Takahashi Gorō is a prolific writer on philosophy, education, religion and ethics. He has just issued a work entitled *Eigo Kyōshūhō* (Methods of teaching English). The Tōbunkan, Ueno, Hirokōji, Shitaya, Tōkyō are the publishers and the book sells for 60 sen a copy. In the preface Mr. Takahashi points out that life is getting to be more and more serious to the rising generation and that it is most important that the modern school should fit scholars for the increasingly keen competition which young men have to encounter. The book is divided into 19 chapters and it discusses the art of teaching English from various points of view. In Chap. XVI. Mr. Takahashi rightly condemns in unmeasured terms the silly practice of attempting to translate English Readers literally into Japanese—a performance that results in making both languages sound ridiculous and in rendering the sense hopelessly obscure. Mr. Tatsumi Kōjirō at one time maintained that the best way to learn English was to supply *kunten*, or translation marks to the English and read the original in the same way as a Japanese reads Chinese books. This is now no longer attempted. But even to-day there is to be heard in numerous schools a ridiculous attempt to reproduce in Japanese all the unimportant words of the original. In his early days Mr. Fukuzawa much favoured this practice. Here are a few specimens of this kind of translation:—"Mary stood by her papa," *Mary wa kano onna no chichi ni yotte tachishi*; "As soon as he saw me," *kare ga ware wo mita*

gotoku sayō ni hayaku; "He as well as I was deceived," *kare wa ware no gotoku sayō ni yoku azamukareshi*. The effects of this ludicrous method of translation are still to be seen in our schools, says Mr. Takahashi, where most of the pupils show an entire lack of readiness to express in ordinary Japanese the meaning of the original. And many of the errors of this method of translation are still perpetuated by Primary School and Middle School teachers by whom "in, at, on and upon" are all rendered by the everlasting *oite*, "for" by *nukatte* and "over" by *koyete*. There are times when *ni mukatte* as a translation of "for" makes nonsense, observes Mr. Takahashi. Chap. XVII. deals with text-books. Those now in use, according to Mr. Takahashi, are unsuitable and the great need of the time is to have analytical Readers that can be taught synthetically (*Bunkai teki tokuhon no sōgō teki ni kyōju subeki mono*.) Wilson's Readers and the National Readers are too narrow in respect of subjects treated. It is all religion or science. The object which many compilers set before them is the collection of specimens of fine style. The pieces chosen are frequently unsuited to the requirements of the Japanese student and are quite beyond him. The practice of introducing English novels as text-books in Japanese schools Mr. Takahashi condemns. Most of these books are full of eccentricities of speech, provincialisms, slang, recondite allusions to local customs and ways, and are thus rendered extremely difficult to the Japanese student and from his point of view do not pay at all for the labour spent on them.* The object of teaching students English is not chiefly to enable them to understand novels, but to enable them to comprehend ordinary written and spoken English when they come across it. Ornamental literature is not suitable for our students in the early stages of study. Our language teaching has on the whole been very unsuccessful, the reason being that we have gone the wrong way about things.† The deficiencies of most of the Japanese students sent abroad are apparent to everybody who comes into contact with them. They do not possess a practical knowledge of the tongues they have been studying even after some 10 years of steady work, and it is impossible to avoid the conviction that mistaken methods of study are the principal reason of this deficiency. Mr. Takahashi's book on teaching covers 362 pages and should prove of considerable value to Japanese teachers of English.

The *Ro-wa Ji-i* (Russian-Japanese Dictionary), originally compiled by the Mombushō and afterwards enlarged and revised by the late Mr. Furukawa Tsunechirō is now in the press. It is being published by Maruya. The subscription price is 7 yen 50 sen. It is to cover 1,300 pages and to contain 200,000 words.

The *Nihon Kyōikushi Shiryō* (日本教育史資料) is an exhaustive history of Japanese Education which has been compiled by the Department of Education. The publication of the work has been entrusted to the Fuzambō, Urajimbō-chō, Kanda, Tōkyō, which is now soliciting subscriptions for the same, the price of the whole being 7 yen 90 sen. It is said to contain a minute account of the education of old Japan, that of the *dainiyōs'* schools, the temple schools, and the private schools known as *juku*, as well as a history of education in the Meiji-era.

Murray's "Companion Dictionary of the English Language," containing no less than 33,000 words, has now reached its Fourth Edition. It sells for 48 sen only. It is published by the Sanseidō, Kanda.

A Zoological and Botanical Dictionary com-

* We know of instances in which several hours are spent by students every week in mastering half a page of one of Dickens' novels, the English found there being such as is never heard in ordinary conversation to-day or to be found in ordinary class-books.—(WRITER OF SUMMARY.)

† This is the opinion of a great many able Japanese teachers of English. Mr. Awano Kenjiro, a highly talented and experienced teacher of English in the Second High School has just been ordered to Europe by the Mombushō with the special object of investigating the methods adopted for teaching foreign languages in Germany, France and England. He is to be away 2 years.

piled by Mr. Ichimura Tō, a science graduate who is now a teacher in the Fourth High School, is announced as ready for sale at 1 yen 65 sen a copy. The title of the work is *Doku-Ra-Ei-Wa-Dō-shokubutsu Ji-i*. The terms are given, it is seen, in languages, German, Latin, English and Japanese.

Ei-Doku-Wa Kobutsu Ji-i is a Mining Dictionary, compiled by Dr. Kofuji Bunjiro and two others. It sells at 75 sen a copy at Maniya's.

The *Futsuryō* (French Dominions) compiled by Doctors Nanjō and Takakusu and selling at 90 sen a copy at the Bunnmeidō, 4 chome, Hongō, Tōkyō, gives an account of the various French provinces through which these gentlemen travelled last year after visiting Bangkok, whither they went to attend a meeting of the Oriental Society. They journeyed through Tonking, Annam and Cambodia (Camboja); and other parts.

Three very well-known Chinese scholars, Doctors Shigeno, Mishima and Hattori have compiled a Japanese-Chinese Dictionary called *Kan-Wa-daijiten*, which covers 1,960 pages and sells at the Sansaidō for 3 yen 50 sen a copy. It is said that nothing of the kind has appeared in Japan before. Hitherto the most comprehensive dictionaries in circulation have been mere reproductions of Chinese editions and hence in many respects have been found unsuitable for use in Japan. In the arrangement of the words the compilers have followed Western methods.

Maniya announces the publication of a Japanese-Chinese Colloquial Dictionary entitled *Nissei Kaiwa Jiten*, by Mr. Ikeda Tsunetarō, one of the editorial staff of the *Fiji Shimpō*. The work sells at 45 sen per copy.

In No. 196 of the *Nippon Jin* the question of race antipathy is treated at some length by Mr. Sasagawa Ketsu, who maintains that the treatment the Japanese receive in various parts of the world calls for the special attention of all interested in the nation's future welfare. At the time of the Boxer disturbances the term "yellow peril" was in everybody's mouth, observes Mr. Sasagawa. Notwithstanding the contempt in which we are held by a certain class of Europeans and the air of superiority they assume towards us, the conduct of our troops during the North China war with the Boxers and their supporters was in every way more humane and more virtuous than that of the French and the Russians, who were guilty of violating women and killing little children, despite their boasted Christianity. The atrocities committed by European troops on that occasion were the result of race hatred and are paralleled by the outrages against the Jews in Russia, which no laws succeed in stopping. In connection with this sentiment a serious question arises. What would be the feeling among white men generally if Japan waged a successful war against Russia? Would it not be on the side of Christianity and the Aryan race? No one who knows the world well can deny that an enormous combination against us as a nation could be worked up by reliance on religious and race feeling. In certain publications even now readers are being warned of the danger that would be involved in the triumph of our arms over any Western Power; which, in a word, is considered to be a race peril—a Chinese and Japanese combination* against Europeans. *Harper's Weekly* of Sept. 8th discusses the race question in connection with Russia's action in Manchuria and predicts that if Japan were successful against Russia, she would go on to complete the work which the great Genghis Khan (1162-1227) began. The article proceeds to condemn England for attempting to break down racial and religious prejudices and compares modern British to the Ostrogoths who in the fifth century fought in the interests of Orientalism against Occidentalism. Though there are now few among us who entertain the notion of a great Far Eastern alliance against the West, galled by the treatment accorded to our people in some

Western lands there is a slight tendency among certain Japanese towards the establishment of a Monroe doctrine in the Far East by means of a new triple alliance; consisting of China, Japan and Korea. Were we to wage a victorious war against Russia, this feeling would grow stronger. But it is to our permanent advantage to base our policy on solid interests and not on mere race sentiment, and we must learn to treat with indifference all attempts to represent us as other than we are. Japan desires peace and facilities for trade. Even were she to drive Russia out of Manchuria she could not occupy it, and the result of her victory would only be to stir up more race feeling against her than now exists, a most undesirable outcome of a war with Russia.

* * *

In the *Chūō Kōron* Mr. Terata Yūichi discusses at great length the physical defects of the Japanese and the remedies necessary for permanent improvement in this line. We give below a brief epitome of his essay. Three hundred years ago the Japanese were a much finer and stronger race of people than they are now and were longer lived. Judging from the armour worn in the sixteenth century, the wearers must have been powerful men. It was quite common for a warrior to go into battle under a weight of armour amounting to nearly 70 lbs. The present generation of men at 20 years of age weigh about 12 *kawanme*, (approximately 100 lbs.) Is it conceivable that a man weighing only this amount could fight under 70 lbs. of armour? During the Tokugawa era there was no war, and in order to allay the suspicion of the Bakufu the smaller *daimyō* were in the habit of discouraging military exercises of every kind and of allowing their retainers to dawdle away their time in verse-making, chanting (*utai*), and in watching the performances of dancing-girls. Great *daimyō* like Shimazu and Mōri, however, were too strong to make it necessary for them to curry favour with the Shōguns by emasculating their followers. Consequently we find at the beginning of the Meiji era that the Southern clans were the ones to take the lead in bringing about the revolution, and most of the great men of the Meiji era come from the families of stalwart warriors who escaped the influence of the effeminacy of the Tokugawa age. One factor which contributed to physical weakness was the intermarriage between relations created by the strictness of the rules observed in each *han* relating to intercourse with the subjects of other *daimyō*. In Europe recent investigation has shown that Englishmen and Germans have increased in height by one inch and also in longevity considerably during the last 200 years. The average length of life with Englishmen is now 50. With Japanese it is only 37. It would seem by army statistics that even to-day we are getting worse instead of better in this respect. The Army report for the 35th year of Meiji (1902) shows a decrease in height of 2 *bu* and a decrease in weight of 12 *monme* over the previous year. The Japanese are apt to treat such matters with indifference. If the same tendency were observed in any European country, the whole nation would show concern. Our population increases at a fair rate, but the production of inferior types of men and women is a subject for deep regret. Comparing ourselves with Europeans and Americans, we find that in height we average 3 *sun* less than they do, and in weight 2,300 *monme*. Comparing our women with theirs, we find our women 9 3/4 *sun* below Western women in stature, and no less than 3,000 *monme* in weight. As our women use *geta* here, the difference does not strike us, but in foreign countries our diminutive stature attracts everybody's attention, and when in Germany I constantly overheard comments on my shortness, and in one case it was attributed to deformity. Any one who has resided abroad for any length of time must have felt considerable discomfort from constantly figuring as a subject of ridicule on this account. Mr. Terata's essay is not finished. It is to be continued in the next number of the magazine.

* * *

The *Keiōjūku Gakuhō* has an article in a recent number entitled "Englishmen and Ko-

reans" by Mr. Kamada Eikichi, which contains the following remarks: When in Korea some little time ago I was one day engaged in a pen-conversation (*hitsu-dan*) with a good class Korean, when the subject of the comparative merits of different nationalities came up. He wrote down that Occidentals ranked highest (上), Japanese next (中) and Chinese lowest (下). I asked, where do your own countrymen rank? He immediately wrote 下下, "lower still than the lowest." This explains how it is that it is impossible for Korea to make any progress. They have lost all the self-respect they ever had and there is no surer sign of a nation's decay than the absence of self-esteem. Not long after this I went to England and there I found the exact opposite feeling very much in evidence. One Englishman said to me, speaking of our war with China, "When compared with the Chinese you appear very much like Englishmen, he taking it for granted that this was the highest compliment he could pay us. It is this national pride that renders the English so powerful over the world, and the absence of this kind of pride in China and Korea is the cause of extreme weakness of those two countries. This is, it is true, a certain kind of national pride. Celestials consider themselves superior to all other countries. But this is mere ignorance, is unassociated with moral qualities superior kind and is not founded, as in the case of Englishmen, on the actual achievements of a nation on the stage of world history. national pride of the Chinaman is founded on delusion, prejudice, obstinacy and ignorance on a failure to appreciate those cosmopolitan standards by which all nations pretend to be civilised are judged. Self-esteem founded on ignorance of others and their many qualities is of little value. Even in national pride there is a rational and an irrational China, unfortunately, has much of the latter little of the former and the same may be said of Korea. There is a certain standard of attainment which is respected by all nations, and national progress which ignores this standard is not worthy of the name of progress. Japan must ever bear this in mind. She strives to get a name not only for progress but for high class civilisation.

* * *

The October number of the *Taiyō* contains in several articles the question of the reform of the Department of Education. In an article entitled *Gyōsei Seiri Mondai*, "The Question of the Reform of Administrative Government," it is pointed out that the question of the retention or abolition of the Mombushō is subordinate to the question of administrative reform. The whole subject is one of means. No sensible person supposes that the question would be neglected even if the Department of Education were abolished. The question of State must be regarded as a whole and undue importance is to be attached to the many functions of the administrative writers who oppose the abolition of the Mombushō. It seems to us, says the *Taiyō*, to state any very powerful argument in its retention. The arguments advanced by Tōjō Shinji, as representative of the Education Society, are ridiculously shallow. They show an entire failure to comprehend the question at issue in the retention or abolition of the Department. Mr. Tsuji sets out on the principle that each Minister of State should be allowed to administer the affairs of the government which he conducts just as he pleases, without interference on the part of other Ministers. This shows an entire misconception of the very nature of constitutional government. Although administrative purposes each member of the government superintends the work of a special Department, in a Government the Ministers are all responsible to the nation and to the Sovereign for each and every act. Constitutionally there is no such thing as individual responsibility. It is all joint responsibility (*kwansei-jō* [官制上] *ni oite wa hak wa onono sono tantō* [擔當] *suru shu mo shokuseki ari to iedomo, kempō-jō*

* The London *Spectator* is perpetually dwelling on this topic. This journal is singularly ill-informed on Japanese opinion and feeling in reference to the Chinese.—(WRITER OF SUMMARY).

ku hakumu-daijin wa dōitsu no sekinin wa nshu (元首) ni yūshi, kakko (各閣) tokubetsu shokuseki aru wo mitomese. The notion is that any Department of State has some inherent right to exist irrespective of its relation to the government machine as a whole is manifestly untenable, and this Mr. Tsuji ought to cognise. A Government is of course at liberty to alter its administrative arrangements in any way it pleases if more efficient administration is attained thereby.

Mr. Tsuji next informs us that an argument for the retention of the Department is to be drawn from the practice of Western countries. He says that in Western countries the only nations without a Department of Education are small countries with a population ranging from three to five million people, and that by other countries, it is recognised as one of the primary duties of the State to establish a Department of Education. This generalization overlooks an important fact connected with the functions of Departments of Education in the chief countries of the West. I refer to religious functions. The Department of Education in the West has much to do with religious administration and therefore it is deemed very necessary. We have only to read an account of the discussion on the Education Bill in England to see how closely connected in the minds of the people is education with the teaching of religion.

Mr. Tsuji next informs us that there are two reasons for our having won the esteem of Western nations: one being our possession of monuments whose value is known to them and the other that we have an advanced system of education. If we were to abolish the Department of Education we should create a bad impression in the West, says Mr. Tsuji. He fails to perceive that the progress of education and the existence of the Department of Education are two entirely separate questions. What we are proud of is our education, and not our Department of Education, nor its management of education.

In his argument No. 4, Mr. Tsuji says that the effect of the abolition of the Department would be bad in China, as the Chinese have come to regard our system of education as worthy of their opinion, and so on. This too is mixing up our system of education and the administration of educational affairs. An alteration in the method of administration does not imply necessarily a change in respect of educational methods in the estimate formed of the value of special branches of knowledge. Mr. Tsuji's 5th and 6th reasons for the retention of the Department play the same fallacy as that stated above. If, instead of taking this line of argument, Mr. Tsuji had endeavoured to show that during the 30 odd years of its existence, the Department has done work of which the country might be justly proud; if he had contended that as an administrative machine, for it is nothing more, it had shown remarkable efficiency, and pointed out that for the sake of saving a paltry sum of some 100,000 a year to abolish an institution possessing real merit would be very foolish, his statement of the merits of the anti-abolitionists would have carried weight. But he adopted no such course and only brought forward arguments of a most illogical and inconclusive type. To assume that a Department of Education constituted as ours is an essential part of the executive of a Government is to show ignorance of the most fundamental principles of constitutional Government.

In the same number of the *Taiyō*, under the heading, "Opinions of Prominent Men," will be found the report of a very strongly worded statement of views made by Mr. Izawa Shuji, who many years was an employee of the Education Department and who enjoyed the confidence of several successive Ministers of Education. Mr. Izawa is not in favour of the abolition of the Department, but of its thorough reform. Here is the substance of his article, entitled *Mombushō no taiyō ni Daigaku no Dokuritu*. "The Fate of the Mombushō and the Independence of the University." That the present Department of Education is not what it ought to be is recognised by every one. (*Konnichi no Mombushō no yokunai*)

to iu koto wa, jijitsu de, tare mo mitomenai mono wa arumai.) Hence if the present Mombushō were destroyed, the country would certainly be much benefited, but this is not saying that the Department as a Department had better be got rid of. The present Department of Education is in a most disorderly state (*jitsu ni ramō na mono de, &c.*) and if allowed to remain as it is, there is no saying what evils may overtake the educational world. The Department must be radically reformed. This reform must begin with a thorough clearance of the officials who have hitherto been connected with it and whose ways have encouraged the numerous abuses of which the public rightly complain. If this measure can be effected, nobody will clamour for the abolition of the Department. The country does not say "We want no Mombushō," but it does say "We want no such Mombushō as now exists." It is because perhaps people despair of any radical reform being effected that they advocate the entire abolition of the Department. The present Minister of Education being a military man is of course a disciplinarian. I confess I should like to see army discipline applied resolutely in the Department. If Baron Kodama were to act the general in his capacity of Minister and come down with unrelenting severity on existing abuses, in a few months we should see another Mombushō.

In reference to the independence of the Imperial Universities, I am of opinion that from every point of view it is most desirable that it should be secured. In the first place as great seats of learning these institutions should be absolutely independent, and free to carry on what investigations they please in the manner they think most suitable. The professors of such institutions should be free to think as they please and teach as they please. Learning should be exalted to a throne of its own and should be deemed too sacred for the control of mere officials. The vulgarization of our University professors which has taken place is enough to astonish everybody. (*Zendai daigaku wa jiyū ni gakumon wo kenkyū suru tokoro de aru ga, konnichi sono jiyū ga sakubaku serarete itte, daigaku kyōju-ren (連) no zokkwa (俗化) shite oru ni wa, odoroku no hoka nai*). There are in the two Universities no less than 58 teachers of *Chokunin* rank, and 30 of these are *Chokunin* of the first grade. In no other Department of State do we see so many high-rank officials, and I venture to affirm that no University in the world furnishes a parallel to this state of things. Of course it may be said that the fact of a man's holding high official rank is no impediment to his carrying on independent investigations, but in the case of our professors the constant hankering after official eminence degrades and vulgarizes the mind, and involves the sacrifice of independence. No one can say that the professors of the Universities as teachers have the liberty that is essential to a due discharge of their duties as leaders of thought. The scholar ought to be satisfied with the rank which his intellectual attainments give him in the world. He is decorated with Heaven's orders in the form of genius and a profound love of knowledge. What to him are the titles which officialdom has to bestow? So lofty is the position taken by learning in Germany that even a Bismarck found that he was not strong enough to interfere with the rank bestowed on one of its professors by a Medical college. As long as our Universities are tagged on to the Mombushō they will not improve. In a word, then, I am in favour of a thorough reorganization of the Department of Education, of a change in all the principal officials, and I advocate the rendering of the Universities entirely independent of the Department.

CORRESPONDENCE.

THE IMPERIAL STEEL WORKS.

TO THE EDITOR OF THE "JAPAN MAIL."
SIR,—On reading an article with respect to our works in your paper of the 3rd inst. we find that some error has been committed therein, which we may point out as follows:

* This was written before the change in the ministry took place.—(WRITER OF SUMMARY.)

That "the 7 foreign employees, among 8 now employed, are perpetually raising objections which impede the progress of our enterprise and one only seems to co-operate heartily with the authorities" is not a fact and we may assure you that none of them has raised such objections at any time since their engagement.

Hoping that the error will be corrected in your columns at your earliest convenience, we remain,

Dear Sir, yours faithfully,

Y. NAKAMURA.

DIRECTOR-GENERAL.

Yawata-machi, Chikuzen, October 16th, 1903.

THE SIBERIAN RAILWAY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have the pleasure to inform you that as regards the transmission of Mails for Europe by the Siberian railway an arrangement has been recently concluded between the Postal Authorities in Japan and in Russia and its operation comes into force after the 25th inst.

Now, senders who wish to send their Mails via Siberia are requested to indicate on the cover with the mark such as, via Siberia, via Dalny, or via Vladivostok, and the Mails indicated as above only will be forwarded by the said route at present.

The above Mails are to be sent by means of the steamers of the Eastern Chinese Railway Company and those of the Nippon Yusen Kaisha, leaving Nagasaki for Dalny on every Wednesday and for Vladivostok twice or thrice a month respectively. The mails thus transmitted will reach Moscow taking twenty-three or twenty-six days from the date of posting.

Taking this opportunity, I beg also to inform you that Mails for New Zealand will hereafter be transmitted from this office via Honolulu, but not via Hongkong or Brisbane as heretofore, for we were informed by the Postal Authorities in New Zealand to the effect that the former route is quicker than the other.

Yours faithfully,

T. AONUMA.

Yokohama, October 21st, 1893.

PRIZE STOCK FOR JAPAN.

That the Japanese Government is determined to improve the quality of the horses and cattle bred in the Empire is evidenced from the fact that by the *Sado Maru*, at present in Hongkong Harbour a consignment of prize breeding stock has been brought out from England, says the *China Mail* of the 7th inst.

The cattle, which are all thoroughbred and prize winners, are fine stamps of the Ayrshire breed, the introduction of which into Japan cannot fail to be of inestimable benefit to the country. In all there are eighteen Ayrshire cows and two Ayrshire bulls, and the action of the Japanese Government in securing this very useful breed is one that will meet with the approval of all interested in cattle-raising in Japan. The horses, which are also for breeding purposes, number twelve, six of which are Hackney stallions, and six Hackney mares. All the horses are highly bred, two mares and two stallions being thoroughbred. One of the stallions is by "Queen's Birthday," which, about seven years ago was regarded as one of the best horses in England. He is owned by Mr. C. Perkins of Yorkshire. "Dangelt Royal" is another of the stallions brought out, and at the last Royal Horse Show in London, he took several first prizes, being reserved for Champion prize. He failed, however, to secure that honour, being beaten for first place, but he obtained second prize. This record is sufficient to stamp "Dangelt Royal" as a horse of the best possible breed, and by judicious crossing his progeny should prove themselves distinguished horses.

The two thoroughbred mares are in foal to "Isinglass," a horse generally considered to be one of the best, if not the best horse, bred in England. These mares would be an acquisition to any stud, without the additional advantage of being in foal to such a sterling horse as "Isinglass," and the Japanese Government can compliment themselves upon securing such valuable stock. The horses will all be landed at Yokohama, and the cattle at Kobe.

The arrangements for housing the cattle and horses on board the *Sado-maru* are excellent, and reflect credit on the persons responsible. The stalls are large and roomy, with peaked roofs, so as to allow the water that may fall on top to run off without having an opportunity of getting through on to the occupants. Mr. James Murray and Mr. Arthur Throup are in charge of the stock, and it is to their credit that their charges are in such a healthy condition after the trip. No sickness occurred during the voyage, and the gentlemen in charge expressed their complete satisfaction at the arrangements made on board for the comfort of the stock.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

THE ITALIAN VISIT TO PARIS.

London, October 16.

At the dinner at the Champs Elysees President Loubet and King Emanuel exchanged the most cordial toasts. The President described King Emanuel's visit as a striking demonstration of the close agreement established between Italy and France. King Emanuel declared that France was right in considering the visit to be the natural outcome of the welcome rapprochement happily accomplished.

The Italians are much gratified at the excellent reception given to their Majesties in Paris.

NEW APPOINTMENTS.

London, October 17.

The Earl of Hardwicke has been appointed Under-Secretary of State for India; and the Earl of Donoughmore Under Secretary for War.

[Earl Hardwicke resumes his old seat in the India Office, having been appointed to the same position in 1900, which he had to resign owing to family reasons. He then went on the Stock Exchange and has evidently rehabilitated his fortunes. The Earl of Donoughmore, while Viscount Suirdale, was Private Secretary to Sir Henry Blake, Governor of Hongkong, an appointment he resigned on the death of his father. He is a young man, having been born on March 2nd, 1875.]

"A BLACK DAY" IN THE CITY.

The fifteenth was an anxious day in the City of London, and the Stock Exchange Settlement proved disastrous to one of the largest stock-broking firms, whose losses are estimated at a million sterling. Open failure was prevented by a description of forced liquidation. Several other important firms will be compelled to practically wind-up or obtain assistance from the banks to the extent of several millions.

STRENGTHENING THE BRITISH FLEET.

The cruiser *Europa* is commissioning at Portsmouth for the China station. A battleship will also be sent to China from the Mediterranean.

THE BALKANS.

Later.

Boris Saroff, the Macdonian leader, is dead.

THE FAR EAST.

A later telegram says Russia and Japan are buying heavy consignments of Welsh steam coal for Vladivostok, Port Arthur, Nagasaki, and Yokohama.

THE BALKANS.

Boris Saroff, the Macedonian leader, is dead.

RUSSIA AND JAPAN.

Russia and Japan are buying heavy consignments of Welsh steam coal for Vladivostok, Port Arthur, Nagasaki and Yokohama, the latest cargo deliverable in two months.

THE U.S. NAVY AND THE EASTERN SITUATION.

The *New York World* states that the Navy Board has decided to place 49 warships on the Asiatic Station in the event of a Russo-Japanese war, and has designated the respective stations.

FRANCO-PHIL DEMONSTRATION AT ROME.

October 19.

A remarkable Franco-phil demonstration has taken place at Rome in which 50,000 persons with flags and bands paraded the

streets amid the enthusiastic cheering of immense crowds.

THE ITALIAN ROYALTIES.

The Italian King and Queen left Paris yesterday.

SPECIAL RUSSIAN COMMISSION.

A Special Commission under the presidency of the Czar has been formed to consider affairs in the Far East. It will discuss financial proposals and measures for the development of trade and industry.

PROPOSED DISARMAMENT.

The Bulgarian Government has decided to discharge 5,000 more reservists if Turkey does likewise.

A NAVAL ACCIDENT.

London, October 20.

The battleships *Prince George* and *Hannibal* collided early on the morning of the 18th off the Spanish coast during manoeuvres with lights out. The operations were suspended. Both vessels have proceeded for Ferrol with assistance. The *Prince George* is badly, and the *Hannibal* is slightly, damaged.

RUSSO-ITALIAN MISUNDERSTANDING.

Later.

It is significant of the effect produced by the Czar not going to Italy, that the Italian Ambassador at St. Petersburg has been recalled, and that the Russian Ambassador at Rome has taken leave of absence.

Popular feeling on the subject is growing more intense. The Cabinets meet to consider the situation.

It is semi-officially stated that the Russian Ambassador, who had always opposed the visit of the Czar, is responsible for the incident, which cannot close as it stands.

THE "PRINCE GEORGE."

The warship *Prince George* was taking in huge quantities of water, and has therefore been beached at Ferrol.

THE MISSING HOSPITAL DOCTOR.

Miss Hickman's body has been discovered in a plantation in Richmond Park.

BULGARIA AGREES TO DISARM.

London, October 21.

The Bulgarian Government has agreed to disband 10,000 reservists on condition that Turkey disbands 20,000.

THE NAVAL COLLISION.

Vice-Admiral Lord Charles Beresford reports that the *Hannibal* rammed the *Prince George* during a turning movement.

NO PEACE.

Despite the seeming truce in the Balkans it is significant that 37 battalions of Turkish reservists have been called out in the vilayets of Salonika, Monastir and Kossovo; 23 battalions have been called out in Anatolia and are going to Salonika; 2 battalions have arrived at Salonika from Smyrna.

A TREATY SENSATION.

London, October 22.

The draft of the Alaska award was signed on Oct. 20th by the three American Commissioners and by Lord Alverstone, the British Commissioner. Both the Canadian Commissioners, Louis Jette and Aylesworth, refused to sign any part and walked out of the room. Their attitude caused a painful impression.

It is stated on the 21st that the Canadian Commissioners are intensely irritated and resentful with regard to the award. They say the Canadian contentions imposed an even concession regarding the Portland Canal which was nullified by the assignment

to America of two islands on entrance. Mr. Secretary Hay the decision to a U.S. Cal Hearty congratulations were between President Roosevelt and with regard to the greatest success achieved by the United generation.

POLITICAL.

The Chamber of Deputies has resumed its sittings. At the request of the Government it is taking the interpellation announced with regard to general policy.

THE BALKANS.

Saigon, October 22.

The situation in Macedonia is sensibly ameliorated. Turkey and Bulgaria begin to free their reservists previously called out.

(FROM THE "DEUTSCHE JAPAN-POST.")
GERMAN NEWS.

Berlin, October 20.

The continued alarming reports published by the *Daily Mail* referring to considerable warlike preparations on the part of Japan are considered in diplomatic circles of Berlin to be untrue.

The official German organ denies the reports of the press concerning an alleged German-English convention in regard to exchanging the Tonga and the Solomon Islands.

Kaiser Wilhelm unveiled yesterday the monuments in memory of his father and his mother, the Emperor and the Empress Friedrich, erected in Berlin in front of the Brandenburg Arch. Then he proceeded to the Imperial Palace and, in the presence of the whole Imperial family, he read a biography of his parents written by his former teacher, Professor Hintzjeter.

Prince Adalbert, the third son of the Kaiser, will leave on the 28th of October from Genoa by the German Lloyd steamer *Koenig Albert*. He is to arrive at Hongkong on the 27th of November and will there embark on board the cruiser *Hertha*.

The new German Admirals to take charge of the squadron stationed in Far Eastern waters, von Prittwitz-Gaffron and von Holtzendorff, departed from Genoa on the 14th of October.

Berlin, October 22.

According to information received here there is a prospect that the negotiations still continuing in Tokyo will lead to a *modus vivendi* regarding the Manchurian question.

The Russian Minister for Foreign Affairs, Count Lamsdorff, desires a meeting with the French Minister, M. Delcasse. The object is to remove French doubts about the continuance of the Franco-Russian alliance.

The Macedonian programme drawn up by the Emperors of Austria and Russia at Muerzsteg, near Vienna, has been prematurely disclosed through an English Blue Book. The Sultan desires to anticipate the wishes of both Powers by voluntary concessions.

The decrease of armaments and demobilisation in Turkey and in Bulgaria progresses.

The divorced Grand-duchess of Hesse and the Grand-duke Kyriil of Russia, a cousin of the Tsar, wish to make a love match. The Tsar is still opposed.

The Alaska boundary arbitration is a triumph for America. Three American and one English are against two Canadian votes.

(FROM THE "JAPAN GAZETTE.")

THE ANGLO-FRENCH TREATY.

Berlin, October 16.

A Treaty of Arbitration has been concluded between France and England, in which it is agreed that unimportant questions or doubtful interpreta-

tions of treaties, if not of vital concern, shall be brought before the international Arbitration Court at The Hague. The treaty is so scanty and vague that it is believed to veil a secret convention regarding Morocco.

ITALIAN ROYAL TY IN FRANCE.

The King and Queen of Italy have arrived in Paris and received a most cordial welcome. The toasts exchanged between King Victor Emmanuel and President Loubet bore no political significance, the King especially dwelling on the peaceful relations favouring his visit.

ITALY.

Berlin, October 18.

It is expected that Signor Zanardelli, the Italian Premier, will resign, and that Signor Gioletti, a confidential friend of King Victor Emmanuel, will be his successor. The reason of the administrative crisis is said to be the Tsar's announcement of the indefinite postponement of his visit to Rome.

At a Franco-Italian banquet at Paris, there was a tumult caused by a Frenchman insulting the memory of Crispi.

HAMBURG AMERICA S.S. "SAVOIA" ASHORE.

Kobe, October 19.

The Hamburg-America S.S. *Savoia* went ashore outside Nagasaki on the 17th (Saturday) at 3 a.m. She was floated again on Sunday, but she will have to go into dock for repairs. Already part of the cargo has been discharged into lighters.

BRITISH STEAMER SEIZED.

The British steamer *Firth of Dornoch* was seized yesterday by the officials of the Kobe Chihio Saiban-sho, at the instance of the Yokohama Court, in connection with a claim filed by Messrs. Cornes & Co for yen 9,800 for expenses incurred by them as agents on behalf of the ship.

(FROM THE "JUJI SHIMPO.")

JAPANESE LOAN BONDS.

London, October 20.

Four per cent. and five per cent. Japanese loan bonds have risen 15 shillings.

THE REPAIR OF THE EAST CHINA RAILWAY.

The *Novoye Vremya* states that the Russian Government has been applied to for payment of yen 5,500,000, which it is said is necessary in order to repair the East China railway, which sustained damage by the recent floods.

RUSSIAN SOLDIERS.

According to the Moscow correspondent of the *Times*, Russia will dispatch more soldiers from Poltava and other districts to the Far East.

CARDIFF COAL.

Sixty thousand tons of Cardiff coal have been shipped for Port Arthur, Shanghai and Japan, as the result of which the price has risen.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCTOBER 31ST, 1903.

MARRIAGES.

On the 24th October, at H.B.M. Consulate and subsequently at All Saints' Church, Kobe, by the Rev. G. H. Davies, EDWARD, third son of the late James C. Coutts, of Shanghai, and Fraserburgh, N.B., and Mrs. Coutts, 12 Gledstanes Road, West Kensington, England, to EVELYN, eldest daughter of Wallace Tripp, Sidmouth, Tulse Hill, London.

On the 28th October, at Christ Church, Yokohama, by Rev. W. P. G. Field, GEO. E. BREWSTER, of Yokohama, to Miss HATTIE R. WATSON, of Montreal, Canada.

SUMMARY OF NEWS.

THE Kanagawa Prefectural Assembly will be opened for a week commencing on Nov. 5th.

A WAKAYAMA telegram states that the 43rd Bank decided on Oct. 24th to purchase the Shogyo Bank.

NINETEEN cases of cholera were reported at Nagasaki on Oct. 22nd and five of the patients died.

On the morning of Oct. 27th five persons were killed on the railway at a point between Arai and Sekiyama.

A TELEGRAM from Nagoya, says the well-known theatre, Asamaza, was burned down on the morning of Oct. 27th.

It is stated by Tokyo papers that a temple at Nikko was entered by a thief on Oct. 1st, and some silk hangings were stolen.

JUDGE S. SATO, of the Hiromaye Court, is re-

ported to have committed suicide on the morning of Oct. 25th on the railway at a point near Ichinobe. Insanity is said to be the cause.

ACCORDING to latest information, the second crop of Formosa rice is expected to be worse than the preceding crop, which proved very good.

Two Russian military officers arrived at Nagasaki on Oct. 26th from Port Arthur. They are to be present at the autumn manoeuvres.

THE Osaka Omnibus Company, with a capital of yen 50,000, intends to change its scheme into an electric railway and to increase its capital to yen 500,000.

A NAGASAKI telegram states that a case of cholera appeared on October 23rd among the crew of a junk lying at that port. The disease threatens to extend.

A MILITARY review will take place on the Emperor's Birthday (Nov. 3rd) at the Aoyama training ground where the Emperor will be present, leaving the Palace at 8.30 a.m.

THE shareholders of the Kwansei Railway Company held a meeting on Oct. 25th and approved of the proposal to pay an interim dividend at the rate of 7 per cent. per annum.

AN old man named T. Funada (75) living at Chitosecho, Yokohama, committed suicide on Oct. 22nd by cutting himself in the throat with a knife. The cause is reported to be poverty.

A TELEGRAM from Miyasaki states that two police officers belonging to Miyakonojo station were severely injured by an armed robber on the night of Oct. 25th. Details are unknown.

MARQUES OYAMA and Ito, Count Katsura, Baron Komura, and General Kuroki, Commander-in-Chief of the Western Division, had audience of the Emperor on the morning of Oct. 26th.

THE Tosan Life Insurance Company, Kagawa prefecture, was suspended on Oct. 26th by the Authorities of the Department of Agriculture and Commerce under Art. 11 of the Insurance Law.

THE High Educational Assembly will be opened at the Department of Education, for a week commencing on November 25th. A proposed revision of educational administration and other matters will be discussed.

ACCORDING to a passenger who has arrived at Shimonoseki from Vladivostok, the Russians in the latter place believe generally that there will be no war between Japan and Russia. Four Russian warships are now lying at Vladivostok.

CORRESPONDENCE from Chiba states that fire occurred in the dwelling of a wealthy farmer named Tsuruoka (67) in the district of Ichihara, burning down the building. He and his wife lost their lives. Incendiarism is reported to be the cause.

THE shareholders of the Kyushu Railway Company held a meeting on Oct. 26th, where the statement of accounts for the first half-year's business was submitted. The meeting adopted a proposal to pay an interim dividend at the rate of 8 per cent. per annum.

THE *Nichi Nichi* states that the Czar has decorated the Japanese military officers who attended General Kuropatkin when he paid a visit to Japan. The decorations were conveyed by a secretary of the Russian Legation to the Department of War on Oct. 25th.

REUTER telegraphed to Shanghai that when the body of the late Miss Hickman, the missing lady doctor, was found in an enclosed plantation in Richmond Park, the head was severed from the body, seemingly by rats.

AN earthquake, which must have startled many people, visited Yokohama on Tuesday night at ten o'clock. The initial shake was quite strong, and this was followed after a few seconds by one even more severe, the whole series of vibrations lasting for over a minute.

THE British steamer *Firth of Dornoch*, which was attached by order of the Court on her arrival at Kobe, was released on Oct. 22nd, an amount equivalent to that for which Messrs. Cornes & Co., of Yokohama, are suing, being disbursements and advances, having been deposited in Court the previous day.

ACCORDING to the *Glasgow Herald*, the British Admiralty has received tenders for the construction of 15 torpedo boat destroyers, to have a speed of 25½ knots. Their chief characteristic will be a higher forecastle. The builders were asked to submit designs for the machinery on the forced lubrication principle, so that the working parts of the engines will be enclosed.

On Monday afternoon while a football match was being played on the Recreation Ground, Kobe, between teams for the U.S. gun-boat *Annapolis*, Mr. Nichols, a midshipman, was accidentally thrown by one of the players, the result being that his leg was broken. The young officer was immediately conveyed on board his vessel, where his injuries were attended to.

THE *Fiji* states that the number of *jusai* (criminal) convicts in Tokyo prisons seems to be increasing. There are 350 male and 42 female, and out of them, 18 male and 1 female have been sentenced to death. Beside them, there are also 105 males and 55 females on whom sentence is not passed. Comparing these figures with those of last year, they show an increase of 20 per cent.

THE Pope has just written for publication an interesting letter on ecclesiastical music, especially relating to plain song. In this letter His Holiness insists on the necessity for reform in Church music, and also in its publication. The importance of this second allusion concerns the virtual monopoly which has hitherto been enjoyed in the publication of official Catholic music by the Ratisbon publishers, and seems to forecast a change in the sense of wider distribution.

PROFESSOR KAWAI of the College of Agriculture who recently returned from a visit to Formosa, has submitted his opinion to the Minister of Home Affairs. He says that the forests on Nittaka mountain furnish the best materials for the wooden buildings common in the Empire. Many of the *hinoki* measure about seven yards in diameter. The lumber will bring in a large income to the Government when cut and sold. To carry the timber to a shipping port he suggests a railway of about 50 miles for the cost of which about two million yen will be needed.

On Oct. 26th at noon, two trains—one from Nagoya at 10.40 a.m., and another from Kameyama at 11 a.m.—collided at Tomita station, with the result that three goods cars were derailed, causing serious damage to the permanent way, while over thirty passengers were more or less injured. They were immediately removed to the military hospital at the village of Tomita. Some engineers and other workmen were sent to the scene from the Yokkaichi station to repair the damage. Traffic was expected to be resumed on the evening of the same day.

KOREA.

Friday, October 23.

Telegraphic communication having now been restored with Korea, news comes across the wires of the usual state of affairs, namely, M. Pavlow's pragmatic activity. The last act attributed to him is in connexion with telegraphs from Korea to China. Last year he gave much prominence to this matter, urging the Korean Government to allow the establishment of communication *via* Wiju between Seoul and the principal places in Manchuria. In April, 1902, he claims to have obtained from the Korean Foreign Office a promise that his application should receive favourable consideration, but since that time nothing has been heard of it, and he is now said to have addressed a strong despatch to the Foreign Office recapitulating the above facts, and adding that, according to current rumours, telegraphic communication actually exists *via* Wiju, but is limited to the use of Japan, Korea and China. He therefore demands that these secret arrangements should cease and that other Powers should enjoy the same facilities as the three States now using the line.

M. Pavlow is a very enterprising diplomatist. Indeed he often conveys to us the impression of a man struggling desperately to retrieve a greatly compromised situation. But we suspect that he is libelled, or at any rate misrepresented, on the present occasion. For it is impossible to suppose him so egregiously misinformed as to be labouring under the impression that telegraphic communication does really exist *via* Wiju. There is nothing of the kind. If he sincerely believe that there is, we can sympathise with his indignation because of the treatment his application has received. But does he believe it? If so, he is quite singular in his credulity.

A few years ago we should all have been hearty supporters of Russia's persistent endeavours to bring Seoul within the circuit of her East-Asian telegraphic system. They have been very persistent efforts. First an essay was made in the direction of the Tumen River. Poles were actually erected and wires were about to be stretched when the Koreans interfered in an unusually vertebrate manner. Then followed the proposals for re-opening the Wiju-Manchurian line, which was operated during the China-Japan War. Then came the essay to lay a cable across the estuary of the Yalu, where, once more, the Koreans undertook an uprooting campaign. Then things reduced themselves to a signal-station at Tho Yong-po, which station also has no right to be there. And now M. Pavlow reverts to the Seoul-Manchuria line *via* Wiju. Telegraphs and railways used to be regarded as the most useful factors of material progress, but of late years they have assumed the character of the most effective instruments of imperial aggression, and it is by Russia that they have been invested with that character. No longer, therefore, can we blame any Oriental Power that hesitates to be brought within the sphere of these mechanical conquerors.

The opening of the first section of the Seoul-Fusan Railway took place on the 20th instant, in the presence of a large number of official and non-official Koreans and of the Representatives of Japan, England, Germany, Russia and China. The section opened was about 20 miles in length, from Yong Teung-po to Su-won, which latter town lies between Seoul and Yashan, the scene of the first fight between Japanese

and Chinese troops in 1894. Everything passed off most successfully, according to telegraphic reports received in Tokyo. The opening train travelled at a rate of 15 miles an hour—a very modest speed, so that the distinguished passengers had ample leisure to inspect the region through which they passed.

Saturday, October 24.

Mr. Shimura, special correspondent of the *Nichi Nichi Shimbun*, wires to that journal that the Japanese Secretary of the Peking Legation, Mr. Hagiwara, and his suite, among whom was Mr. Shimura himself, were prevented by the Russians from landing at Yong Am-pho, and had to proceed up the river and land at Wiju. It will be remembered that Mr. Shimamura was despatched from the Legation in Peking to investigate the state of affairs on the southern bank of the Yalu and to compile a report. He was therefore on official business and doubtless carried all the necessary credentials. If therefore the above incident be not subsequently explained, it will assume a grave character. The conjecture is that the Russian objection to foreigners' presence at Yong Am-pho is connected with the alleged fort. This was recently supposed to be only a signal station, and it is now understood that the authority for that interpretation was the military attaché of the British Legation in Peking, whom Sir Ernest Satow had sent to Yong Am-pho to investigate the facts. Doubts subsequently arose, however, and were soon strengthened by the extreme secrecy imposed by the Russians—secrecy so strict that a Korean who attempted to ascend the hill on which the apocryphal edifice stands, is said to have been killed on the spot by the Russian sentries. A Japanese subject, however, managed to ascend, and his verdict, which the *Nichi Nichi*'s correspondent telegraphs with full credence, is that beyond all question a fort has been built.

It is further telegraphed by the same correspondent that two Russian vessels from Port Arthur, each of over 2,000 tons, are anchored below the island in the Yalu, and have on board some Russian officers in uniform who appear to be directing the active communications taking place between the vessels and Yong Am-pho.

Nevertheless complete calm prevails at Wiju and in its neighbourhood. The five Japanese gendarmes recently despatched from Seoul for the protection of their nationals' life and property in Wiju have arrived at that place, and have been received with great joy by the Japanese inhabitants. Five men are a veritable drop in the ocean, but the sight of a friendly uniform is welcome in times of peril.

The military attaché of the British Legation, who has been inspecting the state of affairs in the Yalu Valley, has now finished his work and set out on his return journey. If it be true that he pronounced the work on Yong-an-zan to be only a signal station, very explicit evidence will be needed before we can agree to consider it a fort.

It is stated that the question of the Belgian Adviser to the Korean Court has been settled in the sense that this gentleman shall be appointed adviser not to the Court but to the Department of Home Affairs, and that his emoluments and official position shall be the same as those of Mr. Kato, the Japanese adviser. The general understanding is that when the project of appointing a Belgian subject to the Court was mooted, the Japanese Minister objected on the ground that if any such appointment were made, the

prior right was with Mr. Kato. This remonstrance seems to have been effective in one respect, though its net outcome is that no foreign adviser at all is appointed to the Court.

It is telegraphed to the *Nichi Nichi* that officials recently despatched from the Korean Foreign Office to make local investigations at Yong Am-pho and in its neighbourhood, have reported the discovery of a site suitable for an open port at a point about four miles below Yong Am-pho. It would be a curious denouement if, Wiju being opened to foreign trade, a place for its port should be found below Yong Am-pho. The latter would then lose much of its importance.

It is noteworthy that *The Korea Review*, generally well informed, says that on August 22nd the Korean Government decided to make Wiju an open port and to place a custom house at Yong Am-pho. The magazine adds that the distance between the two is about the same as that between Pyongyang and Chinnam-po. If the Korean Government came to that decision two months ago, it has seen reason, apparently, to be slow in giving effect to it.

Telegrams to the *Fiji Shimpō* relate the conclusion of the electric-railway riot in which a Japanese postman was injured and the store of a Japanese merchant, Asada, was wrecked. The Korean Minister of Foreign Affairs has addressed to the Japanese Representative a despatch saying that the matter has been fully investigated, and that as strict injunctions have been issued to prevent any recurrence of such lawlessness, it is hoped that Japanese subjects will pursue their callings in confidence and tranquility. Nothing is said in this despatch about the question of indemnity, but that, doubtless, will be speedily settled. The despatch admits frankly that soldiers were engaged in the riot.

The recent crossing of the Tumen River by a Russian force is said to have been prompted by a rumour that a Japanese man-of-war had entered Yong-kwi Bay, which is a fine roadstead in Hamyong-do. It having been ascertained, however, that the man-of-war was a myth, the Russian force withdrew. Such is the story told by correspondents of the *Fiji Shimpō* and the *Asahi*. A strange story truly, for it indicates that the Russian officers beyond the Tumen regard themselves as guardians of Korean territory on the other side of the river, and are prepared to employ armed force for the purpose of discharging their duties of guardianship. We take leave to regard the whole tale as apocryphal.

From Chinnam-po comes news that although for a time men's minds were greatly perturbed by the arrival of Japanese subjects who had withdrawn from Wiju very much in the garb of fugitives, confidence has been restored thanks to official representations, and things are now in a normal condition. Owing, however, to apprehensions of war between Japan and Russia, business is virtually at a standstill. The same story on a lesser scale might be told of many places where Japanese are engaged in trade and industry. One can not be surprised that they are impatient for a settlement of some kind, and that the requirements of Russia's imperial expansion grow daily less tolerable in their eyes.

Sunday, Oct. 25.

It will be remembered that some time ago two Japanese subjects were wounded near Wiju, a raft of which they were in charge having been previously seized. The public at once jumped to the conclusion that this

outrage had been perpetrated by Russians; a not unnatural inference seeing that the Yalu Valley's timber enterprise was virtually in Russian hands. But subsequent investigations go to show that the Russians had nothing to do with the affair. The seizure of the raft was effected by Korean soldiers belonging to the local force, and at once the two Japanese in charge, Maki and Yoshina, repaired to the quarters of the officer commanding the troops in the district, and obtained from him a written statement denying that the seizure of the raft had been made by his order. As the two Japanese, carrying this statement, were leaving the camp, they were attacked, doubtless by the guilty soldiers, and received severe injuries, especially Maki, who still lies in a very precarious condition. The important feature of the story is that the officer in local command is said to have avowed his inability to punish the offenders. This avowal was made in writing to the Japanese Consul, and has of course been presented by the Japanese Representative in Seoul to the Foreign Office, accompanied by an inquiry as to how the Korean Government proposed to deal with the matter. Evidently if the officers in command of Korean troops confess themselves unable to exercise efficient control over their men, it will be for the Japanese Government to take the matter into its own hands; an obligation which would be most unwelcome at the present juncture. But whatever may be the conduct of individual Japanese subjects in Korea, the Japanese Government's treatment of all questions affecting the peninsula has invariably been moderate and long-suffering, so that there is a margin of hope that the gun-boat which would inevitably make its appearance upon the scene were certain Occidental States concerned in this complication, will still remain out of sight.

The latest news as to the electric-railway riot is that the Japanese Minister has demanded a sum of 100 yen to pay the medical expenses of the injured postman and a solatium of 500 yen, but the investigation of losses in connexion with the dismantling of Mr. Asada's store has not yet been concluded.

It is stated from Seoul that apprehensions of war between Japan and Russia trouble the people's minds in a constantly increasing degree and have almost paralysed trade. Japanese paper-money has depreciated nearly twenty per cent., and a meeting of the leading Japanese merchants was to be held in the Chamber of Commerce on the evening of the 23rd instant to consider the situation.

From Yuen-san the *Sumida-gawa Maru*, which has just entered Nagasaki, brings news that everything is quiet at that place, but that the Russians are increasing along the banks of the Tumen River, and are behaving in an arbitrary manner, keeping all Koreans at arm's length. It is added that the officer in command—apparently in the Tumen district—has warned all Japanese residents that as the Russo-Chinese Railway will be entirely occupied for military purposes during the next month, they had better lose no time in returning home, but what the Tumen district has to do with the Manchurian railway we fail to see. The *Asahi* says that the *Kobe Maru* from Vladivostok has brought ten or twelve Japanese subjects who had been residing in Habarovsk and Nicholsk. One of these persons alleges that Russian soldiers fired at the houses of his nationals in Habarovsk, and that a complaint on the subject is now being preferred in Vladivostok.

It appears to be true that Mr. Hagiwara was not allowed to land at Yong Am-pho. All the Tokyo papers contain a statement that intelligence of the fact has been officially received, but that particulars are still wanting. There does not seem to be any disposition to make much of the affair which may prove, perhaps, to be easily explicable. Mr. Hagiwara telegraphs from Wiju that all is quiet there.

Tuesday, October 27.

Telegrams from Seoul confirm the news that the Russians at Yong Am-pho would not allow any of the Japanese passengers of the *Wakanoura Maru*, among whom was Mr. Hagiwara, Secretary of the Legation in Peking, to land at that place, and that the ship had to proceed to Wiju. The Japanese Representative in Seoul is reported to have addressed a strong remonstrance to M. Pavlov on the subject of this manifestly illegal act on the part of the Russians, and Mr. Hagiwara was to set out for Antung on the 26th instant to prefer a similar complaint to the officer in command there, under whose immediate jurisdiction Yong Am-pho falls. No explanation is offered of the arbitrary procedure of the Russians. If such a step were deliberately taken, we can only conclude that there is a desire to precipitate a collision with Japan, for it would be obviously intolerable that the Russians should take unlawful possession of an important place in Korea and should close it against all ingress by Japanese subjects. Our conviction is, however, that whoever was responsible for the Yong Am-pho performance acted in excess of his instructions or under some misapprehension, and that the incident will be found to admit of satisfactory explanation.

It is now stated by the Seoul correspondents of both the *Fiji Shimpō* and the *Asahi Shimbun* that the Military Attaché of the British Legation in Peking, who was recently sent to report on the state of affairs in the Yalu Valley, telegraphed to the British Legation in Seoul on the 23rd instant, in the sense that the ambiguous edifice at Yong Am-pho is certainly a fort and not a signal station. It will be remembered that this officer was said to have made a communication in precisely the opposite sense to the Peking Legation.

On the 21st instant—that is to say, two days before the arrival of the report attributed as above to the British Military Attaché—an official sent from Pyong-yang to collect information in the same region, is said to have forwarded a detailed statement to the effect that undoubtedly a fort had been erected by the Russians; that, further, they had marked out a greatly increased area of occupation there; and that their boundary posts now extend as far as Sok-jing. Apparently the plan pursued by the Russians is to do their own delimitation on a liberal scale since the Koreans hesitate to take part in the operation. That is not wonderful. It is an obvious method of teaching the Koreans that "masterly inactivity" may be made to cut both ways.

According to the *Asahi's* correspondence the Korean Minister of Foreign Affairs has addressed a very strong remonstrance to M. Pavlov on the subject of this fort. The Minister encloses copies of reports sent in by the inspector despatched from Pyong-yang and by the local officials of Yong-chong, from which documents the nature of the erection can no longer be in any doubt. He naturally asks what possible occasion there can be for a lumber company to erect fortresses, and he denounces the flagrant

illegality of building fortifications and making military preparations within the territories of a friendly State in time of peace without any permission from that State. The Russian Representative is called on to have the fort removed at once and to take steps for punishing the lumber company's representative, by whom such an illegality has been perpetrated.

These two incidents—the building of a fort and the refusal to permit the landing at Yong Am-pho of the Japanese Secretary of Legation—are scarcely credible. They place the Russians so hopelessly in the wrong that one naturally hesitates to attach any faith to them. We apprehend, however, that there is no longer any room for doubt. Possibly the sudden development of Russian enterprise in the Yalu Valley may have been originally intended as a mere diversion; a make-weight to be thrown into the scale when the Manchurian problem came up for final solution. But the trouble about these feints is that they are very apt to be perverted into real attacks through the precipitancy or indiscretion of those to whose immediate charge they are committed. We do not wish to do M. Pavlov an injustice, but his feverishly pragmatic record scarcely indicates him as a fitting controller of delicate operations. At all events the Yalu Valley is now the arena of imminent danger, for it is there that potentialities of actual collision exist. In Manchuria there are comparatively few points of direct friction. When the history of all these Far-Eastern incidents comes to be written, it will look badly for Russia. At one time it seemed that she had inaugurated a new regimen of civilized conquest by the aid of the iron horse, but in the sequel she descends to the old-fashioned and now unsightly methods. Other Powers have been there before, but not when the world held a photographic lens in its hands.

The chief local official at Kyong Heung—which will be remembered as the place on the Korean side of the Tumen where the Russians last year attempted to carry a telegraph wire to Yuen-san—reports (*Asahi Shimbun* correspondence) that several hundreds of Russians have crossed the river and are firing guns. They allege that they are sportsmen, but a Japanese consular official has arrived from Song-jin to investigate their proceedings. This story looks like a veritable mare's-nest. What on earth should induce Russians to behave in such a manner were they engaged in any enterprise other than sporting? We can scarcely imagine them crossing a river and firing fusillades into the air just by way of defiant amusement.

Li Keun-thaik, who has always enjoyed the reputation of being a Russo-phil, is reported to have received the collateral appointment of acting Minister of War. Li is now Chief of Police.

There is a rumour in Seoul to the effect that M. Pavlov has been recalled, and that the Korean Court has expressed a desire to have M. Waeber appointed as his successor, with the view of completing the purposes of Kin's recent mission to Port Arthur. All this has the semblance of a familiar Korean canard. We need scarcely add that it is supplemented by various rumours as to the purpose of Kin's visit. Some say that he went to "borrow" Russian soldiers! Some that his mission was to inspect the state of affairs in Liaotung with a view to advising his Government whether confident reliance might be placed

on Russia's military preparedness. It is a veritable nest of hypotheses.

It appears that the recently reported depreciation of monetary tokens in Seoul had reference, not to Japanese bank notes, as we supposed, but to Korean nickels. The Japanese merchants have held a meeting and have advised several remedial measures, the most obvious being to peremptorily veto the striking of fresh coins; to refrain from putting into circulation the residue of even those already struck, and to make arrangements for officially redeeming at par the nickels now in circulation. In the context of this intelligence it is alleged that the cause of the depreciation is fear of war, which sentiment has had the strange effect of inducing the Koreans to possess themselves of as much Japanese paper-money as possible and to store it away, the final result being that nickels of the face value of over 2 yen are paid for one Japanese yen note. Later reports from Seoul state that orders have been issued for the suspension of nickel coinage by the Mint and the substitution of copper coins.

Wednesday, October 28.

A report from the Tumen-river district comes to Tokyo *via* Seoul and is given in the columns of the *Jiji*, the *Nichi Nichi* and the *Asahi*, to the effect that 200 Russian soldiers have crossed the river into Korean territory. Unless this be intended as an armed invasion, which is in the last degree improbable, it can have no significance whatever, and therefore we anticipate that the incident will prove a myth.

The *Jiji*'s Seoul correspondent telegraphs—and is confirmed by the *Asahi*'s, though the two reports differ slightly as to details—that a party of Russian soldiers and Chinese mounted bandits have seized a Japanese raft (or rafts) at Kiu Yong-po. There is apparently much confusion about the ownership of rafts when they come floating down the Yalu, and the probability is that this affair will be found to be nothing more than a question of marks. Mr. Hagiwara appears to be busying himself about the general arrangements for indicating and identifying rafts. He is consulting at Antung with representatives of the various interests concerned, and he is said to have found that improper dealings have taken place on the part of his own nationals also.

With regard to the Hagiwara incident, the same correspondent wires that the refusal to allow the Secretary to land at Yong Am-pho was in accordance with orders from Viceroy Alexieff, but that assertion may be dismissed as incredible.

A telegram to the *Nichi Nichi* from Wiju says that on the 22nd instant a body of 30 Russian soldiers made their appearance at that town and were followed by 10 more on the 23rd. These detachments were supposed to have been sent for the purpose of observing the Japanese, and they are said to have been alarmed at the sight of Secretary Hagiwara's large following. They did not actually enter the walled town, and what became of them ultimately we are not told. Wiju is stated by this correspondent to be carrying on its business undisturbed, and the Japanese residents are much gratified by the prospect of the place being opened to foreign trade.

The significant point of this story is that detachments of Russian troops should be moving about in the Yalu Valley. With a fort at Yong Am-pho and a military garrison for their new settlement there, the Russians give every indication of having come to stay.

On arriving at Wiju Mr. Hagiwara immediately opened negotiations, it is said, with reference to the murderous assault recently made by Korean soldiers upon two Japanese subjects, Maki and Yoshinaga, who had repaired to the camp for the purpose of complaining about the seizure of a raft. The upshot of the negotiations was an agreement that the officer in command of the riotous troops should pay an indemnity. This is the officer who is said to have reported to Seoul that he could not control his men and that he desired to take upon himself all responsibility for their act. That was probably a mere figure of speech, an Oriental grace. But the officer has been taken at his word, and his position must be very unenviable if he finds himself at the head of uncontrollable soldiers whose offences he must expiate in his own person.

According to the *Nippon* M. Pavlov, having received the strong representation presented by the Japanese Minister with reference to the indignity offered at Yong Am-pho to Mr. Hagiwara, replied that he could not credit the alleged facts, but that, at any rate, Yong Am-pho lay within the jurisdiction of Viceroy Alexieff and therefore a satisfactory answer could not be returned from Seoul. The *Asahi*'s correspondent, on the other hand, says merely that M. Pavlov showed much concern and was perplexed how to reply. In the *Niroku*'s columns a more definite account is given, as might have been expected. M. Pavlov is there represented as saying that Mr. Hagiwara's landing was not interdicted (*kyozetsu*) but only objected to (*shasetsu*), the reason being that owing to the disturbed state of the district the authorities at Yong Am-pho deemed it expedient to prevent the access of outsiders. M. Pavlov promised, however, that so far as might be consistent with the preservation of peace and good order, the ingress of Japanese subjects would not in future be obstructed. We (*Japan Mail*) take leave to doubt the correctness of all these versions. The first is scarcely conceivable; the second is absurd, and the third depicts M. Pavlov as assuming the very position which the Japanese Government could not possibly recognise; that is to say, arrogating the right to deny to Japanese subjects access to parts of Korea where Russian subjects have full liberty to come and go.

The *Niroku* has a telegram from Seoul saying that Li Keun-thaik has applied for three Russian officers to train the Imperial Guards.

A telegram received in Tokyo on Tuesday afternoon from the Japanese Representative in Seoul conveys final news about the Yong Am-pho affair. It says that in answer to official remonstrances with regard to the refusal of the Russians at Yong Am-pho to permit the landing of Mr. Hagiwara and his suite on the 20th instant, M. Pavlov has admitted the illegality of such refusal, has promised to convey the necessary expression of disapproval to Yong Am-pho, and has engaged that there shall be no repetition of the illegality. It is evident, as most thoughtful persons must have conceived at the time, that this Yong Am-pho incident was the outcome of some misconception. No one could imagine that responsible Russian officials would deliberately have taken a step of the kind. Thus this cloud upon the horizon of peace is happily dissipated. There remains, however, the fort at Yong Am-pho. On the 26th instant it was officially stated in Tokyo that there could be no doubt about the existence

of this fort; that it was a petty work of fortification, but that 5 or 6 guns had been mounted in it. On the other hand, Korean officials—the telegram continued—had received from Russian officers an assurance that the so-called "fort" was merely a place for storing articles of daily use, and the inhabitants of the district credited the truth of that assurance. Many things conspire to suggest that the erection has attracted unwarrantable attention. The placing of guns in position is an act that can not be excused, but, after all, what serious aim could be contemplated by the builders of a little fortress, supplied with feeble artillery, cut off from support and within easy range of heavy cannon on the side of the sea? The probability is that the Russians really contemplated nothing more than a store-house when they put their hands to the work, and that the idea subsequently occurred to them to mount a few gatlings for purposes of protection. Will they dismantle the fortification, however, in deference to Korean remonstrances? That will be the test of their sincerity.

The *Nichi Nichi Shimbun* has a strong article about Yong Am-pho. It points out that Russia's proceedings there are childish petty as to their practical results, and yet they involve a large responsibility. She is pledged by her conventions with Japan not to send troops to the peninsula, and she is pledged by her promise made to England through China in connexion with the evacuation of Port Hamilton not to undertake any enterprises of territorial expansion in Korea. She recognised the binding nature of her obligations on the occasion of Masampo, but her doings in the Yalu Valley seem to indicate forgetfulness of her pledges. Our contemporary writes contemptuously about the whole essay from its imperial point of view, but regards its possible consequences as important.

Thursday, October 29.

It is reported from Kaison that a Japanese named Kubo Goichi (or Moriyuki) was killed by a Korean sergeant of the garrison at 3 a.m. on the 27th instant in an inn, and that he was robbed of a large sum of money, some accounts say 2,500 yen, others 3,000. Three Chinese subjects who were in the lodging-house at the time were wounded. Probably this will prove to have been a case of common burglary.

Tokyo newspapers allege that the Korean Government, replying to importunate inquiries by the Ministers of Great Britain and Japan, intimated on the 27th inst. that the delay in deciding whether or not Yong Am-pho should be opened was owing to the Cabinet Council not yet having concluded its investigations. The Ministers were therefore requested to have patience.

With regard to the latest report of a seizure of a Japanese timber-raft by Russian subjects, the Korean Government is said to have replied to a protest from the Japanese Minister in Seoul, that before coming to any decision, the statements of the Lumber Company's officials must be sought.

The line of telegraph between Wiju and Anju has been interrupted, so that communication is suspended for the moment.

On the evening of the 25th instant communications were restored by the Tsushima-Fusan cable. Our readers remember, of course, that the break-down of this cable was attributed to Russian enterprise, and that the theory received serious attention in some quarters. It need scarcely be said

that the facts did not support any such hypothesis. What happened was that a big fish-hook caught in the cable and pierced it. Certainly it must have been a hook intended to capture a remarkably large fish, but a hook it was.

Friday, Oct. 30.

On the 26th instant the Minister of Foreign Affairs in Seoul addressed an official intimation to the Representatives of Japan and Great Britain in the sense that although the question of opening Yong Am-pho was under consideration by the Korean Government, no decision had been reached, and that the Minister would endeavour to expedite a settlement. Such a communication sounds very futile. It would not have been made were there any prospect of a speedy decision on Korea's part, and we must therefore regard it as a mere sop. Probably the *Asahi Shimbun* is correct when it concludes that Korea, being a highly interested spectator of the Manchurian dispute between Japan and Russia, wishes to preserve everything in *statu quo* until the issue of that complication is definitely known. Korea is a petty State, but even little things are endowed with a troublesome force of inert resistance, and if she will not open her ports, it is not easy to find legitimate means of compelling her.

It is stated that the Russians who seized Japanese timber-rafts at Wiju, claim to have been acting under instructions from Mr. Commissioner Cho. The matter has therefore been taken up in Seoul, where Mr. Hayashi is asking whether responsibility has been properly placed on Cho's shoulders. To the general public it will sound a little quaint that Russian subjects in the Yalu Valley should assign the orders, or the authority, of a petty Korean official in justification of their acts. They pay no attention whatever to the instructions or remonstrances of the Korean Government itself when their own convenience is better consulted by indifference.

Mr. Hagiwara is said to have found it impossible to effect anything at Antung, whither he went to consult with M. Clemetiff about the solution of timber-felling disputes. The Lumber Company's representative averred his inability to enter into any responsible discussion in the absence of instructions from M. Pavlov. Mr. Hagiwara was therefore obliged to proceed (29th instant) to Yong Am-pho, furnished with a letter of introduction from the officer commanding the Russian garrison in Antung to M. Ustomoff (?), the principal official at Yong Am-pho. It seems to be a curious coil, for negotiations with M. Pavlov in Seoul find him unsupplied with the necessary information, and negotiations *in loco* with the persons that possess the information find them unsupplied with authority from M. Pavlov.

Travellers visiting Antung report it to be absolutely in Russian military occupation, and say that all arrangements have been made for going into winter quarters.

A report addressed to Minister Hayashi from Wiju is said to have attributed to Mr. Commissioner Cho Song-hyop a public declaration that all the forests in the whole Yalu Valley belong to the Russian Lumber Company. That is precisely what Russia has hitherto contended and what others have denied. Cho Song-hyop seems to have "taken sides."

The "secret messenger" is again talked of. His name, like his mission, is hard to decipher, its orthography varying from day to day, but we are at least justified in

asserting that he is a "Kim." An attempt is said to have been made to cover up his tracks by spreading a story that he had gone to Chhollado on official business, but the newsmongers affirm that he turned up at Seoul on the 24th instant and proceeded to Port Arthur on the following day by a Russian war-ship, bearing a letter from the Korean Minister of the Household to Viceroy Alexieff. The purport of this epistle is said to have been a request for Russian assistance, inasmuch as Korea found herself confronted by a crisis threatening her integrity, which she had no competence to protect. The framers of this story add that it is another device of M. Pavlov to entangle the Korean Government. We do not believe that M. Pavlov wastes his time playing such childish pranks.

On the 28th instant the contract engaging a Belgian subject to be Adviser to the Korean Foreign Office was signed in Seoul, according to the *Fiji's* correspondence. The term of service is 3 years; the salary is 600 yen monthly together with house allowance, and the Adviser is to receive the treatment of a high-class official.

Persistent rumours continue to circulate about Russia's doings in the Tumen district. She is said to be building extensive barracks, presumably on her own side of the river. If Russia be doing even a moiety of the things attributed to her, her monthly bill on account of the Far East must be enormous.

CHINA.

Saturday, October 24.

China seems to be sending several officers to attend the Japanese military manoeuvres which take place in Hyogo prefecture next month. We do not doubt that these manoeuvres will be associated by the newsmongers with some warlike purpose, and it is therefore advisable to insist upon the fact that they take place regularly every year at the present season.

The French, according to a telegram from Tientsin, have now restored to China the greater part of the land at that place occupied by them in the sequel of the Boxer trouble. The only remaining foreign occupants of territory are now Japan and Russia.

Monday, October 26.

Prince Ching seems to be standing his ground firmly in Peking. There is no confirmation of the news received a few days ago in Tokyo—news which we ventured to doubt at the time—that M. Lessar had addressed to him a despatch which would have reduced the Tokyo negotiations to a farce and amounted virtually to a declaration of war. Officialdom in the Japanese capital remains ignorant of any such despatch, and it may probably be dismissed as a figment of some newsmonger's imagination. One may fairly assume, however, that M. Lessar is sparing no pains to break down the resolve of the Chinese Government. That is his duty as a Russian diplomatist, since if China could be induced to sign away her own sovereignty in Manchuria, the situation would be greatly compromised for those that are striving to preserve her integrity. It is a very interesting fact that the two Courts in Peking and Seoul are both simultaneously restrained by the influence of Japan conspicuously and of England and America in a secondary degree, from committing suicidal acts—China from agreeing to Russia's new demands and Korea from ratifying the Yong Am-pho lease. Did

either Court give way the path would be greatly smoothed for the great Northern Power, and it must be assumed that M. Lessar and M. Pavlov are exerting all the resources of their ingenuity to accomplish that end. For the moment, however, there are no signs of yielding in either of the Far-Eastern capitals. Japanese diplomacy still controls the situation.

Peking reports, on avowedly good authority, that the Russians on the Liao River—a very vague expression—have trained a thousand mounted bandits and, having given them Chinese costumes, have despatched them to Mukden. It has long been understood that the Russians were utilizing the services of the bandits, doubtless finding that the best way to convert them into law-abiding citizens. This tale, therefore, has no special significance.

It is stated that the Russians have handed over Tien-chwang-tai to the Chinese who have established a custom house there. Tien-chwang-tai is a name familiar to those that recall the incidents of the China-Japan war. It lies on the Liao westward of Yin-kow.

Tuesday, October 27.

Some of the news agencies have supplied a paragraph which appears in several Tokyo journals. It professes to give the exact numbers of the Russian forces now present in Shingking, Kirin and Amur. No doubt the Japanese Head Quarter Staff possesses accurate information on this point, but whether the news agency which has catered for the Tokyo press is in the secret, we can not tell. At all events the figures are these:—

	Shingking.	Kirin.	Amur
Infantry	20,000	15,000	14,600
Cavalry	8,000	7,000	5,000
Artillery	6,000	8,000	5,000
Engineers	1,000	700	500
Railway Guards.....	800	700	500
Totals	35,800	31,400	25,600

In addition to the above there are said to be some twenty thousand disbanded soldiers who would be available in time of need, the grand total thus being 111,800 of all arms. It sounds a very credible estimate. Considering the immense extent of the area occupied, the uncertainty that must exist as to points of attack, and the impossibility of concentrating such widely scattered forces for the purposes of a sudden emergency, one can not say that the above figures make a very strong showing.

Shanghai has been true to itself at this crisis. It has outshone all other places as a manufactory of bunders. On the 12th instant the *N.-C. Daily News* published a telegram from Chefoo dated the 10th, saying:—"The Japanese have occupied Masampo. War will be officially declared noon to-morrow (Sunday)." It would be a pity to consign that fine bit of romance to oblivion, so we reproduce it, though tardily.

Wednesday, October 28.

It is reported to the *Fiji Shimo* from Peking that the southward movement of Russian troops in Manchuria continues, and that some ten thousand men have reached Ta-shi-kiao, advancing down the Valley of the Liao. All military operations in the Liao district must be now growing very difficult.

The two steamers recently reported to be

lying off Stanly Island in the Yalu estuary are now said to have been laden with provisions and other military stores for winter use at Antung and Fenghwan. There had been talk of increasing the forces at these places but no signs of any such step are apparent. It is added that the Russians do not seem to have occupied Takushan. These precautions for winter supplies are naturally interpreted to mean that there is no intention whatever of making any movement in the direction of evacuation until next year at all events. Indeed, unless the Russian troops had withdrawn by the beginning of the present month, there remained no time for overland evacuation until next spring.

It is stated that the Foreign Representatives in Peking have at length agreed to the trial of the *Supao* prisoners by the Mixed Court in Shanghai. This has been a weary business; another illustration of the splendid indifference for time that marks the procedure of Western Powers acting in concert.

Friday, Oct. 30.

The *Niroku Shimpō* publishes a wonderful telegram from Peking announcing, on the authority of the Chinese Representative in St. Petersburg, that the Russian Government's counsels have been finally swayed in the direction of peace, the Empire's military and naval experts having decided that victory would not be assured in the event of war, and that anything resembling defeat would seriously check the progress of Russia's Far-Eastern enterprises. The *Niroku* made a far-seeing venture when it undertook to place itself on sale at a cost of 5 *rin*—or one half of a farthing—per copy and 3½ *d.* per month. The result is that it is now said to have a circulation of 100,000 daily. The proprietor himself claims to have a circulation of 150,000, and last Sunday he and his staff organized a magnificent entertainment at Ueno to celebrate this high-water mark of sales. Considering, then, that its *clientèle* consists mainly of the lower middle classes—among whom are to be included *jimikisha*-men and labourers—it may be assumed that the newspaper does not exercise much discrimination in its methods of catering. That is doubtless the reason why it maintains such an active domestic manufactory of foreign news.

THE ENGLISH UNDERWRITERS.

What can be the cause of the panic into which Liverpool underwriters have fallen, as indicated by to-day's telegrams? It is scarcely conceivable that these sober men of business can have allowed themselves to be misled by alarmist rumours emanating from sensational sources. Really trustworthy journals like *The Times* have not suggested the imminence of war, and it is out of the question that insurance offices in Great Britain can have any special power of forecasting events, or any access to information which is not possessed by even the Japanese Government itself. Besides, even supposing that war did break out within the course of the next two or three months, it is highly improbable that Japanese steamers then *en route* for their own ports would be molested. The action of England and France with regard to Russian merchantmen in 1855; the corresponding action of France with regard to German ships in 1870, and the procedure of Russia with regard to Turkish ships in 1877, may be said to have

established the principle that the ships of a belligerent loading at the ports of another belligerent, or *en route* from the shores of the latter to those of the former at the moment when war breaks out, are secure against molestation until the time of reaching their destination. It is true that the principle has not yet been extended in practice to the ships of a belligerent loading at, destined for, or *en voyage* from, the ports of a neutral State. Hence we have no precedent to indicate what course Russia might choose to take in respect of Japanese steamers *en route* from Great Britain to the East when war broke out between this country and Russia. But it may reasonably be assumed, we think, that Russia would respect a principle which is manifestly dictated by equity and which will assuredly pass sooner or later into the established tenets of international law. At any rate the point is that war is not imminent by any means, and that no well-informed observers in Japan regard it as imminent. The Liverpool underwriters are strangely credulous.

The *Fiji Shimpō* queries the correctness of Reuter's telegram about the insurance rates demanded by Liverpool underwriters in the case of Japanese vessels. Reuter announced that 25 guineas were refused; that 35 guineas were demanded, and finally that the rate fell to 25. Our contemporary thinks that this must mean 25 guineas per £1000, not per £100. The former would work out at 0.25 guineas or 5.75 shillings per 100 *yen* approximately, whereas the normal rate is 37½ *sen* per 100 *yen*. We are inclined to think that the *Fiji's* calculation also is erroneously stated, but the simple plan is to await further intelligence.

A Yokohama broker assures us that these high rates apply only to goods liable to be declared contraband of war. His own information from England is that rates on ordinary goods are unaltered.

The curiously uncertain attitude of the British public towards the Far-Eastern crisis is illustrated by repeated fluctuations in the share-market. Two days ago a sudden and sharp fall in Japanese securities was cabled. On the 28th instant this was followed by a telegram announcing that the 4-per-cents had suddenly leaped up from £79 to £80.10s. and 5-per-cents from £89 to £91.10s. Is Berlin speculating largely in these securities? It looks very like something of the kind, for on more than one occasion when stupidly pessimistic reports from correspondents of English newspapers in Japan have produced a sharp depreciation, Berlin has stepped into the breach with equally silly stories of an opposite complexion. Possibly a ring of shrewd and unscrupulous German financiers have obtained control of an influential section of the Berlin press and are using it to rig the London market. That is not inconceivable. On the other hand, the stupendous ignorance, credulity and prejudice shown by certain German newspapers during the South-African war prepare us for any escapade they may now indulge in.

Negotiations are now pending between H.H. the Sultan of Johore and a Singapore syndicate for the transfer of His Highness's private race-course at Johore, with the object of running gate-money race-meetings. The Sultan's recent visit to Australia so impressed him with the success of this system of race-meetings that he the more readily entered into negotiations for the transaction mentioned above.

THE SITUATION.

Saturday, October 24.

The goings and comings of leading statesman and especially the return of Marquis Ito to Tokyo, which took place on the 22nd instant, inspire the usual stock of rumours. People talk of a council in the Palace and of a meeting of the *Genro* to discuss the situation, now supposed to have become very grave. Others affirm that troops have been placed under orders for Korea and that the steps preliminary to their despatch are being actually taken. But, as a matter of fact, the situation is unchanged, and the sending of troops to Korea is, for the present at all events, a figment of the newsmongers' imagination. We do not pretend to know anything about the exact nature of the negotiations or about the causes of delay. But as to the negotiations, they are in the hands of men sincerely, and mutually anxious to find a pacific solution, and as for the delay, though it may seem long when counted from the first symptoms of Russia's resolve to remain in Manchuria, no one can honestly say that the time hitherto devoted to their task by the plenipotentiaries in Tokyo has been at all out of proportion with the gravity of the work. Our own information goes to show that the last conference between Baron Komura and Baron Rosen took place on the 14th instant; that since then they have not come together, and that their next meeting will probably be two or three days hence.

Nagasaki wires that a number of suspicious Russians have arrived: men who do not answer the description of merchants or travellers. They are consequently labelled "beware" by the correspondent who wires to the *Shogyo Shimpō*. Why "beware" we should like to know? The coming and going of Russians in Japan need not disturb any one.

All the Tokyo papers allege that Baroness Rosen is about to leave Tokyo for home. No inferences are drawn; but that is only a question of time. We happen to know, however, that the statement is baseless, the Baroness having no such intention.

Monday, October 26.

A meeting of statesmen took place in the Premier's official residence on the forenoon of the 24th instant. There were present Marquises Ito, Yamagata and Oyama, Counts Inouye, Matsukata and Katsura, Baron Komura, General Terauchi and Admiral Yamamoto. Of course it is not known what passed, but some Tokyo newspapers undertake to explain that the object of the meeting was to assure unanimity with reference to a point which creates a deadlock in the negotiations. Others say that the conference with Russia has developed phases which, though not unwelcome to Japan, would scarcely be reconcilable with the terms of her English alliance. Others allege that the purpose of the assembly was merely to confirm a consensus which had been reached with some difficulty. The upshot of the matter is that all these newspapers are merely drawing a bow at a venture, and that the *Genro* and other statesmen are keeping their counsel as carefully as they have hitherto done. We may observe that as there has not been any meeting between Barons Rosen and Komura since the 14th instant, it is not conceivable that any new difficulty has yet openly presented itself. Our own conjecture would be that inasmuch as plenipotentiaries never spring surprises on each other, but always take care—assuming them to be desirous of a settlement—that cardinal questions shall

be solved outside the conference chamber, which thus become a place for confirmation only, the nine statesmen who met at the Premier's on Saturday had to debate the conditions the Russian Representative will formally state to Baron Komura at their next meeting, which is expected to take place very shortly, if not to-day. The statesmen were in conclave from 10 a.m. until 5 p.m., so that they must have found much food for discussion.

The *Yomiuri Shimbun* has an extremely thoughtless article, which consists chiefly of silly invective against the interference of the Elder Statesmen in the empire's foreign affairs. It calls them "decrepit and brainless" (*suizan nuno*) individuals, and urges that instead of having recourse to such bruised reeds, such bald-headed obsoletes, the Cabinet should appeal to the strong-hearted nation at large. Surely it is curious to find a Japanese newspaper writing in such strains about the men that have made modern Japan, and that too during their life-time. We judge that kind of temper to be essentially a Japanese characteristic; the disposition to thrust aside grey-headed mature wisdom in favour of giddy, callow youth. It is a relic of the days when Sanemori dyed his beard for the sake of going into battle; a relic of the fighting feudal era when brawn and muscle counted more than experience and brain-fibre. The *Kokumin*, with a higher sense of the situation, notes that the *Genro* are an essential product of Japan's modern history and that she can not dispense with them. Very thankful may she be—we venture to add—that some of them are still left to direct her counsels.

Wednesday, October 28.

The fifth meeting between Barons Rosen and Komura took place on the 26th instant. Its results are not accurately known but an impression prevails that the two Powers are gradually drawing together, though we have to warn our readers that it is only an impression. The *Fiji Shimpō* relates that at the meeting on the 8th instant—which was the third—the gulf between the negotiators was very large, and as neither side showed any disposition to yield, a dangerous situation existed. When the Plenipotentiaries met for the fourth time on the 14th, however, it appeared that Russia was disposed to be more conciliatory, and although no details are known about the fifth meeting on the 26th there is an idea that an *entente* is nearer than before, and that whatever obstacles may be put in the path of peace by the man at the front, the two Governments will succeed in finding a pacific exit from the dilemma. This result will not be immediately attained, however. There will be some delay and several conferences, and a renewal of war scares may be anticipated from time to time. The *Fiji*, however, appears to have little doubt that war will be avoided.

BANKS IN TOKYO.

Tokyo journals give the following figures showing the sums now lying idle in the principal banks of the capital:—

	Amount unemployed. Yen.	Amount of bank's deposits. Yen.
Mitsui Bishi.....	3,042,792	13,409,802
First Bank	2,841,951	11,711,414
Mitsui Bank	1,728,539	11,499,397
Fifteenth	1,449,938	13,972,358
Nakai	1,176,154	—
Yasuda	1,090,040	12,370,007

POLITICAL NOTES.

Monday, October 26.

There is a suggestion in some quarters that Viceroy Alexieff's sudden visit to St. Petersburg is subjective rather than objective; in other words, that he wants to go there rather than is wanted to go. This new hypothesis assumes that the division of councils in Russia hampers the hands of the Viceroy and renders it impossible for him to assume a definite attitude towards Japan. It does not greatly matter which construction we accept. Each has virtually the same practical result, namely, that the Viceroy's visit to St. Petersburg is an event pregnant with the gravest consequences for Eastern Asia. We are forcibly reminded of Muravioff's celebrated journey to the Russian capital in 1853, and of the memorial he presented to the Tsar on that occasion, a journey and a memorial which had as immediate result an imperial order for the occupation of Saghalien, and as later consequence the annexation of the whole region between the Bureya and the sea.

The stock exchange in Tokyo has recovered from the partial panic that overtook it a few days ago. It would seem that the news of Viceroy Alexieff's journey to St. Petersburg was the proximate cause of the alarm, but that people have now come to regard the prospect with calmer minds, and to perceive that there is still a margin for diplomacy.

Tuesday, October 27.

Rumours of warlike preparations are in the air. Thus we read in vernacular journals that the neighbourhood of Tsushima has been protected with torpedoes; that steps are being taken to train physicians and nurses of the Red Cross Hospital in field duties, and so on. All these things would be mere ordinary precautions, and no sinister inference need be drawn from them. Japan is bound to be ready, and she has been ready for some time. That her preparations have been made quietly and without any symptoms of fuss or disturbance, is merely a proof of the completeness of her organization.

Wednesday, October 28.

There are symptoms of great loss of cohesion in the ranks of the *Seiyu-kai*. It was always predicted that so soon as the autumn elections for communal assemblies were over, several of the local organizations would fall to pieces, and this prediction has now been verified. It is unnecessary to state in detail the places where disruption has occurred. Our readers do not require to learn more than that the *Seiyu-kai* may be said to have lost the allegiance of the whole Hokushin district. The Hiroshima branch of the Party has also broken away. These incidents, happening on the eve of the opening of the Diet, suggest that the *Seiyu-kai's* majority in the Lower House may be much reduced.

Thursday, October 29.

Professor Kanai—one of the Seven Belligerents—delivered a lecture before the *Tōhōkyō-kai* on the 25th instant. It was a very interesting address, because the Professor, instead of limiting himself to vague generalities, went into detailed calculations. He insisted, of course, that war is essentially necessary, his contention being that in no other way can the Manchurian question be solved so as to give permanent satisfaction to Japan and peace to the East. Thus much

premised, he proceeded to deal with the apprehensions of pessimists who allege that Japanese finances could not bear the strain of war. These people pretend that the country is not prospering, but on examination the holders of such a view are found to be not real men of business but pseudo-traders (*kyōgyō-sha*) and speculators (*tōhi sharyū*). Facts altogether belie their allegation. Thus, during the past ten years, the number of ordinary banks has increased four-fold and that of savings banks seven-fold, while the capital of each has quintupled. There has also been an immense increase in the capitals of manufacturing and mercantile companies, and the savings of the nation have become 24 times greater than they were. Under such circumstances there could be no difficulty in collecting war taxes or floating bonds, especially in view of the great sums now lying idle in the banks. As to the actual cost of war, the experience of 1894-5 was that a Division of the Army could be kept in the field for one month at an outlay of 2,200,000 *yen*. Since that time a much more economical system has been elaborated, especially in the matter of transport, a corps of soldiers having been organized for that purpose to take the place of coolies. It would therefore be safe to put the outlay now-a-days at two millions. Less would probably suffice but certainly two millions should cover everything. Now military experts say that 8 Divisions (about 160,000 men) would suffice for the Manchurian campaign. Thus there is here an outlay of 16 millions per month or 192 million *yen* annually. The Navy would not require one half of that amount on the most liberal estimate. Allowing one half, however, then the outlay on account of the two services would be 280 million *yen*, in round numbers, in one year. No one can seriously imagine that Japan is incapable of putting up that amount. She could do it with ease. Such is Professor Kanai's view.

The *Asahi Shimbun* has undertaken the same calculation independently, and we find that the gist of many elaborate estimates made by it, always on the basis of the war of 1894-5, is that the total expenses for one year need not exceed two hundred millions of *yen*. Yet another estimate has been made by an anonymous member of the *Seiyu-kai*. His figure is 300 millions. There is thus a difference of 100 millions between the lowest and the highest calculation. Nevertheless the results are sufficiently close to suggest that all three estimates are approximately correct.

The *Shogyo Shimpō* complains that Russia seems to be bent on a policy of delay. The decisions of the home government are submitted to local officials, and the modifications made by the latter have to be again considered in St. Petersburg. Finally, if anything inconvenient happens, the responsibility is put upon the man at the front and everything has to be commenced over again. Our contemporary points to the summoning of Viceroy Alexieff and M. Pavlov to St. Petersburg as examples of this shifting of responsibility. We can not wonder that the Japanese are becoming impatient, but, after all, the interests at stake are enormous.

There has been another marked fall in the London quotations for Japanese bonds. The five-per-cent. bonds of last year's fifty-million issue have depreciated by $\frac{1}{2}\%$, and were quoted on the 27th instant at $\pounds 89$, while the four-per-cent. fell to $\pounds 79$. These quotations indicate war rumours of course.

Friday October 30.

A Russian journalist—representing the *Amur Vedomosti*—paid a visit to the office of the *Nichi Nichi Shinbun* on the 27th instant and declared that the main cause of trouble between Russia and Japan was English incitement. The naughty Britisher was egging on the innocent Japanese to fly at the Bear's throat, John Bull looking to line his pockets out of the expenditures of the belligerents. This gentleman—whose name appears to be Sozonow—is stated to have charged Dr. Morrison with telling Mr. Inagaki that if Japan wants to be classed with first-rate Powers, she must fight Russia. Of course we entirely sympathise with M. Sozonow's attempts to throw oil upon the troubled waters, even when the oil takes the form of slimy falsehood. But if he be himself a man of any intelligence and if he credit the Japanese with possessing any intelligence, is not this device of his a little too thin? How has England sought to incite the Japanese nation? Can Mr. Sozonow point to even one English journal published in Japan that has advocated war? And does he really pretend to think that such incitement—even supposing it to be a reality, which it is not—would weigh for the value of a feather in the scale against Russia's wholesale aggressions and defiant violations of her treaty engagements? M. Sozonow had better try some other kind of motley. The suit he now wears does not fit him at all.

There was a great meeting of Tokyo journalists in the Kanda Kinkikan on the afternoon of the 28th instant. A thousand people are said to have been present, but of course the majority of these composed the audience and were not directly connected with journalism. Many speeches were delivered. They are not reported in detail, however, and we can only say that, judging from their titles, their general import was warlike. Mr. Taguchi, the well-known and widely respected economist, appeared first upon the platform. He took for subject "the time for becoming a great nation" (*daikokumin taru no jiki*). Mr. Nakajima Kiso followed with "the relations between war and trade;" Mr. Takahashi Tokuyei lectured on the "uneasiness caused by the Katsura Cabinet's foreign policy;" Mr. Kubo Juichiro on "the nation's spirit;" Mr. Otani Seifu on the theme "settle it at once;" Mr. Muramatsu Tsuneichiro on "the calamity of a century;" Mr. Onjoji Kyoshi on "what are conditions, what is the cost of war;" Mr. Uyejima Nagahisa on "one route only;" Mr. Kuroiwa Shuroku on "the energy I believe in;" Mr. Fukumoto Sei on "we have the right to fight;" Mr. Miyagawa Tetsujiro on "Russia would be foolish to fight, Japan foolish not to fight;" and Mr. Ooka Ikuzo on "cautions preceding war." The nature of the opinions ventilated will be gathered from these topics. Another big meeting is to be held in a few days.

"THE BAD OLD TIMES."

Mr. George Jacob Holyoake, in his 87th year, has written an article for the *Fortnightly Review* upon the old times, contrasting them with the new. He is no "laudator temporis acti," as, according to the Horatian maxim, he should be. On the contrary, Mr. Holyoake is the most contented of men, and proceeds to give excellent chapter and verse for the faith that is in him. A man who has lived through more than eight decades has a right to an opinion; and this old-man-eloquent bids all grumblers stay their tongues, and be thankful that they

were not born even fifty years earlier than they were. It is all stuff and nonsense, says Mr. Holyoake in effect, to pretend that England was half as good a place to live in under King George the Third as it is under King Edward the Seventh. In every possible way we are all better off than anybody, even the most favoured, was then. Why, our grandfathers could not get a light in the night without striking a flint and steel, which not seldom failed to produce the desired spark. What a world of trouble and bad temper has been removed by the simple invention of the lucifer match! Chloroform and other anæsthetics have killed pain; and in a hundred ways living has been rendered so much easier than it was, that we go on to live much longer than our ancestors, and insurance offices have to extend the range of their calculations to meet the new conditions. And if the grown-ups have come into possession of a wider kingdom of comfort and ease, how fares it with the children? For them also the world of the 20th century is fuller of delights and possibilities than it was for their grandparents. The hideous nightmare of the Edgworthian tradition has finally passed away, and the inmates of the nursery are treated as rational beings almost from the time when they emerge from the age of crawling and staggering and toddle erect. It is safe to say that in the majority of homes of to-day, parents enter more fully into the lives of their children, share more freely in their thoughts and hopes and strivings than ever was known before, while seldom has an age dawned upon this weary world that has seen more genuine, thorough-going companionship between parents and children than is to be seen nowadays. The contrast between family life as reflected in the pages of early Victorian writers and that which is passing under our own eyes, makes even the least reflecting among us return thanks that our lot was not cast in the "good old days."

HONGKONG.

The Hon. F. H. May, C.M.G., Colonial Secretary of Hongkong, will administer the government of the Colony during the interregnum between the departure of the old Governor, Sir Henry Blake, in November and the arrival of Sir Mathew Nathan, the new Governor, in the spring. According to instructions issued in 1896 under the Royal Sign Manual and Signet, the Senior Military Officer in command of the regular forces in the Colony should assume the administration of the Government when the office of Governor is vacant or the Governor is incapacitated or absent, shutting out the Colonial Secretary altogether. These instructions, perhaps, did not contemplate the contingency—which has arisen through the departure of General Gascoigne, and the non-appointment, so far, of a successor—of the General Commanding the Troops being absent from the Colony at the same time as the Governor, and so the King has been pleased to issue royal letters patent authorising Mr. May to fill the position. Mr. May well deserves the honour thus conferred on him. An Irishman of Irishmen by birth and disposition, the best years of his life have been given to Hongkong, where he has risen from the position of cadet to the highest post in the public service. He made his mark as Chief of Police, but his career since then has won the favour of Hongkong residents, and the announcement of his promotion has drawn forth expressions of approval on all sides.

WEARERS OF THE MOTLEY.

The remark of a public school master of some eminence that "there can be no doubt that God gave us fools for our enjoyment; but we should show economy in the enjoyment of fools," has brought forth a most delightful essay in the *Spectator*. Our contemporary, after alluding to the custom of the Middle Ages, when every great man kept his own fool to divert the tedious hours, passes on to a consideration of the fools to be met with in the present year of grace. Clever fools are very much the fashion nowadays, it says. "Literary society keeps quite a number for its amusement. In mental feature they favour their spiritual progenitors in motley. They write a great deal, and they talk a great deal, taking themselves very seriously all the while, which is no doubt part of the game, and would do no harm if certain other people did not take them at their own valuation. Their *metier* is to say silly things in a clever way, and the chief secret of their philosophy is the deduction of rules from exceptions. A great license is allowed them in accordance with motley traditions. Current morality is an easy butt, and sometimes they say things which would not be permissible, even in an age so little strait-laced as the present, except to a professional fool. Often a keen sense of literary form gives a more legitimate piquancy to their comic casuistry. Sometimes their audience is tempted to wonder whether they are able men who are playing the fool; but this charitable supposition is only possible when they are very young. 'The fool' is a dangerous game to play; before long a man slips from feigning to reality. Lately the world has become a little too prodigal of its flattery to such as these, who should certainly be enjoyed with economy. Grinning through a horse-collar is not a wicked, neither is it a dignified, performance; and if a wise man enjoys now and then to see it done, he should at least show some moderation in the indulgence of his taste. There are, of course, other and far more respectable types of clever fool. There is the fool who is apparently inspired now and then to say a really shrewd thing. He is often described by his intimates as "no fool." There is a link missing in his reasoning apparatus. He cannot take his hearer straight from one point to another; neither can he follow an argument from end to end. Now and then, however, he, or more often she, makes most astonishing leaps; and we have known wise men who could pick the brains of such fools as these to immense advantage, and who have been able to make quite a collection of scintillating sayings with which to adorn their own more reasonable productions. Too much admiration turns the heads of such fools. They try to manufacture verbal gems in imitation of those which come naturally to them, and the man who makes them increase their stock will only give himself double trouble in selecting the genuine article. Into the 'clever fool' class come two very rare and superior kinds. One may live a lifetime and not encounter more than one of each. But they do exist. We mean the learned fool and the fool of culture. The learned fool is a 'fact glutton,' if we may be allowed the expression. He has more appetite for knowledge than power to assimilate it. Kept in his place he is useful as a kind of index to other men; but once let him get what Scottish people call 'above himself,' and he will begin to use his facts as missiles and become a great intel-

lectual danger. The cultivated fool has lived in the hothouse atmosphere of a highly cultivated clique till he literally smells of culture; but the source of the aroma is not in his own mind, and if put out to air among philistines for a sufficient period he will lose all traces of his much-prized artificiality. It is a great bore to be obliged to observe for any length of time the antics of this type of fool; but they are amusing sometimes to tell about. Very few 'silly fools' afford any pleasure to the spectator. Yet out of two types of them some dangerous entertainment may be derived. The first of these two is a pretty woman,—an inhabitant, perhaps, of the 'fool-frequented fair of Vanity.' But she may thrive anywhere in any station. As a rule, she is not such a fool as she looks, and her mind is capable of some expansion, at least in one direction, the direction of self-interest. The man made to match her is generally aware that folly is his most remarkable quality, and as he likes to be remarkable for anything, he exaggerates it all he can. Did he omit to act in an ineffably silly manner no one would notice his actions at all. Those who enjoy the sight of his folly are to a great extent responsible for him, and as he is an entirely useless member of society the responsibility is pretty heavy."

"THE ACADEMY."

Home papers just to hand bring the news that Mr. Shore, son of the late Canon Teignmouth Shore, the well known divine, is succeeding Mr. C. Lewis Hind in the editorship of the *Academy*. The change is one of considerable interest to all who take any thought for English literary opinion, for the *Academy* under its late editor kept up a very high standard of criticism. Mr. Hind had occupied the editorial chair for just seven years. His direction of the paper, begun in October, 1896, was accompanied by a radical change in its character: hence some writers still refer to the "old" *Academy*, or to the "*Academy* (old style)." By the changes then instituted, the *Academy* ceased to be an organ of high and dry scholarship, pure and simple, and became a plastic literary paper concerning itself primarily with "belles lettres," and bringing to its work the quick and more picturesque play of younger minds. By his direction of the paper, Mr. Hind made a journalistic record of much interest. With notable skill he provided each week a journal of literature and art which appealed to some thousands of readers not professedly or professionally interested in literature, but which at the same time was read with admiration by critical men and women. For a long time, indeed, the *Academy* has been the ideal paper for young litterateurs and students of modern literary movements. Many of its present readers are probably ignorant of the fact that the paper was founded by the present Mr. John Murray, the publisher. Its first number appeared on October 9th, 1869. A writer in *T. P.'s Weekly* adds that no editorial bow was made, no statement of hopes and aims was offered. A little band of scholars had encouraged the enterprise, and the new journal made its quiet appeal to those who were willing to pay 6d. a week for an organ of learning and advanced criticism. Such a journal necessarily did not touch the big reading public. From first to last, as we have pointed out above, the old *Academy* might have drawn from the ordinary man the naive exclamation of Stevenson's friend, when he opened the *Athenaeum*: "Golly, what a paper!"

SIR FRANCIS PLUNKETT.

There are many residents of Tokyo who still retain pleasant recollections of the Hon. Sir Francis Plunkett, who represented his Queen at the Court of Japan some years ago. The visit of King Edward to Vienna the other day earned for Sir Francis another high decoration, and home papers all concur in remarking that it was deserved. Few British diplomats can boast of so wide and varied a range of practical experience as that which has fallen to the lot of the King's Ambassador at Vienna. From Tokyo to St. Petersburg, from Copenhagen to Florence, and from Constantinople to Washington his diplomatic service has extended, and more often than not his term of office has found him confronted with situations of exceptional difficulty and responsibility. The youngest son of the ninth Earl of Fingall, Sir Francis was born in 1835, and in his childhood visited, with his parents, many places which were afterwards to be the scenes of his adult activities—Brussels and Rome amongst others, at the latter of which places he had the rare experience of encountering Mezzofanti, the multi-tongued cardinal, who displayed the extent of his linguistic talents by addressing the family in the ancient language of their native land. At Brussels he remembers seeing Mr. Augustus Craven and Charles Lever (the family doctor—in a blue coat), as well as Leopold I, and Queen Louise. Sir Francis was at Copenhagen during the war between Germany and Denmark, at Vienna during the struggle for supremacy which ended in the invasion of Austria by Germany, and in St. Petersburg during the war between Russia and Turkey. He married in 1870 Miss Wain Morgan, of Philadelphia, and has two daughters, one of whom is married to Count August Fersen Gyldenstøpe, Minister of Sweden and Norway at St. Petersburg, and a descendant of the Count Fersen who figures so prominently in "Un Ami de la Reine."

AN AUSTRALIAN EXODUS.

The Sydney correspondent of the *Globe* declares that the steadily increasing number of departures from New South Wales and Victoria for Canada, South Africa, and even Great Britain, is beginning to awaken alarm in the Commonwealth. "The steamers of the White Star and other lines are continually leaving Australian ports with full passenger lists, and nearly the whole of the passenger accommodation has been booked for several weeks to come. During the first six months of the present year, according to official reports, no fewer than 16,327 persons left New South Wales alone for ports outside the Commonwealth, the emigration exceeding the immigration by 2,116. In addition, there has been a large influx of New South Wales and Victorian population into Western Australia. This is one of the immediate effects of Socialist Labour legislation in the Mother State and Victoria. The people who are leaving Australia are no mere birds of passage. They are mostly a class who have been born or long settled in Australia, many being steady, competent tradesmen; not a few belonging to the ranks of master-craftsmen, others being pastoralists, farmers, station hands—in fact, the very men of whom the Commonwealth stands in most need. Scarcely any are trade-unionists. The non-unionist under the new order of things, has no place in Australia. The New South Wales Industrial Arbitration Court and the Victorian Wages Board

each refuses to recognise his existence. He must either join a trade union or—starve." Later in the course of his letter he remarks: "How different was the situation a few years ago, previous to the advent of the Socialist Labour party in State and Federal politics. As Mr. Reid, the leader of the Federal Opposition, lately pointed out, Australia is the only new country in the world which was not attracting population. Between 1861 and 1891 the additions to the Australian population had been between 700,000 and 890,000, but during the last ten years the excess of arrivals over departures had been only 5,000. At this rate of progress it would take 1,200 years to reach the level attained ten years ago. In the one State (Victoria) where there had been the most legislation to make the country happy, in the one State in which there had been all these efforts to do justice to the working people, wage boards and taxes to promote colonial industries and so on, people had cleared out more extensively than they had out of the other five States. In the last ten years Victoria had lost 110,000 people. Official statistics show that the excesses of emigrants during the periods 1891-1901 were as follow:—Victoria, 112,579; South Australia, 18,219; and Tasmania, 1,948. During the same period the excesses of immigrants were:—Western Australia, 130,133; Queensland, 21,221; and New South Wales, 9,423. With the commencement of Socialist-Labour legislation under the administration of Sir John See, New South Wales began to share the fate of Victoria, and appears destined to lose the greater portion of its most capable population within the next few years, unless the prohibitive restrictions on labour and capital become modified, if not removed. No wonder that thoughtful men, like the President of the Sydney Chamber of Commerce, asks, Has New South Wales ceased to attract the desirable immigrant, the man with more or less capital, or he whose sole fortune is represented by strong hands, a clear head, and a brave, stout heart?"

Our contemporary's correspondent writes in a pessimistic strain, but recent travellers to Australia, some of them old residents of Japan, bear him out fairly fully when questioned regarding the state of affairs in the Commonwealth. Speaking to one of these only the other day, we drew from him the observation that he was disappointed in the race which Australia has evolved during the past twenty years. The men seemed very much below the physical, moral and intellectual standard of the Canadians of the Pacific slope, while the women gave him the impression that the whole object of their lives was the pursuit of pleasure.

GIFTS.

I bring thee lilies, pale, pale lilies,
All wet with the dews of heaven:
Take them, dearest, keep them, sweetheart,
Purest and best of God's gifts to men.

I bring thee love, the songs of children,
Days of sweet peace and deep content:
Undream't of yet are storms and turmoil,
Ill-tuned the voice to grief's lament.

I bring thee tears, so sad, so bitter,
Wring from the heart 'neath stress and pain—
Take them, perchance, to thy soul's healing,
They'll bring back faith and peace again.

A.B.B.

ASTROLOGY.

Astrology still lives. Its tenacity of life is difficult to credit, but "Anubis" continues to edit *Out of the Silence*, wherein he monthly declares his belief in the quaint old phantasy. The September number of the journal says:—"The present Tsar of Russia was born at St. Petersburg a few minutes after noon on Monday, 18th May, 1868; rectified by the events of his life, we believe the exact time of birth was 11½ minutes after noon, but in any case the error, if any, will not affect the accuracy of our prediction. The Sun "Hyleg," or vital spark here, was a little past the Meridian in the 28th degree of Taurus. Mars, the war planet and shedder of blood, was in the 28th degree of his own fiery sign Aries, in which he is very powerful. This conjunction of the luminary with the red planet by converse motion, according to the tradition of ages, portends in the horoscope of a ruler, war, fever or violent death. We print *in extenso* the sum in spherical trigonometry—finished and dated 5.15 p.m., 23rd August, 1901—by which, ever since, we have predicted in print and writing sent all over the world, that the Tsar will be forced into war with England or Japan, or be killed, in the autumn of this year, in any case a very violent and disastrous influence." We (*Japan Mail*) omit the sum in astronomy, contenting ourselves with stating that of the "eight days of danger" indicated by the astrologer—14th and 20th of August, 12th and 25th of September, 10th and 23rd of October, and 6th and 19th of November—all but the two last have passed quietly. Appended to the above quotation is the following note:—"This prediction of war between Russia and Japan (in which we included England and France), appeared in our theory horoscope of the Mikado in *Modern Astrology* for April, 1902. * * * The same prediction was repeated by Merlin, in the *Referee* for August 31st of last year, and as danger to the Tsar or war in October last in this magazine. We repeat that the Japanese will win handsomely and astonish Europe; the Vernal Equinox, early in the coming year at Tokyo, being a most glorious one, Venus exactly culminating in her exaltation *Pisces*, and the sun in conjunction with Jupiter in Aries."

THE TRANSVAAL.

Reuter on Wednesday wired to the Far East, on the authority of the *Standard's* Pretoria correspondent, that the economic situation was daily growing more acute. Some former residents of Japan who are trying their luck in the Transvaal, in recent letters, give some idea of the inordinate cost of living which now rules in Johannesburg, and their news explains the reasons for the bitter cry which is now going up from all parts of South Africa. The big boom which was confidently expected to set in as soon as the war was over has not come along, and there are little signs of its appearance. Labour at the mines is totally inadequate, and though there is much opposition to the idea of importing Chinese to do the work that white men refuse to take up and the South African native prefers to leave to more energetic folk to do, there seems little doubt that the Chinaman must come in to relieve the situation. Meanwhile, for the benefit of housewives who grumble at the ever increasing cost of living in Japan for foreigners, we append a few selections taken at random from a Johannesburg grocer's price list:—Ammonia, 1s. 9d. a bottle (in London

10d.); chamois leather, 3s. 6d. (10d.); embrocation, 3s. 6d. (2s. 3d.); kerosene, 8s. 9d. (3s.); bread, 6d. a loaf (2½d.); milk, 6d. a pint bottle (2d.); candles, 1½d. each; biscuits, 1s. 3d. a tin (6½d.); clothes-pegs, 9d. a dozen (1d.); sardines, 9d. a tin (3½d.); dried pippins, 2s. a lb. (4d.); euchred figs, 5s. per lb. (11½d.); bacon 1s. 5d. per lb. (4½d.); margarine, 1s. per lb. (4d.); matches, 9d. per packet (2d.); oatmeal, 3s. 3d. per tin (1s.); salt, 1s. 3d. a tin (5½d.); soap, 1s. 3d. a box (7½d.). From this casual collection it will be seen that the ordinary expenses of house-keeping in Johannesburg are from 50 to 100 per cent. higher than in England, or about double what they are in Japan. When you add £25 a month for a four-roomed cottage you will not need to be told, says one of our correspondents, that for the present, Johannesburg is not a Paradise for the poor.

A GREAT CHANGE.

An old Far Eastern resident who has been paying a visit to the home country after many years of absence, has been putting some of his impressions into print regarding the changes that have taken place in England during the past quarter of a century. Turning back in memory to the days of his boyhood, which were spent almost entirely in the country, one of the most striking changes that he has noticed is the almost entire absence of the old time harvest customs. They had begun to fall into desuetude in some parts before he left the old country, but some districts still kept them going vigorously. Now even these have given them up, and one can walk almost from Berwick to Land's End without finding a trace of the ceremonies which once attended upon the "harvest-home." A London paper commenting upon the matter says that this great change can only be described as the completion of the process of the commercialisation of agriculture. Many who can look back from middle-age, it continues, will remember harvest as a time of jovial personal relationships amongst the country folk of all degrees. From the morning when the first scythe was put into the first field to the evening when the last load was in and everybody gathered at the harvest-home, it was all a merry-making, a Pagan revelry of good-fellowship and thankfulness for the sunshine and the increase. It is all gone. There is no first-sheaf feasting at harvest now, and only here and there does an old-fashioned farmer keep up the festival of harvest-home. In rural tales written in Fleet-street, and in pictorial art of a certain kind, these things still survive; but in actual fact the old social life of harvest-time in English villages is as dead as the dodo. There is more in this than the disappearance of a cheerful old custom; though that in itself would be grievous enough. For this disappearance is only one indication of the deep fundamental change that has come over English rural life. The old personal relationship between all village classes has vanished. The farmer and his labourers are no longer held together by a sort of a family sentiment. Only the modern commercial cash bond of union now exists between them; they are the employer and his hands. "You have your wages for what you have done; why should I feast you as well?" is the explanation of the disappearance of the old customs. And so the ancient and immemorial industry of reaping the fruits of the earth, which brought down to us from a time before commercialism existed

its sense of personal relationship expressed in festive rejoicing, has yielded at last to the modern spirit. It is true that we still have our harvest festival services, for which the church is decorated with corn and the vicar prepares a special harvest sermon. But everybody feels it to be the poorest sort of pretence for the old lost spirit of common rejoicing and feasting over the completion of a common task. The change was inevitable. The old custom was after all just a bit of surviving feudalism, with a touch of even earlier Pagan feeling in it. Perhaps we may some day attain again to a conception of solidarity and mutual interests in rural life, a new conception based upon common citizenship, when the now much talked of "garden cities" are in the full tide of development.

A ROMANCE OF OLD BYZANTIUM.

Since Sir Walter Scott wrote "Count Robert of Paris"—among the least satisfactory of his historical novels—no novelist of repute, if we except some recent Polish writers—has turned to good account the vast stores of material which accumulated in the archives of the Greek Emperors during the declining days of the Byzantium empire. The announcement that Mr. Frederic Harrison has written a historical romance under the title of "Theophano: the Crusade of the Tenth Century," based upon an episode of Byzantine history at the period of its military glory and greatest power, has therefore aroused considerable interest. To a *Westminster Gazette* interviewer Mr. Harrison said:—

I did at first contemplate a monograph on Nicephorus Phocas, the military hero of the long war with the Saracens of Aleppo in the tenth century; but as I went on with the chronicles in the "Corpus Scriptorum Hist. Byzant," and the recent works by French and German scholars on the Basilian dynasty of the tenth century, I was so much struck with the romantic and tragic character of the story of Constantine VII., Romanus II., Nicephorus Phocas, John Tzimiskes, Theophano, the wife first of Romanus, then of Nicephorus, whom she induced John to murder, that I resolved to see if it could not be told in the form of a historical romance.

Mr. Harrison says he has followed facts closely; his difficulty has been to select topics from the infinite material ready to his hand. In reply to the question, "Do you propose to deal with the Mussulman side of the question as well as with the Christian?" Mr. Harrison said:—

Yes. From my point of view both sides of the great Crusade had very real faith and high aims after their own creed. And the finer spirits in both armies were not blind to this. Accordingly, I seek to do justice to the Spanish Caliph of Abderraman III., the great Cordovan Emperor. The scene, in fact, ranges all over the Mediterranean and Bosphorus, and shifts from Spain to the Euphrates.

The romance, in effect, is an attempt to restore the credit of the Byzantine Empire for the early Middle Ages, and its opening chapters appeared in the October *Fortnightly Review*. They are full of high promise.

"EMPEROR OF THE SAHARA."

The much advertised endeavours of M. Lebaudy, Emperor of the Sahara, have set the French Press seeking for parallel accomplishments; and they have unearthed two worthy predecessors. One was a lawyer of Perigueux, who became the first King of Araucania and Patagonia, where, after the common experience of South American rulers, he was murdered. The other was a private citizen, who founded a Malay kingdom, from which he was expelled by his subjects. M. Menier, the chocolate maker, who might

well take a royal title as king of the island he bought from Canada, is a less romantic but more successful example of the Alexander Selkirk tribe. M. Lebaudy calls himself James I. and he is endeavouring to get negroes from the southern states of the U.S. who are discontented with their present lot, to come to him in Africa where he promises "liberty, equality and fraternity" to one and all. It is stated that he will charter a Cunard liner to convey such emigrants to Troia, his new capital. While in London he will issue through the Press a proclamation to the Powers, notifying the foundation of the Empire of the Sahara. The official notepaper of James I. has been prepared, and bears the following inscription in French on the top of each sheet:—"Empire of the Sahara. Freedom of conscience, strength, work, industry, trade, agriculture," concluding with the rather hackneyed Latin motto:—"Labor improbus omnia vincit." Beneath is a vignette of two lions, contemplating each other, and supporting a shield, on which is seen a ploughman guiding a motor plough. James I.'s "Ambassador-Extraordinary to the Powers" is a young Parisian nobleman. He will reside at The Hague, and all diplomatic relations and business with other Powers will be carried on by him on behalf of the Empire of the Sahara. James I. wishes the neutrality of his Empire to be recognised and guaranteed by the Powers, "at all events, for the next ten years." It is all delightfully thought-out, but we fear that the Saharan Empire has but a short career before it.

NOTES ON CURRENT EVENTS.

Referring to the Rev. R. C. Fillingham, whom it calls "the Brummagem hero of the anti-ritualistic crusade in England, Japan and America," the *Japan Times* says:—"In using chopsticks and eating native food at a table in a foreign-style dining room, the Rev. Mr. F. was guilty of the greatest solecism possible." Why so, forsooth? Are foreigners guilty of the greatest solecism possible when—as is repeatedly the case—they use knives and forks and eat foreign food in a Japanese style dining room? We hold the editor of the *Japan Times* entirely guiltless of penning or approving the "smart" paragraph in which the above appears; a paragraph which also violates the best principles of journalism by using its access to the public ear to bring ridicule on a private individual who has no easily accessible means of redress. But the editor is responsible for the contents of his columns, and we suggest to him that the real solecism is to be found in the outrage of calling Mr. Fillingham "a Brummagem hero." We ourselves do not share Mr. Fillingham's views. In fact we entertain the strongest possible antipathy to the kind of crusade in which he is engaged. But we have no manner of right to question his sincerity or to doubt that the minutiae to which he and his fellow-thinkers attach cardinal importance, really do bulk as largely in their innermost conscience as they themselves allege. There were no newspapers in the days of Confucius, but that extraordinary sage may be said to have projected his intelligence into journalistic days when he said:—"I hate the way in which smartness of speech in men is liable to destroy kingdoms and ruin families."

It is stated that the troubles of Japanese subjects in the Philippines have commenced in a very practical manner. The *Hongkong Maru* carried 190 Japanese labourers to

Manila on the 16th instant. They do not seem to have been prevented from landing, but the heads of the civil administration held a meeting and decided that Japanese labourers should not be employed. It is added that the Foreign Office in Tokyo has consequently addressed a circular to local officials warning them that great care must be exercised with regard to emigrants for the Philippines.

This attitude of the civil administration of Manila is very inexplicable. All accounts from the Philippines agree in stating that a crippling want of manual labour is experienced, and that white labour can not possibly be employed. As for the Filipino, he is generally pronounced to be virtually worthless. Why then should the Japanese be excluded? They appear to be precisely the element needed for developing the islands. This procedure on the part of the civil administrators looks like racial prejudice run riot, but judgment must be suspended until fuller particulars are obtained.

There has been a fatal accident in Osaka in connexion with electric-lighting wires. On the evening of the 23rd at 8 p.m., a tradesman's clerk was engaged in some manipulation of a wire—we do not clearly comprehend the details—when he suddenly fell to the ground. Another man who attempted to assist him shared his fate, and so did a third. Two of the men were killed on the spot. The Osaka Municipality immediately suspended the use of electricity in the district where the accident happened. Their appears to be no doubt that the trouble is attributable to a leakage of electricity owing to a defect in the wire.

Cholera appears to have assumed almost epidemic dimensions in Nagasaki. It is reported that there have been 30 cases since the disease first made its appearance. The telegram is unsatisfactory for it does not explain what is meant exactly by "first made its appearance," and thus we are unable to say how many weeks or days are in question.

The death is announced of Mr. Mizobe Korechika, formerly Governor of Tochigi, whose name was connected with the textbook scandal and whose appeal against a sentence of imprisonment was recently dismissed by the Supreme Court. The unfortunate man died of enteritis in the sequel of typhoid fever.

The foreign trade of Japan for the first nine months of the present year aggregated 453,257,749 yen against 372,929,784 yen for the corresponding period of last year, the difference in favour of this year being 80,327,965 yen. Imports continued to show a considerable excess over exports, the figure for imports being 245,447,127 yen against 207,810,622 yen for exports or an adverse balance of 37,636,505 yen. The excess of imports last year during the same time was only 16,692,728 yen. This year, the bulk of the increase is in imports, namely, a difference of 50,885,871 yen, against an increase of 29,942,094 yen in exports. It is to be noticed, however, that the two staples of rice and sugar alone are responsible for 45,848,954 yen of the total increase in imports.

A post card dated Victoria Falls, Zambesi, August 24, 1903, reached Yokohama on Oct. 21, having travelled by way of Mbanji, Bulawayo and Colombo. It came from Mr. C. Beresford Fox, who is engaged in superintending the erection of the fine iron bridge sent out to South Africa by the Cleveland Bridge Company of Darlington. He says:

"It is to be flung across this wonderful gorge and is 650 feet long, 500 feet span, made of steel (main arch) and is to be suspended 450 feet above the present water level. There are some awful precipices here, down which we lower each other by ropes to fix the foundations. Rockets took the first string across. The Falls are magnificent; incomparable to Niagara; so different, so mysterious and awe-inspiring: the gorge even more so, zigzagging for over 25 miles through solid basalt. As I am in charge of the foundations I shall build good huts and try and get some shooting and fishing. Lions, crocodile and hippo. are quite common, and every kind of buck is obtainable." Mr. Fox's letter will cause many a man of sporting proclivities to envy his opportunities.

Under the heading, "Perils, Yellow and Russian," Mr. Woodruff contributes the following letter to *The Evening Post*:-

SIR:—In an issue (September 7) of one of your morning contemporaries the Hon. Augustine Heard, formerly our Minister in Korea, called attention to the military "yellow perils" there would be should China and Japan join in a close alliance to defend the lives of their nations against Russia and other false friends. When, with the friendly aid of Japan, China had been reformed and taught the arts of Western civilization, what, "is to prevent their marching across Asia and showing their yellow faces, at last the materialized 'terror' in Europe?"

Cannot Mr. Heard and everybody else see that if instead of Japan it were Russia that had taught the millions of Chinese how to fight under its leadership this Russian military "peril" would be a thousand more dangerous to Europe and the world? With the yellow peril there would be Russia and British India to oppose every step on the long journey; with the Russian peril the multitudes under her command from Japan, China and Russia, could march through her own country—not opposed, but actively aided—to the very borders, of India and Europe.

Moreover, should the Oriental alliance succeed in securing decent treatment from the Western Powers no one who knows the two peoples can doubt that in their councils China would be the senior comrade, or that her voice, and indeed the voice of Japan also, would be for world-wide peace. On the contrary, unless the Colossus shall fall to pieces from internal rottenness, it can only be expected that on one pretext or another Russia will try to keep on conquering her successive "neighbours" until she has reached at last the ends of the earth.

If, therefore, the Western rulers are wise they will carefully consider whether Russia's present attempt to absorb China and Japan might not, if successful, prove to be but a prelude to an attempt to absorb Europe and the world.

FRANCIS E. WOODRUFF.

Public Opinion has the following notice of "Hyacinth" by Onoto Watanna, accompanied with a picture of the fair authoress:—

Among all the Japanese romances which have delighted American readers in recent years, including the previous stories by Onoto Watanna, John Luther Long, and others, there is none more delicate, dainty, or charming than this one. It is the tale of the love of a transplanted English boy and girl, and their natures and character are such as to strengthen our belief in the all-powerful influence of environment. The girl, Hyacinth, is so thoroughly Japanese that she will not consent to be classed as English, and the boy is scarcely less loyal to the land of his fathers even after he has visited it. The Japanese woman who was the mother of this boy, the wife of his English father, and the foster parent of the girl, probably had much to do with the love her children felt for their adopted land; she was all that a mother of any country could be. Her home and that of Hyacinth was in the far north of the island empire, where the contamination of civilization had not reached to any extent, and there the pretty romance of which this is the story is unfolded. Everything about the book accords with its tender sentiment—the delicately tinted page decorations and the colour pictures by the Japanese artist, Sano, making an unusually attractive volume.

No less than thirteen Japanese songs are now adapted for the phonograph. They are *Kimigayo* (the national anthem), *Suruganaru*, *Imayo*, *Hotaru no Hikari*, *Ukikumo*,

Omoi iasureba, Ware no Kami ni, Kappore, Suiyo bushi, Komori uta, H'totsutoya, Kii no Kuni and Dodoitsu. These are not all Japanese airs, however. "Auld Lang Syne," "Bonnie Dundee," and "Nearer My God to Thee" lend their aid to eke out the tunes.

The American daily press of the saffron-hued variety, is now busily engaged in writing up the private life and everyday doings of Miss Gladys Deacon, in view of the fact that there is a faint chance of the possibility of her making a match with the widowed Duke of Norfolk. According to the *San Francisco Call*, such an alliance will atone for the loss which America will sustain when Lord Curzon retires from India and becomes again an ordinary member of the English aristocracy, for just as Lady Curzon at present fills the most exalted position ever yet reached by an American girl, so would Miss Deacon by becoming Duchess of Norfolk step into a place which is second only to royalty, the Duke of Norfolk being the Premier Peer of the realm. By-the-way, why is it that the American papers always go out of their way to call Lord Curzon's wife, Daisy Leiter, and never give her, excepting by accident, her proper title of Lady Curzon of Kedleston? Is it because they imagine that by these vulgar means they can the more readily keep her parentage and birthplace steadily fixed in the public recollection?

Vice-Admiral Kamimura has been appointed Vice-Commander of the Standing Squadron, and Rear-Admiral Dewa is nominated to the same post. It should be explained that according to normal arrangements the Commander-in-chief of the Standing Squadron is a Vice-Admiral, and the two seconds in command are Rear-Admirals. A departure has now been made, however, from the general rule, Vice-Admiral Tōgō having been recently made Commander-in-chief, while for his immediate juniors are appointed a Vice-Admiral and a Rear-Admiral. These officers all distinguished themselves in the China-Japan war. Their nominations, taken in conjunction with that of Lieut.-General Baron Kodama to be Vice-Chief of the Head-Quarter Staff, indicate that Japan is not hampered by red tape where the interests of the country are at stake. Kodama, Tōgō, Kamimura and Dewa all give up higher positions to revert to lower because their country has need of their services. The right man in the right place is the rule, not the right rank in the right place. There have been other changes in the personnel of the Standing Squadron, the most important being that Captain Shimamura, hitherto in command of the *Hatsuse*, becomes Chief of Staff. He is succeeded in the command of the *Hatsuse* by Captain Nakao. Captain Sakamoto is appointed to command the *Yashima*.

Some interesting particulars concerning the commercial value of old books appear in the *Publishers' Circular* from "Bits from an Old Book Shop," by R. M. Williamson, of Edinburgh, to be published shortly. The popular idea that if a book is over a hundred years of age it must be of value is a fallacy, he says: Booksellers are daily forced to consign to the waste dealer as unsaleable many venerable tomes of double that age. A Bible before it becomes of value to the connoisseur must have been in existence for at least four centuries. The highest price ever paid under the hammer for a book in England was £4,950 for the *Fust and Schoeffer Psalter*, printed on vellum, 1459. The celebrated *Mazarin*

Bible on vellum brought £4,000. A copy of the same book on paper, being the first book printed with movable types, sold for £3,900. At the Roxburghe sale, 1812, the famous "Decameron" of Valdarfer held the record of £2,260. The highest price obtained for a book in 1902 was £2,225 for a copy of a Caxton, "The Ryall Book," folio, original oaken boards, stamped leather. The First Folio edition of Shakespeare's works was published in 1623. The best price obtained was £1,720 in 1901. This copy, bound in morocco by Bedford, is now domiciled in the Scribner Library, New York. About 600 copies of the First Folio were printed at the price of £1. A copy was sold in 1756 for three guineas, in 1787 for £10, in 1807 for thirty-four guineas, and resold at the Roxburghe sale, 1812, for £100. The first edition, 12mo, 1653, of Walton's "Compleat Angler," published at 1s. 6d., sold in 1896 for £415.

During the month of August a conference was held at Cork to effect the organization of an Irish anti-emigration society and to take steps to prevent the depopulation of the island. According to reports presented at the conference, and summarized by *Public Opinion*, the population has decreased by more than one-half during the past half century. The emigrants naturally are mostly from the stronger and more intelligent portion of the population, leaving in the island an abnormal number of number of cripples, blind, lunatics, paupers, and other dependents. For a number of years nearly eighty per cent. of the emigrants have been between the ages of fifteen and thirty-five. At the present time the birth-rate of Ireland is the lowest of any country in Europe, except France. Another paper read at the conference showed the proportion of emigrants to total population. During the closing decade of the last century France sent out one emigrant to every 6,975 of its population; Germany, one in 2,574; Belgium, one in 267; England, one in 292; Italy, one in 212; Scotland, one in 214; Spain, one in 261; Portugal, one in 241; Sweden, one in 427; Austro-Hungary, one in 480; Denmark, one in 686; Switzerland, one in 1,256; Holland, one in 2,772, while Ireland sent out one in every 114. This does not include the emigrants to England and Wales. The means to be adopted by the new society to check this outward flow are suggested in the report of the conference in the *Boston Transcript*. "Many speakers at the conference declared that the idea of emigration had become a species of mania among the youth of Ireland, who from childhood had their minds constantly inflamed with glowing accounts of American life contained in letters written home by relatives or friends who lived in America, and that it was necessary to show the people of Ireland, by authoritative and matter-of-fact statement, that America was by no means the Eldorado many of them imagined."

All the ship-owners of Japan are forming a union for the purpose of adopting a similar course in the event of war. There was a preliminary meeting of the Eastern Section in Tokyo on the 27th instant, and a meeting of the Western Section in Osaka yesterday. The object of the union is not to embarrass the Government, but to arrange for uniform charges in case of vessels being required for transport purposes, and to take convenient steps in the matter of insurance.

Mr. Kataoka's illness has taken a very serious turn. It is now said to have become

mō-chū-en, which is the malady that nearly carried off King Edward. Mr. Kataoka has been in hospital for months and we gather that little hopes are now entertained of his recovery. His loss would be severely felt in political circles. Out readers will remember that he holds the office of President of the Lower House.

Marquis Ito has refused to act as arbitrator in the affairs of the Tokyo Street Railway Company, and Mr. Asada, who would have been welcome to both amalgamationists and anti-amalgamationists, declines to be President. Thus things are again unsettled and the vote of the majority of the shareholders can alone be relied on. The Company is most unfortunate.

The twenty-five students from Pao-ting who have just arrived in Tokyo under the auspices of Viceroy Yuan, are all holders of literary degrees in their own country. They come to Japan to obtain instruction in pedagogics, and will enter the *Kōbunshō-in* of Mr. Kano Jingoro, which is attached to the High Normal School. The ages of these students range from 25 to 35.

The truth of Dr. Koch's theory about typhoid is a question of very great importance to inhabitants of Japan, where the disease prevails so much. What has been generally believed hitherto is that typhoid is transmitted in food or drink containing germs of the malady, and that only in very rare cases is it propagated direct from one patient to another. Dr. Koch declines to place continued credit in that theory. He maintains that in the great majority of cases contagion results from direct contact with a person suffering from the disease. In short he contends that "the bacillus of typhoid, like that of cholera, is a parasite of which man is the necessary though unwilling habitat," and that the life of the bacillus outside the human frame is a secondary consideration. It can live in water, he says, and it can live in the ground. But it does not live long in either element. Its true seat of vitality is man, and man is the persistent cause of epidemics, the earth, water and milk being temporary causes. A very remarkable verification of this theory has been furnished by the case of Treves. In that city, when Dr. Koch carried on his investigations, there were 72 typhoid patients. The city had never been free from the disease, though its water supply was pure and could not have been responsible. Dr. Koch took the matter in hand by isolating the typhoid patients in the same manner as though they were suffering from a virulently contagious disease. The result was that the malady was wiped out in three months, and Treves has subsequently remained altogether immune for six months. That experiment goes far to support the theory of the great scientist. Henceforth, instead of looking only to the purification of food and water, we shall have to treat typhoid as we treat cholera or plague. Doubtless the time will come when the genius of man will succeed in discovering some insecticide to free his own body from all these gruesome bacilli.

The death is announced of Mrs. Troup, wife of Mr. James Troup, formerly British Consul-General at Yokohama, the sad event occurring at Helmsley, Yorkshire, on Sept. 14th. The deceased lady was in her 59th year.

THE SITUATION.

A TELEGRAM from Peking to the *Fiji Shimpō* says that Viceroy ALEXIEFF has been summoned to St. Petersburg with all haste for the purpose of discussing the Far-Eastern problem and that a decision as to peace or war will not be formed until after his arrival. In the same message it is stated that ALEXIEFF is entirely in favour of war, so that his presence in the Russian capital can scarcely fail to turn the scale which now sways evenly between peace and war. We can not learn that any news of the Viceroy's journey has been officially received in Tokyo, but the statement is not discredited. Further, the Chinese Minister in St. Petersburg is said to have telegraphed to Peking that the advocates of a belligerent solution and the supporters of a pacific settlement stand each unyielding, and that the Tsar, being perplexed to decide between the two, has summoned Viceroy ALEXIEFF to his aid. The *Fiji Shimpō* confirms this rumour independently, and says that a special train to carry the Viceroy is actually at Port Arthur. It is therefore inevitable that a fresh delay should occur in the progress of the Tokyo negotiations, and as all delays are looked upon with suspicion and uneasiness by those in Japan who watch the gradual additions Russia is steadily making to her fighting forces in the Far East, this new source of hesitation will be counted most unwelcome. On the other hand, it can not be forgotten that the longer an appeal to the sword is postponed, the less likely is it to be made, unless some unforeseen event precipitate such an issue. If the forces of both sides were present in the arena or within immediate reach of it, the case would be different. But without a deliberately overt act on the part of one or other of the disputants there need be nothing to disturb the peace, and certainly by looking at the situation carefully Russia ought to grow more and more unwilling to fight in such an extremely unjust cause. Her warmest advocates can not pretend to deny that she is a deliberate violator of solemn treaty engagements, or that, were China in a position to protest vigorously against one of the most flagrant insults ever put upon an independent State, she would have drawn the sword long ago. There is absolutely no defence for Russia's procedure, except the plea that she has gradually allowed herself to be involved in enterprises whose safeguarding she now finds it difficult to reconcile with strict observance of her treaty promises. Every reasonable Power, however,—and Japan has amply proved her title to be included among the number—is prepared to make due allowances for the interests which Russia has acquired in Manchuria. She will be suffered to provide all moderate means for insuring their safety, short of openly constituting herself lord of the territories concerned. If she force a bloody issue in the face of such

facts, she will deserve to fall to the place of an international outcast, and to cease to be regarded as a tolerable associate for self-respecting States. We have not the least doubt that millions of educated Russians see these things clearly and would bitterly regret an appeal to the sword on such an occasion. But it is very hard, terribly hard, for a great Power to make any concession when standing within sight of the field of battle, and unless diplomacy can build some golden bridge, Russia may be forced to action which, whatever be the event, she must herself sincerely deprecate in her heart of hearts. Viceroy ALEXIEFF, if it be true that the *Novi Krai* is his organ or in any way reflects his sentiments,—Viceroy ALEXIEFF is essentially in favour of war. The Port Arthur journal, in a leading article recently translated into these columns, had the magnificent assurance to speak of the righteousness of Russia's cause—the righteousness of stealing an immense expanse of territory from another Power,—and to plead the Boxers as an excuse for the continued occupation of Manchuria, though it was expressly agreed among the Powers which took part in quelling the Boxers that no one of them should derive any territorial benefit from the event. The Port Arthur journal had also the assurance to deny *in toto* Japan's right to any voice in the fate of Manchuria, though seven years ago Japan was in military occupation of Manchuria, and was induced to abandon it in the cause of Oriental peace at the representations of the very Power which has now seized it. If it were conceivable that Viceroy ALEXIEFF, who has a high reputation as an officer and is regarded by his countrymen as a statesman, if it were conceivable that he had inspired these comments of the *Novi Krai*, then indeed the situation would be hopeless and Russia would have painted herself in colours such as not one of us would willingly employ for limning her likeness. The strong probability is, however, that the editor of the *Novi Krai* yielded to a vertigo of fighting phrensy and wrote himself into a mood with which neither Viceroy ALEXIEFF nor even Colonel ARTEMEFF in his sober moments would sympathise. We are persuaded that if the war party in Russia carry this question to the tribunal of the sword, it will be sorely against the will of a majority of the Russian nation.

THE QUESTION OF COAL.

HITHERTO in practically all East-Asiatic wars waged by Occidental Powers England has taken a part or been a principal, and thus the question has not arisen as to the supply of coal to belligerent ships at her various ports of call between Europe and the Far East. Evidently if she chose to refuse all supplies of coal to such vessels, they could not make the voyage in either direction, unless they were accompanied by their own colliers and could coal at sea. And of course were England herself engaged in a

war with any Western Power, the Far East being the arena of conflict, her enemy would have to fight with the ships he happened to have on the spot at the moment of the outbreak of hostilities, for all ports of call would be hermetically sealed to him between Port Said and Hongkong, to say nothing of the possible closure of the Suez Canal. But suppose that Japan and Russia came to blows, Great Britain being neutral, then the applicable principle of international law would be that no Russian ship *en route* for the East might obtain, in any of the English possessions, a quantity of coal greater than that required to carry her to the nearest port of her home country. That sounds simple enough, but when the rule comes to be applied to a series of ports girdling almost a moiety of the globe, complications are at once detected. For Russia has home ports at either end of the line. At Singapore a Russian ship would be nearer to Vladivostok than to Odessa, and the British Authorities at Singapore might interpret their duty in the sense of granting a supply of coal sufficient for the Singapore-Vladivostok voyage, in which case they would be obviously assisting the Russian war-ship to reach the scene of belligerent operations. When the matter is carefully considered, however, it is perceived that the basic doctrine of the rule is that a neutral State shall not render to a belligerent any assistance of a nature calculated to promote the latter's warlike operations. Hence there would plainly devolve upon the authorities in all British possessions the duty of not aiding Russian vessels of war to travel eastward for the purpose of employment in operations of fighting. In short, such authorities would be bound to interpret "home port" in the sense of the nearest port in European Russia, and should consequently supply to a Russian ship just sufficient coal to reach the next station on her homeward voyage, the latter station similarly helping her on to the next and so on. Each great international event adds to the stock of legal precedents, and in the event of war between Japan and Russia international jurists would probably find themselves wiser at the end. This coal problem seems likely to be one of the first offering itself for solution—though we sincerely hope and still believe that it will not become a practical issue in the near future,—and there would be much interest in hearing what jurists have to say on the subject. It is plain that according to their interpretation of the rule, British neutral ports might become sources of supply for belligerent vessels, a result certainly inconsistent with the doctrine of neutrality.

The *Manila Cablenews* publishes the following:—The lovely daughter of Henry Labouchere will marry the son of the Marquis di Rudini. Labouchere has been a member of Parliament for 23 years, representing Northampton. He is the proprietor and editor of *Truth*, the great London weekly. He has been in Parliament off and on for 37 years. He is one of the most famous journalists in the world.

THE CHINESE LEGATION.

The new Chinese Representative, Mr. Yang Shu, presented his credentials at the Palace on the 28th instant, and the retiring Minister, Mr. Tsai Kin, presented his letter of recall. The *Nichi Nichi Shinbun* says that Mr. Yang, originally an officer in the Eight Banners of Manchus, came to Japan in 1876, and spent altogether 12 years in this country. He knows English well and Japanese to some extent. Liberal views are attributed to him, and it is noticeable that simultaneously with his arrival Mr. Wang, Inspector of Chinese students in Japan, has been promoted and recalled to Peking, his duties being undertaken by the new Minister.

PORT ARTHUR.

A WAR SCARE.

(FROM OUR OWN CORRESPONDENT.)

Port Arthur, Oct. 1—14th.

On the 25th inst. (O.S.) Port Arthur was much excited by the receipt of information from a telegraphic agency in St. Petersburg to the effect that Japanese troops had been landed in Korea. The Russians all seemed to regard such a step as equivalent to a declaration of war and at 2 p.m. on the same day the fleet suddenly left the harbour for an unknown destination. Some say that it has gone towards Masampho, others that the bulk of the fleet is cruising in the sea about half way between Liaotung and the Korean coast while swift cruisers are scouting ahead to learn what they can of the movements of the Japanese squadron, but of course the fleet is sailing under sealed orders and nobody here save Alexieff and a few others know what is going to happen. Some of the vessels had been hurriedly painted black,—black being the colour they will wear in war-time,—and the most complete preparations had been made in view of war. A fleet is always, I presume, supposed to be ready for war, but there are a hundred and one little things which make the departure of a fleet for battle different from its departure on an ordinary cruise, and in the present instance all these hundred and one little things were there. Meanwhile the last touches had been put to the defences of the harbour and all the torpedo-boats had taken up their places and changed their colour. I cannot say, however, that there was any very noticeable change in the demeanour of the soldiery or of the public. The latter strolled about, laughing and sometimes hand-in-hand like the Japanese soldiers (although the latter are sometimes supposed to be the only military men who thus go about like Dresden shepherdesses), and the former seemed to attend to their business as usual. I suppose these scares are ordinary occurrences in this fortress town and that they will not cause any real excitement till the guns of a hostile fleet are heard. But really this scare was the biggest that has overtaken Port Arthur so far and I suppose it influenced the conversation on the night in question in every house in the town.

REPORT CONTRADICTED.

The report of the Japanese landing was soon contradicted, the higher authorities here having ascertained that no Japanese had landed in Korea and that the report had probably arisen in consequence of the movements of the Japanese fleet at Masampho. Nevertheless a good deal of uneasiness prevailed for it was feared that Japan was preparing to do something; and it was recognized of course that the sudden breakdown of the negotiations in Tokyo would be followed almost immediately by an encounter between the hostile fleets. This explains why everybody here is on the alert and why the Japanese fleet was actually expected by a large number of residents to appear on Saturday last. In spite of the statements made to the effect that in case of war the Russian fleet will shelter itself under the guns

of Port Arthur, I believe that the first token we shall get that war has broken out—the first token after the rupture of the negotiations at any rate,—will be the news of a terrific naval battle out in the open sea. I think it would be to Russia's advantage to bring on such a battle as speedily as possible for Japan would gain by a protracted naval war owing to her superior facilities for getting her ships repaired, provisioned, &c. All this of course is only speculation on my part. As to the scare about a Japanese landing in Korea, it was contradicted on Sept. 26 (O. S.) in the following leading article which appeared in the local newspaper:—

THE JAPANESE IN KOREA.

"Although it has penetrated in all directions among the public and has even found its way into the telegrams of the Russian Telegraphic Agency, the news regarding the movements of the Japanese troops in Korea must be placed in the category of rumours, whose origin is unknown.

"On account of the wide circulation it received, this rumour undoubtedly attained its object, if that object was to produce alarm in the public mind; but we must distinctly state that a rumour it was and nothing else. While on this subject we might first of all direct attention to the fact that these sensational telegrams did not emanate from Russian sources. One of them came from London, which it had reached from Kobe, and the other came from Paris. The first came in all probability from Japanese sources, the second from American sources. In No. 109 of our journal we inserted a telegram dated Tokyo, September 18, and probably emanating from Russian sources, in which it was denied that Japan was making any extensive warlike preparations.

"For our own part we must say that, informed on the best authority as to the true state of things in Korea, we do not deny the fact that some warlike preparations are at present going on in Japan and that the fleet is engaged in manoeuvres. We deny, however, that Korea is the object of these preparations. As to the future events that may occur in the Far East, we shall put our readers in possession of information about them as soon as such information reaches us. But we do not think that anyone can foretell what is going to happen."

THE MANOEUVRES.

On Saturday, as I have already remarked, the manoeuvres of the soldiers belonging to the Port Arthur garrison were brought to a close and the occasion was signalized by the roar of cannon and the rattle of musketry at frequent intervals throughout the morning. The musketry fire was so close to the town that I fancied an assault was being made by the "invaders" on some of the principal defences near the town, perhaps on Gold Hill itself. This hill was, it will be remembered, taken very easily by the Japanese during the China war but it could not be taken so easily now.

Owing to the absence of the fleet, the manoeuvres were not properly carried out and since an attempt on the part of the invaders to land some troops north of Taliennan was foiled, I suppose the only way to hold any land manoeuvres at all was to take it for granted that some of the enemy had landed in force in Regent's Sword Peninsula and to let him see what he could do under such favourable circumstances. There is now, however, a strong battery at Taliennan and the narrow neck of land further north as well as the hills further south are well protected and can be better protected in case of need by light batteries for of course the system—or rather systems—of communication between the different points of advantage along the coast is I believe, very efficient.

GRAND REVIEW.

On Sunday there was a Grand Review in the course of which all the soldiers of the garrison with the exception of the fortress artillery, passed in review before the Viceroy. At least 40,000 men were present on the occasion and smart-looking, well-set-up fellows they were. The Russians seemed to have made an innovation in their army system by the introduction of Mounted Infantry, a considerable number of which troops are attached to each regiment. These mounted

infantrymen ride well and must be an invaluable addition to a regiment, of which they are as it were the eyes and ears. The Russians are not disposed to impart much information about this useful innovation, but I daresay the foreign military attachés at St. Petersburg have long ago obtained full details. The horses of the Cossacks present on the occasion were of the small Kuantung breed but might perhaps on that account make a better show in a campaign than the heavy horses from Tomsk. Perhaps they were not suitable, however, for the *djigloffka* or peculiar performance of the Cossacks (which has been given on several occasions lately, I believe, by these bold riders at Tientsin) in which, while rushing past at full speed, they stand upright on the saddle and go through a number of other extraordinary exercises. At all events that remarkable exhibition was not given on the present occasion. The number of spectators was very large and one could not help feeling that such a magnificent body of men would not fail, in case of need, to give an excellent account of themselves.

ENGLISH NEWSPAPER FOR PORT ARTHUR.

The publication of a Russian newspaper in the English language at Port Arthur was proposed long ago by the *Nori Krai* of that port and the general principle that Russia should have such a newspaper in this port of the world to voice her opinions and to explain and defend her policy is admitted by all Russians without exception. The *Nori Krai* is a good organ but being printed in Russian, it is as much a sealed book in most of the English newspaper offices of the Far East as if it were printed in Egyptian hieroglyphics. The explanations of Russia's policy and defences of her doings which frequently appear in its columns are therefore almost unnoticed, for the average English journalist who when he comes out to the Far East does not consider life long enough for the learning of Russian. As the mountain will not go to Mahommed, Mahommed must go to the mountain; and it has accordingly been decided to publish a Russian newspaper here in the English language. The question of what particular port in the Far East should be honoured by the presence of the new venture has long been discussed in the Russian Press although most English papers seem to be oblivious of or indifferent to the discussion.

The *Novoe Vremya* does not want the paper to be published in Port Arthur, preferring Shanghai with its more central situation, greater importance, and more cosmopolitan population; but the *Nori Krai* stands out stoutly for Port Arthur. The latest contribution to this discussion is an article from the pen of Mr. "Stromoff" (this is the pseudonym of the *Novoe Vremya's* correspondent in Japan) in the St. Petersburg paper. To this article the Port Arthur paper contains the following reply:—

NEW ADVICE ON AN OLD QUESTION.

"The *Novoe Vremya* has again begun to speak about the projected publication in Port Arthur of a Russian paper printed in the English language. This time it is Mr. Stromoff, well-known to the public on account of his letters from Japan, that has something to say on this question.

"Welcoming, and welcoming very warmly, the idea of publishing an Anglo-Russian paper of the kind contemplated,—a paper which will, he says, 'be as indispensable and as interesting for us Russians as it will be for English people,' Mr. Stromoff nevertheless finds that Port Arthur is not quite a suitable place to publish such a paper in.

"In the first place," says he, "there is not now and there will not be for a long time to come, any considerable number of Englishmen or Americans resident at Port Arthur or at Dalny."

The *Nori Krai's* reply to this is crushing:—

"But," it asks, "can Mr. Stromoff say that there is not here and will not be here for a long time to come, any great number of Japanese?"

Mr. Stromoff also says that Port Arthur is too remote from the centres of "Anglo-Japanese" life and that a paper printed there in English would take too long to reply to any attack made on Russia or Russia's policy by English or Japanese organs. By the time the reply would have reached

those "Anglo-Japanese" centres which it is desirable to reach, the matter in dispute would have been forgotten and any attempt to resurrect it would only be treated with derision.

Mr. Stromoff urges other objections against the establishment of the projected paper at Port Arthur, but the writer in the *Novi Krai* (he writes under the name of *Nabiyoodatel*, i.e. "Observer") thinks that, on the whole, Stromoff is badly mistaken and that the new paper should appear at Port Arthur and nowhere else.

The article is too long, however, to be quoted in full but it may be stated here that the establishment of an Anglo-Russian paper at Port Arthur will take place in about two months, the necessary type being daily expected from America.

MR. DAVIDSON.

Mr. Davidson, the American Consul in Formosa, left to-day (Oct. 14) after spending a few days here and in Dalny. Both of these towns he "did" with American thoroughness and it is extraordinary how much information of every kind he managed in spite of his ignorance of Russian to accumulate in the limited time at his disposal. He was present at the review on Sunday in company with a Russian colonel and he has visited all the places of interest round about—with the exception of the batteries. Our places of interest consist, so far, of unsightly shells of public buildings, but nevertheless Mr. Davidson is enchanted with Port Arthur and calculates that in a few years time it will be one of the prettiest little towns of the Far East. Certainly the almost European look of the place gives it an air which is only shared by Saigon, but while Saigon is hopelessly tropical in appearance and could not persuade anyone even for a moment that it was Marseilles, Port Arthur will, after a while, be very close in appearance to a genuine Russian town, enjoying as it does a Russian climate which necessitates the use of *samovars* and stoves in winter and which increases of course its resemblance to a Russian town. But I forget. Port Arthur is a Russian town.

Mr. Davidson much admires the homely good nature of the Russians, their *penchant for affresco* and extempore entertainments, musical and otherwise, and the ease with which one can get on with them. On this account he thinks that Port Arthur will be a delightful place to visit by way of a complete change and even to live in once it gets into shape. I must say that I fully agree with him in thinking that Port Arthur will have acquired a quaint charm after a while, but at present living in Port Arthur is like living in a half-built house with the masons at work all around one. The only two good things I notice about Port Arthur are the cigarettes—which are cheap and at the same time excellent,—and the music which is superior to what one ordinarily hears in Far Eastern ports.

Mr. Davidson is engaged, I believe, on a book describing the Siberian Railway and will be off in a few days. He confesses to be disappointed with Dalny, he cannot exactly say why, but I suppose it is on account of the want of bustle and activity there. I am afraid, indeed, that Dalny is a failure. It is De Witte's town and since De Witte has been "side tracked" as the Americans say, I am afraid that Dalny will be side-tracked too. I cannot imagine why so much money was spent on Dalny, anyhow, since the same sum spent on Port Arthur would make the latter a very attractive and comfortable city.

At present it is neither attractive nor comfortable and to tourists the memory of it must remain as a horror on account of the absence of hotel accommodation.

The new hotel,—a municipal concern, for no one cared to take up such a comparatively unremunerative undertaking as hotel building while there was so much more profit to be made in other lines,—the new hotel, I say, is now nearing completion and will, when finished, be a fine building, accommodating several hundred guests. It is situated in New Town, a few feet above sea level and a score of yards from the sea-shore. Close by are the Public Gardens, not very remarkable gardens as yet, but pleasant to walk in and destined, I hope, to improve; and, despite some faults such as the smallness

of the dining-room in proportion to the size of the building, this hotel should undoubtedly be a success. Almost every day I see travellers, ladies and gentlemen, wandering about hopelessly in the street followed by their luggage, looking in vain for a lodging; and, if this rush continues, the hotel can easily get six roubles a day at least for a room alone. At present one has to pay at least three roubles a day for a most miserable room in Old Town,—a room without bed-clothes, candle or towel; and considers himself lucky if he gets off so cheap.

THE INTERPORT FESTIVAL.

KOBE WINS THE FIRST BASEBALL GAME.

Friday broke gloriously fine, after a night of continual heavy downpour, but by the time that the Baseball captains had got the battle in array, the ground was in excellent condition and the afternoon, if anything, a trifle too hot. We think that the ground-committee should provide some slight awning for the scorers and press representatives on such an important occasion as an interport baseball match; as it was, on Friday their work was rendered very arduous till late in the afternoon, when a thick bank of clouds came up, much to their relief. Kobe began by scoring 3 runs, and Yokohama only drew level at the second innings. Then Kobe went ahead with another 3, making them 6 while the home side's score stood still till the sixth innings, when they rolled up 6 runs and established a lead of one run. Kobe was dismissed for 0 in the seventh, and Yokohama ran up to 13. The eighth saw a change, Kobe rattling the Yokohama battery and getting in six runs ere they were dismissed. Yokohama replied with one, tying the score; but in the last innings Kobe romped away again, bagging 4, and when the game finished the home nine were 3 runs to the bad:

In the opinion of two old Interport baseball captains, the game on Friday was one of the best ever played between the two ports. Certainly the score was big, but it was made by hard hitting, pure and simple, and not from errors. Both teams batted well and some of the catches of Merriman, Thorn, Goddard and McChesney for the home side were very good; the in-field work was smarter too than we had been led to expect. The judgment of the Kobe captain was well shown just after Yokohama had taken a lead, and his well placed hit to the right field will be remembered as one of the prettiest plays of the day. Kobe's fielding was smart as their batting was sure, and their victory was well deserved.

During the afternoon the Town Band played a selection of airs, and when the game finished the large assemblage of ladies was entertained to tea by Mrs. Thorn, Mrs. Frazar, and Mrs. E. J. Cowan.

To-day the second Interport baseball match begins at 10 sharp, and should this also be won by Kobe, then a game will be played in the afternoon against the U.S.F.S. *Wisconsin*, by a nine selected from both interport teams. The Band of the *Wisconsin* will play during the afternoon.

THE GAME.

Kobe went to bat first. Chalfant took his first base on balls, but failed to reach second, just missing the base by an inch. Hellyer got to second, Mollison failing to hold the base, but Weed, the next man, never got down so far. Meanwhile Hellyer safely reached second and Atkinson came to the bat. He brought Hellyer home with a beautiful hit to the long field, and reached second himself. McLaren, after hitting a foul out of the field, brought home Atkinson with a very pretty strike. An overthrow from catcher to McChesney in the centre field was fumbled and McLaren got down to third; a ball later he came to the plate from a passed ball from the pitcher. Wheeler sent a ball over short stop and earned his first easily, but trying to make second was put out.

Kobe..... 3
Yokohama..... —

McChesney got to first safely, Atkinson taking his foot off the base as the runner came up. He moved down to second before Merriman took his base on balls. Then Thorn went to bat and

sacrificed himself for the others—first man out. This brought E. W. Kilby to the plate. He hit a ball into the diamond and this being smartly returned McChesney was put out at the home plate. Goddard, with a magnificent hit, brought in Merriman and Kilby—two runs. Van Cleve, next put up a fly, which Hellyer held at short stop, and the side retired.

Kobe..... 3
Yokohama..... 2

Kobe began its second innings with Bates making a beautiful hit to the left field. He reached first, but died on second. Stephens then dropped a ball into Mollison's hands at first base and the whole team had been to bat. Another fly to the right field by Chalfant was held by Goddard and the side stood down.

Kobe..... 3
Yokohama..... 2

A nicely played ball took Parker down to first and he stole his second. A sacrifice by Mollison took Parker to third, and Cable brought him home, going to first himself, and then stealing second. McChesney found first denied him, and then, Thorn being held by Atkinson, Yokohama retired, Parker thus losing his run.

Kobe..... 3
Yokohama..... 3

A hit to the centre field took Hellyer to first, and Weed followed him, though the ball was smartly stopped by Parker. Atkinson brought Hellyer home with a pretty hit to right field, bringing McLaren to bat. He began by hitting some fouls, and then with a sacrifice bunt brought in Weed. Wheeler reached first and Atkinson got home, off a pretty hit to left field. Then Watrous was held by Thorn and Stephens went to bat, only to be held, again by Thorn, the catch winning great applause from the spectators.

Kobe..... 6
Yokohama..... 3

A foul ball from Thorn began the next innings, and he died next hit at first. Kilby took his first base on balls. He stole second and Goddard brought him round to third, but then, venturing too rashly, he was put out by McLaren. The side went out when Van Cleve failed to reach first.

Kobe..... 6
Yokohama..... 3

Kobe started its fourth innings by losing Chalfant at first, but Hellyer had it safe. He stole the next, though Merriman stopped prettily. Weed played the ball straight into pitcher's hands and had no necessity to tramp further. The next player, Atkinson, dropped the sphere into Merriman's clutch, and the innings closed with no runs.

Kobe..... 6
Yokohama..... 3

Parker was missed by McLaren just over 3rd base, but Mollison was held by Hellyer, while Cable was struck out. Next Merriman died at first and the side retired.

Kobe..... 6
Yokohama..... 3

The fifth innings now began. McLaren took first on balls, and was presented with the second by the pitcher making a balk. Wheeler sent up a fly for Merriman, which was not refused, and Bates went to bat only to be struck out. The next man in sent a ball over third base and brought in McLaren, getting down to second himself. The side had had enough when Stephens put the ball into Parker's hands at short stop.

Kobe..... 7
Yokohama..... 3

Merriman was held by Bates at centre field, and then Thorn died at first, while Kilby was struck out—the innings being very short and sweet.

Kobe..... 7
Yokohama..... 3

A base on balls was given to Chalfant, and he stole second. A sacrifice by Hellyer took Chalfant to third. A fine catch by Cable put out Weed, and Chalfant got home. Then Merriman pulled off another fine catch, putting out Atkinson.

Kobe..... 8
Yokohama..... 3

Goddard began with a clean hit past short stop, and reached first. He was followed there by Van Cleve, who rapped one into the same place. Parker was struck out. Mollison getting down to first, all bases were filled. The next minute Cable brought Goddard home, and he was followed by Van Cleve, while Merriman brought in Mollison, Cable and McChesney, thanks to wild fielding. Excitement rose to fever heat and it was difficult to follow all the incidents, so rapidly did things happen. Thorn was caught by short stop, as soon as matters quieted down. Then Kilby brought Merriman home, sending the sphere into centre field, and Goddard went to bat. A wild throw from the catcher enabled Kilby to steal second, but Goddard next ball was put out at first. The innings had produced six runs.

Kobe..... 8
Yokohama..... 9

McLaren began the seventh innings for Kobe and took his first on balls, but he was forced off second. Wheeler reached first and took second on an overthrow from Merriman, but he was forced off at the home plate, the ball being very smartly fielded by Parker. Watrous was missed by McChesney in the centre field, and Bates moved to third, but Stephens was held by Parker and the side retired without scoring.

Kobe..... 8
Yokohama..... 9

Chalfant held Van Cleve in the right field, but Parker was missed by Atkinson, and Mollison took him round to third with a two-bagger. Cable brought Parker home and Mollison to third, with a fine hit. Then McChesney brought in Mollison and reached second himself. Merriman failed to reach first. Thorn, with a hit which passed short stop, brought in Cable and McChesney. Kilby died on first and the side retired with four runs to their credit.

Kobe..... 8
Yokohama..... 13

A base on balls was given to Chalfant and a passed ball from the pitcher to 1st gave him the second; Hellyer took him to third with a neat strike over second. Then Weed put up a fly for Cable, which he held. Atkinson, the next to bat, had the base presented him by the pitcher, bringing McLaren to bat. He brought in Chalfant with a beautifully placed ball in the right field, and Hellyer moved to third. All bases were filled. A bunt by Wheeler brought in Hellyer, and then Bates took in Atkinson, the pitcher again missing at the plate. The visitors' score was now only one behind Yokohama. Wheeler and Bates coming in off a hit by Stephens, the score was taken past the Yokohama total and the excitement again grew delicious. Hellyer now put up a fly, which Goddard held in the right field, and Kobe retired, having made six runs.

Kobe..... 14
Yokohama..... 13

Goddard began with earning his first and stealing the second. He moved to third with a sacrifice hit by Van Cleve. Parker was struck out, but Mollison with a passed ball got down to first and Goddard came home, tying the score. Cable placed the ball in pitcher's hand and the side retired.

Kobe..... 14
Yokohama..... 14

The last innings began with a safe hit to right field by Weed, which earned his first. A sacrifice by Atkinson took him round to third, and McLaren brought him in, though Mollison stopped splendidly. At this point Kilby had to retire, having put out his right thumb, and Thorn took his place. Bates after this, with a two-bagger, brought in Wheeler and McLaren, and then he stole to third. A two-bagger by Watrous brought in Bates, but Stephens died at first, the ball being smartly sent down to Mollison, while Chalfant was well caught by McChesney in the centre field.

Kobe..... 18
Yokohama..... 14

McChesney was put out at first, and Merriman met a similar fate. Thorn stopped the rot with

the first home run of the afternoon, sending the ball down to the fence. The spectators roared their approval in generous fashion. Then Jenks, who had taken Kilby's place, was put out at first and the game ended, leaving Kobe winners by 3 runs.

KOBE WINS BOTH BASEBALL MATCHES.

Another day of brilliant autumn weather ushered in the last of the Interport contests, the concluding game with Kobe for the Interport baseball honours. The early morning sunshine proved very hot, not the slightest breath of wind moving across the field, and players and spectators were early on the scene. The first innings saw nothing scored, and in the second Yokohama secured 2 runs to Kobe's nothing. But after this the visitors got the measure of Parker's pitching and, piling up 5 runs in the close of the third innings, got the lead and kept it without difficulty to the end. The Yokohama men played a good up-hill fight, however, and half way through it looked anybody's game. But the visitors were the harder hitters and the smarter fielder and when the last ball was sent down they had won the game with 5 runs and an inning to spare. Goddard's accident was greatly regretted by all the players, but against this misfortune for Yokohama must be placed the crippled condition of Weed, the Kobe catcher, whose injured fingers prevented him from throwing in with any accuracy.

The honours are now easy, both ports having won 4 matches each.

At luncheon, which was served at the close of the game, Mr. C. H. Thorn presided, with Mr. W. L. Merriman in the Vice Chair. The health of the victors was given by Mr. Thorn in a neat speech, after which Mr. Hellyer, last year's captain, handed over the Kobe flag to Mr. McLaren, Captain of 1903, for safe keeping. Kobe having toasted the Y.C. and A.C., the health of the Father of Yokohama baseball was enthusiastically drunk, and Mr. Merriman made a brief reply. The teams were then photographed. The afternoon was spent in a game with a team from the Wisconsin. The sailors, with their hard-hitting and capital team play, had things all their own way against the tired out interport-men of Japan, knocking up 17 runs to the home-side's 2. At the conclusion of play, tea was served in the Pavilion, Mrs. Thorn, Mrs. E. C. Bellows, and Mrs. C. A. Edwards presiding. This pleasant function brought the Interport Festival to a close.

THE GAME.

Yokohama went to bat at 17 minutes past ten, McChesney beginning for the home side. He pulled round some fouls, then bunted the ball, and was put out at first. Merriman got down to first safely off a neat grounder. A high fly to the left field by Thorn was held by Wheeler; Edward Kilby passed a similar ball into Chalfant's

hands at second and the side retired without scoring.

Chalfant opened by being put out smartly at first, Edward Kilby sending the ball down to Mollison in fine style. Then Hellyer died at first off the second strike, but Weed took the base at the expense of the pitcher. He stole his second and then Atkinson went to first on balls. A smart bit of fielding by Cable and Kilby put Weed out on the home plate and the innings closed with neither side having made a knock.

Yokohama..... 0
Kobe..... 0

Goddard rapped a hot one to centre field, which Bates declined, and he stole second, coming to third on a passed ball; Van Cleve brought him home—first blood of the day—on a neat hit over second base's head. Van Cleve stole from first to second, but Parker was struck out. Stephens missed Mollison at 3rd, but two balls later he was put out at first. A pretty hit by Cable right down the line brought Van Cleve home. Cable sneaked to second and reached third by the skin of his teeth. McChesney going out on strikes, the team stood down with two runs to their credit.

The Kobe Captain took his first on balls, bringing Wheeler to bat. McLaren stole second, though Kilby and Merriman almost stopped him, but in going down to third, a smart return by Kilby to Parker put him out. Wheeler made first easily and sneaked to second; meanwhile Bates went out on strikes. Watrous was almost caught by Thorn at short stop, but reached first. Then Kilby sending swiftly to Mollison, put out Stephens, and Kobe closed its innings still with nothing scored.

Yokohama..... 2
Kobe..... 0

Merriman began with losing first, Thorn went out on strikes, and Kilby, following suit, the innings finished having lasted just two minutes.

Parker presented Chalfant with his first base, and he got to second very easily, Hellyer making a sacrifice strike. A two-base hit by Hellyer to centre took Chalfant to third and a wild throw by Parker took him home—Kobe's first run. A dandy hit by Weed, to centre field, brought Hellyer home, and the score was tied. Atkinson put up a very difficult fly near the ladies' tent, which Kilby tried hard to get, and then the batter took the base on balls. A prettily placed ball by McLaren low down to right field brought home Weed, and Atkinson moved to third. Wheeler died at first, and Bates followed suit, but Atkinson got back to the plate. Then Watrous brought McLaren in, while poor fielding allowed Watrous to move to second and Stephens to third. Then Watrous was put out at third and the side stood down, the score standing:

Yokohama..... 2
Kobe..... 5

Goddard received a nasty blow on the spine before getting down to first on errors by McLaren and Chalfant. He stole second, and then Van Cleve was almost held off a foul hit to third. A bunt by Van Cleve failed to come off, and then the game was temporarily stopped through Goddard putting out his knee while running to third. He was patched up by Dr. Tripler but had to retire, Jenks taking his place. A passed ball brought Jenks home. A fine hit by Parker earned first easily; then Mollison made a home run, bringing in Parker, with a hit to the far fence. The applause rang out, for the stroke deserved it. This tied the score. Cable went out on strikes. A bunt by McChesney took him to first, but Merriman was held by pitcher from a high fly. The score stood five all.

Hellyer began with a safe tap past short stop, and he stole second. Weed went out at first, Hellyer moving to third. A base was presented to Atkinson by pitcher, and he reached second in safety. McLaren brought Hellyer home, and Atkinson to third, then he stole a base himself, Wheeler went out at first, but Atkinson scored his run. A dandy hit by Bates almost brought another score on the sheet, but, Cable throwing in splendidly, Kilby put McLaren out at the home plate.

Oct. 31, 1903.]

THE JAPAN WEEKLY MAIL.

明治廿五年三月廿日第三種郵便物認可 477

Yokohama	5
Kobe	7

Thorn made his first on an error by Hellyer. Then a double play put out Kilby,—caught off a fly—and Thorn was run out in returning to his base, the ball being very smartly sent to first by pitcher. Jenks was thrown out, by Stephens to Atkinson at first. Nothing scored. Watrous went out on strikes, and Stephens earned first, though the ball was smartly fielded. He stole second. A pretty catch by Thorn put out Chalfant, and then Kilby threw Stephens out at third. Again no runs.

Yokohama	5
Kobe	7

The sixth innings began, with Van Cleve losing first. A foul fly put out Parker, and Mollison, failing to reach first, the side retired.

Hellyer took first on balls and was given safe on second, but Weed went out on strikes. Mollison put out Atkinson at first, and then an overthrow to third enabled Hellyer to get the home plate. McLaren almost lost first, but was missed by Van Cleve, though it was a very difficult hit to field. A fumble by Merriman allowed Wheeler to get to first, and McLaren to third. Bates brought Wheeler and McLaren in, the ball being badly returned, the field getting rattled. Then Bates got home, on a safe hit by Watrous, who reached first. Stephens was smartly held by McChesney and the innings closed, four runs having been made.

Yokohama	5
Kobe	11

Cable opened the seventh innings for Yokohama and got down to first safely. He slid into second and then McChesney made first and Cable reached third, the field making an error in judgment. Cable came home by a sacrifice by Merriman, who went out at first. Thorn was hit in the back on going in to bat, but next ball he received the base from pitcher. Kilby brought in McChesney, but was put out on first himself. Jenks going out at first, Thorn lost his run. Two runs had been scored.

Thorn now went on to catch, changing places with Kilby. A pretty catch by Merriman put Chalfant out, but Hellyer made first, the field not moving out to catch his fly. Kilby caught Weed, the next batter, redeeming Yokohama's "face." Atkinson brought Hellyer home with a nice grounder to right field, and then McLaren was thrown out by Kilby—a crack-a-jack throw.

Yokohama	7
Kobe	12

Van Cleve lost first and Parker followed suit, while Mollison went under also, the fielding all round being particularly fine. Only five balls were pitched this innings.

Wheeler failed to reach first, but Bates made a two-bagger with a hard hit to centre field. Thorn was again in the wars next ball, being badly hit on his mask, the frame-work buckling in and cutting the flesh. He was loudly cheered on resuming play. Watrous was splendidly stopped by Cable in the left field, and McChesney held him in the centre, bringing Stephens to bat. He sent up a fly which Cable held and Kobe stood down without scoring.

Yokohama	7
Kobe	12

The last innings began at three minutes past twelve. The home team lost Cable before reaching first; then Stephens put out McChesney, but Merriman took the base on balls. A beautiful hit by Thorn to left field, turned out a foul strike, the ball falling just over the line, but two balls later the pitcher presented him with the base. Merriman going out on third, off a hit by Kilby, the game concluded, leaving Kobe the winners of the Interport match of 1903, by an inning and five runs. The game finished at 10 minutes past 12.

YOKOHAMA AND KOBE V. THE U.S.F.S.

"WISCONSIN."

In the afternoon a game was played between a team composed of Yokohama and Kobe Interport players selected by Messrs. Abel and Barto, versus the United States flagship *Wisconsin*. The game attracted a good deal of interest, though naturally the finals in the Ladies Tennis Club on the Bluff drew off a good many. The band of the *Wisconsin* was in attendance and their selections were greatly appreciated.

The *Wisconsin* started the batting and McLaren put out their first man with a splendid stop at third; the next made first, but Hellyer held the third beautifully. Then a home run was made by Ridge, Merriman unfortunately slipping as he attempted to field the ball. When the side went out 2 runs had been made. After losing Chalfant, Thorn made a two bagger with a grounder right down the line; but Hellyer failed to reach first. McLaren brought Thorn home and reached first safely. Merriman going out on first the side retired, having one run to their credit.

Wheeler caught Friel, Cooke went out at first, and then Metcalf made a home run, though he was nearly put out by Thorn at the home plate. Merriman catching Davis, the innings closed.

Merriman did not reach first, at the opening of the third innings, but Atkinson got there safely. He went out at second on a hit by Wheeler, and the team were out when Stephens was put down at first.

In their next innings the sailors made another home run, Ridge bringing home Knacht and Robbins—three runs. Three out, all on strikes, was the record for Japan—Chalfant, Thorn and Hellyer all going down before the redoubtable pitcher. Then the *Wisconsin's* turn came. Cooke went out at first, Metcalf was caught in the centre field by Wheeler, and Davis was put out on first, Hellyer returning splendidly.

A dandy ball by McLaren to the Pavilion fence earned a home run, in the end of the fourth inning. Then the side lost Merriman, McChesney and Hellyer, and the score stood, *Wisconsin* 6, Japan 2.

The *Wisconsin* piled up three runs, and then by a pretty piece of double play by Thorn and Atkinson two of their men were put out, one at first, the other at second. Nothing else was made. The Japan team made nothing in their essay, and the telegraph registered 9 to the *Wisconsin* and 2 for Japan. Merriman brought off a beautiful catch in the next inning, and two others having been put out the side stood down. Another barren innings for Japan followed, after which the *Wisconsin* rolled up four runs. Three successive catches disposed of the Japan side next innings: *Wisconsin* 13, Japan 2. Wheeler for the sailors, attempted a home run; he brought one man in, but was put out on the home plate. After this the field getting rattled, two runs were made, and when the innings closed the score had reached 17 for the *Wisconsin*. The last of the eighth inning

saw Japan again retire for the usual 0. But they had their revenge by keeping the *Wisconsin* down next inning, some good fielding characterising the play. The last inning for Japan closed with no addition to the score, leaving the *Wisconsin* easy victors.

TRAINING NOTES.

Since my last report there have been several improvements in a good many of the animals now training, notably Cameo, which has so far made the best time in training this season; she should show favourably against Rose de France and Therapis. Desdemona did a few furlongs in 12 and 13 seconds per furlong very recently, and if she is not overdone by the time of the Races should have an easy win in the shorter distances, although Fujikawa and May-sie are doing some good work. Izumo is being pushed along rapidly, but Hatsukaze seems the most fit of her class, and Ivy will have to look to her laurels. It is a pity that Seabreeze has taken to bolting as she was getting along so nicely. The Leader is no doubt far and away the best China pony on the course but Mark is going very well and will give a good race. Moth is entirely off color and may not be fit for this meeting, Bauernfänger does not go at all satisfactorily; Sunrise seems very fit, and has been put to some good paces whilst Aberdeen seems to be hopping along on three legs. Pinto has not been seen on the course for some while. It is still difficult to pick any particular favourite from the China Griffins but the best of the bunch are Mayonaie, Settler, Yakumo, John Bull, Harima and Fra Diavolo. The latter, however, seem to get too much trotting to do. All the Australian Griffins (barring No. 8) are now on the course. May-sie has about the finest lines of the bunch but she is too weakly and may not make much showing this meeting. No Trump and Straight Flush are also weakly; the former made a fairly good sprint for a short distance, and should show well up in the ¾ Mile Races. Akashi, La Frippon, Stella, Florentina, Akatsuki, and Pilgrim are pegging away hard. Suma at the present moment is the best of this lot, and has a good showing for the Griffins Grand Prix; if Osaka would only go straight, she might do something.

I see that a band stand is being erected on the Lawn, and if it is to have a roof, it will, I think spoil the view of the Straight for the spectators who may be in the Grand Stand. That would be a pity, as this is the principal part of the race. Why could not the band play in the upper storey of the Grand Stand? I notice a Veteran comes to the training every morning, and if what I hear is correct, Mr. May's stables could not be placed in better hands, during the absence of the owner, as I am given to understand that this Veteran is one of the best judges of horseflesh we have amongst us, and I predict some good wins for the stable.

October 27th, 1903.

LARK.

YACHTING.

In the race for 39 raters on Saturday, only two yachts started, *Mary* and *Maid Marion*. At gunfire *Mary* was quickest over the line, with half a minute's lead of the *Maid*. It was a close fetch to the Harbour Entrance on starboard tack, *Mary* increasing her lead to this point by another half minute. Sheets were eased a trifle, and the Lightship was made on the port tack, times being: *Mary* 2.24, *Maid Marion* 2.26.27. With spinnakers to port guyed well forward the yachts ran down to the Widow Buoy, but *Mary* felt the bottom beneath her keel and had to take in her spinnaker long before reaching the turning mark, where the yachts were timed: *Mary* 2.45.30, *Maid Marion* 2.49.09. Rounding the buoy to port, the *Mary* was quickly headed for the Lightship on starboard tack, and fetched it easily. *Maid* did a short board on port tack before going about for the Lightship. This mark was rounded by *Mary* at 3.09, and by *Maid Marion* at 3.16.19. It was a reach to the Harbour Entrance, *Mary* 3.21.30, *Maid Marion* 3.29.28. Gybing, spinnakers were set to port, and *Mary* finished at 3.28, followed by the *Maid* at 3.36.10. The latter takes the prize, on her handicap of 12 minutes, corrected handicap times being:—

	h.m.s.
<i>Mary</i>	3.28.00
<i>Maid Marion</i>	3.24.10

The Yachts of the Mosquito Yacht Club competed for Mr. E. V. Thorn's Cup, *Edna*, *Pele*, *Winsome*, *Sunbeam* and *Chocho* starting. The course was the same as that of the 39-raters, past the Lightship to the Widow Buoy and back. *Winsome* and *Pele* got out of the harbour together; *Edna* assumed third place, but unfortunately near the Lightship her throat halliards parted and she lost nearly ten minutes in making repairs and then had to make a tack to fetch the mark. *Sunbeam* took her place, closing up on the leaders during the run to the Widow Buoy, where *Pele's* throat halliards carried away and destroyed her chances of winning. *Edna* tried to continue the race but being again disabled returned home. It was a good fight all the way back between *Winsome* and *Sunbeam*, but the latter gradually closed up and finished only 52 seconds late. As her allowance was five minutes she won the Thorn Cup. *Chocho* gave up. Times, corrected:—

	h.m.s.
<i>Winsome</i>	4.04.05
<i>Pele</i>	4.23.00
<i>Sunbeam</i>	4.00.00

The usual "Larks" race took place, ten participating, with the result that No. 12 (Sanders) came in first, No. 5 (Archer) second, and No. 10 (W. Carst) third. Times:

	h.m.s.
12	3.19.55
5	3.20.58
10	3.21.25
11	3.21.55

THE LAW COURTS.

LEI CHEIN HSIANG v. J. C. HARTLAND.

The hearing of this case, asking for the cancellation of registry made on immovable property, was resumed in the Yokohama District Court before Judge Kano on Oct. 23rd, when Mr. G. E. Gregory, and Messrs. Hattori and Akagi, interpreters of the Court, were called in as experts whom the Court instructed to give their opinions as to the signatures of Mr. J. C. Hartland.

The expert witnesses retired to examine the signatures and to write their opinions.

Mr. Tada, public notary, was then examined as a witness.

He stated that the mortgage of the property to Mr. Hartland by a Chinese named Kwan How Chong was officially certified before him on Dec. 23rd, 1902, the amount of the money lent being yen 20,000. On that occasion, the parties were accompanied by Mr. Sawada, a lawyer, and one other gentleman named Komura. The parties made the signatures personally before witness, and Mr. Sawada attended as interpreter for Mr. Hartland, as the witness could not understand English. The

witness was acquainted with Mr. Hartland on Sept. 23rd, 1902, when another document was made between the same parties, at his office.

Some cross-examination by counsel followed, after which the case was adjourned till Oct. 26th when the opinions of the expert witnesses will be declared by the Court.

The hearing of this case, asking for cancellation of registry of mortgage made on immovable property, came up again in the Yokohama District Court before Judge Kano on Oct. 26th when the statements of Messrs. Gregory, Hattori and Akagi who attended to examine, signatures of Mr. Hartland at the previous hearing, were shown to Counsel of the parties. The opinions of the three expert witnesses were to the effect that the signatures in dispute were all made by the same person—Mr. J. C. Hartland.

Plaintiff's counsel presented to the Court an objection as to the opinion of the experts and asked re-examination of the signatures. Counsel mentioned a foreign professor of the College of Literature, Tokyo. His request was rejected. He further asked the Court for leave to examine a private detective who knows that Mr. Hartland and Mr. Tada, public notary, are not acquainted with each other. The Court also rejected this.

The hearing being now concluded, the Court reserved judgement till Oct. 30th.

INFRINGEMENT OF PUBLICATION REGULATIONS.

Fong Yit-Nan, proprietor of the Chinese printing office Che-San Bros., No. 56, Yokohama, who was connected with the anonymous circular affair, was tried in the Yokohama Local Court before Judge Nagasaka and Public Prosecutor Kawasaki on Oct. 23rd.

The accused stated that he received an order on Sept. 20th from a Mr. Campbell to print 300 copies of an anonymous letter and to distribute them among the foreign residents in Yokohama. The accused did as instructed. On the following day Mr. Campbell ordered 300 copies of another anonymous letter, and the same day he repeated the order for 500 more. He took 300 copies himself. As for the others, Mr. Campbell requested the accused to distribute them. The printed matter had no date, name of printer or name of place where his domicile was situated.

Sentence was passed of a fine of yen 30 in accordance with Arts. 3, 5, 22 and 24 provided in the Regulations as to Publication.

CLAIM AGAINST MINISTER FOR FINANCE.

S. Hamada, living in the district of Idzumi, Kagoshima prefecture, instituted a case in the Tokyo Local Court on Oct. 24th against Baron Sone, Minister of State for Finance, claiming yen 1,919/10. According to the complaint, in view of the revision of the land tax the Government surveyed the land of the Empire during the period of 1873 to 1881 during which time the expenses incurred for the work were paid by this owner in behalf of the Government. Repayment is still refused. Of the claimed amount, yen 1.01 is the real expense to be refunded and yen 907/10 is interest.

CLAIM ON A HORSE.

In the Yokohama District Court, the case brought by Mr. G. Booth against Messrs. Durand, Cobb & Co., claiming a refund of yen 238 was resumed before Judge Kato on Oct. 24th.

The averment of plaintiff is that he bought a horse from the defendants for the amount claimed on May 24th this year and returned it to them on June 16th, having found a defect in the animal. Defendants counter-claimed that he should take it back and charge for keeping it at their stable since June 16th at the rate of yen 30 per month.

Drs. W. Harrison and Yokura, veterinary surgeons, were examined as witnesses and stated that they had noted a crack on the hoof of the horse in dispute.

Plaintiff's Counsel asked the Court to examine a betto who attended the horse. The Court agreed to do so on Oct. 31st.

SENTENCE ON A ROBBER.

A man, Chi Shingu by name, who stole sen 27 on Sept. 15th by menacing a traveller on the highway near the village of Mino was sentenced, to nine years' confinement with hard labour, in the Tokyo District Court on Oct. 24th.

CLAIM FOR SHIPPING DAMAGE.

In the Yokohama District Court, this case brought by the American Trading Company against Messrs. Robert M. Sloman & Company (whose Yokohama agents are Messrs. C. Illies and Co.) claiming yen 485.36 for damage caused to goods brought by the steamer *Verona* was resumed before Judge Kano on Oct. 26th.

Defendants' counsel asked the Court for leave to examine an expert as to the mercantile custom with regard to Art. 1 of the bill of lading which provides that the shipper must notify the shipping office if the cost of the cargo is estimated at over \$100 otherwise the shipping firm is not responsible for damage. The Court rejected the request, after which counsel for the parties entered into a brief discussion.

The Court then rose, adjourning the case to Oct. 30th when judgement will be delivered.

SENTENCE ON A FORGER.

Y. Tsuchida, ex-manager of the Ushigome branch of the Aikou Bank, who was charged with the forgery of a draft for yen 4,000 by means of which he obtained that amount from the bank, was sentenced in the Tokyo District Court on Oct. 26th to 3½ years' imprisonment with hard labour, a fine of yen 30, and 6 months' police surveillance.

PROFESSOR KOTEGAWA.

Professor T. Kotegawa, who was charged with theft and had been undergoing preliminary trial in the Tokyo District Court, states the *Nichi Nichi*, was released on Oct. 26th on the ground that the evidence against him was imperfect.

RAZA v. SARDA.

In the Yokohama Local Court, this case, brought by Mr. M. A. Raza against Mr. P. Sarda, claiming yen 52.89, was resumed before Judge Awogagi on Oct. 27th, when plaintiff's Counsel gave explanations as to a number of documents produced to the Court in the previous proceedings.

Counsel for the parties entered into discussion after which the Court rose, adjourning the case till Oct. 31st, when judgement will be given.

THE JOVANSSEN DIVORCE CASE.

The hearing of this case, brought by Mr. Adolphe Jovanssen against his wife, petitioning for divorce, came up again in the Yokohama District Court before Judge Kato on Oct. 27th when Mr. H. V. Gielen was examined as an expert with reference to the Civil Code of Denmark and its provisions as to divorce.

Mr. Gielen deposed that he is Danish Honorary Consul in Yokohama, which office he has filled since 1899. In the Danish Code, there were several causes for a decree of divorce from a Court, but adultery on the part of the wife was a first cause of divorce. Whether a wife had been punished under the Penal Code for adultery or not punished for a proved act of adultery she was liable to divorce. In the code the articles with reference to divorce state simply "adultery" but not "sentence for adultery."

Cross-examined.—The existence of adulterous conduct is a first ground of divorce.

The Court then delivered judgement in favour of the petitioner and ordered respondent to bear the costs.

LIN BEH SENG v. NORWICH FIRE INSURANCE CO.

This case, in which yen 5,421.10 is claimed for losses caused by fire in the building of the Chinese periodical *Shing Yee Tao*, was resumed in the Yokohama District Court before Judge Kato on Oct. 27. Mr. H. V. Gielen, a partner of Messrs. Bavier & Co. (Gomei Kaisha) who are agents of the Norwich Fire Insurance Company, was examined, as a witness.

Mr. Gielen stated that about five years ago he insured the printing plant and other

kinds of property for yen 6,000 on the application of Lin Beh Seng who declared himself to be the owner of the property. Fire occurred in the end of October, 1899, burning down the whole of the property, at which time he was absent travelling. After having returned, he tried to see plaintiff but in vain. After the fire, he found that the property burned did not belong to the plaintiff. A Chinese merchant named Chuming-Loong living at No. 156, Yokohama told him so.

Cross-examined—Kingsell and Co., Chinese printers, are not concerned in the insurance policy. The witness did not know whether Lin Beh Seng was a brother of the proprietor of the Chinese stationer shop. The witness attended to insurance business at his office. He did not inspect the property, when plaintiff applied for insurance, believing plaintiff to be an honest man.

Further lengthy cross-examination with regard to the insurance business followed to which witness gave explanations.

The case was again adjourned till November 4th.

MR. ASAKURA.

The appeal of Mr. Asakura, a well-known lawyer of Tokyo, who was sentenced in the Tokyo District Court to imprisonment on a charge in connexion with the text book affair, was rejected in the Appeal Court on Oct. 27th.

THE BANK OF JAPAN v. K. NEDZU.

The hearing of this case, brought by the Bank of Japan against Mr. K. Nedzu, claiming the value of a draft which had been dishonoured by defendant, was to be resumed in the Tokyo Appeal Court on Oct. 28th.

THE ALLEGED SILK FRAUDS.

The trial of Messrs. A. Le Prevost and Carl Bremer and three Japanese—Sawada, Nishida, and Okazawa—who have been indicted on a charge of fraud in certain silk transactions, was resumed, on Oct. 28th, in the Yokohama District Court before Presiding Judge Watanabe and two Associates—Judges Matsuyama and Nanoya—and Public Procurators Midzutani and Nakamura.

Mr. Kishi and nine other lawyers were present as counsel for accused.

Before the proceedings commenced, Messrs. Kishi and Akiyama presented to the Court an objection to the competency of the Court interpreter, which subject had been introduced at the previous sitting. The Court refused to uphold the objection, on which all the lawyers retired with the leave of the Court, for half an hour, to consult among themselves.

Having re-appeared in Court,

Mr. Akiyama asked the Court to allow an interpreter in addition to the present official, the new one to be employed by counsel themselves. The lawyer asked the Court further to postpone the case for a week, within which time a competent interpreter would be found.

Public Procurator Nakamura opposed the request of counsel, after which the judges retired for a few minutes in order to consult.

The Court then consented to the request of counsel as to the employment of one more interpreter and requested counsel to find one if possible earlier than a week.

The Court rose, adjourning the case *sine die*.

DR. VAN DER HEYDEN v. L. STORNEBRINK.

Judgement was delivered in the Yokohama District Court before Judge Kano on Oct. 28th in the case instituted by Dr. van der Heyden against L. Stornebrink petitioning for partition of joint-owned property.

The following is the judgement:—

1.—The immovable property—the right of perpetual lease of ground (331 *tsudo*), No. 270, Bluff, Yokohama, and two wooden buildings with tiled roof—is ordered to be divided into two. As a means of partition, the property is ordered to be sold by auction and the money raised to be divided between the parties. The other claim of plaintiff is dismissed.

2.—The counter-claim of defendant is dismissed.

3.—The costs incurred in consequence of the absence of defendant from the Court are ordered to be borne by him. The remainder of the costs to be borne by the parties.

J. G. DOERING v. C. KANNHAUSER.

The hearing of this case, in which plaintiff claims yen 10,244, was resumed in the Yokohama District Court, before Judge Kato on Oct. 29th when Mr. Charles Thwaites was examined as a witness.

Mr. Thwaites stated that he had succeeded to the business of Messrs. S. Moutrie and Co., No. 61, Yokohama, whose head office is at Hongkong. He had a circular printed on May 12th, 1901, as an express of the *Kobe Chronicle*, in which it was said that Mr. Kannhauser had entered his employment as a piano tuner. Only a few copies of this express were circulated in Kobe before an objection was brought by Mr. Doering as to the engagement of the tuner. The issue of the expresses was consequently stopped. The witness, however, hired Mr. Kannhauser later when he heard that the latter had been discharged by Mr. Doering after a dispute the details of which the witness did not know. He simply understood it to be a matter of a letter. On June 14th, 1902, the witness ordered Mr. Kannhauser to insert an advertisement with regard to piano tuning business in the *Deutsch-Japan Post*.

The case was then adjourned till Nov. 6th at 1 p.m.

AN INSURANCE FRAUD.

The Yokohama agent of the Mutual Life Insurance Company of New York is prosecuting in the Tokyo District Court, Hideo Yamazaki, chief of its Tokyo branch, on the ground that the latter has embezzled over yen 10,000 belonging to the company. According to Tokyo papers, Mr. Basil H. Betts was examined in the Court on Oct. 28th as a witness. Yamazaki has disappeared from Tokyo.

A POLICEMAN ASSAULTED BY AMERICAN SAILORS.

Two sailors named S. F. Williams (20) and J. R. Suringham (25) of the U. S. cruiser *Albany*, which is now lying at Yokohama assaulted, on the night of Sunday (Oct. 25th) about 11 o'clock, at the English hatoba, a police officer named G. Sato, who was dealing with two jirikisha coolies who had carried the American sailors from Japanese town to the hatoba and were complaining about the sailors refusing payment. It appears that under a misunderstanding the sailors knocked down the officer with their fists, inflicting severe injuries on his nose and forehead, the officer falling back on the pier railway. The constable sustained also a serious injury on the back of his head, which made him senseless. He was immediately removed to the Rokkaku Hospital where he is now in a serious condition. The sailors, after the affair tried to escape by a boat which was lying at the hatoba, but they were arrested and the following day were removed to the Yokohama District Court where they are undergoing preliminary examination.

The preliminary examination in the Yokohama District Court of the two sailors—S. F. Williams and J. R. Cunningham—of the U. S. cruiser *Albany*, who are alleged to have assaulted a harbour policeman was concluded before evening on Monday (Oct. 26th) when S. F. Williams was released on the ground that the evidence against him was imperfect. The other was removed to the Negishi prison. He had not been committed to trial on Oct. 27th.

Dr. A. K. Wentworth, surgeon of the U. S. cruiser *Albany*, paid a visit, on Oct. 27th, to the Rokkaku Hospital, to see Constable G. Sano, of the Harbour police, whom a bluejacket of the *Albany*, now in custody, is accused of having seriously assaulted.

THE LATE MR. LECKY.

The Rt. Hon. W. E. Hartpole Lecky, whose death is announced, was born at Newton Park, near Dublin, on March 26, 1838, and was educated at Trinity College, Dublin, where he graduated B.A. in 1859 and M.A. in 1863. Devoting himself to literature, says *Men and Women of the Time*,

He soon gained distinction as an author. His acknowledged works are "The Leaders of Public Opinion in Ireland," published anonymously in 1861, and republished in 1871-72; "History of the Rise and Influence of the Spirit of Rationalism in Europe," 2 vols., 1865 (5th edit., 1872); "History of European Morals from Augustus to Charlemagne," 2 vols., 1869; "History of England in the Eighteenth Century," vols. i. and ii., 1878, vols. iii. and iv., 1882, vols. v. and vi., 1887, vols. vii. and viii. (completing the work), 1890. A Cabinet Edition of the History in twelve volumes was published in 1892, the last five being devoted to Ireland and Irish affairs down to the Addington Ministry. Mr. Lecky published a small volume of poems (1891), and an important work on contemporary politics, called "Democracy and Liberty," in 1896, a second edition of which was published in 1899, and created some stir through its adverse comments on Mr. Gladstone. His first three works and a large part of his History of England have been translated into German, and some of them into other languages. Most of his works have gone through many editions in England. Mr. Lecky had received the honorary degree of LL.D. from his own University of Dublin, and from the Universities of St. Andrews and Glasgow; the degree of D.C.L. from the University of Oxford, and the degree of Litt. D. from the University of Cambridge. In 1894 he was elected Corresponding Member to the Institute of France. He was also an Honorary Member of the Royal Academy. In November, 1895, he was elected member of Parliament for the University of Dublin, and was a prominent figure in the debates of the House, but retired last year. 1897 he was made Privy Councillor. He had contributed occasionally, but not frequently, to periodical literature; and since the division in the Liberal party, in 1886, he had been an active member of the Unionist party. He married, in 1871, Elizabeth, Baroness de Dedem.

SHIPPING ACCIDENTS.

From enquiries the *Nagasaki Press* learns that the H. A. L. S. *Savio* suffered much greater damage than was at first supposed. She must have driven squarely and hard on to the reef, for sixty plates are damaged, and one expert estimates that six weeks will be occupied in repairing her, though another statement is that it can be done in a month. In any case the work will cost many thousands of dollars.

On Wednesday the agents, Messrs. Kunst and Albers, informed the *Press* that an inspector was to come over from Shanghai, and on his report depended the course to be taken with regard to the vessel.

The Mitsu Bishi Company's steamer *Yugao Maru* while returning to Nagasaki from Takashima, struck on a suiken rock known as Karakasa-Iwa at the southern end of Nezumishima at the harbour entrance on Monday morning at about 11 o'clock. She was successfully floated off about 3 o'clock that afternoon, reports the *Nagasaki Press*, and was brought to Kosuge in order that she might be examined at the patentslip.

It is intimated by M. Roux, Kobe Agent of the Messageries Maritimes, that the Company's steamer *Sydney*, which left Marseilles for the Far East on Oct. 4th broke her shaft before arriving at Aden and has had to stop there. Her mails and passengers were transferred to the P. & O. Co.'s steamer *Britannia* on 19th Oct., and her cargo will follow by the steamer *Himalaya*.

The sailing vessel *Kiko Maru* was wrecked in a severe storm on Oct. 26th while passing Matsuwa, Sagami province, on her way to Tokyo. The crew, consisting of six men, were saved, landing at the village of Shimoura in one of their boats.

On the 12th ult., C. B. Fry headed the cricket records (batting) with 81.30 for 40 innings (7 not out), Ranjitsinghi being second with 58.43 and Hirst third with 47.72.

LITERARY GOSSIP.

M. Maeterlink, who has caught the passion for automobilism in its most acute form, had a marvellous escape from the consequences of his own imprudence the other day. Something went wrong with his motor, and the absent-minded litterateur proceeded to examine its interior mechanism with a naked light. The result was a violent explosion which caused a shock to his eyes and almost destroyed his sight. He escaped, however, with nothing worse than a severe fright.

The Historical English Dictionary, with the inauguration and progress of which the name of Dr. Murray of Oxford is so intimately connected, is most fittingly to have a permanent memorial at Mill Hill School. It was while a master at the school that Mr. Murray planned and began the dictionary, and the handsome new building now being erected from the designs of Mr. T. E. Colcutt, F.R.I.B.A., is placed on the site of the original scriptorium in the school grounds. The opening ceremony was to take place early in October. Sir Ernest Satow was educated at Mill Hill.

The *Buckley Parish Magazine*, Northumbria, announces that the sale of a book consisting of a series of letters from Ruskin to Mrs. Drew, a daughter of the late Mr. Gladstone, has furnished the wherewithal (£400) to pay for a new church porch. An inscription in Latin, cut in a slab of Coniston stone, has been placed on the east wall in the interior of the porch. The translation of the inscription is as follows:—"M. D. caused this porch to be built to the greater glory of God and in memory of her friend John Ruskin. A.D. 1902.

A correspondent writes to the *Scotsman* pointing out that in the ruined church of Abercrombie, near St. Monan's, Fife, he observed that the posts of the door on the north side consisted of fragments of Runic crosses. No local authority can throw light on this fact, and as some years ago similar fragments were discovered built into the east end of St. Andrews Cathedral, about two or three feet above the foundation, the correspondent asks if it be possible that some reason may have existed for building these remains into churches when available.

M. Charpentier, the author of "Louise," which acquired much favour in Paris three years ago, is stated to have declared an artistic divorce between himself and the French capital. He is stated to have discovered, during a tour of repose after the production of "Louise," that Vienna suited his artistic temperament for working purposes better than Paris, and he is stated to have composed in it an opera, which is to be produced at the Opera there during the coming winter. The score will be delivered to the manager in the autumn. Artistic Paris is in umbrage at this news.

Mr. William Westall, whose death at the age of 69 is announced, belonged to the class of novelists generally described as "painstaking." His books depended for their interest more on plot and episode than on delineation of character. They were of a kind that rank midway between the frankly sensational and the ambitious. He was a rapid worker, and had the advantage of being an able journalist and a great traveller. Perhaps the most entertaining of his books was "A Queer Race," in which there is a haunting description of a plague-struck ship. The episode of the rats which climbed from it to the healthy ship that was towing it, is one that stays in the memory.

Apocryphal of Lord Halsbury's seventy-eighth birthday, a contemporary has recalled one of the best stories of his forensic days, and omitted its finishing touch. While leader of the South Wales Circuit, the future Lord Chancellor fought very strenuously a case on behalf of a Welsh public authority, and created some amusement by the ardent manner in which he identified himself with the interests of the locality. "Come, come," interrupted the judge, good-naturedly, "you must not argue too much in that strain. You cannot

make yourself out to be a Welshman, you know." "Perhaps not," returned Mr. Giffard, "but I have made a good deal out of Welshmen in my time." The finishing touch of the anecdote is the judge's retort, "You claim, then, to be a Welshman by extraction?"

A writer in the *Popular Science Monthly* says:—As the question of the size of family appears to be much discussed just now, I should like to call attention to the low birth rate in novels and plays, which, united as it is with a high death rate, will inevitably lead to the rapid extermination of the hero and heroine. I am under the impression also that the birth rate is decreasing, and while families of a respectable size may be found occasionally in Thackeray and Dickens, they scarcely exist in Meredith, Hardy and James. Although, so far as I am aware, attention has never been called to the alarming conditions, their existence will be recognised readily by readers of novels and play-goers. It will suffice to refer to two novels, which I think are fairly typical—"Vanity Fair" and "Beauchamp's Career." Becky Sharp was an only child, nor do we hear of uncles or aunts. "Vanity Fair" is a novel without a hero. Sir Pitt Crawley, twice married, has four children, his brother five and his sister none; so there is an average family of three, just sufficient to maintain that questionable line. Osborne and Dobbins each have two sisters, and we have again the family required for a stationary population. The Sedley family consists of brother and sister. In the next generation, however, things are worse. Amelia has two husbands and two children, Becky one child, Sir Pitt one and Josh none. This is apparently an average family of 1.83, which is almost exactly that of the Harvard graduates, according to President Eliot. In "Beauchamp's Career" Nevil is an only child and leaves a child to survive him; Everard Romfrey, marrying childless Mrs. Culling, has one child who dies in infancy; his brother has none; old Mrs. Beauchamp has none. Austin, Baskett, Lydiard and Dr. Shrapnel leave no posterity. Of the three heroines, Jenny and Cecilia are only children; Renee is of the typical French family of two, but has herself no children. This is obviously a very bad state of affairs—an average family of one-half child and a net fertility of only 0.43. As these statistics have been collected in large measure from a fallible memory, they may not be exactly correct, and they may not be entirely representative, but I am confident that they would be substantially confirmed by more accurate and extensive data. They certainly foretell the rapid extermination of the population of the novel.

The current number of the *Magazine of Commerce* contains a fully illustrated article on "The Romance of the Signs of Old London," written by Mr. Colford, who mentions that when once the system of signs as distinctive trading marks gained full headway, each tradesman tried to outdo his neighbour in the size and glory of his particular advertisement, until the City became one vast display of decorative humour. Later on, by permission of Charles I., every house had its sign hanging from wooden brackets or iron rods, fixed into the walls of the house. The streets of old London were narrow, winding, and dark. The houses projected as they rose above the highway until one could almost shake hands with a neighbour across the street. The narrow places were filled with long-armed signs, ponderous in their weight of iron, ridiculous in conception and fantastic in their dress of paint. In storm and wind they groaned and twisted on their rusty hinges, hindering ventilation, making the night hideous, and becoming an absolute menace to the traveller on the street. In 1762, after many people had been killed by the falling of lumbering things, an Act of Parliament compelled their removal, and they were to be placed level with the wall, or carved in stone and set into the structure. This struggle of illiteracy to make a literature in trade makes a story of surpassing and perpetual interest. Those who could, advertised their name by a rebus; thus a hare and a bottle stood for "Harebottle," and two cocks for "Cox." Those who could not

employ a rebus adopted pictorial objects, until they had ransacked the heavens above and the earth beneath. In due course of time the occupant would move from his place of business and leave his sign behind him, and a trade of another order would then be carried on under the old flag. Addison, writing in the *Spectator* joins every shopkeeper to make use of some sign that bears some affinity to the wares in which he deals. A tailor at "The Lion," a cook at "The Boat," a shoemaker at "The Roasted Pig," are reproached by the author, who adds, "and yet, for want of this regulation, I have seen a goat set up before the door of a perfumer, and the French King's Head at a sword cutler's." And then he goes on to enumerate signboard absurdities. "When was there ever such a combination of incongruous objects as 'The Bell and Neat's Tongue,' 'The Dog and the Gridiron,' 'The Fox and the Geese,' have met, but what have 'The Fox and the Seven Stars' to do together, and when did 'The Lamb and the Dolphin' ever meet, except on a signpost?" The time has long gone when the streets of London were filled with Blue Boars, Black Swans, Red Lions, Flying Pigs, and Hogs in Armour, together with many creatures more extraordinary than any in the deserts of Africa. To study that history is to read the literature of the English people doing business at their great London office at a time when they knew not their alphabet.

MATTERS AMERICAN.

The big Boston firm of Mason and Hamlin, manufacturers of organs and pianos, has been declared bankrupt.

The popularity of Booker Washington's college at Tuskegee is evidenced by the fact that 1048 young coloured people had to be refused admission this fall.

The Canadian Government has asked Parliament to appropriate \$150,000 for a thorough survey of Hudson Bay, the purpose of which is said to be the sequestration of that arm of the North Atlantic ocean. It is the largest body of water in the world practically land-locked by the territory of one power.

Few banking institutions in the United States can point to a record equal to that of the Philadelphia National Bank, which celebrated its one hundredth anniversary on the 19th of September. This bank was opened for business September 19, 1803, with George Clymer, one of the signers of the Declaration of Independence, as its president, and since then he has had only six successors in the office.

It was announced in New York on Sept. 4th that Mr. C. Oliver Iselin, the managing owner of the *Reliance*, went to Captain Barr at the close of the races and said:—"Captain Barr, I am instructed by the members of the syndicate which built this boat to say to you that it has decided to give you an annuity of \$2,000 a year." As Barr's salary is about \$3,500 per year, this gift is more than half pay for life.

The remarkable spectacle was presented at Clinton prison, Dannemora, New York, on October 1st of the execution of three brothers for the murder of their uncle, who had befriended them. The case of the Van Wormer boys had been in the courts for two years, and excited much attention. Strong appeals were made to Governor Odell to commute the sentences to life imprisonment, but without avail. So Willis, Frederick and Burton Van Wormer went to their death, being electrocuted, and paid the penalty of their many crimes.

Of the total working population of the United States women constitute less than 15 per cent. Compare this with other countries and one will realize fully how well women are treated in America. In Germany the percentage of females employed to the total self-supporting population is 25, while in England it is 27. In Italy the percentage is 40, and in Austria 47. Among the Indians it used to be 100, and about the same

percentage was found by Livingstone in Africa. The higher the civilization the lower the percentage.

The railroads of the entire United States are face to face with what promises to be the greatest car shortage in their history. Despite the fact that most liberal orders for new equipment have been given by all the roads during the last twelve months they now find themselves unable to accept all the traffic that is offered. The condition of affairs is outlined by Vice President W. C. Brown of the Lake Shore, who says that the company is in urgent need of 1,500 boxcars daily. On others systems, with a much greater mileage than the Lake Shore, larger numbers of cars are needed for immediate use.

Chicago's City Council is preparing to attack the validity of the act creating Chicago's \$40,000,000 drainage canal. The Finance Committee of the Council has formally advised Corporation Counsel Tolman to bring an action in the Supreme Court of the State. A threatened depletion of the city's water fund, with a possible deficit, is the moving force behind the Aldermen and the act of the last Legislature by which the suburb of Cicero was added to the sanitary district has caused the trouble. By the provisions of that act Chicago will be required to furnish the residents of Cicero water at 4 cents per 1000 gallons, while its own citizens pay 19 cents. The Aldermen say it would mean the expenditure of \$350,000 to extend the mains and \$100,000 to erect a new pumping station and that water would be supplied at less than cost. Should the city comply with this act it is said other country towns could demand the same concession awarded Cicero. This, the Aldermen say, would be ruinous.

Mr. W. P. Brown, the New Orleans cotton king, closed his September deal on the last day of the month. Although he had speculators in his grasp he did not push the price of cotton higher. The option went out at noon at 13 cents a pound. It developed that the bob-tailed pool in September held contracts for 75,000 bales, of which about 50,000 had no physical existence. It was a knowledge of this fact that made Brown so confident. The speculators, some of whom were recognized as treasurers of mills that have closed down for lack of cotton and have laid the blame on the Brown pool, produced 25,000 bales of cotton at the last moment and tendered it to the pool, believing it would demoralize the market. This 25,000 bales cleaned up the market, and as it went to new purchasers under contract and was not to come back into the market, there was nothing left for the speculators to do but settle. Men familiar with the settlement of the short interests in the stock market said the terms made by Brown were merciful. The pool lost on the 25,000 bales accepted about \$125,000, but got from the speculators in the settlement for 50,000 bales of "Wall-street cotton" about \$650,000 leaving the net profits for the September deal about \$530,000. This makes the profits for both pools about \$8,000,000.

There are occasional signs of anxiety for fear that Mr. John D. Rockefeller will get all the money there is, says *Harper's Weekly*. Mr. Rockefeller has not lately seen fit to publish his estimate of the value of his possessions, but sanguine guessers rate him nowadays as pretty nearly a billionaire, and the most conservative computers believe he has more than half a billion. It would be impossible to say what is the total wealth of the United States, but the assessed valuation of the several States for 1902 amounted to about thirty-five billions. Even if Mr. Rockefeller has a whole billion, there is something left for the rest of us. But his fortune, they tell us, is probably increasing by as much as fifty millions a year, and is not unlikely to double within ten years. Already his financial power is enormous, so that he could influence stock values very materially if he chose, and, at times, make or unmake ordinary millionaires by mere whispers at the telephone. Malevolence is not attributed to him, nor is he felt to be a mischief-maker, but the feeling is that his business abilities are so

surpassing and his business judgment so unapproachably sound that he can't help seeing and improving chances to make millions more. To discuss him is as little of an impertinence as to discuss the comet. He is a force, 64 years old, moving through the earth's atmosphere, and believed to be rapidly increasing in weight and velocity. Persons who fear they are in his orbit and may be pinched may find some relief in considering that even though his fortune increases very rapidly its growth may long be fed by the increase of wealth in the country.

The gun foundry at the Washington navy yard is reported to be unable to furnish the ordnance required for the ships under construction, and it is said the ships launched during the next four years will be without their complement of guns for several months. A board of naval officers composed of Captain Folger, Commander Bowyer and Lieutenant Commander Fletcher recommend an appropriation of \$3,464,358 towards expansion and improvement of present facilities or a recourse to contracts with private firms. The gist of the report is that the 12-inch and 10-inch guns may be completed in time, but those of 8-inch and smaller calibre will be delayed for about eight years beyond 1907. There are ten battleships, eight armoured cruisers and three protected cruisers under construction which were authorized between March 3, 1899, and last March. The delivery of these ships is due between February, 1904, and March, 1907, and they will require 430 guns of the following calibres: Forty 12-inch, 8 10-inch, 104 8-inch, 60 7-inch and 218 6-inch. These constitute the main batteries for the twenty-one ships referred to, and in addition twelve 4-inch for two gunboats and 386 3-inch are needed for the new ships. The small calibre guns need not necessarily be made at the Washington gun foundry, and the remainder could have been manufactured at the Government shops in due time for delivery if there had not been unnecessary delay in placing contracts for forgings.

PLAGUE IN YOKOHAMA.

On Oct. 23rd, a case of plague appeared at Furo-cho. The sufferer is a man named G. Ichida (27) who removed there three days ago from Yoshihama-cho, where the disease is still prevalent. He was removed to the Manji Hospital. Some houses adjoining his present and previous dwellings were isolated.

On the afternoon of Saturday (24th) another case of suspected plague was reported at Urashima-cho, Kanagawa, where three cases recently appeared.

A house at Urashimacho, Kanagawa, where three cases of plague appeared on Oct. 19th, and ten adjoining buildings were burned on the 26th by the sanitary authorities.

Another case of plague was reported on the night of Oct. 28th in Yokohama. The patient is a young girl named Katsu Yendo (11), living at Minami Yoshida-machi who was removed to the Manji Hospital on the previous day supposed to be suffering from fever. Her dwelling and thirty adjoining houses with 150 occupants were isolated.

Another case appeared at Yoshida-machi on the 28th and the patient died at the hospital on the evening of the same day. The victim is a painter named R. Otsuka.

NEWS OF THE WEEK.

The Empress is slightly indisposed.

The telephone office at Atami was opened on Oct. 26th.

The Crown Prince arrived at Numadzu on Oct. 23rd from the west.

The members of the *Seiyu-kai* will hold a general meeting, probably on Dec. 1st in Tokyo.

Prince Kan-in left for Niigata on Oct. 27th to

be present at the general meeting of the Niigata branch of the Red Cross Society.

The warship *Soko* has been sold out of the service.

The wife of Mr. Y. Ito (son of Marquis Ito) was delivered of a daughter on Oct. 28th.

Mr. H. C. Austin, an old Yokohama boy, is expected to become Hon. Secretary of the Victoria Recreation Club, Hongkong.

A Chinaman named Han-Pengchu (54) living at No. 164, Yokohama, was arrested on Oct. 26th on a charge of smoking opium.

On the morning of Oct. 22nd, fire broke out at the Oura coal mine, near Fukuoka and was still raging at noon. Details are not given.

A case of scarlet fever was reported in Tokyo on Oct. 23rd. The patient is a young girl named Akie Yabe (10) living at Asakusa.

A fishing boat collided with a junk on October 25th off Shinagawa with the result that two of the three men in the former were drowned.

Marquis Ito arrived at Tokyo on the afternoon of Oct. 22nd from Oiso. He proceeded to his official residence, where the Premier paid a visit to him.

The Yokohama Tea Guild presented a silver statue to Mr. K. Otani, President of the Union, on Oct. 26th, for services rendered by him to the Guild.

The ordinary meeting of the Hokkaido Assembly was opened on Oct. 24th when the budget for next year was submitted, the estimated amount being yen 1,623,312.

Korean military officers who are to be present at the Autumn manoeuvres, arrived at Moj on Oct. 23rd by the steamer *Tairen Maru* They left by train for Tokyo.

The commander of the German cruiser *Hansa*, which recently arrived at Uruga, paid a visit on Oct. 23rd to the Department of the Navy, accompanied by Count Arco Valley.

It is officially reported that a British sailor who accidentally killed a Japanese on Oct. 24 at Hakodate, was sentenced the following day to a fine of yen 50, in the District Court.

The funeral of the late Mr. W. A. Crane took place at the New Cemetery, Kobe, on Saturday, Bishop Partridge conducting the service. The ceremony was very largely attended.

Judicial officials searched on Oct. 28th the premises of the Kwangyo Savings Bank, Kanda, Tokyo. The reason has not yet been ascertained.

The warship *Otoha*, which has been built at the Yokosuka Naval Dock Yard, will be launched on Nov. 2nd. The Emperor will be present on the occasion.

Permission for the amalgamation of the Seoul-Fusan and Seoul-Chemulpo Railway Companies was to be given probably on Oct. 29th. The *Fiji* states that the application was approved by the Cabinet on the 27th.

Mr. Yang-su, new Chinese Minister, and Mr. Tsai-chun, ex-Minister, will proceed to the Palace on Oct. 29th to present their credentials and letters of recall, respectively, to the Emperor.

The opening of postal communication over the Siberian Railway, which had been fixed for Oct. 25th is postponed to the 28th, owing to the fact that there is no steamer to attend to the business.

A man named Y. Shiobara (61) living at Shitaya, Tokyo, has been arrested on a charge of having forged and uttered several kinds of notes. There is a suspicion that he has also forged bank shares.

Construction work on the steamers *Koko Maru* and *Shoko Maru* being finished, the Hunan

(Konan) Steamship Company gave a garden party on Oct. 23rd to over 500 gentlemen of Osaka and Kobe to celebrate their completion.

A man named S. Mameo (20), living at Mukojima, was found, on the night of Oct. 26th at Kanasugi, Tokyo, strangled to death. Two men, T. Ishigaki (22) and G. Inouye (26) were arrested on suspicion of having murdered him.

In connexion with the case of Mr. R. Kamao, ex-Governor of Shimane prefecture, who was involved in the text-book affair, Viscount H. Seki and Baron M. Funakoshi were to be examined as witnesses in the Tokyo District Court on Oct. 29th.

The *Nagasaki Press* records the death in that port of Niels Lundberg, better known as Charlie Brown, who had been resident there something like 44 years; and of Mrs. E. R. Fulkerson, of the Methodist Episcopal Mission, who has friends all over Japan.

Influential German newspapers and magazines are urging the Government to limit the number of foreigners instructed in the German technical high schools, or more properly technical universities, which are over-crowded. Out of a total of 14,626 students 2,242 are foreigners.

A clerk named S. Matsumura of the Azabu Telegraph and Post Office, Tokyo, was arrested on Oct. 21st on suspicion of having stolen money belonging to the office. His dwelling was searched. On the evening of the same day he attempted to commit suicide by hanging himself in the detention ward.

A Japanese named Y. Kawamura (25) employed on the steamer *Korea* as an assistant cook, was arrested on Oct. 27th on a charge of having stolen \$50 in gold belonging to one of the passengers when the ship was lying at Yokohama on the 14th. He spent the money in Tokyo after changing it into Japanese coin at a Chinese exchange shop in Yokohama.

Advice has just been received in Kobe, said the *Kobe Herald* of Oct. 23rd, of the death of Mr. Colgate Baker, Sen., at San Francisco. The sad event was very sudden, heart failure being the cause of death. Mr. Colgate Baker will be remembered by most foreign residents as well as a large number of Japanese, having been prominently connected with the tea trade of Kobe for several years.

The members of the Privy Council held a meeting on Oct. 28th and discussed the draft of a proposal with regard to administrative reform. Baron Kiyoura, Minister for Agriculture and Commerce, was present to give explanations. The draft was passed. Marquis Ito, President of the Council, proceeded subsequently to the Palace to present the results to the Emperor.

On the 12th ult., at Kennington Oval, A. Shrubbs, South London Harriers, made a world's amateur record for two miles. He covered the first mile in 4½ minutes, and the two in 9 mins. 17 secs. This beats the previous best on cinder (9 m. 17½ s.) made by W. G. George at Stamford Bridge in 1894 and the same runner's grass record (9 m. 30½ s.) at Catford in the same year.

At the annual meeting of American Association of Japan, held at the United States Consulate General, Yokohama, at 4 p.m. on Wednesday, October 28th, the following officers were elected to serve during the coming year: Messrs. N. F. Smith, President; B. C. Howard, Vice-President; G. H. Scidmore, Secretary; W. L. Merriman, Treasurer; J. W. Copmann, E. S. Booth, G. W. Bramhall, F. H. Ziegfeld, D. H. Blake, E. W. Frazar and Chandler Gibbens, Executive Committee.

Bishop Hoare, of Victoria, Hongkong, with regard to the work of lady missionaries in China, regrets to find himself at variance, in point of principle, with the policy of the two Societies at work in the Diocese. While admiring the devotion of the ladies, and appreciating the great value of their work, he does not believe it right, or seemly, to plant isolated groups of European

ladies broadcast in a country like China. His position is warmly endorsed by Hongkong papers.

The French Minister in Tokyo, has presented to the Department of Foreign Affairs, photographs of a monument which has been erected at Hiroshima to French soldiers who were attacked by sickness or wounded during the troubles in North China in 1900, and who died after removal to the Hiroshima Military Hospital. The French Minister, at the same time, returned to the Japanese Authorities his thanks for the kindness rendered to the sick soldiers while in the hospital.

A carpenter named K. Sato (38) living at Ichibei-cho, Azabu, Tokyo, and an employee of his were arrested on Oct. 24th on a charge of incendiarism. It appears that the carpenter insured one of his buildings, in June this year, with the Yokohama Insurance Company for yen 2,500. He is alleged to have induced his employee on the 20th to set fire to it so as to obtain the money. The latter did as requested the same night, but the flames were fortunately extinguished by the neighbours, before they extended through the building. Evidence of the crime has been found by police authorities.

The marriage of Miss Tripp to Mr. Edward Coutts took place in All Saints' Church, Kobe, on Saturday afternoon. The ceremony, reports the *Kobe Herald*, was performed by the Rev. G. H. Davies, Chaplain. The bride was given away by Mr. Birch. The service opened with the hymn "The Voice that breathed o'er Eden." A large congregation assembled to witness the ceremony. Mrs. Davies officiated at the organ and played Mendelssohn's Wedding March, as the happy pair left the Church. The bride wore a lovely gown of ivory Duchesse satin trimmed with chiffon and handsome lace Brussels applique passementerie with court train from the shoulders.

On Saturday, says the *Nagasaki Press*, there reached Nagasaki from Formosa a gentleman through whom we have obtained further particulars of some of those unfortunate people who were obliged to abandon the American barque *Benjamin Sewall* on October 5th. It will be remembered that they left in two boats. Our informant states that the captain, his wife, and a niece, have reached a place in South Formosa in safety, and he knows of nothing which would not justify the assumption that the others of their boat's crew were with them. As to the other boat-load, nothing had been heard of them up to the time he left Formosa.

Another naval officer who saw service in the China war has passed away in the person of Rear-Admiral the Hon. A. D. Somerville Denison, who, it may be recalled, was visited by the King, when Prince of Wales, at Woodside Wootton, Isle of Wight, whence his death is announced. He was born in 1835, being the second son of the first Lord Lonsborough, and entered the Navy in 1851, obtaining his commission in 1856. In June of the following year he served at the destruction of the Fatsan flotilla of war junks, receiving the China medal with the Fatshau clasp, and two months later he was raised to the rank of lieutenant. He retired 22 years ago with the rank of captain, and in 1889 was promoted to the rank of Rear-Admiral, on the Retired List.

To mark the opening of their new premises at No. 61-B,—though somewhat behind the event in consequence of the non-arrival of the new machinery which is now a feature of the office—Messrs. Thorn and Son, of the "Box of Curios" Printing and Publishing Co. were "at home" on Wednesday afternoon, and the opportunity was taken by many residents to inspect in operation the varied processes carried on by them. The recent additions to the plant include a large lithographic machine and a simplex type setting machine. But it was the latter that attracted the bulk of attention from visitors, who could not sufficiently admire the manner in which by means of a key-board the types are drawn rapidly from the vertical grooves of the lower of two cylinders, the upper being the means of dis-

tributing the type after use into the lower. A side table generously provided enabled guests to drink to the health and prosperity of the firm.

REVIEW.

A Text-Book of Colloquial Japanese, by Dr. RUDOLF LANGE, Professor of Japanese in the School of Oriental Languages, University of Berlin. English Edition. By CHRISTOPHER NOSS, Professor of Ethics and Apologetics, North Japan College. Tōkyō: Methodist Publishing House, 1903.

VERY few people seem to agree as to the best way of studying Japanese. As he has watched the appearance of book after book on the colloquial or written language of Japan the present writer has often doubted whether real scholarship advances in proportion to the facilities provided for the student. When between thirty and forty years ago such men as Satow, Aston, Brinkley and McClatchie began their study of this complicated tongue they were almost solely dependent on sharp ears, sharp eyes and keenly observant minds for their vocabularies and their knowledge of grammar. But they made rapid strides, strides that fairly astonish many modern students. They each devoted themselves to special lines of study, in which they became thoroughly proficient. The next generation of scholars, represented by such men as Chamberlain, Gullberg, D. C. Greene and many others that could be named, had nothing more to depend on in the way of literary guides than Hepburn's Dictionary and Aston's very short colloquial grammar. An 1871 well-thumbed edition of this book lies before us as we write. It is spoken of by the author as a much-enlarged edition, but nevertheless it only consists of 84 small-sized and by no means closely printed pages. But yet at the time we were quite satisfied with the book. It told us how to begin to converse. It put us on the track for finding out everything we wanted to know. It gave us the knack of consulting original sources of information for ourselves, and after acquiring that art all else was easy sailing. But we are told by comparatively new arrivals from the West to-day that one of the greatest difficulties connected with the study of Japanese is the lack of thoroughly exhaustive and scientifically written grammars. "Does not Chamberlain's Hand-book satisfy you?" we once innocently asked one of these new hands at the language. "Satisfy me! Why there are hundreds of questions that even a man as ignorant as I can ask that Chamberlain has never even noticed," was the reply. The one hope of these embryonic linguistic geniuses is that some day a book will appear which will unravel the whole mystery of the Japanese tongue, solve all their problems and render the acquisition of the language mere child's play. The one cry of these malcontents, is "More books! More books of explanation." They clamour to be treated like so many children, who do not seek to find things out for themselves, but wait for the teacher to tell them everything. Our contention is that the early students of the language in this country who had the fewest foreign text-books made better progress than the new generation of learners.

Many Germans in Tōkyō and Yokohama having made use of Dr. Lange's German book on the Japanese Colloquial, published in Berlin in 1890 as Vol. I of the series known as *Lehrbücher des Seminars für Orientalische Sprachen*, and having declared that it explained the Japanese language in a clearer manner than any other treatise in existence, Dr. Noss and quite a number of other missionaries were of opinion that an English edition of the work would supply a felt need among English-speaking students of Japanese. And so Dr. Noss set to work to prepare his edition. The bulky volume that lies before us is the result of many months of earnest, scholarly labour on Dr. Noss' part, and we trust that the sale of the work will be such as to meet his expectations. The Germans are past masters in the study of foreign tongues, and it is only natural that a large number of Americans and Englishmen should expect to find in a German work on Japanese more thoroughness

and more system, if not more lucidity, than they find in English Handbooks. We are told by Dr. Noss in his Preface to the English edition of the Text-book that he has re-cast all the material in Dr. Lange's book "in such a way as to make it most helpful to the English-speaking student," and that nothing of value in the original work has been omitted. On the chief objects and the general character of the book Dr. Noss writes:—"The aim of the book is pedagogical rather than scientific; hence the combination of system and no-system and the numerous repetitions. The pedagogical principle has been applied, for example, in the study of words. When it seems likely to aid the memory of the student to indicate the origin of a word, this is done; but when the etymology is disputed or apt to be confusing nothing is said about it and the student must learn the word as a whole. The repetitions in most cases are not accidental but designed; for the student must pass through three stages to become master of an idiom. First he needs to be thoroughly convinced that there is such an idiom; secondly, he must learn how to use it; and, thirdly, after he has entirely forgotten its existence he needs to be reminded that he cannot get along very well without it."

Dr. Noss has adopted the plan of writing all words composed of two characters as compound words in the vocabularies given and in some other parts of the work. Thus *gen-ki*, *yō-jin*, *tsu-gō*. When not giving the characters we fail to see the object of this. If the student wishes to study the derivation of words he had better do so in connection with the ideographs, the only true and scholarly way. If he aims at acquiring a knowledge of the meaning of the words only, for colloquial purposes, the division based on ideographs may be disregarded without loss. There are hundreds and thousands of words whose etymology does not help one at all to understand the figurative meanings in which they are used. Japanese etymology without ideographs is hopelessly obscure. It seems to us far better to write *genki* and give its meaning as energy or vitality than to write *gen-ki* without explanation, as is done on p. 6 of Dr. Noss' book. With no characters, no explanation of the meaning of *gen* and *ki* as single ideographs, and no indication as to the original meaning of the combined ideographs the student is not benefited by the division into separate syllables. The above remarks only apply to certain parts of Dr. Noss' work. In other places he does explain the division of words. Thus on p. 15 *ba-sha*, horse-vehicle *tetsu-dō*, iron-way, *den-ki*, lightning-spirit, electricity. But the book contains a very large number of divided, unexplained words like *byō-ki* on p. 25, *hei-tai* on p. 51, *hei-ken* on p. 55, *shin-setsu* on p. 114. As the principal aim of the work is to enable foreigners to master the colloquial without the use of the Japanese script, it is quite necessary that full and clear explanations of all *jukujū* should be supplied. Our point is that it is better either in this matter to adopt one of three feasible plans; let etymology alone altogether, or make the subject thoroughly intelligible by the use of ideographs, or in the absence of characters give full English explanations of their significance; for nothing is more certain than that in a large number of instances the ideographs constitute the key to the very soul and essence of the language treated.

In his introduction Dr. Noss speaks of Mr. Gubbins' Dictionary as being "entirely out of date." Mr. Gubbins' Dictionary, in our opinion, and we have used it ever since its publication continually, will never be out of date as long as to other English work is published that shall embody all the excellent definitions of words given by Mr. Gubbins and add hundreds or thousands of others. As far as it goes the Dictionary is as useful to-day as it was when first published. Dr. Noss' remarks about dictionaries seem to us far from happy. He writes as though any Japanese Dictionary like the *Genkai* could come to an Englishman or an American a substitute or a kind of improvement on Brinkley's Dictionary. There are not, we venture to say to foreigners in the whole country who can make

use of a first-class Japanese dictionary without the aid of a teacher. And who is there that has a teacher by him every time he wishes to look up a word in a dictionary? To say nothing of their being written in Sinitic-Japanese throughout, the best Japanese dictionaries in a very large number of cases do not explain words as foreigners need to have them explained. But these are all minor points and do not in any way affect the value of the text-book which we are reviewing. For those students who wish to study Japanese by means of the *Romaji* only the book may be highly commended. In the introduction, which covers about 20 pages, the following subjects are dealt with:—"The relation of Japanese to other languages, Sinitic-Japanese, words derived from Western languages the ideographic script, Kana, Romaji, Pronunciation and Euphony, the Standard Colloquial, etc. The plan of the work is to discuss each part of speech separately and to furnish vocabularies containing lists of words with their meanings, and then to give an untransliterated, but partly explained, Japanese exercise for the student to render into English, followed by an English exercise, which the student is supposed to render into Japanese. To test the accuracy of the latter, a teacher possessing a knowledge of English would be necessary, we presume, though in the case of such extremely short sentences as are given and considering how closely they resemble in form and often in meaning the Japanese sentences furnished in the preceding exercise, it would not be easy for any one to go astray. In order to give an idea of the plan of the work, we furnish an example of an exercise to be found on p. 10 of the text-book, which brings in all the words contained in the short vocabulary which precedes the exercise. In reference to the vocabularies, in passing we may note that throughout the book they are printed without any stops between the original words and the English equivalents, a somewhat unusual practice. We find "*abura* tooth, *hane* feather, *hige* beard" and this throughout the whole work.

EXERCISE (p. 10).

Hai ni wa hane ga aru (arimasu) ka ni mo hane ga aru (arimasu). Nomi ni wa hane wa nai (arimasen). Hachi ni wa hani ga aru keredono, chō ni wa (hara ga) nai. Buta ni chisai shippo ga aru. Koi ni wa uruko ga aru. Ushi ni wa tsuno mo tsune mo aru. Kirigirisu ni wa hane mo aru. Neko ni wa hige ga aru. Kono kodomo wa yoku (very much) hana ni nite imasu. Saru wa hito ni nite iru. Okami wa inu ni nite iru. Ano inu wa kitsune ni nite imasu. Kono mushi ni wa hani ga aru.

This bird is like a sparrow. That dog is like a wolf. Birds have bills. Both horses (*ni mo*) and deer have hoofs. The cat has claws. The horse resembles a donkey. Deer have horns. This monkey has a tail. He resembles a monkey. This cat has no tail. This calf has no horns yet. This child resembles its father (*chichi-oya*) very much. This child has no teeth yet. Hogs have a great deal of fat (*takasan aru*).

Dr. Noss informs us in the preface that all the Japanese sentences were composed by Japanese. The marking of the long vowels has been done with much care, a matter of no little importance to beginners. It is hardly necessary to say that this book is intended especially for beginners. It is said that hitherto none of the works in use have been simple enough for the majority of foreigners and that more exercise in the elementary parts of the language is needed by novices. Nothing could be simpler than the first 425 pages of Dr. Noss' book. About 20 pages of annotated untranslated anecdotes, followed by a Vocabulary-Index Japanese-English and English-Japanese—an extremely useful addition—bring the total number of pages up to 570.

Most of the translations that we have had time to examine we have found accurate, but casually we have come across a few where the English does not seem to us to give the precise meaning of the original. On p. 408 we find *Kirō to suru tokoro wa hito ga tomemashita* rendered "Just as he was about to cut (at him) some one interfered." The "at him" inserted thus conveys the notion that the person referred to

was only going to have a try at cutting. The original does not say this. Below we find the following:—*Ano hito wa uta ga dekimasu ka! Utaeru dokoro ka: yūmei na ongakusha desu*, translated "Can he sing? I should say. He's a famous musician." To bring out the force of the original we venture to think the following would be better, "Can he sing?" "Sing! Why, he's a noted musician." Or "Can he sing?" "I should just think he can (I should say he can). He's a well-known musician."

The literary get-up of the work is excellent. The paper is good, the type extremely clear and the book is well bound. To business men, missionaries, and school-teachers who have little time to devote to the Japanese script and yet who desire to be able to express themselves idiomatically in simple Japanese Dr. Noss' Colloquial Text-book should prove to be a great boon.

There is perhaps one drawback to all books on the Japanese language written by foreigners which we ought to notice, and that is the authority which even if not assumed by their authors is apt to be given to them by those who make use of them. There is not a text-book in existence on Japanese but contains many disputable assertions, and often there is no warrant at all for the dogmatic form in which mere theories are expressed. To quote a case in point from Dr. Noss' Text-book on p. 29 of the introduction Dr. Noss refers to the absence of personification in Japanese as though it had been proved beyond the shadow of a doubt. Not only has this not been proved, but the opposite has in our opinion been indisputably demonstrated. We would refer Dr. Noss to what the late Mr. P. Ehmann wrote on this subject in his *Sprichwörter und Bildliche Ausdrücke der Japanischen* (Introduction p. 15 *et seq.*) Mr. Ehmann adduced the most indubitable proofs of personification in Japanese. We have always been of opinion that it is most common and have repeatedly stated this opinion in these columns.* This is only one among many instances of the ease with which foreigners are apt to generalize on the Japanese language with little or no data to go on. Hence it has to be remembered that the authority possessed even by the most scholarly works written by foreigners on the Japanese tongue is extremely limited and the tendency to exaggerate that authority is a weakness against which we have all to be on our guard in the use of foreign text-books. The only sure guide in the study of the language is general usage among educated Japanese and there is hardly a foreigner in existence who has sufficient knowledge of that usage to be a sure guide on all occasions. Would Englishmen accept the authority of Germans on the English language? So that the criticisms of the Japanese alludes in his introduction to which Dr. Noss on the authority of foreign guides to the study of their language are by no means uncalled for in certain cases.

CORRESPONDENCE.

A WONDERFUL YACHT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In a recent issue of one of your contemporaries, I noticed an account of a wonderful time made by a racing yacht called the *Defiance*, measuring 16 feet on load water line. This smart boat is said to have covered a course of 22 miles in a race, of which 10 miles were to windward, in the remarkable time of 2 hour, 20 minutes. Supposing that the distance given is the actual distance sailed, and not the distance of the race as per chart, this works out at an average speed of 9½ miles per hour.

According to Dixon Kemp, the well known authority, a sailing vessel's maximum speed is approximately $\sqrt{L \times W \times L}$ in feet $\times 1.25$ = knots per hour. This is frequently exceeded by modern racing yachts, but probably only by reason of the increase of load water line when the yacht is heeled over, at high speeds. On a water line of 16 feet this formula gives a maximum speed of 5 knots per hour. Supposing

* Among numerous instances that might be quoted we give only two or three. *Muriga ōreba, dori hikikomaru. Akiuji senri wa hashiru. Kaji mon too idezu. Ari no kwannon-mari. Daikoku wa chiri too yefabazu. Demono, haremono, tokoro wa kirawazu.*

the *Defiance* has overhauled increasing her water line to 25 feet effective, that would give a maximum speed of 6.25 knots. She must therefore be quite a remarkable craft to make an average speed of 9½ miles per hour over a course of 22 miles. If the distance of the race was 22 miles on the chart, and 10 miles was to windward, the performance was more remarkable still, the speed working out at over 11 miles per hour, and approximating the maximum speed of America Cup defenders.

Further particulars of this wonderful craft would greatly interest local yachtsmen.

Yours truly, MUNCHESEN, JUNIOR.

Yokohama, October 29th 1903.

BRITISH SOUTH AFRICA SINCE THE WAR.

Mr. Stafford Ransome, so well known in Japan, went out to South Africa, at the close of the war, as the representative and correspondent of a trade journal, remained out for ten months, and while there transmitted to England a series of articles, on which the book before us ("The Engineer in South Africa," published by Messrs. A. Constable and Co.) is based. Mr. Ransome's instructions were to "write fully and frankly on the various problems which have been evolved by recent events—to record, to criticise, and to suggest." He appears to have taken great pains to see the situation as it really is, and his report is entitled to careful consideration.

We may first note some passages in which the book has application to the present state of affairs in Cape Colony. "Let no one," he says, "run away with the error that recent events have done anything towards weakening the Dutch preponderance in Cape Colony. The 'Bond' is stronger than ever, though for the time being it may be less openly aggressive." Moreover, "the Dutch element is bound to be strengthened as time goes on, for the Englishmen who come to South Africa go farther afield than Cape Colony." Mr. Merriman, Mr. Sauer, Sir Gordon Sprigg, and Mr. Douglas are not enrolled as members of the Bond. Nevertheless, Sir Gordon, "still calling himself a 'Progressive' Premier, advocates the anti-English claims of the Bond, on whom he relies for his majority, and who use him as a mouthpiece and a puppet. By utilising in this manner the services of the 'Progressive' Premier, the disloyal party have made for themselves an ideal position. They have attained power without responsibility." As for the future—

"The people of the colony, whether Dutch or British are so sick of the existing state of affairs that a change must come. The Constitution is not to be suspended; but a Redistribution Bill cannot be put off much longer. The next elections will take place before that can come about, and yet it would seem that even with the present unfair distribution of seats, there is a possibility that a small loyalist majority will be forthcoming. If so, we may look to see Sir Gordon Sprigg join the Progressives again if they will have him.

In his second chapter, Mr. Ransome deals with the cost of living and travelling in British South Africa, and in his fourth with the "boom" in business which is supposed to be coming. He does not believe in that boom, for there are still, he says, drags upon the progressive wheel which greatly restrict its freedom of action. And as he goes on to say, "a gradual increase should suit the British manufacturer better than a sudden rush, for it will give him time to study the country and formulate his policy for dealing with it." As regards the present prospects of employment in the new and the old colonies, Mr. Ransome tells us that white skilled labour of all sorts is wanted everywhere, but not in great quantities. "A steady influx of good skilled men, and, above all, of useful practical women, is what South Africa requires at the present day." Wages rule high, but then so does the cost of living, and the bachelor artisan who gets £3 a week in South Africa will find that it does not go so far as 35s. will do in London, or 25s. in the provinces. On the other hand, a married couple, with children who can work, have very fair prospects of eventual success.

Discussing the labour question in its relation to the mines, Mr. Ransome, assuming that the capitalists cannot afford to pay for white unskilled labour, mentions the three alternatives—the importing of Asiatics, the trusting to Providence to induce the Kaffir to work, and the taking of measures to make the importation of the Chinaman if he is properly controlled:—

"If he is to be treated as a bonded labourer, to remain for a certain number of years, and then be shipped back to his country; and if, during his sojourn, he is to be restricted absolutely to Locations or Compounds, and not allowed in any circumstances to mix with the white community, then, from the mine owner's standpoint, I should say that it would be the soundest solution of the problem.

But, meanwhile, Mr. Ransome thinks that the second of the alternatives has not had a sufficient trial given to it, and he declares altogether in favour of the third—"the introduction of legislation which shall induce or, if you prefer the expression, force the Kaffir to work."

"Why many of our friends should cry out about this, and call it slavery, I do not know. In England we force able-bodied men to work or starve. Why, then, should we object to do likewise in the case of our black British subjects in South Africa? We do not allow the natives here to indulge in their natural pastime of killing one another, and so they increase and multiply. . . . As compared with the white man, the Kaffir is a child. We keep our children within bounds till they understand the world. It is our duty to do the same for the Kaffir. Anyone who has visited the diamond mines—where the strict Compound system is enforced under a special law—can see at once the advantage to master and man of this policy."

In his other chapters Mr. Ransome deals with inter-colonial relations, the British manufacturer (to whom he gives a good deal of useful advice), the competition in gold-mining machinery, the struggle for life in Rhodesia, possibilities in the Orange River Colony, the theory and practice of the railways, the harbours of Cape Colony, diamond mining in Kimberley, and several other subjects of cognate interest. On all these points he has something informing and suggestive to say. He has faith, apparently, in the eventual prosperity of the Transvaal and Orange River Colony. "Here," he says, "the industrial future, clouded only by the present scarcity of labour, is brighter than anywhere else in South Africa." As regards Cape Colony, "if Cape politicians cannot be persuaded to govern on progressive lines, that huge colony will be dismembered. The northern and eastern provinces will become detached from the southern portion; and this not by force of arms, but by force of circumstances."—*The Globe*.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

MR. CHAMBERLAIN ON HIS POLICY.

London, October 23.

Mr. J. Chamberlain, speaking at Tynemouth, said he did not believe that a general election was impending. Meantime he was going to work, and if he should fail in the first place he would go on again until he was convinced that the Colonies would reject his scheme or that the British people were unable to understand its magnitude.

THE BALKANS.

Later.

The Revolutionary Committee is advising the Bulgarian inhabitants in Macedonia to become Catholics in order to escape persecution. Meanwhile an active Catholic propaganda is expected to convert many.

CANADA AND THE ALASKAN TREATY.

London, October 23.

Correspondence cabled to the Dominion House of Commons shows that Canada vigorously protested against the appointment of the American arbitrators on the Alaskan dispute, urging that they were not impartial jurists of repute as stipulated by the treaty. Canada subsequently complained when the treaty was ratified, but the protest remained unanswered by the Colonial Office.

WAR SCARES.

London, October 24.

Owing to fear of war, Lloyds' insurance rates to the Far East have been doubled since yesterday.

BRITISH AMBASSADOR TO WASHINGTON.

London, October 25.

Sir Henry Mortimer Durand succeeds the late Sir Michael Herbert as British Ambassador at Washington.

(Note—Sir Henry Mortimer Durand has been British Ambassador to Spain since 1900. He was born in 1850 and has had a distinguished career in India, Afghanistan and Persia.—Ed. J. M.)

CANADIAN FEELING.

In the course of a debate on Alaska in the Canadian House of Commons, Sir Wilfrid Laurier observed that they might have made a mistake in supposing that Canadian interests were safe in the hands of Lord Alverstone, but he would not believe it until he had Lord Alverstone's reasoned opinion. If Canada refused to proceed after the treaty had been signed, the American flag would be flown over all the disputed territory, or Canadians would have to fight for their right.

Sir Wilfrid Laurier announced that immediate steps would be taken to construct a railway to the Yukon.

MACEDONIA.

Later.

The Austro-Russian reform scheme provides for the Austro-Russian control of all branches of the administration in Macedonia for two years, and for the appointment of two assessors—Russian and Austrian respectively—to advise Hilmi Pasha.

RUSSIA AND FRANCE.

London, October 26.

Count Lamsdorff is coming to Paris to confer with M. Delcasse regarding the common policy of the two Powers.

MACEDONIAN REFORMS.

An Irade has been issued disbanding the Albanian redifs.

The reform scheme of Austria and Russia provides for the appointment of a European General in the Turkish service who shall reorganize the gendarmerie, assisted by a number of officers selected by the Great Powers, and if necessary supplemented by a number of foreign non-commissioned officers, the relief of the refugees; the reconstruction of destroyed villages, schools, and churches; the disbanding of irregular, undisciplined troops, and the unconditional prevention of the formation of Bashi-bazouk bands.

SCARED UNDERWRITERS.

London, October 27.

Liverpool underwriters absolutely refuse to accept risks on Japanese steamers, even at 25 guineas per centum.

THE SITUATION IN SOUTH AFRICA.

The *Standard's* correspondent at Pretoria reports that the economic situation is growing acuter daily. Prices are all abnormal and the cost of living is unaffected by the reduction in railway rates. The mine-owners are satisfied that the pressure of circumstances will give them Chinese labour, to which other classes strongly object.

RETURNING CONFIDENCE.

Later.

The Liverpool underwriters have dropped the war-risks on Japanese vessels from 25 to 25 guineas.

MEETING OF EMPERORS.

The Kaiser and the Czar have agreed to meet at Wiesbaden.

JEALOUSY OF THE POWERS.

Although all the Powers have intimated their approval of the terms of the Macedonian Reform scheme, the idea of allowing the whole control in Turkey to pass to Russia and Austria is occasioning many jealousies, by which the Porte will not fail to profit.

BRIGHTENING PROSPECTS.

London, October 28.

Japanese and Russian purchases of coal at Cardiff during the past fortnight total 120,000 tons, including the cargoes of several chartered steamers. On Monday instructions were received that it was unnecessary

to insure the Russian Port Arthur cargoes against war-risks, which has hitherto been done. This is regarded as a most favourable symptom.

The *Standard* says that official information has been received in Berlin, both from St. Petersburg and Tokyo, that the Czar and Count Lamsdorf have approved of the drafts of a Russo-Japanese convention providing for the peaceful compromise of all differences.

PEACEFUL PROSPECTS IN THE BALKANS.

Later.

The demobilization of all the Bulgarian reserves has been ordered, thus putting an end to all prospects of war this year.

Reuter learns that the Powers are perfectly united in their support of the Austro-Russian reform scheme for Macedonia.

BIG FLOODS IN BRITAIN.

London, October 29.

There has been a phenomenal rainfall in the United Kingdom. Hundreds of square miles are under water.

RUSSIA AND GERMANY.

German papers view the projected meeting of the Czar and Kaiser as emphasizing the relations of friendship (between the two countries). They say that Russian newspapers are mistaken if they think that Germany is about to depart from the attitude of strict neutrality in the Far East.

BRITISH POLITICS.

The Duke of Devonshire, replying to a correspondent, says that it may be necessary to reconsider the position of the Liberal Unionists towards the question of rejoining the Liberals.

(RECEIVED AT THE LEGATION OF FRANCE.)

FRENCH POLITICS.

Saigon, October 25.

The Chamber of Deputies, by 329 votes to 127, has approved the declaration of M. Combes, President of the Council, with reference to the Government's policy.

THE LATE WAR RUMOURS.

Saigon, October 28.

The rumours of war from the Far East are losing their persistency. War risks on Japanese steamers insured in London have fallen from 35 guineas to 25 guineas.

COUNT LAMSDORFF.

Saigon, October 29.

Count Lamsdorf has arrived. M. Delcasse awaited him at the station.

STRIKES IN SPAIN.

Serious disorders have been caused by strikers at Bilbao.

(FROM THE "DEUTSCHE JAPAN-POST.")

THE ITALIAN CABINET.

Rome (via Berlin) October 23.

The whole Italian Cabinet has resigned.

JAPAN AND RUSSIA.

Berlin, Oct. 24.

The Japan Minister to Berlin, Viscount Inouye, led on the German Chancellor, Count von Buelow, gave him the most peaceful declarations.

MINISTERIAL CRISIS IN ITALY.

It is certain that the King of Italy will accept the resignation of Signor Zanardelli; but the Minister of Foreign Affairs, Signor Morin, may remain in office.

THE BALKANS.

The demands drawn up by the Emperors of Russia and Austria at Muerstegg, near Vienna, have been sent to the Porte in an identical Note.

GERMAN MINISTER TO WASHINGTON.

Baron Speck-Sternberg, the German Minister to Washington, has fallen sick and is returning to Germany. He is suffering from some trouble in the throat and must undergo an operation. He conveys Emperor William's friendly communication from President Roosevelt.

GERMAN FINANCE.

The financial conference of the German Federal States has closed. Baron Podewitz, the Bavarian Minister, in a speech in the Bavarian Chamber, expressed the most loyal and friendly sentiments towards the German Empire, appreciating the progressive policy of the Kaiser and Count von Buelow.

CZAR AND KAISER TO MEET.

On November 4th a meeting, proposed by the Czar, will take place between His Imperial Majesty and Kaiser William.

ENGLAND'S COMPENSATION.

Berlin, October 27.

From New York it is reported that, should a Russo-Japanese treaty be concluded, England will demand compensations by a claim in the Yangtse Valley.

THE DARDANELLES.

The Russian press profits by the Franco-Italian intimacy to demand that the Dardanelles question be reopened.

LAMSDORFF'S VISIT TO PARIS.

The journey of Count Lamsdorf, the Russian Minister of Foreign Affairs, to Paris is certain.

BRITAIN'S INFLUENCE.

The French press states that the Macedonian programme of the Emperors of Russia and Austria has been influenced by England.

FRANCO-RUSSIAN ACTION.

Franco-Russian action in Oriental affairs, as alleged in Paris, is totally unknown in Berlin.

THE VICEROY'S PROJECT.

The Russian press reports a project by the Viceroy of the Far East, to divide the Siberian Coast Province into an Amur government and a Kamschatka government, both with military governors.

MONUMENT TO BARON KETTELER.

In the Palace gardens of Munster (Westphalia) a monument in memory of the late German Minister to Peking, Baron Ketteler, who was murdered in the Boxer troubles, was yesterday unveiled. The Kaiser sent his adjutant, Count Moltke, as his representative.

GERMAN FINANCES.

The financial situation of Germany has further improved. The exchange is more animated on account of the renewal of the principal syndicates and of the increase in the coal and iron production, further on account of the increased liveliness in business all over and the easy money market, and also on account of the fact that the law concerning the exchange is soon going to be revised.

THE MEETING OF THE EMPERORS.

Berlin, October 28.

In the Russian press the interview of the German Kaiser and the Tsar, which will take place on November 4th at Wiesbaden, is supposed to be aimed against Japan, and it is considered possible that a new East Asiatic Triple Alliance may be formed very soon. The German press is very cool about this matter and utters hopes that the German policy which is not at all interested in the Manchurian question, may continue its neutral attitude as hitherto.

THE FAR EASTERN SITUATION.

Berlin, October 29.

The conciliatory attempts made by the Russian press in regard to the Far East do not find an echo in the German press. All desire that neutrality should continue to be strictly observed.

THE EMPEROR'S VISIT.

The Minister, Count Lamsdorf, will accompany the Tsar to Wiesbaden who has expressed his wish that the German Chancellor, Count Buelow, may also take part in the meeting of the two Emperors. Count Buelow will accede to the Tsar's wish.

HUNGARY AND ITALY.

The Cabinet crisis both in Hungary and in Italy are over. M. Tisza in Hungary and Sig. Giolitti in Italy formed new cabinets.

COUNT LAMSDORFF.

Count Lamsdorf is trying to obtain the sanction in Paris of M. Delcasse to several details contained in the Russo-Austrian Balkan programme. Further it is desired to keep back France from coming closer to the English side.

THE CAUCASUS.

From Tiflis is wired: The Governor-General of the Caucasus was assaulted and severely injured. Three of the would-be assassins were shot.

(FROM THE "JAPAN GAZETTE.")

FATAL ACCIDENT AT HAKODATE.

Hakodate, October 26.

A non-commissioned officer, named Falcon, from H.M.S. *Eliphe*, while riding on a horse through the town shortly after 4 p.m. on Saturday, ran over an aged Japanese and killed him. The accident is now being investigated by the authorities.

TERRIBLE MARINE COLLISION.

Hakodate, October 29.

A terrible collision occurred early this morning off the coast of Hakodate between the Russian steamer *Progress*, which had just cleared for Vladivostok, and the N.Y.K. *Tokai Maru*, which was just arriving from Aomori.

The accident was due to the prevalence of a dense fog.

Almost immediately the *Tokai* sank with about 200 passengers and crew, of whom only 56 were rescued.

Tokyo, October 29.

It is learnt here that the *Tokai* carried 52 passengers and a crew of 47, out of whom only 51 were saved. The collision is said to have taken place about 3 mi off Hakodate. The *Progress* is owned by Bayner, Kousnetzoff & Co., one of the leading Russian firms in Vladivostok.

SWISS WATCH INDUSTRY. 20/-

To Every Connoisseur, Post Office and Railway Servant, and Persons Requiring a Splendid
Watch, we offer this opportunity of their obtaining this "Original Swiss Watch" (Our
Exclusive Property). The Watch in question is made on the World Renowned
"GUANSHUO SYSTEM" and received the Highest Award at the PARIS
EXHIBITION IN 1900. IT IS THOROUGHLY REGULATED, A SILENT
TIME KEEPER, AND CARRIES WITH IT A THREE YEARS' WRITTEN
WARRANTY. It has Three Heavy Cases, Savonats, which are
made of indestructible Brain Metal. Extensively tried, placed on
the latest principles, and the most complete recent defect
THE DIFFERENCE BETWEEN OURS AND THE USUAL
GUINEA WATCH. It was, like the Real Gold, and the only
watch of its kind having that advantage. To introduce this
watch to the British Public and Foreigners, we will deliver
FIFTEEN LAKES OF GUNS for every one of these watches.
Formerly costing 40/- and 50/-, we now offer for two years only.
To every one who is also given, with every watch, a complete Chain.
Altogether, the Swiss Metal can be lost by the use of the watch, for
weight. Any watch touched and not yet sold will be a loss of 10/-.
Value of our watch, according to our only Order and the dated. To deliver
proves the Swiss watch, advertisements. Post Office or Postal Orders should be
made payable to MESSRS. DODD, BARNES, 1882.

**HOLLOWAY'S
PILLS**

Cure Indigestion,
Bile, Sick Headache, Giddiness,
Palpitation,
and all Internal Disorders.

**THESE PILLS
ARE PURELY VEGETABLE ;**
they contain no deleterious
matter, and may be taken by
the most delicate.

Manufactured only at 78, New Oxford St. (E. to 528, Oxford St.),
London. Sold by all Chemists and Medicine Vendors.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOVEMBER 7TH, 1903.

MARRIAGES.

On the 29th of October, 1903, at Holy Trinity Cathedral, Shanghai, FRITZ J. KRONENBURG to NINA B. SMITH, daughter of Mrs. St. John, of Yokohama.

On November 2nd, at the German Consulate-General, Yokohama, by W. Hagen, Esq., (H.I.M.'s Acting Consul-General) and afterwards at Ruff 224-A, by Pfarrer Hans Haas: Mr. HANS TEMME, son of the late Capt. Temme, of Oevelgoenne, to MARIE AUGUSTE, daughter of R. Pachtmann, of Yokohama.

DEATH.

Entered into rest at her home in Nagasaki, Friday morning, Oct. 23rd, Mrs. KATE JOSEPHINE FULKERSON, aged 36, beloved wife of the Rev. E. R. Fulkerson, D.D., Principal of Chinzai Seminary.

SUMMARY OF NEWS.

DURING the month of October, 259,693 tons of coal were exported at Moji.

THE Crown Princess is expected to return from Hayama about Nov. 10.

ADMIRAL ITO, Chief of the Naval General Staff Office, was promoted to the Senior Class of the Second Rank on Oct. 30th.

A TELEGRAM from Hakodate states that during a snow-storm on Oct. 29th, many fishing boats

capsized off Kuto, Shiribeshi province, and over thirty fishermen are missing.

MR. Y. KAMINISHI, Councillor of Fukui Ken, and six other officials were arrested on Oct. 31st on suspicion of having received bribes.

TOKYO papers state that the authorities have decided to abolish local educational inspectors, before the beginning of the next fiscal year.

A GOODS train on the Kyushu Railway was derailed on the morning of Nov. 4th at Moji. Four cars were smashed and four persons injured.

A TELEGRAM from Toyama states that snow fell in several districts of that prefecture on the night of Nov. 3rd. It is 15 days earlier than last year.

A TELEGRAM from Newchwang has been received at Nagasaki to the effect that plague still prevails in the Chinese port. It has extended to Chefoo.

A TELEGRAM from Utsunomiya states that on the morning of Oct. 27th snow fell on the Nantai mountain at Nikko. This is 11 days earlier than last year.

BARON SWEERTS DE LANDAS WYBORGH, Minister for the Netherlands, entertained Barons Komura and Sannomiya, and other high officials at the Legation on Oct. 29th at 7 p.m.

O. MORIMOTO, of Oita prefecture, who was sentenced to death for robbery on May 20th last year, in the Kagoshima District Court, was executed on Nov. 28th.

THE equipment of the new cruiser *Nitaka* will be completed in January. Her sister ship, *Otowa*, which was launched at Yokosuka on Monday, will finish her equipment within a year.

THE steamer *Duke of Fife* which was chartered by the Morioka Emigrant Company to carry workmen to Peru, has been re-named the *Isukushima Maru*, having been purchased by Japanese.

THE express train from Kobe at 6.15 p.m. on Nov. 3rd collided with a goods waggon passing the crossing at a point between Kanagawa and Tsurumi, on the night of the 4th, destroying the latter.

TOKYO papers state that Prince Cyril of Russia who paid a visit to Japan last year presented on Oct. 29th to the Emperor a pair of diamond sleeve-suds. Baron Rosen conveyed the gift to the Palace.

MR. J. H. GUBBINS, Japanese Secretary of the British Legation, paid a visit, on Nov. 4th, to the Department of Foreign Affairs, where he had an interview with Mr. Yamaoka, Director of the Bureau of Political Affairs.

THE Hongkong and Shanghai Banking Corporation has seized the property and goods of a Chinaman named Yee-tai, No. 150, Yokohama. It is said that the Chinese failed to take up various drafts from Shanghai and other Chinese ports.

THE Government intends to amend the Railway Regulations, with which view the authorities of the Civil Engineering Bureau are conducting an investigation. The *Fiji* states that the draft of the amendments will be submitted to the coming session of the Diet.

It is understood that the Viceroy of India during his coming visit to the Persian Gulf will hold a great Durbar and address the Sheiks on the British policy in Persia. Sir Arthur Hardinge is in consultation with the local political officers and is arranging the details.

Y. YAMANOTO, former clerk of the Osaka Exhibition Office, who has been under trial in the

Osaka District Court on a charge of having received bribes from merchants patronized by the Exhibition office, was sentenced on Oct. 30th to two months' hard labour and a fine of yen 25.

THE Yokohama District Court rendered a decree of bankruptcy on Oct. 20th in the case of the Japan Tobacco Company, which was established at Uchida-cho, Yokohama, in April, 1897, with a capital of yen 75,000. The debts of the firm amount to yen 103,958.

SOME merchants in Yokohama are promoting the establishment of automobile omnibuses with a capital of yen 100,000. It is said by the *Asahi* that the cars will be of 12 horse-power and have a speed of 6 miles per hour. Each car will have accommodation for 10 passengers.

A MAN named R. Kamiyama (22) was arrested at Isezaki-cho, Yokohama, on the night of Nov. 3rd while carrying a short-sword in his pocket. The man is reported to have entered the dwelling of a female dresser named Tachinatsu on Nov. 12th for the purpose of robbery and badly injured her.

THE expelled monks of the Grande Chartreuse at Grenoble have at last found a permanent resting place. They have purchased for £15,000 the ancient Carthusian monastery of Farnete, near Lucca, where everything will be conducted just as at Grenoble, except the liqueur factory, which will be for the future conducted in Spain.

THE income of the various Government railways for ten days ended Oct. 20th are given by the *Fiji Shimpō* as yen 355,520 from passengers and yen 192,817 from freight. These figures show a decrease of yen 15,106 and an increase of yen 28,963 respectively as compared with those of the corresponding period last year.

A MAN named Y. Kanamori (25) employed in the Hotel Metropole, Tsukiji, Tokyo, murdered another servant, S. Okamoto (28) by name, with a cooking knife on Oct. 30th at 2.30 p.m. on the premises of the Hotel. The culprit was arrested on the spot. The cause is reported to have been some slight trouble between the parties.

K. MASE and six others of the crew of a sailing vessel which, owing to a storm on the evening of Oct. 29th, was wrecked about 24 miles distant from Oshima while bound from Awa province to Manazumi, were rescued and brought by the French cruiser *Bugeaud* to Yokohama on the following day and delivered to the Harbour police. It appears that they were in a very perilous condition when the warship came up. The rescue was not effected without considerable difficulty.

THE shareholders of the Kiwa Railway Company held a meeting on Oct. 31st at Wakayama when the president of the company explained the condition of its affairs and proposed a resolution to sell the whole property to the Nankai Railway Company, as to which transaction the directors of both companies had negotiated provisionally before the meeting. After a discussion the shareholders decided to sell the property for yen 1,093,540.

ACCORDING to the *Official Gazette*, the Minister for Home Affairs has prohibited the circulation of a Gekibun (Manifesto) on the ground that it is injurious to social order. The authorities have confiscated copies published by Mr. M. Naohara and 14 other members of the juvenile section of the Tairo Doshi-kwai. It is said by the *Asahi* that the members of the union intended to hold a meeting at Ueno Park, Tokyo, on Nov. 8th when the manifesto was to have been circulated.

POLITICAL NEWS.

Saturday, October 31.

The *Hochi Shimbun* publishes a curious story, but guards itself against being supposed to endorse it. Mr. Sugiyama Shigemaru, who endeavoured unsuccessfully to place Japanese bonds in London last year, is the hero. He is said to have been in collusion with certain Osaka capitalists for the purpose of rigging the share market, and as steps taken in Japan alone would not suffice for that purpose, he enlisted the services of a correspondent of some European newspaper, through whom the false telegram about an approved draft of a Russo-Japanese convention was published in Berlin. If these statements be untrue, Mr. Sugiyama will doubtless take action to repel the libel. One or two other Tokyo journals, however, are disposed to think that the Berlin news has some basis of fact. The *Shogyo Shimpō* goes so far as to allege that at the Council of Statesmen on the 24th instant it was practically agreed that a pacific arrangement should be concluded, Russia having made certain concessions which Japan might meet half way. But we (*Japan Mail*) are unable to find that there is any good authority either for the Berlin telegram or for the optimistic conjectures suggested by it.

Monday, November 2.

The *Jiji Shimpō* urges its countrymen to remain absolutely calm in face of the present crisis. It is certain that the people's mind is completely made up and that they are fully prepared for whatever result may have to be faced. Such being the case, they must not allow themselves to be in any degree perturbed about trifles. They have to thank themselves for the alarmist rumours that find their way to Europe, and they are thus ultimately responsible for the re-telegraphing of these rumours to Japan and for the consequent fluctuations in the stock market. Rumour has not by any means exhausted itself. It will be busy again, perhaps busier than ever. But to treat its manufacturers with full indifference is the only way to deprive them of mischievous potentialities.

In this context may be quoted some statements attributed by the *Asahi Shimbun* to Marquis Ito. The Marquis is represented as saying that undoubtedly Japan had put forth certain proposals with which he was well acquainted as he was also with the details of the negotiations thus far conducted. But it was not a time to speak. Concerning the issue, neither he nor the officials directly concerned could make any forecast. The future was beyond their ken. He might almost say that the future in any international complication was beyond even the ken of heaven. One thing was certain. Those charged with the direction of the country's affairs would not allow their hands to be forced by popular clamour. History contained many lessons showing what overtook States that adopted such a course. Happily the people of Japan were calm and self-contained. They showed a less disturbed mien than they did even on the verge of the war with China, perhaps for the reason that troops which have fought several times go into battle more calmly than recruits. That demeanour of the nation was a great help to the Government. While the people remained quiet a peaceful solution was always easier to find, and the Marquis hoped that the same patient attitude would be steadily maintained.

The process of weakening the *Seiyun kai* continues. Three of its parliamentary members—representatives of Kanagawa prefecture—have resigned. Their statement of reasons is interesting. In the first place they lay down the general principle that political parties in Japan have ceased to work in the interests of the State devoting themselves solely to party interests. It will appear to many onlookers that the *Seiyun-kai's* history does not invite that accusation in a conspicuous degree. Indeed the *Seiyun-kai* is less chargeable with serving selfish ends than any of its predecessors were, so far as we can see. But the three seceders add a proposition that the time does not lend itself to party squabbles. That is unquestionable. Finally they say—and we strongly suspect that here is to be sought their true reason—that they can not reconcile themselves to continue in a party which, instead of being the mouthpiece of public opinion, is governed and directed by a dictator as the *Seiyun-kai* is. It would really seem as though the great party were suffering the disintegration that overtakes so many human organizations when brought into contact with practical events. What is to be the future of political parties in Japan?

That same question appears to be causing much uneasiness to the leaders of the Progressists and the *Seiyun-kai*. They are said to have been discussing the desirability of amalgamation, as the day for standing in opposite camps seems to have passed. Probably the truth is that all the issues which might reasonably constitute platforms for political coteries have been thrust out of sight by the national crisis. No one cares to hear about party disputes when a problem of such incomparably greater magnitude is awaiting solution. Japan is happy in one respect: she has no Henry Campbell-Bannermans to substitute cant for patriotism.

At a meeting of the Bankers' Club on the 28th ultimo, Baron Shibusawa, President of the First National Bank and Chairman of the Tokyo Chamber of Commerce, is reported to have expressed himself in the following words:—"If Russia entertain no idea of making any concession, if she persist in arbitrarily pursuing her own selfish ambition as she is now doing, so that the honour of our country is impaired, then we, bankers as we are, will find the position intolerable, and, faithful to the spirit of the people of Yamato, will stand forth sword in hand. I may be an old man but I have still some courage left, and I know how you in the prime of youth must feel." This outburst of patriotic fervour, rare indeed in the case of a man so uniformly circumspect and occupying such a prominent and responsible position, is said to have been received with loud cheers. It illustrates what we recently wrote as to the patience of the Japanese people being strained very nearly to breaking point.

The sixth conference between the Russian Plenipotentiary and Baron Komura took place at the Foreign Office in Tokyo on the afternoon of the 30th ultimo, and lasted about one hour. The usual impenetrable secrecy is preserved as to the details of the negotiations.

Tuesday, November 3.

A very pessimistic tone is adopted by the *Jiji Shimpō* in speaking of the *Seiyun-kai*. According to our contemporary's estimate, the Party has lost from 50 to 60 members having seats in the House of Representa-

tives, among whom six were members of the Council. As for the names of quondam supporters that have withdrawn, the *Jiji* estimates them at from 1,200 to 1,300. The places where the Party's influence has been wholly lost are Kochi, Tokushima and Hiroshima. In these three prefectures not only have the local branches been dissolved but all the former affiliates have withdrawn their names. A lesser catastrophe has to be noted in the prefectures of Ibaraki, Tochigi, Gumma, Satsuma, Aichi, Ishikawa and Fukui. In these seven places the local branches have been dissolved and the greater part, but not the whole, of the Party's associates throughout the prefectures have taken their names off the roll. The general elections in 1902 showed 189 declared supporters of the *Seiyun-kai* among the members returned, who with eleven unaffiliated supporters made a total of 200 votes in the House of Representatives. A similar record resulted in 1903, when 191 affiliated members and 9 unaffiliated were returned. But the *Jiji* calculates that the Party does not now command more than 136 votes in the Lower House and that there are still a number of malcontents, as has just been illustrated by the disaffection in Kanagawa prefecture. There is not now a very conspicuous difference between the effective strength of the *Seiyun-kai* and that of the Progressists. The *Seiyun-kai* was born in August, 1900, and seemed then to have a great future before it. Could it have retained Marquis Ito's active leadership and could it have subordinated itself thoroughly to his guidance, the portals of power must soon have opened to it. But it has lost the Marquis, and has also shown that its sense of discipline was mainly a fine-weather faculty. One can not but be diverted now at hearing disaffected members justify their secession by pointing to the one-man-control constitution of the Party. It was one man that made the Party, but now, apparently, the obedience that many members were prepared to render was loyal only so long as no sacrifice was demanded of it. After all, however, the faithful remnant of the *Seiyun-kai* is still a power in the land.

Thursday, November 5.

The members of the *Tai-Ro Seinen-kai* planned a demonstration in Ueno Park on the 4th instant. They sent round a very violently worded circular which we refrain from producing though, in spite of its over-strong language, it deserves notice as evidence of the mood to which some Japanese have been excited. The police judged that such a demonstration would imperil the public peace. They therefore took steps to interdict it.

The *Gaulois*, as reported *via* London to Tokyo (*Jiji Shimpō*), says that France has determined to espouse Russia's side against Japan and that instructions in that sense have been issued to the French Representative in Tokyo. We do not believe a word of it.

KOREA.

Saturday, October 31.

It is stated from Seoul that the Russian Representative has informed his Japanese colleague that instructions have been sent to Yong Am-pho in the sense that every facility should be given to Mr. Hagiwara and his suite if they again arrive there. These instructions are said to have been inspired by Viceroy Alexieff. We gather incidentally that the Russian Representative

regards Yong Am-pho as under the control of the Lumber Company; not in the sense of actual possession, but only in the sense that the responsibility for everything occurring there devolves on the Company. The inference is that the refusal to allow Mr. Hagiwara to land was in no sense an act of Russian officialdom, but must be regarded as a piece of arbitrary exclusiveness practised by the officers of the Company. Is the same explanation to be extended to the fort with its "five or six guns"? Very likely it is. We hazarded a conjecture in a previous issue that the so-called "fort" is really a species of store-house which its owners have ornamented by building parapets and mounting cannon, just as the British residents at Tamsui used to ornament their compounds away back in the sixties. But it requires a great deal of good will to accept such an explanation in its entirety.

Monday, November 2.

We gather incidentally from telegrams published by Tokyo journals that there is talk of opening to foreign trade Ung-kwi, a place on the coast of Ham-yong-do, a little to the south of the mouth of the Tumen River. A good deal has been heard recently about Russian activity in this region—though it must be confessed that most of the reports have been strikingly vague and some even silly—but the public were not aware that any proposal for the opening of Ung-kwi had been officially formulated. The place has a fine harbour, but of its commercial prospects we know nothing. The Russians are assuming a new character in the eyes of the nations. They are supplying a receipt for opening all the doors hitherto hermetically sealed. Their mere appearance in a locality proves an "open sesame," though whether they should be regarded as the forty gentlemen that used the formula originally, or as Ali Baba that borrowed it, history has to determine.

The *Jiji Shimbun's* special correspondent records, as the result of his observations in Korea, that the disposition shown by Korean soldiers in Wiju and Pyong-yang to behave rudely and violently to Japanese subjects seems to be due to their imitation of the ways of the Russians. There is no evidence that they have been actually incited by the Russians, but in the total absence of a Japanese military uniform it is not unnatural that the constant presence of the Russian soldier should influence the Koreans. As for the recent affair at Wiju where two Japanese were wounded, the correspondent refers its origin to a mere dispute about lumber. The Korean timber-men sought Russian assistance, but whether they obtained it or not the correspondent does not say. He adds, however, that since the incident the Korean officers and residents have frequently made inquiries for the wounded Japanese.

Tuesday, November 3.

M. Pavlov's latest step is reported by the *Asahi Shimbun* and other Tokyo journals to have been the sending of a despatch to the Korean Government on the subject of Mr. Kato, the latter's adviser. The despatch says that the Korean Government is believed to be about to establish a central bank to which will be entrusted some important functions in connexion with the State's finances, and that, according to rumour, Mr. Kato is to be adviser and overseer of the Bank. Further, that the same gentleman is to be superintendent of the administration of the ginseng farm, which is one of the Court's principal sources of revenue. M. Pavlov reminds

the Government that at the time of dispensing with the services of a Russian financial adviser in 1898—M. Alexieff is, of course, alluded to—it stated its intention of not again employing any foreigner in that capacity, which statement was repeated more than once subsequently. The Russian Representative professes to be fully persuaded of the good faith of the Korean Government, but in order to avoid future complications he thinks it right to formulate this query.

We presume that the truth of this proceeding on M. Pavlov's part may be accepted. If so, there may be difficulty in reconciling his action with the first Article of the Nishi-Rosen Protocol of 1898, which says:—"The Imperial Governments of Japan and Russia definitively recognise the sovereignty and the entire independence of Korea, and mutually engage to abstain from every direct interference in the domestic affairs of the country." It is a most unequivocal interference in the domestic affairs of a country when a foreign Representative attempts to restrain that country's right of employing whomsoever of whatever nationality it pleases for purposes of financial advice and direction. The sovereignty and independence of a nation subject to such interference are purely illusory. It is true that the second article of the same Protocol contains these words:—"Desiring to remove all possible cause of misunderstanding in the future, the Imperial Governments of Japan and Russia mutually engage, in the event of Korea having recourse to the counsel and assistance either of Japan or of Russia, to take no measure as to the nomination of military instructors and financial advisers without having previously arrived at a mutual accord on the subject." But there is no possibility of mistaking the purport of that provision. It means, and can only mean, that if Korea officially applies to either Japan or Russia for counsel or assistance, the Power so applied to will consult the other contracting party before complying with the application. There is plainly no reference to a contingency such as the employment by Korea of a Russian subject or a Japanese subject in a military or financial capacity without reference to the Government of either Japan or Russia; still less to such a contingency as that of utilizing in a new direction the services of a Japanese adviser already in Korea's service. M. Pavlov, however, is plainly determined to grasp at every opportunity of making Russia's influence felt in Seoul. His policy is intelligible enough, and from a Russian point of view it is doubtless justifiable, more or less. But lovers of peace can not but regret his pragmatic activity at this critical juncture.

The *Niroku Shimbun* alleges that the talk of opening Ung-kwi to foreign trade has its origin in pressure brought to bear on the Korean Government by M. Pavlov, who is asking for the use of the place as a naval station. We give this story for what it may be worth, and we may observe, in its context, that the same journal is publishing installments of a war song called *Rosia seibatsu no uta*. The authorities would be applauded if they suppressed such martial incentives, but perhaps they think that the explosive might be rendered more dangerous by tamping.

Thursday, November 5.

It appears that a fight did actually take place at Chemulpo on the 1st instant between blue-jackets of the Russian ship *Bobro* and Japanese residents. The Russians, numbering some 20 or 30,

are said to have landed in a very drunken condition—or at least, some of them were very drunk—and to have fallen foul of a Japanese at a restaurant called Iwata. What ensued is not very clear, but there was certainly a fight of some dimensions from which both parties emerged with a good many injuries. Three Japanese policemen appear to have suffered most. Of course the affair is of no importance from an international point of view.

Friday, November 6.

The Russian Representative in Seoul is said to have officially informed the Korean Government that there is no such thing as a Russian fort at Yong Am-pho and that no military preparations of any kind have been made there. The correspondent (*Nichi Nichi Shimbun's*) who sends this news, prefaces it by saying that M. Pavlov found himself in a position to disavow the fort because it had been already converted into a wireless-telegraph station. But were we not assured in the first instance that the obnoxious edifice was precisely what M. Pavlov now affirms it to be? The building and arming of a fortress at Yong Am-pho would have been acts so obviously defiant alike of Japan and of Korea, and so flagrantly aggressive, that in spite of unequivocal declarations from various sources we have always remained sceptical. Nothing can be gained by invariably putting the worst construction on Russia's acts, and we are bound to say that in that respect she has a great deal to complain of. It may turn out, and is not unlikely to turn out, that in view of sundry contingencies, the lumbermen built a place which with some conversions, might be put to non-pacific uses in time of emergency. But that is very different from official fortress-constructing.

Since the above was in type an official report has been received by wire from Mr. Hagiwara. It will be found elsewhere in our columns.

The Japanese police-office at Fusan was destroyed by fire at 3 a.m. on the 4th instant. No other building was reached by the flames. The telegram is curt. It does not offer any explanation.

The (5th instant) was the anniversary of the Emperor of Korea's accession, but His Majesty being indisposed, requested the Foreign Representatives to abstain from calling. It need scarcely be added that according to the diagnosis of the news-mongers the Monarch is suffering from diplomatic sickness.

MANCHURIA.

Sunday, November 1.

The *Jiji's* Peking correspondent telegraphs under date of the 31st ultimo, that two companies of Russian soldiers accompanied by artillery have entered Mukden and taken possession of the town. The public will not be surprised to hear various rumours of this kind during the next few weeks, for it is inevitable that the Russian forces scattered through Manchuria should be assembled in the towns during the winter now about to commence.

The Russians are said to have recently acquired large lots of land by purchase in Manchuria, notably at Hai-ching-hien, Ta-shi-kiao, Laoyang and Mukden. These acquisitions appear to be in connexion with the railway, so far as we can judge.

Undoubtedly Russia is sinking an immense amount of capital in Manchuria, but we do not really see that the fact constitutes an

excuse for her aggression, as our French contemporary of Shanghai ingenuously suggests. Lawlessness is lawlessness no matter how much money may be devoted to its pursuit. If the *Echo de Chine's* theory had any validity, a man might claim that he was justified in being licentious because truly the passion is very expensive to indulge. One of the charms of Frenchmen's reasoning is that they are so frank. Biblical texts count for very little in their *exposés* of international motives. The *Nori Krai* recently told the public that because Russia had built a railway in Manchuria she was entitled to continue her military occupation of the country. Would the building of forts in an invaded district confer upon the builder a right of occupation? The right of might, certainly, but that is about all.

It is reported that the Chinese Government finds itself almost completely without any telegraphic news from Manchuria, the line in the Amur-Kirin district being closed to public messages, and the Shingking line being under such strict Russian surveillance that non-Russian messages are seriously delayed in transmission.

A few days ago we were told by the telegraph that the Chinese Government had instructed Viceroy Yuan to hold himself in readiness to march his forces towards Shan-hai-kwan in the event of war between Japan and Russia, and that General Ma had been simultaneously instructed to provide for the defence of Mongolia. It is now said that there is talk of employing these two officers in the task of quelling the Kwangsi rebellion, which, in spite of the trivial character originally assigned to it by missionary writers, and in spite of the repeated statements that effective measures had been taken to crush it, seems to be making constant head against the authorities.

Monday, November 2.

It continues to be industriously reported that the Russian forces in Manchuria are steadily concentrating southward. One report says that troops from the Amur district have passed Liaoyang on their way to Liaotung, but it seems curious that such a route should be chosen by a corps coming from that direction. As to the fact of a southern movement, however, there appears to be no doubt.

Viceroy Alexieff proceeded by sea from Port Arthur on the 28th ultimo and inspected the squadron in Dalny harbour. He landed at the latter place on the 31st ultimo, and received an address from the Japanese residents, to which he is said to have made a cordial reply.

It is reported that on the 29th ultimo a force of a thousand Russian troops entered Mukden and took possession of the official buildings and the telegraph station. During the night of the same day and throughout the 30th, many waggons full of Russian soldiers passed Mukden going southward by rail.

The Washington correspondent of the *London Morning Post* telegraphs to that journal that, according to information obtained by him from American officials, there has been a Cabinet meeting in Washington to consider the fact of Russia's re-occupation of Mukden. The decision arrived at was that the new commercial treaty should be immediately confirmed, and that active steps should be taken to give effect to its provisions. This news is published by the *Fiji Shimpō*.

What this means, we need scarcely say, is that whereas China is pledged by her new treaty with the United States to open

Mukden to foreign trade within six months of the ratification of the treaty, the Peking Government is obviously unable to fulfil that pledge if Mukden is in Russian military occupation. A good deal may happen in six months, however.

Tuesday, November 3.

It appears, if telegrams to the *Fiji Shimpō* from Peking be accurate, that the reason of Russia's sudden action in re-occupying Mukden is of quite a special order. The story is that the Russian authorities had handed over to the Chinese a leader of bandits on receiving a promise that he should be duly tried. But without any form of trial Governor Wang of Mukden ordered the man to be beheaded, alleging a number of crimes against him. Indignant at this action the Russians marched into Mukden, occupied the town and placed the Viceroy Tso in restraint.

This procedure is said to have caused much excitement in Peking. The Empress-Dowager, recognizing that such acts on the part of the Russians are wholly irreconcilable with any theory of Chinese sovereignty in Manchuria, summoned Viceroy Yuan and Chang to the I-ho Palace, and there they had a long consultation, the Minister of War being of the party. The curious feature of the case is that the complaint about the bandit-leader's summary execution had been duly preferred through diplomatic channels, and five days had been allowed as the time within which the Chinese Government's answer must be formulated. But before the expiry of the five days Mukden was occupied, and the general demand for redress originally preferred by Russia was exchanged for an explicit demand that Governor Wang's capital punishment must follow at once.

This is a curious complication. There is no difficulty in believing that Governor Wang dispensed with all formal trial in the case of the *ba-soku* captain, and as protesting against that kind of injustice Russia must have the sympathy of all civilized peoples. It is a pity, indeed, that her vehement protest should be made on behalf of a leader of bandits, and of course the roughly-judging public will find in the fact a proof that she is utilizing for her own purposes the brigands whose outrages she pleads as a pretext for continuing the military occupation of Manchuria. But we read her policy in that matter to be one of conciliation. She has probably come to the conclusion that the best way to deal with the *ba-soku* is to convert them from law-breakers into guardians of the peace, and it is very likely that her plan will prove efficacious. At any rate common justice requires that she should receive the credit of good intentions. But why, in the face of innumerable precedents, were her officials so sanguine as to imagine that the bandit-chief would obtain formal justice under Chinese criminal processes? Summary punishment could scarcely fail to be his fate, and thus the result is that in Chinese eyes Russia will seem to be championing a freebooter whose decapitation was indirectly attributable to the fatuousness of her own officials. However, the essential fact is that in this matter the Great Northern Power stands for the vindication of law and for its proper application. If very drastic and apparently hasty measures to assert the principle have been adopted, most assuredly precedents can be found in the procedure of other Western Powers towards China. Russia had at least the grace to preface her military movement by an appeal to Peking, whereas

fresh in the memory of all is one case where a permanent seizure of Chinese territory was not preceded by any such formality.

Wednesday, November 4.

According to latest news, the fact which troubles China above everything is the imprisonment, or confinement, of Viceroy Tso by the Russians. Tso is the Emperor's representative; the Viceroy of Manchuria. The seizure of his person is an unequivocal act of war. Strong remonstrances are reported to have been addressed to M. Lessar by the Chinese Foreign Office about the whole incident, but M. Lessar is alleged to have replied that in the steps taken by them at Mukden the Russian troops had Viceroy Alexieff's order, for which the Legation in Peking could not accept any responsibility. It may reasonably be doubted whether that answer is rightly reported, for according to the terms of Viceroy Alexieff's commission the Legations in Far-Eastern capitals should be his mouth-pieces with regard to matters that concern the territories under his jurisdiction. The contention on the Russian side is understood to be that their applications to Viceroy Tso for redress against Governor Wang's neglect of legal forms had failed to secure a satisfactory reply and that they could only have recourse to the strong hand.

From the 1st instant telegraphic communication between Mukden and Peking is said to have been interrupted, and the Chinese Court is all the more perplexed as to the proper course to adopt, being in ignorance of the progress of events in the Manchurian capital. Any Power with the slightest shred of a practical sense of national dignity would regard Russia's action with the utmost gravity. But though China knows well what national dignity means in theory, she is so unhappy as to be unable to assert her knowledge. Does she see, however, that all these difficulties are primarily of her own making?

Friday, November 6.

Peking appears to be much disturbed about the re-occupation of Mukden. There have been Councils in the Palace and, as a matter of course, there have been various expressions of opinion. As for the facts of the re-occupation, it appears that the troops which effected it were 700 men with 8 guns. They marched in from Liaoyang, and among their first acts were the closing of the Viceroy's offices and the seizure of the telegraph station. The city was naturally thrown into a state of great perturbation, especially as this body of men was reported to be the van of a force of 3,000 which would presently follow. Prior to the seizure of the telegraph office there seems to have been time to wire the main facts to Peking, where their gravity was fully appreciated. According to some accounts the councils in the Palace did not result in any definite decision, some of those present being in favour of an uncompromising attitude; some advocating compliance with Russia's demands in the matter of the incriminated officials, and some advising the surrender of a portion of Ili to Russia as a means of conciliating her. But the *Fiji's* telegrams allege that Viceroy Yuan returned to Tientsin from Peking on the 4th instant, and that before he left the capital it had been decided that Taotai Yuan, of Tatung, together with the junior officials concerned—among whom Governor Wang is presumably included—should be deprived of office in deference to Russia's complaints and in consideration

of the release of Viceroy Tso from duress, or from whatever kind of restraint has been imposed on him. This decision is attributed partly to the advice of the Japanese Representative, Mr. Uchida, who took advantage of the Birthday reception on the 3rd instant to impress upon the leading Chinese officials the importance of maintaining a circumspect demeanour, and not allowing themselves to be perturbed into any yielding in the matter of Russia's cardinal demands about Manchuria.

The *Nichi Nichi's* correspondent sends a piece of intelligence which we take leave to question. It is that upon receipt of the news of the re-occupation of Mukden, M. Lessar visited all the leading Chinese officials, and endeavoured to re-assure them by denying that Viceroy Tso was in any manner subject to restraint, and by explaining that the steps taken at Mukden were not directed against China but were dictated by consideration of Russia's relations with a certain other Power—meaning Japan of course. Few people will insult M. Lessar's intelligence by crediting such a tale. It would be too obvious an act of buffoonery on his part to assure China that the seizure of one of her chief cities by Russian troops and the imprisonment of one of her highest officials, were deeds quite innocent of any intention to hurt or offend her, being designed solely as an intimation to an outside Power.

The fact is that Russia in this matter has merely displayed logical contempt for the shadow of Chinese sovereignty. Did she admit that the authority of Peking extended to Mukden, she would necessarily have appealed solely to Peking for redress of the grievances she complained of, and would have abstained from taking the law into her own hands until Peking's incompetence or reluctance had been fully proved. That is the routine hitherto observed invariably by England in her various complications with China, and it is a routine that has been roundly denounced by local English journals as quite unsuited to the conditions of a country like China. It was not the routine observed by Germany at Kiaochow, however. She seized Chinese territory by way of preliminary to preferring her complaints in Peking, and the net result was that she became possessor of the territory in addition to obtaining redress. At the worst Russia can not now be charged with greater arbitrariness than Germany showed on that occasion, whereas, on the other hand, we have to remember that Russia claims to be, and actually is, in military occupation of all Manchuria. In fact, to talk of Chinese sovereignty in Mukden at the present moment is mere vapouring. Russia holds the sovereignty of the Three Provinces, and her latest procedure is merely a natural exercise of that authority. It is a startling procedure certainly from China's point of view, and possibly Russia may be prompted by some sense of the expediency of startling China. But without recourse to any such hypotheses it appears to us that Russia, being the actual Governor of Manchuria, can not be asked to administer its affairs in deference to the dictates of some outside sovereignty. Hence we regard the military occupation of Mukden as a normal incident of a situation which the world recognises as practically existing, the only question at issue being whether it shall be a permanent or a temporary situation.

One matter of some importance from an academical point of view remains more or less obscure. Some authorities—the *Asahi's*

correspondent, for example—allege that before marching a force into Mukden the Russians had formulated demands in Peking and had received an unfavourable reply. They had demanded that Governor Wang should be beheaded and Taotai Yuan dismissed from office, these two officials having been directly connected with the execution of the bandit chief whom Russia had taken under her protection. Peking answered that no reason appeared for beheading Wang, but that in deference to Russia's protest he should be removed to Sinkiang—the district of China most remote from Manchuria—, while, as for Taotai Yuan, he could not be punished. Russia had preferred her demand in the form of an ultimatum, allowing five days for a reply and threatening to occupy Mukden were the answer unfavourable. The answer was unfavourable and the occupation of Mukden followed. If that was the routine, there is nothing to be said about the incident except that it unfortunately happens most inopportunistically. This is not an auspicious moment for emphatic displays of the authority which Russia has usurped in the Three Provinces. But neither is it an auspicious moment for taking passionate views of happenings which are in truth logical outcomes of the position she holds. If she has offered a violent object lesson, she will now have an opportunity of rehabilitating her pacific disposition by removing her troops in consideration of China's compliance. It is China that emerges from the incident in full possession of the cap and bells.

General Ma is reported to have marched at the head of 10 battalions—5,000 men—into the district between Ying-ping and Shan-hai-kwan, where he is supposed to be making dispositions to repel any Russian incursion. We are reminded of Mrs. Partington and her mop when Ma with his ten cohorts undertakes to stem the tide of Russia's advance.

We learn on good authority in Tokyo that Viceroy Tso, now under Russian restraint in Mukden, has addressed to the Peking Government a letter containing the following words:—"According to statements made by the Russian soldiers in Mukden, Russia has demanded the dismissal of Taotai Yuan and the execution of Chih-sien Wang, declaring that if the Peking Government do not accede, she will appoint all the local officials in Mukden, and will hereafter hold communications with officials of her own nomination only."

CHINA.

It is telegraphed from Dalny that Mr. Tsuji, representative of the Mitsui Bussan Kaisha in Yin-kow, and Mr. Yamana, of the Kanegafuchi Spinning Company, and another Japanese, who were held in custody by the Russians for several weeks on a charge of being spies, have been at length released. These gentlemen have had a disagreeable experience, but we presume that they committed some indiscretion. It is not easy to understand, however, why such a long time should have been required to settle the question of their guilt or innocence. Unless they were detected in the act of doing something which constituted spying, their arrest could scarcely have been warrantable, and if they were so detected there should not have been any long delay in disposing of the case. If such incidents are to be regarded as an earnest of the perils that would beset foreigners

travelling in Manchuria under Russian jurisdiction, the outlook is disagreeable.

The *North-China Daily News* pays the following handsome tribute to Japan at the close of an article discussing the Manchurian problem:—"If the worst should come to the worst, the sympathies of all generous people must be with Japan. She has shown unexampled patience under repeated provocation, while every delay has been in favour of Russia and against herself. She has allowed the negotiations to be tossed about between St. Petersburg, Peking, and Tokyo, and has shown a forbearance which would do honour to the most practically Christian nation. She must sometimes wonder how it is that it should be left to her alone to stem the tide of Russian aggression, from which she is far from being the only sufferer; and if she is forced into war at last, she may well feel that she has done everything that a self-respecting Power could do to avoid the necessity."

Mr. A. A. Radzig, a well-known statistician and economist, has published an essay on the prospects of Manchuria from a Russian point of view. The gist of it is thus summarized by a correspondent of *The Times*:—

M. Radzig first gives statistics showing the present and past volume of Manchurian trade, from which it appears that exports and imports together averaged 48,573,000 roubles from 1896 to 1900 inclusive and increased to 59,074,000 roubles in 1901, but diminished to 52,447,000 in 1902, exports and imports decreasing about equally. The important cotton textiles branch was largely in the hands of the American and English.

"Can Russian drive out the American and English cotton fabrics from Manchuria?" asks M. Radzig. "We doubt this, for the following reasons. Thanks to the protective system to which Russia is wedded, the production of all manufactures is dear in this country. Not only is raw cotton expensive, but everything which is used in the cotton-spinning works is dear too, such as coals and fuel generally, carding ribbons, machine parts, chemical and dyeing materials, &c. The result is that cotton fabrics are produced at such great cost that they cannot be sold at moderate prices, and therefore cannot compete with foreign fabrics. If our cotton should continue to be admitted free of duty into Manchuria, and if a Customs wall were erected against English and American cottons, we could, of course, monopolize the trade; but with the open door (like duties for all) this is impossible. Besides that, the costs of carriage by railway from the Moscow and Lodz districts will be considerably higher than the charges for sea carriage. All this may be said likewise of iron, the low price of which excludes large expenditures for carriage. In fact, the same is true of sugar and all other such wares. Speaking broadly, it will be impossible to export anything at all from European Russia to Manchuria, because we have no goods which will stand the freight charges from Cheliabinsk to Manchuria. We exclude kerosene, of course, which has always gone by sea to the Far East."

The writer goes on to say that a considerable through passenger and mail traffic can be confidently expected, but this will by no means suffice to make the Siberian and Manchurian railways paying ventures; nor will the tea and silk traffic from China materially alter the situation. Therefore he concludes that the Manchuria railway will bring Russia absolutely no commercial advantages.

To this the correspondent adds:—"Pessimism regarding the results of the Manchurian venture is not confined to such freelances as M. Radzig, but has, particularly since the return of General Kuropatkin, taken a strong hold of Government circles."

THE "GRAPHIC."

The *Graphic* for Sept. 26 contains several very interesting pages illustrating the recent military manoeuvres in England. Among the photographs is a group of foreign attaches and we notice that Japan is well represented, her officers being Major Koike, Lieut.-Col. Utsunomiya, Major Furumi, and Col. Oka. The portraits are exceedingly good. In the same issue of the *Graphic* is a full page illustration

ration of "Girls throwing peace-offerings to the spirits," to which is attached the following letterpress:—"The scene depicted is on one of those lovely rivers in Japan where the stream flows between two banks covered with the beautiful pine woods for which Japan is famous. A large covered barge belonging to the temple priests is being towed along by a man upon the towing-path. Behind the barge, but fastened to it, is a boat crowded with laughing Japanese girls, who, to the accompaniment of a low chant by the priests, are incessantly throwing into the air small scraps of paper, upon which are printed the figures of some river deity or relative. The waters rushing by soon become white with these small drawings, and the wind wafts many of them into the woods, which fact apparently affords great delight to the easily amused people performing this religious ceremony. These papers are supposed to be peace offerings to the spirits represented and denote the longings of the living to communicate with the separated, a yearning which exists among all nations. The Shinto priests have invented this way of satisfying their craving, and the girls firmly believe that this method is effective; and it was evident that it afforded them intense satisfaction. Their simple faith was very feminine, and the ceremony itself made a picture in thorough harmony with the quiet, peaceful scenery of the surroundings." We make no comment, save that the faces of the girls have suffered a slight sea-change, in that Mr. Frank Dadd, R.I., drawing the picture from a sketch by Major J. Fortune-Nutt, has not been able to cut himself adrift from the influences of his surroundings, and has given a decided European cast of feature to each and all. The *sendo*, too, is habited as no boatman ever dresses in Japan.

A SCOTTISH SEA-SERPENT.

One hails with pleasure a good sea-serpent yarn. But it must be good. Some of the stories told about this marine creature only awaken derision by reason of their extreme improbability; while others, like that of the *Dædalus*, evoke impatience with the prosaic manner of their telling. The latest tale of adventure of which the sea-serpent is the subject does not sin in either respect, as our readers will probably admit after perusing it, and it also has merits of its own—which will appear. The Scottish steam trawler *Glengart*, we are told, lay about eighty miles from land on September 8th and just about dawn the hands turned up to draft nets. "While they were thus occupied a tremendous commotion arose on the weather quarter, scarce forty yards off. 'Whales!' exclaimed one of the crew, but to their consternation a huge dark body rose and made for the steamer. The men were almost paralysed at seeing an awful monster, which came on with a swaying motion. When twenty feet off the vessel it reared its head to a great height out of the water, and with a loud hissing noise plunged down into the depths again. A second more and the vessel was lifted at least six feet as the monster worked its way beneath her. She took a great dip by the bows, and shipped a huge sea, washing the deck clear, and flooding the engine-room, cabin and fore-castle." One plain defect about this is that it says nothing of the sea-serpent. For it seems quite evident that the whales surmised by one of the crew might have done all that is above recorded. Wait a bit and read another version of the story, which undoubtedly supplies the deficiency. It is a correspondent

of the London *Express* who is responsible for it. "Suddenly," he says, "the monster [which appears to have climbed on deck instead of passing under the vessel] started to slide down again into the sea. As he did so the open cabin skylight attracted his attention, and he thrust his head down to see what was below. The skipper and the mate were just about to have their morning coffee when the awful-looking head swung across the table. Both of the men are strict teetotalers, and knew that this was no vision. They dropped their coffee mugs and fled on deck. The poor steward, however, was left pinned up in a corner and unable to move. Slowly the serpent looked round the cabin, scorched the steward's whiskers and the paintwork with his fiery breath, and then withdrew his head from the skylight, sinking back into the water. One of my shipmates hit his body with a belaying pin, and it sounded as if an iron tank had been struck." We say with perfect confidence that none of the sea-serpents of which there is record possessed any such breath as that described, and the result of this innovation is that there now exists, we presume, ample, incontrovertible evidence of the existence of the mighty reptile, namely, the steward's scorched whiskers and the blasted paintwork. The belaying pin with which the blow was struck that caused the intruder's body to resound like an iron tank can hardly be included in the body of testimony. We read further that the strange visitor hastily withdrew, and by the time things were righted the monster was some distance off, but, to the horror of the crew, it was seen turning and coming on again at a furious pace. "One of the fishing hands, dashed below and got out a gun. When the animal was fifteen yards away he fired at the head. The monster dived, and a long sinuous body followed, wriggling like a serpent, but travelling at great speed. The serpent's undulations could be plainly seen. It was twice the length of the *Glengart*, or nearly 200ft. long. It had a head like a seahorse, with a long mane or fin down the back; great green, glistening eyes, an enormous mouth, and teeth." That is the Scottish sea-serpent yarn, and it can hardly be denied that it possesses none of the defects which mar its predecessors: it is not without marks of authenticity, and it is told with some freedom of language. Compare it, for instance, with a still later story which comes from Singapore and states that "one of the Marine Police officers who was patrolling the harbour in the police launch on Saturday night (Oct. 10) alleges that he saw something in the water which he declares very closely resembled the Sea Serpent, or what the Sea Serpent is supposed to be. The monster was seen at Tanjong Pagar near the old hulks. It could not be seen plainly, owing to the dim light, but what appeared to be the head, which was black, was raised about two feet above the water. It disappeared on the approach of the launch." In this case the story is baldly and feebly told; it certainly is not properly authenticated, and on the whole it does not deserve to be placed in that department of tales which the former yarn undoubtedly glorifies.

THE RUSSIANS IN THE YALU VALLEY.

Monday, November 2.

A report *via* Seoul, dated the 29th instant, reaches the *Fiji Shimpo* from Chinampo. We presume that this route was chosen by the *Fiji's* special correspondent in consequence of the temporary interruption of the

telegraph between Anju and Wiju. He says that there is every appearance of the Russians having come to stay permanently at Yong Am-pho. The work of embanking and other building at the much-talked-of fort is now nearly completed and the interior of the fortress is almost invisible from the outside. Two guns are already mounted and 150 Russian soldiers in uniform are garrisoning the place. Solid brick stores and workshops with iron-shuttered windows are in course of construction and about 200 Chinese labourers are constantly employed. Timbers that have been floated down the Yalu are stacked to a great height on the shore. Steps are being taken to gradually extend the limits of occupation; the position of the Russian flag is changed from time to time in accordance with these extensions, and the strictest possible watch is kept. With the exception of Russian vessels coming from Port Arthur or plying to Antung no ship is allowed to enter; landing is interdicted to all persons unfurnished with a Russian permit, and the Russians openly declare that the place belongs to their country. Another despatch from the same source says that the fort is built on the top of an embankment along the Yalu; that it would be useless for purposes of defence on the land side, and that its obvious aim is to guard the maritime channel of approach. The Russians say that it is only a storehouse, but there can not be any doubt that artillery is mounted there.

There are, we learn from this correspondent, not more than 200 Russian soldiers at Antung. They frequently cross over to Yong Am-pho but, for the rest, they remain inactive.

There is now an official statement as to the area of the land held by Russians at Yong Am-pho. The statement comes from Mr. Hayashi, Japanese Representative in Seoul, but of course no measurement has been actually made by Japanese; the responsibility for the estimate rests on the Korean headman of Yong-chon district, in which Yong Am-pho is situated. He puts the dimensions at 6,360 Korean feet (8,480 yards) from east to west (*i.e.* along the river), and 4,260 Korean feet (5,697 yards) from north to south, which works out to an area of nearly 36 square miles. On the other hand, an officer specially sent by the Seoul Foreign Department to obtain figures states that the land measures 2½ miles along the river and 5.75 miles inland, which would give an area of 15¾ square miles approximately. The latter figure seems much more probable than the former, but either is formidable. Mr. Hayashi is said to have noted that whichever estimate be taken, the fact is indisputable that the Russians have extended the boundaries of their occupation greatly beyond the limits originally contemplated by the Korean commissioner—limits which never received the sanction of the Korean Government. The latter, in view of complaints from the Yong-chon officials that they are powerless to restrain the Russians, recently addressed—as our readers already know—a very strong remonstrance to M. Pavlov, who appears to have taken refuge in the expedient of the *beatus possidens*—silence.

Mr. Hagiwara reports that according to statements made by the local authorities at Antung, the Russian military men in that region are behaving with great arbitrariness, their constant habit being to impress the services of the inhabitants for transport services without remuneration of any kind. They have three hundred waggons, which require a large force of coolies, but Mr.

Hagiwara's account—so far as it is published—does not explain precisely how these waggons are employed. The Russians are adopting a very unwise policy if this be true. One would have expected to hear that they were seeking to conciliate rather than to alienate the sympathies of the population.

Tuesday, November 3.

The *Yomiuri* and the *Hochi* publish telegrams from Seoul to the effect that, according to intelligence received by the Korean Government from Wiju, the Russians have dismantled the fort at Yong Am-pho and withdrawn the soldiers stationed there. Much as we desire to credit this news, we are bound to note that its source renders it apocryphal. Such a very important fact would scarcely come through the *Yomiuri* and the *Hochi* only. Our own belief about the Yong Am-pho fort is that its construction never had the sanction of Viceroy Alexieff, and, indeed, that it is a furtive kind of fortress, owing its existence to a truculent inspiration on the part of the Lumber Company's officials, who considered that they would be performing a fine and patriotic manoeuvre by calling into existence a structure which, though nominally a mere store-house in time of peace, might serve a very different purpose in time of war. If, as is easily conceivable, they carried their design beyond the limits of credible simulation, they may have been peremptorily ordered to undo the work. Further news has to be awaited, however, especially in view of the fact that soldiers are said to have been in garrison at the alleged fort. There is another hypothesis, namely, that the make-weights prepared by Russia in the Yalu Valley may now be about to exercise their influence. The dismantling of the Yong Am-pho fort would produce a very pacific effect on Japanese public opinion. People would not vividly remember that it should never have been there, and that its creation may have been expressly with a view to its ingenuous removal.

Thursday, November 5.

Mr. Hagiwara's account of the state of affairs at Wiju conveys an impression very different from that produced by the stories hitherto received. He says that the tales about Russian troops and Russian military movements in that district had their origin in attempts made by law-breaking Japanese subjects to cover up their own tracks. Eight or nine Japanese had appropriated timber rafts belonging to other people, and finding themselves unable to carry through their fraud by ordinary means, they set about spreading reports calculated to inflame the public mind against the Russians, and to create an atmosphere which would obscure their own wrong-doing.

Mr. Hagiwara adds that there are some Russian soldiers in the vicinity of Wiju, but that their functions seem to be limited to protecting the lumber-men.

As to Yong Am-pho, it is true that various reasons were originally assigned to prevent Mr. Hagiwara's landing there. But on application to the Russian officer commanding at Antung these difficulties were at once removed, and Mr. Hagiwara subsequently spent two nights at Yong Am-pho where he was most courteously received and where every facility was afforded to him. He reports—we are taking all this from a telegram sent by the *Fiji Shimpō's* special correspondent in Chemulpo—that the alleged fort is not yet in a condition to justify any definite appellation. It may be a fort or it may not be. There are at present no materials to

form a final judgment. But if it be intended for a fort, the position has been selected with remarkable want of military forethought. In short, reading between the lines of Mr. Hagiwara's statement, we gather that he queries the fortress interpretation. He is in no doubt, however, about the significance of such a solid structure. It means that the Russians have come to stay.

With regard to this fort, the Russians themselves are said to have explained that it was erected originally as a protection against bandits, whose raids upon a station situated in such a remote district were to be apprehended. Inasmuch, however, as this source of apprehension was subsequently judged to be more or less chimerical, no artillery was even mounted in the fort and it is now used solely for purposes of exercise (?).

Meanwhile rumours continue to be prevalent that the Russian are about to dismantle the fort, withdraw the soldiers from Yong Am-pho and entrust the guarding of the place to twenty-five policemen.

DEATH OF A FAMOUS JAPANESE NOVELIST.

The death is announced of Mr. Ozaki Tokutaro, who, under the *nom-de-plume* of Kōyō Sanjin, shares with Professor Tsubouchi the honour of having introduced the modern style of novel-writing in Japan. All the novels of former days, notably those of the celebrated Bakin, were written partly in so-called colloquial and partly in ornate literary sentences, and we can remember with feelings of still poignant bewilderment how the unhappy foreign student of Japanese in very early days used to pore over these ancient novels, hoping to discover in their pages some models for modern colloquial construction, and not recognising until a late period of his laborious career that even the conversations put into the mouths of their heroes and heroines by Bakin, Shunsui, Saikaku and so on were not a bit like the colloquies of every-day life. Professor Tsubouchi took the novel of Europe for exemplar and presented to the Japanese public scenes from real everyday life, making the actors and actresses move and speak as naturally as they do in most novels of the West, which is not very naturally, it must be confessed. Kōyō Sanjin followed in Professor Tsubouchi's footsteps with distinguished success. He has died at the early age of 37, carried off by that terrible scourge of Japan, cancer of the stomach. He spent three years in the Imperial University but never graduated, his mind even then being filled with romantic ideas. It is related of him that though he could never write satisfactory answers to the scientific questions propounded by his examiners, the unscientific answers that he did write astonished the faculty by their literary skill. He was also a renowned composer of *haikwai* (the 17-ideograph stanza) and on his death-bed he wrote the lines

*Shinaba aki
Tsuyu no hiru ma so
Omoshiroki.*

This verselet is an admirable example of Japanese impressionist poetry. Freely rendered it reads, "Let me die in autumn before the dew dries;" words which recall, though they do not express, the familiar idea of the dew-drop evanescence of life in Buddhist eyes, and of the shining of night-pearls on the petals of the autumn flower, the morning glory, "The dew-drop slips into the silent sea."

LADY McEACHARN ON JAPAN.

Lady McEacharn evidently made good use of her time during her recent visit to Japan. She has contributed to *The New Idea* a chapter on "The Women and Children of Japan," which shows with what kindly and yet clear eyes she viewed these elements of the nation. "One of the fascinations of the 'Land of the Rising Sun,'" she commences, "is the women and the children: both find a warm corner in a foreigner's heart."

The women are small, their skin is a light-brown colour, their hair black and straight; their eyes almost black, and set more or less obliquely; their cheekbones high; their feet and hands small, and, as a rule, well shaped—some of the ladies' hands, indeed, are most beautiful, and exceedingly well kept.

They are womanly, kind, gentle, faithful, and very obedient. A Japanese woman's lot is summed up in what are termed "The Three Obediences": Obedience to a father; obedience, when married, to a husband and his parents; obedience, when widowed, to a son. The greatest lady in the land may have to be her husband's drudge, fetching and carrying for him, bowing humbly in the hall when her lord sallies forth. She has to wait on him at his meals, and may be divorced almost at his good pleasure. She bears it all so bravely and patiently, never showing any ill-temper. Women in Japan do not hold the same position as their sisters in the Western countries. They are not ill-treated, as so many foreigners imagine, and wife-beating is scarcely known. They are accustomed all their lives to be treated as babies. They are not actually shut up, as in India, but it is considered that their true vocation is to sit at home and take care of their family, and look to their husband's interests. The duties of Japanese ladies in their homes are very much like those of other women, so a Japanese gentleman informed me; their spare time is occupied in learning the koto and samisen, the two most noted musical instruments in Japan.

This is all very true, though exception might be taken to the assertion that ladies of the higher classes have to wait on their lords at meals and may be divorced at a husband's good pleasure. Japan has emerged from the days when such statements were accurate. But of course Lady McEacharn is not responsible in such matters. She speaks only from hearsay. Here is what she has to say about "feminine fashions in Japan":—

The Empress always wears European dress when she receives, and all ladies attending Court have to wear the same. A few of the Japanese like the European dress, but most of them prefer their own costume; they cannot get used to the low bodice, and will never wear them cut so low as a European woman. Their own dress is graceful, and among the upper and middle classes the materials are of the richest silk and the finest material. The men's and women's dresses are very similar. Beneath all come two little aprons round the loins (called *koshi-maki* and *suso-yoke*); then a shirt, then the kimono, or kimonos, kept in place by a thin belt; then the obi, a large sash drawn tightly over the front of the body and hips. This is the chief article of feminine adornment. In order to hold it up at the back a bustle is worn. Europeans think a Japanese dress is not expensive, but it is more extravagant than English apparel. All the linings are of good silk, and some are even more costly than the outer material. Their fashions alter just as in other countries, and they have different colours for each season. A lady's dress often represents a value of 200 yen (£20), without counting the beautiful ornaments in her hair, which are often worth twice the amount of her dress. All Japanese women bestow very great care on the dressing of their hair. It is always done by the hairdresser. Very few women, even of the poorest class, do their own hair, and in the remotest village a barber's shop is found. The combs and hairpins are of gold set with jewels and of tortoise-shell, the pale yellow being the most favoured. They are made in the most beautiful designs, with coral and many other costly materials. Often they represent in value many months of their husbands' salaries; but they are treasured as heirlooms, and handed down from mother to daughter with valuable dresses, as jewels and lace are among Europeans. The custom of blackening the teeth has been abolished by the present Empress, also the shaving off of the eyebrows, which used to be the custom, as soon as a woman married. The style of hairdressing of the married woman is quite different from that of the single woman. A widow always

wears her hair cut short, and never appears in anything but the most sombre hues. Very seldom does a widow marry, and a divorced woman is always shunned.

We should have been disposed to say that the corset rather than the *decolleté* robe stands in the way of the adoption of Western costume by Japanese ladies, and we must take exception to the conclusion that "Japanese dress is more extravagant than English apparel." Lady McEacharn mentions 200 *yen* as the cost of a fine lady's garments independently of head ornaments. That is certainly not an extravagant estimate. Many ladies wear girdles that cost from a hundred to three hundred *yen*. But the point is that the garments of the Japanese lady last for years. They are not sacrificed on the altar of fashion as are those of her Western sister. Thus, in the end, she is found to have spent much less on her wardrobe than an Occidental lady spends. No man in Japan has to postpone his matrimonial purposes because he anticipates inability to pay his wife's milliner's bills. "I can not speak too highly of the Japanese women," says Lady McEacharn in the closing paragraphs of an essay which delights us by its quiet, unassuming, and perfectly unaffected style. "From them I received the greatest kindness. While in Tokyo I was confined to my room with influenza for some weeks. During that time they constantly called, or left little presents; one lady kept my room supplied with beautiful plants, which her gardener changed two or three times a week, and when I was well enough to go out, many of them most courteously placed their carriages at my disposal."

We lay down this pleasant essay with a conviction that if many of those visiting Japan had Lady McEacharn's faculty of observation and her gift of telling a plain story in plain, placid words, the outside world would know a great deal more than it does about Japan.

DEATH OF MR. KATAOKA KENKICHI.

We regret to have to announce the death of Mr. Kataoka Kenkichi, President of the House of Representatives, which occurred in Tosa, his native place, on the afternoon of the 30th ultimo, immediately after receiving the news of his nomination to the Third Class Order of the Rising Sun and to the First Class of the Fourth Official Grade. Mr. Kataoka had been undergoing treatment for a long time in the Tokyo *I-cho* Hospital, but he recently returned to Kochi, his health having improved considerably. A sudden relapse, however, carried him off. Mr. Kataoka commenced his career as a soldier. He took part in the campaign against Aizu, and in 1871 he was sent to America and Europe in the suite of Prince Iwakura. In 1873 he became a commander in the Navy, and in the following year he resigned his official position and went into retirement with Count Itagaki on the occasion of the *Seikanron* (the problem of an expedition against Korea). Thenceforth he figured altogether in the field of party politics, having been one of the founders of the original Liberals. He was returned by Kochi prefecture for the Diet in its first session, and he retained his seat, with the exception of a brief interval, from 1891 until his death. From the Diet's twelfth session he continuously occupied the post of President of the Lower House. Mr. Kataoka was a Christian, and during the past two years he had been President of the Doshi-sha in Kyoto.

LOCAL TAXES.

What principle, we wonder, guides the Tokyo Municipal Authorities in imposing taxes. At present the total sum levied annually upon one bicycle is 6.80 *yen*, which probably represents about 10 per cent. of the original cost of the average machine ridden in the city. Surely that is an enormous impost? The prefectural tax is 3 *yen*; the city tax 1.50 *yen*, and then there are two special city taxes aggregating 2.30 *yen*. In taxing vehicles two considerations are paramount, we presume. The first is, what amount of wear and tear does the vehicle inflict on the streets; the second, what is the taxable competence of its owner. To the first of these questions the reply is cypher in the case of a bicycle. A bicycle does not cause the least appreciable injury to streets. A bicycle ridden constantly for six months injures a road probably less than a man walking for a sixth of the time. As for the second question, the bicycle-rider in ninety-nine cases out of a hundred is a youth who has little money to spend. One imagines that the use of these vehicles by young people in Japan ought to be encouraged, for unquestionably the exercise is a splendid developer of physique. But when the tax alone represents some ten per cent. of the value of the machine, an effectual deterrent is offered. The annual tax on a privately owned *jūrikisha* is 8.80 *yen* annually, which represents some 25 per cent. of the cost price of the average vehicle, and is therefore an enormous charge. But the *jūrikisha* is not a thing to be encouraged.

It is an interesting fact that the "special taxes" now paid by citizens of Tokyo are just about equal to their ordinary taxes. Special taxes are supposed to be for purposes of city improvement. It results, therefore, that the imposts of the citizens are approximately doubled on account of city improvement. A man who would escape by paying 17.69 *yen* were not these improvements in progress, has now to pay 33.39 *yen*. We are well aware that Tokyo is not nearly so heavily taxed as some other cities in Japan—notably Osaka—; but what strikes us as noteworthy is the adoption of a system which requires one generation to bear all the cost of improvements by which succeeding generations will benefit equally. No economical principle sanctions such a system. It illustrates the general difficulty of obtaining loans on moderately easy terms in Japan.

WHAT THE WORLD KNOWS.

The latest number of the *Independent* received in this country bears date Oct. 8th. In an article headed "Manchuria and Korea," it affirms that "Japan has sent troops estimated at between 8,000 and 10,000 into Korea," and that "from the activity prevailing at Karatsu and Kokura it looks as if more troops were to be sent over." To this item of extraordinary news the *Independent* adds:—"Baron Hayashi, the Japanese Minister at London, says that the movement of the troops has no significance, and is only the routine relief of the Japanese forces guarding the telegraph line from Fusan to Seoul and Chemulpo."

Paragraphs like the above fill one with despair. Will the day ever come when journals and magazines in Europe and America may be trusted to speak about Far-Eastern affairs with some measure of accuracy and discrimination? Ever since the year 1896, that is to say, during the past seven years, it has been matter of

public knowledge—knowledge accessible to the most superficial student of contemporary history—that Japan is conventionally pledged *vis-à-vis* Russia not to maintain in Korea a force of more than 200 gendarmes for guarding the telegraph from Seoul to Fusan, and four companies of troops at Seoul, Fusan and Gensan to guard the settlements there, each of such companies not to exceed 200 men. Hence the total force that Japan has agreed not to exceed in Korea is 800 soldiers of all arms and 200 gendarmes. Yet the *Independent* confidently asserts that from 8,000 to 10,000 men have been sent, and represents "Baron Hayashi"—there is no such person, the Japanese Minister in London being Viscount Hayashi—represents "Baron Hayashi" as saying that these 8,000 or 10,000 men are the routine relief of the four companies of settlement guards and 200 gendarmes, protectors of telegraphs. We are not surprised to find, in the sequel of such loose talk, a statement that "the general belief is that Japan is preparing to hold Korea until Russia gives up Manchuria."

Then the *Independent* goes on to tell us about the forces of Russia in Manchuria. Here is what it says:—"Russia now has 50,000 men of all arms in Manchuria including 18 batteries of artillery. On the lines of communication between Port Arthur and Amur Province she has 110,000 men and at Port Arthur and Talien-wan 90,000 more." Can any one tell from this statement what the Russian force in Manchuria may be supposed to be? Incredible as it may seem, the writer in the *Independent* seems to regard Port Arthur, Talien, and the line of communications between the former and the Amur Province as places outside Manchuria. He thus unwittingly commits himself to the assertion that Russia's forces in Manchuria aggregate a quarter of a million, though he himself evidently believes that they number only fifty thousand. The whole article is consistent in the matter of blunders and want of knowledge.

AUSTRALIAN ABORIGINES.

Dr. Roth, the Protector of Northern Aborigines in Queensland, and a Mr. Hedley made a very interesting discovery on their last scientific tour of the Wellesley Archipelago in the Gulf of Carpentaria. At the southern end of the Gulf is situated Mornington Island, which was discovered by Capt. Matthew Flinders in 1802, though he does not appear to have landed there. The island is not inviting, the soil being poor and marshy, and the bush coarse and stunted. Dr. Roth experienced no difficulty in landing, and soon found that he had stumbled upon a new discovery, a race of aborigines who had evidently been separated from the mainland natives for untold generations. With one exception, an aboriginal who had visited the shores of the Gulf, none of the islanders had ever seen a white man, and the use of clothing, however scanty, was unknown to both sexes alike. Dr. Roth, together with some "tame" blacks, that is, natives who have been educated at the mission stations in Northern Queensland and elsewhere, remained on the island three days, employing the "tame" blacks as guides and scouts; and it was speedily discovered that the latter could converse, in a fashion, with the islanders, whose language was a dialectical version of that of the Gulf natives. Great caution had to be observed by the visitors, who were always armed, the islanders having spears and a few boomerangs, but always running away as the white men

advanced. At last, however, a couple were induced to make friends with the two explorers, whom they regarded with a stolid gaze, as if their unexpected appearance was an everyday occurrence. This seeming indifference is an aboriginal characteristic. Their assumed apathy vanished the moment that Dr. Roth and Mr. Hedley lighted their pipes. They stared in bewilderment and, according to the "tame" boys, declared that the white men were burning their mouths. They were equally astonished when a match was used for lighting a fire, and a "billy" employed for boiling water. Mr. Hedley distributed among them a number of penny whistles, which he had brought from Sydney, and soon the bush began to be filled with sounds to which it had previously been a stranger. The islanders, who form a race new to ethnologists, are supposed to be a retrograde type, or else a more primitive type than the ordinary Australian aboriginal. They do not make huts as do the natives on the mainland, they simply collect heaps of grass and sleep on the bare ground to the leeward of them. Articles which have to be carried from one place to another are wrapped in bark, the use of baskets being unknown, as is that of canoes, the water-craft employed being rudely constructed rafts, consisting each of a couple of logs, with some light wood, propelled by branches as paddles. Compared with the natives on the mainland, the islanders seemed far behind in a knowledge of even the rudest aboriginal appliances. They have, however, a "stringent system of tribal classification, intended to represent different degrees of relationship, and to assist in preventing too close intermarriage. The origin of this system, so prevalent among all classes of Australian aboriginals, remains an unsolved mystery. Its existence on Mornington Island was discovered by Dr. Roth, when one of the islanders refused to speak to one of the "tame" boys, because he was his "father-in-law." Only members of the tribe belonging to the same class are allowed to marry; and, much to the amusement of the two explorers, they found an island woman flirting with one of the "tame" blacks, she having ascertained that both belonged to the same class, and that she, therefore, could marry him, if he were willing. Notwithstanding the rough nature of life among the islanders, they looked strong and healthy, although somewhat under-sized, and were apparently of a peaceful disposition. They were ignorant of the arts of cultivation, their food consisting of wild fruits, fish, and meat, fire being obtained by rubbing a couple of sticks together. Except their weapons and a few cooking appliances, there is no personal property, almost everything being shared in common.

THE NEW TOURIST AGENCY.

"Messrs. T. Minami & Sons" is the name of a new tourist agency just started in Japan. Mr. Minami is a well-known gentleman. He has occupied some important official positions, has travelled extensively, and during the immediate past was director of the affairs of the Welcome Society. No one, we should say, knows better what tourists want and how to make them comfortable; nor, it should be added, does any one know better how to guard them against the extortions to which the peculiar conditions of this country render a traveller specially liable. We have known for some time that Mr. Minami, his two sons, and, we believe, his daughter also,

were engaged in organizing this agency, but the fact is now brought prominently to public notice by the appearance of a periodical, called the *Excursion Journal*, which Mr. Minami purposes to publish quarterly, with the object of making the country and its people familiar to foreigners, and supplying information useful to tourists. What Messrs. Minami and Sons have to tell us of their project is this:—

This Journal will be published quarterly with the latest information about the actual state of affairs in Japan relating to Finance, Economy, Commerce, Communication, Industry and Manufactures. Stories of old Japanese manners and customs will be included. Numerous editions will be published every year according to demand.

This Journal will be distributed free to well known hotels, clubs, shipping and railway companies for use of visitors and passengers; to the Editors of newspapers provided that they notice the work in their paper and send the number to us; and any firms which will undertake to distribute a certain number of the Journal provided that they send an order for more than fifty copies each time together with a cheque equivalent to the half price of the journal, that is 12.5 sen, (6.25 cents or 3 pence) per copy and their names and addresses will be printed in the journal as our distributing agents.

The Journal will be sent post free to any address; for a single number 25 sen and for one year or four copies, 80 sen.

The subscription from abroad must be sent by cheque or draft only.

The contents of the first number will give an idea of the scope of the periodical:—

A Sketch of Japan; Finance and Economy by Finance Department of Japan; Imperial Government railways; Sanyo railway; Kyushu railway; Kwansei railway; Osaka Shosen Kaisha (Osaka S. S. Co.); Map of Japan; Notes on Railways; Vocabulary; Advertisements on both covers.

We anticipate for this agency a prosperous future. It will probably become the Cook's of Japan, and the publication of the interesting and prettily illustrated *Excursion Journal* ought to prove useful not only in the interests of travellers but also for advertising the enterprise. By way of corollary to the Journal there is a small volume entitled the *Tourist Compass*, which purports to be a list of the principal business establishments in Japan, "recommended by T. Minami and Son's Tourists Agency." We presume that firms must pay to have their names inserted in the *Compass*, and that they must also have the approval of the publishers.

RUSSIA AND GERMANY.

It is natural that Japanese attention should be keenly directed at this juncture to Germany's attitude. The *Kokumin Shinbun* and the *Nichi Nichi Shinbun* both indicate the existence of such a feeling. Germany, the former says, has made it the habit of her policy to reap advantages as an outsider from all international troubles in the East. She commenced that system on the occasion of the retrocession of Liaotung. She continued it by the seizure of Kiaochow, which may be said to have inaugurated all the subsequent troubles in the Far East. She pursued the same path when she interpreted her agreement with England as having no reference to Manchuria. Running through all her procedure there has been a uniform thread of pro-Russian sentiment, and seeing how useful her coöperation would be to Russia at this juncture, it is not surprising that Japan, reading the history of the immediate past, should have misgivings. Russia has made a very distinct bid for German coöperation. St. Petersburg journals have flown several *ballons d'essai* in that direction, and other indications have shown which way the wind blows. Russia can not rely on France at this juncture. It

is true that on the occasion of the Anglo-Japanese alliance Russia and France also extended the scope of their alliance so as to embrace the Far East. But their compact, like the compact of England and Japan, was emphatically and clearly intended to preserve the *status quo*, not to assist one another in a course of wholesale territorial aggression. The prudence and self-restraint that have marked France's foreign policy during recent years make it incredible that she should now associate herself with a programme of aggressive enterprise. Besides, she and Russia know well that in the Far East they would be no match for England and Japan. Thus, on the whole, Russia sees no prospect of coöperation on France's side and she naturally turns to Germany. The journals of the latter country, however, have answered their Russian contemporaries very distinctly. They have declared that the policy desired by the German people is a policy of strict neutrality, and the Kaiser, a man of proved insight and high acumen, will know how to steer his country wisely at this crisis. He sees that England and America are on Japan's side. America, indeed, can not be expected to take up arms, but she has demonstrated in the clearest manner where her sympathies are enlisted. She has worked hand-in-hand with England and Japan for the preservation of China's integrity and the maintenance of the open door. In some cases she has gone farther than England and Japan, for she has said things that they would have wished to say and done things they would have desired to do. Everything indicates that if Russia forces the pending question to a sanguinary issue, she will find herself completely isolated. The *Nichi Nichi* adds that in consideration of the Anglo-Japanese alliance there is no reason to apprehend anything like a coalition such as drove Japan from Liaotung; and it adds also that if war break out between this country and Russia, the whole of China will feel the shock, and all the Powers having large tradal interests in the Far East will suffer more or less.

THE OSADA CASE.

The suit brought by Mr. Osada against the President of the Telegraph News Agency for libel in calling him "a dog of Russia" has been decided in favour of the defendant. It is noticeable that the Public Procurator pressed for a conviction on the ground that the News Agency had not taken proper steps to ascertain the correctness of the charge before giving publicity to it. But, at the same time, he urged extenuating circumstances on behalf of the defendant. Counsel for the latter took the ground that the statement of the Agency being true, its ventilation did not constitute an offence against the laws of Japan. No copy of the Court's judgment has yet been published but our readers are aware that the evidence offered even by the plaintiff himself does not appear to have been favourable to his case, and the assumption is that he failed to fully rebut the accusations preferred by his assailants. We frankly confess that on general principles our sympathies are with the complainants in these libel suits. Many Japanese journals—and not Japanese journals alone—show by their daily practice that they have no sufficient, or even partially sufficient, respect for the rights of the individual.

RESEARCH AND THE CHEMICAL INDUSTRY.

The lecture recently delivered at the Oxford University Extension meeting by Professor Raphael Meldola, on the relations between scientific research and the chemical industry, and published in *Nature* and in the *Journal of the Society of Arts*, is a valuable contribution to a subject which is attracting universal attention at the present moment. From the nature of the circumstances under which it was delivered, it is a popular sketch of those relations, with special selection of a few of the more important of those cases in which our advance in chemical knowledge has been successfully applied to technical processes. The first instance is the manufacture of glass for optical and other purposes, and the story the lecturer has to tell is the old, old story. In the early stages of research, before commercial results had been obtained, the experimenters were subsidised by the Prussian Diet and by the Prussian Education Department. The very great importance of the study of the properties of glass is obvious enough. Glasses of special composition have to be made for thermometers, for electric insulation, for Röntgen vacuum tubes, for chemical laboratories, and so on. It was not until the microscopic objective was greatly improved that bacteriology began to make strides. So, again, with regard to agriculture. From the researches of Liebig into the phenomena of plant life it was a natural step to the manufacture of artificial manures. The farmer had to be supplied with compounds containing potassium, phosphorus, and nitrogen. Thirteen years ago the salt mines of Anhalt and Stassfurt were producing an annual output of carbonate of potash of the value of eleven and a half millions, and that output has been steadily increasing of recent years. America, the West Indies, France, Belgium, and Germany have reaped the benefit of the demand for apatite, a mineral containing calcium phosphate. As a striking instance of the romance of chemistry, Professor Meldola pointed out that the bones of animals grazing on the South American pampas are built up from the phosphates in the vegetation on which they feed. Bone ash is converted into superphosphates. These are required by, for example, a beet-sugar manufacturer.

Another instance is that of coprolites. Buckland was the first to suggest that these objects, shaped like kidney potatoes, might be used for agricultural purposes on account of the calcium phosphate they contain. Now these coprolites are the fossilised excrement of animals long extinct. They still bear the marks imprinted upon them in their passage through the intestines. Voelcker's analysis showed that they contain phosphoric acid equivalent to over 50 per cent. of tribasic calcium phosphate. Hence it follows that through the crops of growing turnips may be circulating the phosphates accumulated by the giant saurians of a distant geological epoch. Or again, the Chincha islands off the coast of Peru are covered with the deposits of sea-birds whose food is fish. These deposits, which contain both phosphates and nitrogenous matter, are exported in enormous quantities, and are used for fertilising purposes. And thus the phosphates from marine organisms pass through these birds into the crops in fields far distant. One of the most important objects of research is the utilisation of the waste products in modern manufactures. Phosphate is now obtained from the basic slag, once a waste product of one of the processes of

making steel. Of course no lecture from Professor Meldola on this subject would be complete without reference to the revolution in the art of the dyer and the calico-printer by the use of the synthetic colouring matters prepared from coal tar. This is, as the lecturer observed, the stock example of the interdependence of science and industry. The industry has, indeed, assumed colossal dimensions. Six large German factories, with a capital of three millions, employ some twenty thousand persons, and pay dividends of from 5 to 25 per cent. The value of the annual output of tar products is over ten millions.

BELLEVILLES.

The performances of the *Good Hope* and her consorts, the *Hogue*, *Drake*, and *Sutlej*, have demonstrated to the world that British cruisers can maintain their high speed when called upon to do so without any great difficulty or breakdown. It has again and again been asserted by the opponents of the water-tube boiler that they cannot maintain a high rate of speed for any long period and the contest between the *Hyacinth* and *Minerva*, which was unhappily brought to a premature end through the breakdown of the former's port engine at the time when she was hourly increasing the distance between herself and her competitor, has been unfairly adduced as a proof that the water-tube boiler is inferior in staying power to the cylindrical. Let us hear what the correspondent of a contemporary on board the *Good Hope* has to say on the subject. "It will be a disappointment to such (i.e., to hostile critics of the Belleville boiler) to learn that though the '*Good Hope*' has steamed something over 2,500 miles at various speeds, from 10 to 22½ knots, she has had no trouble with her steam generators, 43 in number, with upwards of 11,000 tubes to keep in order." When it is remembered that this ship maintained a speed for 73½ hours, which was nearly double that of our best cruisers twenty years ago, it must be recognised that the propulsion of great ships has marvellously advanced in those two decades. Another interesting fact mentioned by the correspondent is that at 18 knots the *Hogue* was burning more coal than the *Good Hope*, due, as he says rightly enough, to the fact that 18 knots was much nearer the maximum speed of the *Hogue* than it was of the *Good Hope*, although it has also to be remembered that the latter ship is the bigger of the two by more than 2,000 tons. If the "Manœuvres" have proved nothing else, they have at least shown that our newer ships can be implicitly depended on to steam their higher speeds, and to maintain them, as long as the coal they can carry will last, and more can scarcely be demanded. No other Navy in the world can show a parallel performance to that of these cruisers during the late manœuvres.—*The Globe*.

THE CELEBRATED SMOKER.

We learn that the Incumbent of Christ Church, in a sermon delivered last Sunday, censured the local press with one exception for not openly condemning the tone of some of the songs sung at the recent "smoker" in Yokohama. This utterance of the reverend gentleman is not unlikely to set some folks speculating about the limits of newspaper duties and the limits of clerical interference. In our opinion such speculations are entirely superfluous. It is most unquestionably the business of every minis-

ter of the Gospel, just as it is the business of every clean-minded individual, to protest against things tending to lower the moral standard of the community, and it is most unquestionably the business of every respectable newspaper to assist in giving force to such a protest. The writer of these words was not present on the occasion in question and can not, therefore, express any opinion at first hand as to the moral quality of the performance. But he has heard quite enough from trustworthy witnesses to assure him that some of the songs depended wholly for their humour on their questionable—and in certain cases very unquestionable—nature, and that many of those who went to the smoker looking for innocent amusement, came away disgusted. When that is said quite enough has been said. If entertainments of that nature be considered most likely to appeal to the taste of the greatest number, then there is all the more reason for strong condemnation, whatever be the practical value of the remonstrance. So far as newspapers are concerned, they have nothing to do with the private life of any individual; their function commences where his actions become an object of public interest whether as a benefit or as an injury, and it can not be denied that the public are concerned when at an entertainment open to men of all ages and almost of all classes, amusement is provided of a nature calculated to encourage depravity. Very likely this incident has now been magnified by writing and talking to dimensions out of proportion with its special importance. That is generally the case in such matters. The particular event that evokes criticism may be only one of a series which should have been interrupted long ago, just as the last straw is only a straw whatever its direct potentiality. Apart from that question, however, we do not hesitate to express an unqualified opinion that the Incumbent of Christ Church did his duty in stigmatising the matter, and that he ought to have the support of the local press.

MARTYRS' MEMORIAL IN SHANGHAI.

A Committee, of which the Rt. Rev. Bishop Graves is Chairman, and Rev. D. McGillivray, General Secretary, has been formed for the purpose of establishing a Martyrs' Memorial in Shanghai and has forwarded to us a statement and appeal to the Churches in Asia and Africa with a request for publication, with which we gladly comply:—

You, in common with the whole world, were deeply moved to hear that in 1900-1901 A.D. China was the scene of the Boxer massacres, during which thousands of native Christians and 188 foreign missionaries, including fifty-two children, died martyr deaths. In addition to these, the century of Protestant missions in China (1807-1907), now drawing to a close, is further marked by the martyr death of 21 others, making a grand total of 209 of eighteen different societies. "Of these the world was not worthy." "These are they which came out of great tribulation, and have washed their robes."

The missionaries of China, in dependence on divine help, have now resolved to erect in Shanghai, the missionary and commercial headquarters of the Empire, a large *Memorial Hall*, and *Missionary Union Building*, for the use of the Chinese and all missionaries of all societies. 1. As a perpetual and visible witness at the entrance to China that China has a Martyr Church. 2. As an expression of the unity of the Church of all nations and sects, to whom belong the "cloud of witnesses" as a common heritage. 3. As an expression of gratitude to God who enabled His servants to glorify Him by such a death.

The Committee, consisting of representatives of every mission in China, expect that £50,000 will be needed, of which China will probably contribute

£10,000. The deficiency is open to the Christian world to supply. We believe that the churches of Asia and Africa will be deeply interested in this sacred task, and as God enables them, will cheerfully contribute, even out of extreme poverty. Do we not all desire a share in this unique and useful memorial? In this confidence, the Committee send out this notification, soliciting the prayerful sympathy of every Christian. Foreign missionaries and editors of missionary papers will, we are sure, gladly undertake to forward subscriptions, which should be made payable to "Treasurer, Martyrs Memorial Fund, Shanghai, China."

NOTES ON CURRENT EVENTS.

It has been already stated in these columns that a meeting of the principal ship-owners in Japan is to be held in Tokyo on the 7th proximo. The subjects of discussion are thus stated by the *Kokumin Shinbun*:—(1) The establishment of a mercantile marine bank. (2) The degree of protection to be extended to Japanese vessels in time of war, and the advisability of employing as transports the ships now trading with northern China. (3) The determination of regulations relating to disputes between ship-owners, to services rendered to vessels in distress and to the control of employees. (4) The use of uniform flags by vessels of combined companies. (5) The enactment of rules as to free passages for members of the Diet and high officials. (6) The establishment of an economical division between the Osaka and the Tokyo districts.

The Tokyo share market showed some appreciation of the deceptive pacific news telegraphed by Reuter from Berlin, as the following quotations will show:—

Name.	Quotation on 28th.	Quotation on 29th.	Appreciation.
Sanyo-Tetsudo	60.50	61.60	1.10
Shiga-Tetsudo	104.60	105.80	1.20
Yusen-Kaisha	80.15	81.10	1.05
Tokyo Dento	85.50	86.50	1.00
Tokyo Kabushiki	165.00	168.40	3.40
Kwansei Tetsudo	42.30	42.85	.55
Kyushu Tetsudo	58.07	58.80	.75
Tanko Tetsudo	77.00	77.70	.70
Tokyo Denki Tetsudo	54.30	54.60	.30
Do do New Shares	17.00	17.70	.70

Some very remarkable figures are given by a vernacular contemporary with reference to the enterprises of foreigners in Japan and the capital invested in them. Looking at the totals we find that there are 89 firms—41 joint-stock, 9 *goshi* and 39 *gomei*—with an aggregate capital of 1,404,465,804 yen, of which 1,376,131,629 yen is paid up. These various firms are thus divided:—

	Capital. Yen.	Paid-up. Yen.
Beer Company	600,000	450,000
Druggists	28,000	28,000
Mineral Waters	40,000	25,000
Washing	35,000	35,000
Machines	2,290,000	2,290,000
Box-manufacturing	15,000	15,000
Kerosene	24,000,000	16,500,000
Silk Mercers	1,850,000	1,850,000
Real Property Dealers	14,000	14,000
Brokers	25,000	25,000
Miscellaneous	2,401,000	2,401,000
Commission Agents	50,000	50,000
Purveyors	1,500,000	1,500,000
Livery Stables	40,000	40,000
Banks	23,750,000	23,750,000
Trading Companies	17,245,840	17,241,056
Insurance	5,000,000	3,750,000
Newspapers and Printing	227,000	227,000
Hotels	1,125,000	1,110,378
Wholesale Dealers	780,000	780,000
Land & Sea Transport	61,323,450,000	1,304,050,000

A few weeks ago we gave extracts from an article in the *Spectator* in which the writer deplored the lack of imagination in the Colonial-born youth of the British empire. His remarks applied more particularly to Australia and New Zealand, though there was a passing reference to South Africa. A

resident of Cape Breton, Canada, now writes to our contemporary complaining that the title, "Imagination in our Colonies" was much too wide, and at the same time inaccurate, if applied to the young Canadians. The Canadian youth, he contends, has an adequately developed imagination, and food for it on every side. "A month ago a call at a house a mile or so above my host's, near Quebec, fell to my lot, and a boy of eight was made my guide. We chose to go by water in a canoe. He told me his Indian name, and we paddled up as Iroquois on the warpath, turning every bend after a stealthy survey of the next reach, watching for hostile parties, and taking infinite precautions to paddle without noise. My visit over, we came back in hot haste, a French officer with his faithful Indian ally, our passenger a lovely maiden rescued from the savages, and not until the canoe was lodged in a modern boathouse did he realise the dun-coloured twentieth century with its necessities for punctuality and hated ablutions. He told his aunt superintending these that I had 'the true Indian spirit,' and my heart was made glad."

Further on in his letter this dweller on Cape Breton says:—

The youngster along these coasts, as I know him, feels the calling of the sea which tosses unbroken between him and Antarctic ice. Any one of them is within gunshot of some place, revealed in a dream, where Captain Kidd's treasure has been dug for; mysterious French vessels have come at nightfall and strangers have landed, dug, guided by ancient charts, and carried on board iron-bound boxes, then before dawn silently slipped out of the harbour. "Treasure Island" fascinates hereabouts because a perfectly reasonable tale has been adorned with stirring adventure, and English country people had the same experience in Southern seas which the young Cape-Bretoner knows about on the next farm. Miners will not work in a pit on a certain day because Mother Blank has foretold an explosion, and where country-folk gather there is a fair chance that some late-comer arrives breathless with a tale of chasing footfalls and a ghostly hand which almost reached his neck as he raced through the last wood-road. Further West, as I have told, Iroquois and Huron, and French and English explorers, revisit the earth; ancient men tell the children what befel them as strapping young *voyageurs* in the service of the Hudson's Bay Company; and every winter the talk in lumber camps is not of timber, but of the things to which mystery lends its charm. Ontario has to tell of loyalist ancestors in their struggle with the wilderness and the repulse in 1812 of the American invasion. Children of the remoter West I do not know, but theirs is the country of the "sandhill stag." Wherein is this difference between us and our brothers in blood who dwell overseas? My answer is that our winter season is one of uninterrupted frost and snow, giving playtime to minds stimulated by the keen air; moreover, that the minds which respond are for the most part Celtic, and not Saxon, in their origin.

Interesting figures have been published in Tokyo showing the amount of aid granted annually by the Treasury to technical schools in Japan. The table stands thus:—

	Number.	Grants in Aid. YEN.
Industrial Schools	25	59,600
Apprentice Schools	30	28,340
Agricultural Schools	103	107,710
Commercial Schools	41	52,750
Mercantile Marine Schools	7	10,500
Marine Products Schools	5	4,400
Practical Business Schools	57	14,923
Totals	268	278,223

Twenty-eight thousand pounds sterling divided among 268 schools, or an average of less than £105 a school—there are figures that can not be called lavish.

The members of the Succour Corps of the Red Cross Hospital, both surgeons and pharmacists, are to attend the coming autumn manoeuvres for the purpose of practical experience. It has always been the custom to attach these experts to the various

Divisions, so that their knowledge of field duties is already excellent. But we gather from a speech addressed to them yesterday by Count Matsukata, Principal of the Red Cross Society, that it is thought advisable for the corps to work in co-operation with the Sanitary Corps of the Army in order that absolute uniformity of methods may be secured. Count Matsukata's speech was of considerable length, but the gist of it was contained in this one intimation.

The *Asahi Shimbun's* Peking correspondent reports that the Chinese Representative in Tokyo has informed his Government of the prospect of a peaceful termination of the Russo-Japanese complication, and that the news has been received with much satisfaction by the Chinese Court. If this be true the inference is that the Minister in Tokyo attached credence to recently circulated rumours. It is to be hoped that His Excellency Mr. Yang has not inaugurated his service in Tokyo by falling a victim to delusive canards.

With reference to the Yunnan Railway spoken of in the Saigon telegram published elsewhere, we presume that the line in question is that from Hanoi running up the valley of the Song-kai to Lao-kai, and thence *via* Manho, Liu-an and Cheng-kiang to Yunnan-fu. But independent telegrams speak of an arrangement having been just concluded for a Yunnan-Kwangsi line, to be exploited by a Franco-Chinese syndicate. If the latter construction is to be put on the French telegram, it must be admitted that the time is unfortunate, for no railway work could be safely undertaken in Kwangsi at present.

The present Korean Representative in Tokyo has, it is said, been appointed Vice-Minister of Finance in Seoul, and Mr. Li Chi-yong has been nominated in his place. The new Minister is of the Imperial family, but the telegram does not make any mention of his rank. He was formerly Minister of the Household and Minister of War.

M. Beau, the Governor-General of French Indo-China, is reported to be considering the question of creating three free ports in that colony—namely Haiphong, Tourane, and Saigon. Under the administration of M. Doumer similar projects were on several occasions discussed in the Conseil Supérieur of Indo-China, but no progress was made with them. This time it is expected that the Minister for the Colonies will at least authorise the experiment so frequently advocated by the Indo-China Chambers of Commerce and of Agriculture. The scheme is promoted by M. Deloncle, Deputy for Cochinchina, and M. de Montpezat, delegate for Annam and Tonkin in the Chief Council for the Colonies. The Hanoi correspondent of the *Univers* says it is calculated that the establishment of these free ports would double Indo-Chinese commerce within five years without diminishing the average customs receipts.

The Mexican Representative in Japan has been made a Minister Plenipotentiary—hitherto he has been only a Minister Resident—and a corresponding change has been made in the rank of the Japanese Representative in Mexico. H. E. Mr. Lera, the Mexican Representative, is now on leave in Europe, but his return to Japan is expected in a few months.

The War Office announces the issue of an officially compiled history of the China-Japan war of 1894-5 (*Nisshin Senshi*). There are six volumes containing six thousand pages

In all, and the price for those that pay at any date prior to the 30th of November is 10 *yen*, the publishers being the Tokyo Insatsu Kaisha, No. 2 Kabuto-cho, Nihon-bashi, Tokyo. This book will be of great value, not merely because of the text, which is understood to have been compiled from all records officially available, but also because of the maps and illustrations. The work of compilation has been very long, seven years and a half, but we presume that if the wheels of authorship have moved slowly they have ground proportionately fine.

The second section of the Tokyo Street Railway—Sukiyashi to Hanzo-mon, a distance of $1\frac{1}{2}$ miles—was opened to traffic on the 1st instant at 8 a.m. It appears that the line did not work quite successfully, especially at the steep hill near the Head Quarter Staff, so that the time required to traverse the distance was from 20 to 25 minutes instead of 15. It is expected, however, that the defects will be immediately remedied. In spite of the inclement weather there were a good many passengers. Another section, as far as the Yotsuya Mitsuke, will be opened at the end of the month.

Kawakami and Sada Yakko, with whose names all English, French, German and Italian lovers of play-acting are familiar, have just commenced at the Hongo-za in Tokyo a series of performances of "Hamlet." They announce that the play proceeds daily from "5 o'clock past-half, to 10 o'clock, at eve" and that the performances will continue from "November 1st to 15th, between fifteen days, 1903." Any one that saw this company act "Othello" last spring, will not fail to see "Hamlet," and to those who lost the former privilege our strong advice is not to be so careless of their opportunities now.

On the 31st ultimo the Tokyo Local Court gave judgment in the action brought by the owner of the Norwegian steamer *Calenda* against the Nippon Yusen Kaisha. The *Calenda* was sunk at Nagasaki in consequence of a collision with a steamer belonging to the Japanese Company and the owners of the former claimed damages amounting to 430,000 *yen*. It has been decided, however, by the Tokyo Local Court that no responsibility devolves on the Nippon Yusen Kaisha, and the claim has accordingly been dismissed. We have not learned whether an appeal has been lodged.

On Monday the *Otorwa* was launched at Yokosuka. She is a third-class cruiser of 3,000 tons displacement, 10,000 horse-power and 21 knots speed, and her sister-ships are the *Nitaka* and the *Tsushima*. When the *Otorwa* is added to the Japanese fleet, the second programme of naval expansion will have been completed. The Emperor proceeded to Yokosuka by the 10 a.m. train from Shimbashi and the launch took place at 2 p.m.

The telegram published a few days ago with reference to Professor Theodor Mommsen, the eminent German jurist and historian, has doubtless prepared our readers for his death, which is now announced. Dr. Mommsen was born eighty-six years ago at Garding, in Schleswig, and was the son of a pastor. We quote a brief sketch of his career from *Men and Women of the Time*:

He studied at the University of Kiel, and travelled from 1844 till 1847, examining Roman inscriptions in France and Italy for the Berlin Academy. On his return he wrote numerous articles for the *Schleswig Holstein Journal*, which he conducted, and was made professor of Law at Leipzig. Having been dismissed on account of the part he took in political

affairs, he was made Titular Professor of Law at Zurich in 1852, at Breslau in 1854, and at Berlin in 1858. In 1875 he was appointed Professor of Jurisprudence in the University of Leipzig. On June 15, 1882, he was tried at Berlin for having in an election speech slandered Prince Bismarck, but was acquitted. The decision was appealed against, and on April 7, 1883, the Imperial High Court of Appeal at Leipzig finally acquitted Professor Mommsen of the charge. He has written numerous learned works, has edited a magnificent work on Latin inscriptions, published by the Prussian Academy of Sciences, and a work on Roman Coins, and is best known in England by his "Earliest Inhabitants of Italy," of which a translation by Robertson appeared in London in 1858, and "History of Rome," translated by W. P. Dickson, and published in London in 1862-63. In 1878 the King of Italy conferred on him the Grand Cross of the Order of SS. Maurice and Lazarus. In 1880 Professor Mommsen's library was destroyed by fire; and a number of his English admirers had the happy idea of presenting him with a selection of classical and historical books, printed in England, to compensate him for some portion of his loss. On the occasion of his seventieth birthday, in November 1887, a congratulatory address, signed by sixty-two Dons, was sent to him by members of the University of Oxford. Other works of his are:—"The Oscan and other Italic Dialects," 1845; "Roman Coins," 1850; "Roman Constitutional Law," 1871; and an edition of Justinian's "Pandects," 1866-70. In 1895 he resigned his position as Perpetual Secretary of the Berlin Academy.

Some interesting particulars are published by the *Engineer* with reference to the late "War Trial" cruise of H.M.S. *Europa*. On her return from her voyage to Hongkong and back, she remained fourteen days at Portsmouth, but nothing was done because nothing was required in the way of repairs to her boilers. She was commissioned for the manoeuvres with a scratch crew, so that one-half of the stokers were raw, second-class men, who had not previously been to sea. During the manoeuvres she steamed 5,600 miles and burned 2,500 tons of coal. No defects developed during the cruise, although for 58 hours she maintained full speed. For 29 hours the stokers were in two watches instead of three, owing to the sea-sickness of the raw recruits, and two deck hands had to be lent to the stoke-hold to trim coal. Including the voyage to Hongkong and back, the *Europa* steamed in all 25,000 miles; and at the end the only defect was a slight leak in an indicator pipe. It is doubtful if such a record can be equalled, much less surpassed, by any existing ship—war or mercantile.

Lieut.-Generals Barons Oku and Kuroki have both been appointed full Generals. General Oku's name is very familiar to those that remember the Satsuma rebellion. It was he that led the force which relieved Kumamoto.

We learn that Vice-Admiral Mirabello, now commanding the Italian Squadron on the Far-Eastern station, has been appointed Minister of Marine in Italy, and that he will proceed at once to take his portfolio.

The Emperor is to leave Tokyo on the 11th instant by the 8.20 a.m. train from Shimbashi. His Majesty will pass the night at Nagoya, and proceed on the following day to Maiko, where Prince Arisugawa's villa will serve for the Imperial reception. On the 13th, 14th and 15th His Majesty will be present at the manoeuvres. The review will take place on the 16th and be followed by a reception. On the 18th the Imperial party will set out on the return journey, reaching Shizuoka that evening, and going on to Tokyo on the forenoon of the 19th.

It will be remembered that on the 31st ultimo Reuter sent us a telegram stating that an attempt had been made upon the life of His Excellency President Diaz. We

learn on inquiry at the Mexican Legation that according to an official telegram received there on the 4th instant, no such attempt has been made.

THE "TOKAI" COLLISION.

Further reports with regard to the collision of the Russian steamer *Progress* and the Nippon Yusen Kaisha's steamer *Tokai Maru* (1,120 gross tons) which occurred on the morning of Oct. 29th off Yakoshi, 15 miles distant from Hakodate are given by Tokyo papers. According to the *Jiji*, the Japanese steamer immediately sank and 145 of her 200 passengers are missing, the remainder, numbering 55, being rescued. The *Asahi* states that 25 out of the 47 of a crew of the Japanese steamer were rescued, and the chief engineer died on board the Russian ship after having been saved.

The latter paper adds that the passengers are believed to have been 150 or 160 in all, of which 56 were saved.

It appears that the Japanese ship was on her way to Hakodate from Awamori leaving there on the previous day at 6 p.m. The *Progress* was en route to Vladivostok from Muroran leaving there about the same time.

The Nippon Yusen Kaisha's steamer *Jinsen Maru* left Hakodate as soon as information of the accident reached there, for the scene.

According to an official report, 21 of the crew and 30 passengers of the Japanese steamer were rescued by the Russian vessel, but 16 crew and 16 passengers are missing.

In connexion with the collision of the steamers *Progress* and *Tokai Maru*, the Captain of the former and the two quarter-masters of the latter were examined in the Marine Examination Office, Hakodate, on Oct. 30th, the Russian Consul at the port being also present. The nature of the evidence is not reported.

A telegram from Hakodate states that the examination of the Captain of the Russian steamer *Progress*, which took place at the Marine Examination office on Oct. 31st, closed before a conclusion was arrived at. The Captain refused to give any statement with reference to the collision with the *Tokai Maru*, alleging as a reason that he could not understand Japanese (though an interpreter was present), and that he was deprived of reason at the moment of the accident. Further, he refused to append his signature to the official statements which described what had occurred in Court.

According to a telegram from Hakodate, states the *Asahi*, Messrs. Howell & Co., agents of the owner of the Russian steamer *Progress*, which collided with the *Tokai Maru*, lodged a claim on Nov. 2nd with the Nippon Yusen Kaisha for loss caused by the collision.

FIRES.

On the night of Oct. 29th, fire occurred at Aikawa, Sado island, destroying over 50 buildings.

Fire broke out early in the morning of Oct. 30th at Toshima-cho, Kanda, Tokyo, destroying two houses.

Another fire occurred on the morning of the following day at the Asakusa Garden, destroying two buildings. Two women who were living in an up-stair room of one of the houses fell and sustained injuries while struggling to escape.

On the night of November 1st, two fires broke out at Noge-machi and Benten-dori, 3-chome, Yokohama, but were put out before the flames extended to adjoining buildings.

On the evening of Nov. 3rd, two electric light wires crossing Uchisaiwai-cho, Kojimachi, Tokyo, caused a fire extending for many yards. No injury was sustained by persons or buildings.

THE CHINESE GOVERNMENT.

A TELEGRAM to the *Nichi Nichi Shin-bun* from Peking says that the Chinese Government has been making exhaustive inquiries as to the nature of the negotiations between Japan and Russia, and has carefully debated the information obtained, with the result that orders have been issued to Viceroy Yuan to hold his troops in readiness for proceeding to Shan-hai-kwan, and to General Ma to make preparations for guarding Mongolia. If this news be correct it is of much importance, for although the Chinese troops would not be a serious factor in actual fighting, their hostility to Russia would mean the hostility of all the Chinese and Manchurian population, and no military man can underestimate what that would involve for Russia. The weak point in Russia's Manchurian position is her long line of communications. Were her railway injured her difficulties would be immensely augmented, and supposing the people of the country to be hostile to her, the precautions essential for the purpose of protecting the railway throughout its entire length would subtract heavily from her effective force in the field. China need not be very active, but between strict neutrality and declared hostility there is all the difference in the world. She has shown much uncertainty in this matter, being probably convinced that whichever side wins, her own integrity must suffer. By this time, however, she ought to see plainly that Russia's victory would involve the permanent absorption of Manchuria into the great Northern Power's dominions, and what is incomparably more important, would expose the northern provinces of China proper to the same fate sooner or later. This latter contingency is not a matter of conjecture. It is as certain as anything can be certain under the sun. The limits of Russia's expansion are not yet in sight. No one can pretend to project his vision into a future when the impulse of empire-building shall have ceased to drive onward this mighty engine of conquest. If Manchuria become hers, it will be merely a stepping stone not a terminus. Japan's victory, on the other hand, would mean at least the postponement of China's disintegration. Russia, by fair means or by foul, has acquired in Manchuria interests which can not be ignored in any international settlement; interests which will inure to her ultimate ownership of the Three Provinces just as surely though more slowly than a triumphant war would inure. Nothing can invalidate these interests except the occupation of Manchuria by a third Power or by a rejuvenated China. There is thus no such thing as complete salvation for the Middle Kingdom. But there is a chance of postponing the evil day for a considerable time, and in the interval means of partial self-preservation could be devised. That chance lies in supporting Japan, for Japan in this matter stands for the preservation of China's integrity and for the open door. As between China and Russia the

majority of Occidentals might not hesitate to choose. This, however, is not a question of ethical selection. We are discussing the matter from China's point of view; from the point of view of her continued existence as an independent empire, and, thus considering the situation, it is impossible to understand why Peking should hesitate, or how the statesmen of the Middle Kingdom can imagine that any hope lies in craven neutrality.

THE EMPEROR'S BIRTHDAY.

BIRTHDAY BALL AND REVIEW IN TOKYO.

The Birthday Ball in Tokyo gains in brilliancy every year. Not only does the number of guests increase—on the present occasion over three thousand invitations were issued—but some new decorative scheme always delights those fortunate enough to be present. This year the fertile brain of Mr. Yoshida, who is the leading spirit in all such matters in Tokyo, conceived the idea of converting the approach to the ball-room into a maple grove. Big branches of artificial leaves in all the glory of autumnal tints stretched across the ceiling, and innumerable electric lights, each forming the calyx of a huge chrysanthemum, produced among this forest of colours reflections and shadows of singular beauty. The ball-room itself was ornamented with festoons of greenery relieved by chrysanthemum blooms and dotted everywhere with many-coloured electric globes. It was in sober truth a fairy scene. His Excellency Baron Komura, assisted by Viscountess Tanaka—Baroness Komura being indisposed—and supported by Mr. Ishii, received the guests, among whom were their Imperial Highnesses Prince and Princess Kanin, Prince Higashi-Fushimi, Prince and Princess Kuni, Princess Nashimoto and Princess Kacho. Supper was served at half-past ten. A very large number of British and American naval officers were among the guests, who numbered nearly two thousand. At 1 o'clock a special train carried home the Yokohama residents.

The usual review took place in splendid weather, in the presence of His Majesty the Emperor. Two Divisions were reviewed, but one of them—the First Division—furnished one brigade only. Lieutenant-General Oku—who was subsequently gazetted a full General—had command of the parade.

The Emperor held a levée after the review on the 3rd instant, and subsequently the Princes of the Blood, the Ministers of State, the *Genro*, the Foreign Representatives and other distinguished persons to the total number of 428, had the honour of lunching with His Majesty in the Phoenix Hall. The Emperor gave the usual brief address of welcome, and Count Katsura replied on behalf of Japanese Officialdom. Baron Sannomiya translated the Emperor's words into French, and His Excellency Baron d'Anethan, Doyen of the Corps Diplomatique, made a suitable answer, Baron Sannomiya rendering his speech into Japanese.

The Prince Imperial was, on the 3rd instant, raised to the rank of Colonel in the Army and Post Captain in the Navy, His Imperial Highness' previous ranks having been those of Lieut.-Colonel and Commander. The Princes received at the same time the Grand Order of the Chrysanthemum, namely, Princes Yamashina, Kayō and Kuni.

YOKOHAMA.

In Yokohama the day was celebrated in the usual fashion. Practically all places of business, both foreign and Japanese, were closed, and flags were displayed abundantly both in the former Settlement and on the Bluff. The sun shone brightly, but a brisk easterly breeze and low temperature admonished people to keep moving. The Bund was resorted to during the day by large numbers of holiday folks desirous of viewing the warships in harbour, of revelling in the noise and smoke of the salute at noon, or of witnessing the illuminations at night. It was understood

that the various warships now in port would make a special demonstration in the evening: the British flagship *Albion*—to mention one instance—was ready with the design of a large chrysanthemum. But as the men-of-war of other nationalities had no such decorations ready it was decided not to specially illuminate the British squadron. This was a huge disappointment to the many sight-seers, the more so as the evening, though perhaps over bright and clear to allow the electric light decorations their best effect, was still exceptionally favourable for the production of the looked-for spectacle.

Prominent among foreign buildings were the hotels, which were profusely adorned with flags during the day and with parti-coloured lanterns at night, the music at the Grand Hotel attracting a considerable crowd of Japanese while it was in progress. The usual official events took place in the course of the day.

BASEBALL.

The Tokyo High School arranged on Monday to play a team from the U.S.F.S. *Wisconsin* on the Yokohama Cricket ground, to take place on the morning of the 3rd, and a considerable number of spectators gathered to see the match. After waiting an hour, no naval men putting in an appearance, enquiries were set afloat to ascertain the reason for the apparent want of courtesy on the part of the *Wisconsin*. It was eventually discovered that after arranging the match several members of the naval team found that they were required on duty and could not possibly get off, so a telegram was sent to Tokyo to the Captain of the Tokyo High School Baseball team. Unfortunately this telegram did not reach them, and the lads accordingly journeyed down to Yokohama, only to meet grievous disappointment. Such being the state of affairs, Mr. C. H. Thorn very kindly asked the T. H. C. team if they would care to play a nine picked up from such members of the Y. C. and A. C. as happened to be on the ground, and some players from the Yokohama Commercial School. They preferred not to do so, however, and Mr. Thorn then asked the Yokohama Commercial School if they would mind putting a team in the field, so that the spectators should not leave the ground entirely disappointed. This the Y.C.S. kindly consented to do, and lending two of their players to the foreigners a couple of nines were picked up. These played a game of six innings, at the end of which the score stood 6 runs all, and the game was abandoned, the demands of hunger by this time being too insistent to be longer denied.

THE SALUTE.

The large fleet of war vessels that has gathered in Yokohama during the past week or two made a fine show on the occasion of the Emperor's birthday. At eight o'clock all dressed ship, practically all the merchant vessels in harbour following suit, and as they rode at their anchors to the easterly breeze, being thus broadside to the Yokohama shore, they presented quite a gala appearance. In this congregation of national flags the white ensign was prominent, Britain being represented by the splendid sister battleships *Albion*, *Ocean* and *Vengeance*, the first class cruiser *Cressy* (a four-funnelled ship of high freeboard), and the second class cruiser *Eclipse*. The Stars and Stripes flew above six fine vessels, the battleships *Wisconsin* and *Oregon*, and the cruisers *New Orleans*, *Albany*, *Raleigh* and *Cincinnati*. Four ships hoisted the Tricolour, the armoured cruiser (flagship) *Montcalm*, the cruisers *Chateaufrenault*, *Pascal* and *Bugeaud* and the gunboat *Surprise*. Italy was represented by the armoured cruiser *Vettor Pisani*, and last but not least the Japanese battleflag waved at the stern of the *Chen-yen*, once the finest of China's Northern fleet, now a second class battleship in the Japanese navy.

At noon the *Chen-yen* fired the first gun of a twenty-one gun salute and at once the thunder of artillery filled the air and the assembled warships became veiled in smoke. The British ships firing at long intervals were the last to finish, and the final gun from the *Cressy* was not over two minutes

after the salute began. Music, the Japanese National Hymn, accompanied the firing.

OFFICIAL DOINGS.

The various Consuls in Yokohama visited the Kencho about 10 a.m. There they were received by H.E. Governor Sufu, to whom they offered the usual congratulatory salutations. Police officials and others connected with the public service also attended, as well as many prominent citizens.

About noon Governor Sufu entertained at his official residence the members of the Consular body and a considerable number of other official personages. Among these were the Commanders of the battle-ship *Chen-yen* and of other warships in port, Judge Watanabe, President of the Yokohama District Court; Messrs. Kobayashi, Public Procurator of the District Court; Minakami, Director of Customs; and Ikeda, Director of the Post and Telegraph Office, etc.

All the Japanese schools of Yokohama gathered on the ground behind the railway station and went through an interesting series of drills and evolutions in the course of the day.

RUGBY FOOTBALL.

The opening of the Football Season took place on the afternoon of the Emperor's Birthday when a team composed of officers of H.B.M.'s fleet tried conclusions with the Y.C. & A.C. The game was an even one and, considering that it is the first game of the season, the locals did not disgrace themselves. The game was far more of a forwards' game than it need have been, both the Navy and Yokohama when in their opponents' territory persisting in trying to work up the touch-line. Both sides were guilty in this respect, but Yokohama more so, and there were several opportunities for the Yokohama three-quarters to score during the last five minutes if the ball had been passed out promptly. As regards the play, it calls for little comment. The sides were evenly matched but the Navy forwards were not so selfish as their forward opponents, and it was not until just after half-time that the useful gentleman, A. N. Other, scored a try which Moss failed to convert. Within five minutes of the kick-off the Navy made a good combined rush and a three-quarter getting hold of the ball found himself in front of the Yokohama goal with only the full back to pass. He did not risk running in but, steadying himself before anyone had a chance to tackle him, dropped a neat goal. The score was now 4 points to 3 in favour of the Navy. On resuming after the interval Yokohama began to press and although some players showed lack of condition the local team distinctly had the best of the second half and should have, as stated above, scored towards the end of the game. There was a great deal of offside play in the second half, one or two of the local forwards, after overrunning the ball, calmly waiting for it to come back again, when they did not hesitate to "have a hack at it." But one of the Navy halves was the principal transgressor in this respect; in the "wing forward" game as played ten years ago he would be worth his place in any team. The fielding of the Yokohama backs was shocking. The day was an ideal one, the ball was therefore not greasy and yet it was the rarest thing throughout the game to see a local back take a pass or field a ball cleanly.

The forwards were all much of a muchness but Hayward at half was much sounder than his colleague, who was several times guilty of that fatal fault of kicking the ball when it comes out of the scrum. If the half can't pick it up there is only one thing to do and that is to throw himself on it; then not a yard is lost. The game was witnessed by a goodly crowd of spectators and, no score being made in the second half, ended in a win for the Navy by 4 points (a dropped goal) to 3 (a try).

K. Okuma (42), ex-post-deliverer of the Yedo-bashi Post Office, Tokyo, was arrested on Nov. 4th on a charge of having stolen a parcel-post packet containing 366 *momme* gold bullion (about *yen* 1,440 in value) while in service at the office. He sold the gold in Tokyo and Yokohama.

EXHIBITION OF PHOTOGRAPHS.

The third semi-annual exhibition of the Yokohama Photographic Society is being held at the Bazaar in the Public Gardens, having been opened on the 1st of the month for a term of a fortnight. Some defects in arrangement to which attention had been drawn in previous notices of the Society's undertaking seem, to have had an effect, and now the pictures are disposed in the order of the catalogue so that reference either way is vastly facilitated. It is still a pity, however, that if one wishes to learn the title assigned by the artist to his work one has to borrow the (only) manuscript list in English kept at the office.

The display is meritorious and would be more so if many of the photographs had not suffered from attempts to improve upon the camera's story. As may be imagined Fuji is represented in a number of ways, but not so very often after all—we counted five representations of the "peerless" one in a gallery of some 170 pieces. Thus we have Fuji (coloured) from Fujikawa by Tomono, Fuji with snow from Susono by Inagaki, another Fuji coloured (too lavishly) by Tomono, a Fuji from Tako-no-ura (creek in the foreground) by S. Fukui, and finally another Fujikawa Fuji, this time by Takagi. Among the other pictures may be mentioned the fog effect of Mr Sugisaki in No. 11; and an excellent view in which under the title "An Odd Rock" Mr. Ushijima shows a rocky gorge and a solitary figure passing along an overhanging pathway. There is plenty of colour in the cherry trees at Uyeno by Harada; and Yamaguchi's "Autumn Evening" is a well selected and carefully executed work. We have two waterfalls—Senga by Ichinose and Senjo by Kikuchi—both striking photographs. There are two "Twilights," one "On the River," by Ishin, and the other by S. Fukui; the latter is distinctly the more crepuscular.

KOBE SOCIAL CIRCLE.

In point of numbers and funds the Kobe Social Circle—members 270, balance in hand, *yen* 369.45—is flourishing, but we notice that the committee in their annual report lament that the number of volunteers willing to give their services at the entertainments is sadly deficient. They say "that more volunteers are required if the work of the Circle is to be carried on." This was suggested in the 1901-1902 report, and during the past season there was no improvement in affairs, the Committee being at their wits' end to find means of providing entertainments. Practically the same people, whether in concerts or dramatic entertainments, had to bear the brunt of the work, which in a Society of 270 members, does not seem reasonable." This plaintive cry seems to have set one of the members of the Circle a-thinking, and he accordingly drew up and circulated a scheme whereby the whole of the Circle could take an "active part." Here is the suggestion:—

1st Meeting	½ Concert ½ Dance.
2nd "	½ Concert ½ Dance.
3rd "	Dramatic.
4th "	½ Concert ½ Dance.
5th "	Concert.
6th "	Dance.

We understand that the suggestion evoked considerable discussion at the annual general meeting, but the sense of the gathering was against the innovation and it would seem that the new committee will proceed along the old-established lines this winter. The new committee are:—Messrs. P. E. Beeston, C. Crowther, W. H. Ferrier, S. G. Giles, F. Grimble, A. Hansen, and Mrs. Kerr, Miss Penney, Miss Ada Sale and Mrs. Wicher. If we remember rightly, the President of the Yokohama Literary Society—a somewhat similar organisation with some 300 members—at the annual general meeting, mentioned that some 60 members of the Society had taken part in the musical and dramatic portions of the season's programmes, and this did not include the writers of the twelve lectures, or papers, which were given in 1902-1903.

YACHTING.

CLOSE OF THE SEASON.

The Yokohama yachting season closed on Saturday, per programme, under exceedingly discouraging and cheerless weather conditions. There was a moderate to fresh northerly breeze, which in its way would have been quite acceptable, but rain fell all day, and both rain and wind being bleak and cold, yachts' cockpits offered slight allurements except to enthusiasts.

Four events were down on the Yokohama Yacht Club card, a 39-rater, a cruiser, a 21-rater and a "Lark" race. The big boats were very well satisfied to lie at their moorings, not one even threatening to start, and the 21-raters agreed among themselves that it was no day to go out in. This left the cruisers and the "Larks," the latter of which may be depended upon for a show of some kind even in weather which certainly they were never expected to be exposed to.

Three cruisers made ready—*Dainyo*, *Nina*, and *Asagao*—but *Nina* had trouble with her topsail gear too near gun-time and so did not start. *Dainyo* made a very bad start and in consequence was two minutes late in getting out of the harbour. *Asagao* held her lead to the Lightship and when, running off for the Widow Buoy, they disappeared from view she seemed to have increased her advantage. Beating back in a considerable sea the big yacht should have worked up to her opponent but apparently this was beyond her powers. At any rate they passed the Lightship about the same distance apart (three to four minutes). They fetched in to the harbour entrance and reached home, *Asagao* an easy winner on level terms, irrespective altogether of the nine minutes allowed her by arbitrary handicap. *Dainyo* carried gafftopsail through-out. Times:—

	Finish	Handicap	corrected
	h.m.s.	m.	h.m.s.
<i>Dainyo</i>	4-35.55	3	4-32.55
<i>Asagao</i>	4-31.30	13	4-19.30

Seven "Larks" sailed over the course which seems to specially commend itself to them—round the breakwater twice—and after the usual sorting out victory rested with No. 12 (Sanders) first. The times were:—

	h.m.s.
1	4.01.10
2	4.05.10
5	3.38.50
9	4.05.50
10.....	3.56.10
11.....	4.00.05
12.....	3.55.00

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

In a former Summary we mentioned the fact that Mr. Takahashi Gorô had published a book comparing the teaching and lives of Christ, Shaka and Confucius under the title of the *Sekai San sei* (三聖) *Ron*. This work has since reached us, and we are now able to furnish a fuller account of its contents. In his preface Mr. Takahashi observes that the superiority of these three men to all other teachers of religion is so universally acknowledged that the point need not be argued. But when we come to the subject of the comparative merits of each teacher, we find a great variety of opinion, says Mr. Takahashi. Mr. Takahashi's book consists of 3 chapters. The general title of Chap. I. is "The relation of the three Sages to each other." The sub-headings are (1) The relation of Confucius to Laotzu. (2) The relation of Confucianism to Buddhism. (3) The relation of Buddhism to Christianity. (4) The Buddhist symbols, the cross and the *ganmyaji*.* (5) Resemblances between the two creeds (Buddhism and Christianity). Chap. II. The distinctive merits

of each of the three Sages. (1) Confucius. (2) Shaka Muni. (3) Jesus Christ. Chap. III. The Effects on the World of the teaching of the three Sages. (1) Confucianism. (2) Buddhism. (3) Christianity.

Mr. Takahashi is strongly of opinion that no connection of any kind has been proved to exist between the teaching of any one of the three sages with another. They thought separately, and such coincidences in their teaching as have been specified by certain writers are superficial and unimportant. The three systems are quite separate, each one taking a line of its own.

The following is what Mr. Takahashi has to say on the character of each of the three men in his second chapter. I Confucius. What was remarkable about Confucius was the earnestness he showed in study. He studied all that he could study, and he learnt something from everybody he met. The result of this extraordinary application was the production of a man of remarkable perfection. It is hardly possible to conceive of a man more thoroughly equipped or more thoroughly developed. He seems to have embodied in his person all the many virtues and accomplishments of his ancestors and his contemporaries. So great is his eminence that even to-day all the world feels that though it has much to learn from him, it can teach him nothing. Thus did his commonsense appeal to the whole world in his day; there is nothing to be said that it has not said. It has exhausted everything. As a man Confucius was developed in a measure that will never be surpassed.† But, continues Mr. Takahashi, the morality of Confucius did not reach the depths of man's heart, the chief reason of this being that he took no real interest in the question of a future life nor in theology. He dealt with ethics and politics only, and was in favour of keeping religion at a distance. It is true that he speaks of the gods and of "honouring Heaven" and, so on, and he informs us that he always prayed, but all this is to be regarded as a mere bowing to the customs of his time and not as representing his real convictions on the subject. These convictions he states in those oft-quoted phrases: *Imada hito ni tsukauru atawazu, nanzo yoku ki ni tsukayen* (Not knowing as yet how to fulfil your duties to your fellow-men, how can you know how to serve spirits?), and *Imada sei wo shirazu, nanzo shi wo shiran?* (Not knowing life, how can you know death? Or not knowing this world, how can you know the next?) This is at once the strongest and the weakest characteristic of Confucianism—that which made it so widely acceptable to people naturally inclined to be agnostic and that which prevented its effecting what other forms of belief have done. The Heaven of Confucius is Matthew Arnold's Heaven—a subtle principle or mere energy, not a living, thinking spirit; not God, but what men call Nature. But though not a believer in a Divine Being, Confucius was no mere grovelling materialist. He had high aims and an ideal of his own.

II Shaka Muni. There is nothing new under the sun. Confucius did no more than embody moral ideas which had been known and esteemed in China for centuries before his time. Shaka did the same in India. Just as Christianity was evolved out of Judaism, so Buddhism was developed from Brahmanism. In its connection with Brahmanism lie both the strength and the weakness of Buddhism. Buddhism made itself popular by preaching anti-caste doctrines. The equality

of all men which it proclaimed was a welcome message to people groaning under the oppression of the caste system, but while doing this it failed altogether to shake itself free from the pessimism which has always characterized Brahmanism. Buddhist pessimism is largely derived from the fact that the prospect it holds out to man is of the gloomiest kind. In its Nirvana there is no consciousness, and no life. If Confucianism failed because it was ultra-human, beginning and ending with man, Buddhism has failed because it ignores man altogether as a separate and an important unit in the universe. It is essentially an anti-human creed. (非人間教 *Hi-ningen-Kyō*.)

III Christ. Though Christ was born a long time after Confucius and Shaka, he had the advantage of being preceded by a number of Jewish teachers whose doctrines met with his approval. He said that he came not to destroy the Law and the Prophets, but to fulfil them. So the basis of his teaching was Jewish monotheism and the righteousness proclaimed by Moses and the Hebrew prophets. The essence of Christianity consists in a union between man and God effected by means of Christ as a mediator.

In reference to the effect of the three creeds on the lives and conduct of human beings, the gist of what Mr. Takahashi says is that Confucian morality is effete because it has no theological basis. That Buddhism can logically have no system of morality, as it teaches people to despise this life altogether. Radical reform of the nature of things it deems impossible. Neither in this life nor the next is there, according to its teaching, to be found anything gratifying to man—evil everywhere here, annihilation there. Christianity, on the other hand, is a religion for the present and a religion for the future. It, according to Mr. Takahashi, has produced Western civilisation and therefore it should be accepted as the only religion in the world worthy of our entire confidence.

* * *

In an article which recently appeared in the *Shinjin* (*New Man*) entitled:—"How far should we comply with the demands of the times?" a number of questions affecting the attitude of Japanese Christians to Western customs are discussed and a good deal is said on the diversity of opinion that exists among the converts of various missions. The article opens with the assertion that it is an entire mistake to suppose that the Japanese as a nation are indifferent to religion. The indifference of which some have even boasted is only apparent. Deep down in his heart of hearts the Japanese desires religion. This sentiment is not the result of Buddhist or other direct teaching, but innate in Japanese human nature. But while as a people we like religion and have welcomed Christianity here, says the *Shinjin*, there is one thing which we are very jealous about, and that is our independence as a nation and our freedom to choose which of the many customs that have associated themselves with Occidental Christianity we will adopt. There is no denying that in some countries of the East the acceptance of Christianity has implied slavery, a servile following of foreign customs and ways. In India the 3 million Protestant Christians do not enjoy the confidence of their fellow-countrymen. Why is this? For no other reason than that these Christians have gone too far in following Western customs. The same thing exists in China to a certain extent. Though we are a different race of people and have more spirit than either Indians or Chinese, yet we are exposed to the same danger as our fellow-Christians in other Eastern countries. Insidious, indeed, are the methods by which now and again it is sought to impose Western customs on us. They are spoken of as cosmopolitan, and what not. Under whatever name it may appear we must be on our guard against any teaching that has a denationalizing effect. Our Christianity must be of a pronounced Japanese type. And though we are willing to work in conjunction with foreign missionaries, we cannot consent to subject ourselves to them in any way whatever.

It is supposed by some that as a nation we have

given up religion in favour of science and that we are unwilling to accept any religion which cannot be shown to have a scientific basis. But that is not the position we take by any means. We realize that science and religion are quite different and that it is impossible to prove the truth of a religion by adducing scientific evidence. Science and religion cover different areas of investigation, and to require that the conclusions they reach shall always agree is unreasonable. But what we do insist on is that the Gospel that is preached to us in the name of religion shall not be diametrically opposed to reason as is orthodox teaching concerning the Trinity, the resurrection of Christ and the atonement. The Gospel for the Twentieth Century must be a rational Gospel.

Among our Christians there is a section which calls itself the *Keiken-ha* (Experientialists). The converts who belong to this body declare that dogmas, theological doctrines, and articles of faith are the dry bones of Christianity, that heart experience—faith, devotion, earnestness, hope and love alone are of any value. Only those who possess these are really religious, say these teachers. Others are mere formalists. We commend this teaching, says the *Shinjin*, to those Christian pastors who have been trained in the orthodox theological fashion. There is another school of Christians among us calling themselves Mystics, (神秘派 *Shinpi-ha*), whose devotion and earnestness are worthy of the highest respect. To confound mysticism with superstition is an error to be guarded against. The difference between the experientialists referred to above and the mystics is considerable. The former are active and aggressive the latter passive and retiring. The fundamental notion of the term "mystic" is something hidden from ordinary eyes. Some people speak of Christ's miraculous birth as a mystery, but this is a myth rather than a mystery. (*Kirisuto no kōtan setsu nado, hiki-kitarite, kore wo Shinpi to iu mono ari. Kakaru kiji wa Shinpi-teki ni arazu kōto* (虎虎) *nari*.) The resurrection of Christ, too, is not a mystery, but a mere rumour (*densetsu*) or tradition. What is really mysterious is the communion that every devout soul may have with the living God—the inner consciousness of the believer known to no one but himself or herself—the opening of the ears of the soul when the voice of God speaks. Into every devout soul the Christ is born. God's assuming human form and thus bringing Himself into communion with mankind was not an event that took place only once more than eighteen hundred years ago, but one that is always happening. Our Christian mystics, like the experientialists, have little sympathy with orthodox ways of teaching Christianity and attach no importance to forms of faith and mere ceremonies. But this form of belief in Japan is certainly pantheistic rather than monotheistic. In many respects it resembles the teaching of the Zen Sect of Buddhists, expressed in the saying: 不立文字, 以心傳心, *Furitsu monji, ishen, denshin* (The communion of heart with heart in a way that no language can make clear.) There is an element in Japanese human nature which welcomes teaching of this kind. Christian mysticism finds congenial soil in certain Japanese hearts.

The orthodox section of the Christian Church disapproves of the experientialists, the mystics and the rationalistic Christians alike, and is satisfied to go on repeating its articles of faith and performing its rites and ceremonies. To Japanese demands to-day these orthodox Christians make no response; neither have they the necessary qualifications for doing this, were they so inclined. If the three above-named sections of Christendom are unable to supply the religious wants of the age, they will go unsupplied. But what is wanted is an amalgamation of the qualities that characterize these three schools (*Nihonjin no yōkyū ni oji ubeki shikaku wa moto yori Orthodox no yūsuru tokoro ni arazu. Kore ni oji ubeki shikaku aru mono wa, ijo no keiken to shinpi to kwagaku to wo kane-sonoyetaru. Schliermacher no goloki jinkaku tarasumba arazu. Shikashi kakaru shikaku wo motomuru wa hanahada katashi. Warera wa masu William Penn ya, Wesley, Zinzendorf no goloki nitemo, konnichi*

* The sign 卐, called *svastika* in Sanskrit, supposed to be a combination of 4 Greek gammas, called 卐 *manji* by the Chinese and the Japanese.—(WRITER OF SUMMARY).

† Mr. Takahashi's testimony to the greatness of Confucius is worth quoting in the original:—*Sunawachi kaku kiroku manabitaru ga vuyez, banjin, (人) bambutsu, banji wa kohogotoku kōshi no sono deshi to shō shi-uredomo, sono uchisuru no hitotsu mo kōshi no onare no deshi nari to iu atawazu, K ko wo motte tōji no jōshiki sekai ni oite kōshi no chishiki wa itareri tsukuseri.... Sunawachi kare wa taisei (大成) shitaru mono, yemmu no hito to shō su, hito to shite kare yori ijo wa nozomu bekarazu.*

no yōkyū wa kore wo mantoku seshime-ubeshi to omou.)*

In an article entitled *Kinsen ijō no Seiryoku* (That which is more powerful than money) the *Chūōkōron* (No. 10) calls attention to the change of national sentiments in reference to money. In the old days to show a supreme contempt for money was the mark of a gentleman. When on one occasion Date Masamune took some money out of his pocket, Uesugi Kenshin's noted retainer, Naoe Kanetsugu, observed that for a man of Masamune's rank to handle filthy lucre even was polluting; so it is related that after that Masamune's money was placed on a fan when he had occasion to hand it to other people. At the beginning of the *Meiji* era so ignorant were the *samurai* as a class of money affairs that the simplest accounts connected with daily household purchases puzzled them beyond measure, whenever circumstances demanded a certain amount of attention to business on their part. But to-day, continues the *Chūōkōron*, on every hand men are hastening to become rich. Books on "Success," "The Gospel of Wealth" and the like, are all the rage. It goes without saying that morals have degenerated. We have rushed from one extreme to the other, and at the present time there is a great call for teachers who shall hold up to admiration those moral qualities which are of far more value to the nation than millions of yen.

The *Chūōkōron* publishes an article from the pen of L'Abbe E. Ligneul entitled "National maladies that I have observed in Japan." In this article M. Ligneul says that he considers that the Japanese were in former times to a certain extent a religious-minded people and that even to-day this national characteristic has not been obliterated by any means. But the Japanese have a notion that the scientific spirit is opposed to religion, forgetting that from the days of Sir Isaac Newton onwards there have been hundreds of noted scientists who have accepted Christianity. The study of nature impresses on the mind the vastness and grandeur of the Universe and the comparative insignificance of man and so prepares the mind for the acceptance of religion. . . . The difference between the morality of religious people and non-religious people is, I think, sufficient to call the attention of thoughtful people to the claims of religion. But when we come to consider what religion should be adopted, we reach the conclusion that whatever benefits Shintoism, Buddhism and Confucianism may have conferred on Japan in past ages, from one cause or another they are neither of them suited to her wants to-day. She must look elsewhere for help.

To the *Fukin Shimpō*, No. 428, Mr. Ōtani contributes an article entitled *Kuchizaru Reisei* (The Never-dying Soul), in which the following opinions are stated. Buckle in his "History of Civilisation in Europe," says that the difference between the East and the West is that "in the West men subdue nature and in the East they are subdued by nature." This holds good in the province of religion. Take Confucianism. It represents man as entirely subject to destiny, as so bound down by the inflexible laws of nature as to be unable to act as he pleases. He is a mere atom in the great structure of the universe. *Shisei mei ari; fuki Ten ni ari*: "Life and death are all pre-appointed; wealth and honour are decreed by Heaven." However great man's mind may be, it has to submit to the inexorable laws which govern all things. Though occasionally Confucius speaks of "Heaven" as though it had a mind and was capable of emotions, these are evidently only figures of speech

* "The orthodox party does not possess the qualifications for supplying the (religious) demands of the Japanese to day. These could only be supplied by some one possessing the characteristics of the three schools of thought referred to above, who was at once an experientialist, a mystic and scientific (rationalistic) like Schleiermacher. But a man possessing this character it would be very hard to find. In the meantime the needs of our time might well be supplied by such men as William Penn, Wesley or Zinzendorf."

and the Heaven of his conception was no other than blind fatalism. Buddhism holds out the state called Nirvana as the final good of mankind. It is customary to translate this term into Chinese by the characters 寂滅 *Jakumetsu*, which mean extinction. But Buddhist scholars say this translation conveys a wrong impression. In the Royal Library of Paris there is a Buddhist work which represents Nirvana as a "Deliverance," *gedatsu*. The teaching of Buddhism is that all our trouble here comes from supposing things to be real when they are only visionary. Our separation from the great universe to which we belong has never been anything but a fancy of ours say the Buddhists. At death we shall hold to this fancy no longer; there will no longer be an *ego* and a *non-ego*, nature and a being outside nature. Absorption will take place and what we have considered the part will be lost in the whole. Thus, according to this system of teaching, man becomes entirely subject to nature.

Christianity represents nature to be subject to a supreme, actually existing Being called Jehovah, the "I am." This Being is a thinking, spiritual Being, the "Great Self" of the Universe, the Christians' God. God created man in his own image and placed him over nature. Man, according to this teaching, originated from God, his separateness from nature was an attribute bestowed on him by God. Kant says that in order to establish a reliable basis of ethics three things must be premised: (1) The freedom of man's will, (2) A future life, and (3) The existence of God. If, as Buddhism represents, there is no separate existence for the human *ego* and man's will is not free, then morality and religion can effect nothing. They are mere empty names. Responsibility, duty, the pursuit of high ideals, all these are dependent on the reality of our individuality. If men once begin to doubt the teaching of their own inner consciousness, what else have they to rely on and what becomes of all the accumulated knowledge of the world founded on that consciousness? And of what does that consciousness consist, and where is its chief seat? These are subjects over which materialists and spiritualists have disputed for ages, but despite all the progress of physiology, it has by no means explained all psychological phenomena, nor has it shown that all mental operations can be traced to material causes. The bridge between the material and spiritual worlds has yet to be built. But in man's inner consciousness he is as convinced of the existence of a part called the soul as he is of the external, material world. What is the soul? Martineau thus writes of it:—"That changeless inner mind of ours which is the source of all our activity and the receptacle of all our experience, we call the soul."*

In the *Tsūyoku Shūkyō dan* (No. 5) L'Abbe E. Ligneul's well-known translator, Mr. Maeda Chōta writes as follows:—During the last 20 years not a few scholars in this country have studied religion, and at the present moment there seems to be a wide-spread feeling that religion is indispensable as a reforming agency. Yet we are very surprised to find various scholars expressing themselves in a manner which shows that they have no adequate conception whatever of the real nature of religion. "Religion," said Mr. Fukuzawa, "is like tea, and the difference between one religion and another is like the difference between Japanese tea and Chinese tea." "Religion," says Dr. Katō Hiroyuki, "is a sort of narcotic which temporarily stupefies man's conscience (*Kyōshin wo ichiji shibire-saseru mono de aru*)." Quite recently Mr. Ōmachi Keigetsu has told us (in the *Taiyō*) that religion is based on fear. While Doctors Inoue and Motora continue to talk about manufacturing a new religion, quite a number of scholars and politicians regard religion as only suitable for silly old men and women. And the general opinion among the learned is that religion is no more than a device for attaining worthy ends. If asked to define religion I say, "It is the union of earth and heaven, of God

* The above is a translation from the Japanese and probably differs verbally from Dr. Martineau's original definition, which is not at hand as we write. —(WRITER OF SUMMARY.)

and man—a union that is brought about on man's part of his own free-will, and a union that when accomplished is thoroughly effective. Religion, as the word implies, is a bond that binds man to God. The bond between father and son we call *kō*, filial piety, that between master and servant or subject and monarch we call *chū*, loyalty. What these two virtues are in our earthly relationships, that is religion in our heavenly relationship. In a country where the two above-named virtues are held in great honour religion ought to flourish; for it is no more than a higher form of filial piety and loyalty. . . . But there can be no compelling of belief in religion. Men must accept it voluntarily, and not from constraint of any kind. But when it has been accepted it will certainly prove itself to be a force capable of effecting great things; since religion brings man into union with an all-perfect God. . . . Religion is a branch of learning, but it is unlike those sciences whose first principles are based on axiomatic truth. There can be no immediate and direct perception of the first principles of religion. They must be taken on trust. Faith is absolutely necessary. We must receive humbly the teaching of God, realizing our own inferiority to the all-wise God.

The last volume of the Encyclopædia published by the Hakubunkwan consists of a work on "The Religious Systems of the world" by Mr. Kudō Shigeyoshi, one of the lecturers at the Sōtōshū Kōtōgakurin. The book treats each religion analytically first, and then discusses them all synthetically. The subject of universal peace and methods for diminishing crime are dealt with in the closing pages of the work. The price is 50 sen.

We read in the *Kiritutōkyō Shōkai* that a Christian belonging to the Tōkyō Shinbō (興業) Kyōkai has established in Nagoya what the Japanese call a *Yorozu-ya* for supplying Christians with any articles they may require at reduced prices. The profits of the business are to be devoted to Christian work. The shop is said to be much appreciated. The notion of starting this business agency originated with Mr. Teramoto, belonging to the Mitsui Bank.

The Nihon Dendō-kaisha has just celebrated its 25th anniversary and the *Kiritutōkyō Shōkai* utilizes the occasion for furnishing a history of the Association written by Mr. Osada Tokiyuki. The title of his article is "The Past and Future of the Japanese Missionary Society." For many years the Society received help from abroad and was to a certain extent controlled by foreign missionaries, but during the past 7 years it has been under exclusive Japanese management. The following is an epitome of the history of the Association. The Japanese Missionary Society (Congregational) was founded on January 2nd, 1878. On that occasion delegates from Kobe, Osaka, Miya, Hyōgo, Kyōto and other places, representing 9 Churches in all, met in a girls' school situated in Hori-ura Machi, Tosa. Mr. Nijima presided at the meeting. After each of the delegates had given an account of the work carried on by his church, it was unanimously agreed that a Missionary Society be formed which should from the first aim at becoming by degrees entirely self-supporting. A committee consisting of Messrs. Nijima, Sawayama and Imamura was appointed, to whom the task of drawing up rules and taking steps for the proper organization of the Association was entrusted. These may be said to have been the founders (*ranjō*) of the Society. At first the Society received help from the American Board of Foreign Missions, the sums granted differing according to years. But in January, 1896, this practice ceased, and the Society became wholly self-supporting. The Society has since its foundation carried on work at 75 different mission stations, located in the 3 chief cities and in 33 prefectures of the empire. At 50 places churches were formed, and 17 out of these churches are wholly self-supporting. The evangelists in the employ of the Society number 126. It would be quite correct to say that more than

half of the evangelistic work of the Kumiai churches has been done by this Society. In 1890 Mr. Sawayama Takakichi was chosen President of the Society, but he soon after resigned and Mr. Ebina Danjō was appointed in his stead. During the first 18 years of the Society's existence it received from native and foreign sources the sum of 51,280 yen 17 sen 6 rin. Of this sum 38,000 yen came from the United States, the remainder was subscribed in this country. The money subscribed since the Society became entirely independent, that is, during the last 7 years, amounts to 26,954 yen 93 sen 2 rin, that is, to more than double the amount subscribed during the 18 years of the Society's dependence on foreign aid. The total amount subscribed by Japanese to the Society's funds during the 25 years was 40,188 yen 87 sen 9 rin. The total amount expended by the Society since its establishment reaches 78,237 yen 20 sen 8 rin. Since it became independent, the Society has not only succeeded in collecting money with greater ease, but its work has advanced with more rapid strides than it did when it was pecuniarily semi-dependent on foreign aid. The present annual expenditure of the Society is reckoned at 5,550 yen 50 sen. New stations have just been opened in Tōkyō, Yokohama, Nagoya, Fukui, Hiroshima, Fukuoka, Kumamoto and Nagasaki by evangelists who are full of faith and earnestness, from whose labours much is expected. We aim, says Mr. Osada, at breaking up new ground and at establishing self-supporting churches at places where now there are none. We contemplate eventually being able to send missionaries to other Eastern countries, to China and to Korea. In the latter country we already have a Christian teacher engaged in education who may act as a John the Baptist there and "prepare the way of the Lord." There are many circumstances connected with the situation in Korea which make it desirable for us to open mission stations in that country. As the most advanced of Eastern nations, our responsibility is great. "If," said Joseph Cook, "the East be compared to a big man-of-war, Japan is the rudder of that ship." A true saying, indeed, to which we Christians do well to take heed. We wish that we could commemorate this our 25th Anniversary by reading reports of work carried on in the neighbouring countries. But we trust it will not be long before our resources will allow of our sending missionaries to China and Korea. We need more evangelists. Out of Japan's 50 million inhabitants there are now some 50,000 Christian soldiers, but for the evangelization of neighbouring countries our disposable force is still inadequate. The *Kirisukyō Sekai* publishes a very happily worded letter of congratulation from the Rev. H. Kozaki in which he speaks of the society as a child that had grown to manhood unobserved by its parents, (of whom Mr. Kozaki was one) as the Japanese saying is, *Hitō sono ko no chizuru wo shiru mono nashi*. The letter calls attention to the steady progress which the Society has made and warns its members against any relaxation of effort.

YOKOHAMA CHARITY ORGANISATION.

A general meeting of the Yokohama Charity Organization was held at the Chamber of Commerce Rooms on Monday afternoon, Mr. Jas. Dodds presiding.

The following is the report and statement of accounts:—

REPORT FOR THE PERIOD BETWEEN APRIL 1ST, 1900, AND MAY 31ST, 1901.

The Committee beg to lay before the subscribers the following report and statement of finance.

The relief of destitute seamen has been accomplished with the cooperation and assistance of the Salvation Army. During the period covered by the report, tickets for 534 days board and lodging have been granted without any distinction of race or creed, and your Committee feel that the thanks of the community are due to the Agent of the Salvation Army, Major Ellis, and to Mrs. Ellis, for the self-sacrificing care and attention which they give to the waifs and strays who drift to our shores. Were it not for the home which they offer to the destitute, the question of relief would be a much more serious matter, while the moral influence which they exert would be entirely missing.

Assisted passages have been granted to those who were desirous of leaving the country, but the largest expenditure of the Society has been for the maintenance and relief of residents whose misfortunes justify the assistance, and as there are several cases in which this relief will be required more or less permanently, any increase in contributions during the coming year will be welcome.

The Committee desire to direct attention to the main object of the Society's existence, namely, to direct the charitable funds of the port on organized lines, so as to avoid, as far as possible, those cases in which unworthy persons trade upon the feelings aroused by tales of distress. It often happens that lists are circulated and responded to without sufficient enquiry being made as to the merits or needs of the case, and money is thus taken which might have been directed to better and more widespread uses. The Committee therefore urge that applicants for charity should be referred to them, and that no subscription should be made to lists unless signed by a member of the Committee.

In October, 1900, Mr. Charles V. Sale was invited to join the Committee and is now acting as Honorary Treasurer.

REPORT AND FINANCIAL STATEMENT, FOR THE PERIOD BETWEEN SEPTEMBER 1ST, 1902, AND 31ST AUGUST, 1903.

The Committee beg to lay before the subscribers the following Report and Statement of finance.

During the twelve months the Society have been able with the cooperation and assistance of the Salvation Army to extend relief to seventy-eight destitute persons.—43 Seamen, 3 Firemen, 7 Clerks, 4 Ship's Stewards & Cooks, 21 various and unknown. The nationalities were as follows:—

America	13
Austria	1
Belgium	1
Chili	2
Denmark	4
France	2
Germany	8
Great Britain	35
Italy	1
Russia	8
Unknown	3

The relief given consisted of approximately:—177

Nights' Lodging, 573 Meals, 2 Assisted Passages to Pacific Coast, 9 Assisted Passages to other ports. In addition, contributions have been made towards the maintenance of several old residents.

The Committee further desire to thank residents and visitors for many gifts of clothing, in the distribution of which they have been very greatly assisted by Major Ellis, also Messrs North and Rne and Messrs. Brett & Co. for making up prescriptions gratis; and they would express their obligations to the proprietors of the local journals, the *Japan Herald*, *Japan Gazette*, *Japan Mail* and *Japan Advertiser* for inserting without charge our advertisement calling attention to the needs of the Society.

The Committee desire to reiterate their sense of the debt which they owe to Major Ellis and to Mrs. Ellis of the Salvation Army for their valuable cooperation and assistance, without which it would be impossible to make such effective use of the funds at their disposal.

The Committee in presenting this Report and Statement now beg to tender their resignation, and to thank the community for the response as shown in the attached Subscription List.

(Signed) E. RAY.

The CHAIRMAN explained that since the accounts were made up, viz the 31st August, the balance in hand, yen 208, had been completely expended and the Society had now to make a fresh appeal to the public. A fresh list will accordingly be sent round. In dispensing the funds of the Society, it will be seen that the Committee have given prominence to the idea which primarily led to the formation of the Society, the relief of distressed seamen of the Mercantile Marine, whose cases could not be fully met by the Seamen's Mission; but, as will be observed, there have been many other cases of distress relieved by the Society. In dealing with the cases brought before them, the Committee have exercised what discrimination has been in their power; but they do not pretend to say that every case has been a deserving one. People in distress find themselves here in some way, and have to be helped away from the place or remain as a burden to the community. The funds, however, have been dispensed as carefully as circumstances would admit, and the Committee hope that subscribers will be satisfied with the results achieved. The Committee, continued Mr. Dodds, desire to emphasize one paragraph which runs:—"We desire to direct attention to the main object of the Society's existence, namely, to direct the charitable funds of the port on organized lines, so as to avoid, as far as possible, those cases in which unworthy persons trade upon the feelings aroused by tales of distress. It often happens that lists are circulated and responded to without sufficient enquiry being made as to the merits or needs of the case, and money is thus taken which might have been directed to better and more wide-spread uses. The Committee therefore urge that applicants for charity should be re-

ferred to them, and that no subscription should be made to lists unless signed by a member of the Committee." In conclusion, the Chairman said that the attitude of the public generally, "We don't mind paying up, but don't bother us to attend meetings."

This concluded the proceedings, and the old Committee remain in office.

CUSTOMS APPEALS.

According to the *Official Gazette*, the Minister for Finance delivered on Oct. 23rd his decision on an appeal brought by Mr. Richard Reiff, representative of Messrs. Reimers and Reiff, No. 8, Naniwa-cho, Kobe. The firm imported on May 12th this year three cases containing avarturine glass, with a certificate of origin, from Germany, on which goods the Kobe Customs imposed 30 per cent. *ad valorem* duty in accordance with No. 470 of the general statutory tariff which provides for precious stones, pearls and their imitations. The appellant contended that the goods in dispute were merely lumps of glass not to be confounded with any kind of precious stones, and that the duty should be imposed at the rate of 10 per cent. *ad valorem* under the conventional tariff between Japan and Austria-Hungary. The Minister for Finance sustained the appeal imposing the rate of 10 per cent. *ad valorem* duty.

The Minister rendered the same day decision in an appeal presented by Mr. J. Ringer, representative of Messrs. Holme, Ringer and Co. Nagasaki. The firm imported on June 5th 50 tons waste pieces of old mild steel on which the Nagasaki Customs imposed 10 per cent. *ad valorem* duty under No. 496 of the general statutory tariff. The appellant held that the goods were pieces of old steel which had been cut out at an iron factory and were only fit for re-manufacturing, and the duty should be at the rate of *sen* 14.4 per 100 *kin*. The appeal was not sustained on the ground that the steel cannot be recognized as old from the fact that it consists of waste pieces.

Another decision was given by the Minister on the same day in an appeal brought by Mr. H. Tatsumi, director of the Sasebo Naval Dockyard. The dockyard imported from England mild steel plates and oval bar steel on which the Nagasaki Customs imposed specific duties of *sen* 49.9 per 100 *kin* under No. 220 and *sen* 53.9 per 100 *kin* under No. 118 of the statutory tariff respectively. The director of the naval dockyard contended that the goods should be free from duty because the materials are to be used for the hull of torpedo-boat destroyer *Shinonome*, which is undergoing repairs at the yard, and are not for common use. The appeal was rejected on the ground that the steel materials are not certified to be for the special use of warships, and could not in their present form be for the special use of warships.

THE PLAGUE.

Two cases of plague were reported on Oct. 29th at the village of Koyasu near Kamakura. The patients are a boy 8 years old, his younger sister, and a fisherman named R. Kayama. The boy died the same day.

A case of plague was reported at Urashima-cho, Kanagawa, the night of Oct. 30th. The patient is a girl named Shimo, 9 years old. The sanitary authorities have decided to burn the dwelling and over 20 adjoining houses.

On the night of Nov. 3rd, another case of plague was reported at Urashima-cho, Kanagawa. The patient is a boy named K. Koyama, 11 years old, who was staying with his father at an inn known as the Nakazawa-ya.

The Yokohama sanitary authorities commenced on Nov. 4th, to build an isolation house at Minami-Otamachi. The building will be completed within four days.

The Yokohama City Assembly held a meeting on Nov. 3rd, when it was decided to expend *yen* 79,000 in preventing the further spread of the plague.

ASSOCIATION FOOTBALL.

ADDITIONS TO THE RULES.

The new laws for the season 1903-4 largely affect the question of the referee's discretion, and these laws are likely to give some trouble both to referees and to players until they are properly understood. The principal change is in Law 16, which deals with the penalty kick. The addition to this rule reads thus:—"The Referee may refrain from putting the provisions of this law into effect in cases where he is satisfied that by enforcing them he would be giving an advantage to the opposite side." It might be as well to mention here that the International Board has decided that, when a penalty kick is taken at the expiry of time (everyone knows, of course that the time for play is extended until such penalty kick is made) in the event of the ball touching the goalkeeper before passing between the posts a goal is scored.

The next alteration, in importance, or rather addition, applies to Rule 6, which deals with an offside player. He cannot now interfere, not only with an opponent but *with the play*, until the ball has been *again* played. This makes the offside sneak a veritable dummy and it is strange that the Board did not take this leaf out of the Rugby Union book years ago. Another important alteration is in Rule 10, which is quoted in full. It now reads:—"A goal may be scored from a free kick which is awarded because of any infringement of Law 9 but not from any other free kick. When a free kick has been taken the ball shall not be again played by the kicker until it has been played by another player. The kick-off, corner kick, and goal-kick shall be free kicks within the meaning of this law." Players will note that the alteration in the rules is printed in italics. This is perhaps a fitting opportunity to remind players that the International Board has decided that, with reference to Rule 9, in cases of handling, tripping, pushing, kicking holding, or charging an opponent from behind which the referee deems intentional, no penalty must be awarded. This has practically been the custom up to date with referees but it is now laid down as a hard and fast decision and if players will only respect it many unallowed appeals in the past will not be repeated.

An alteration of minor importance is in Rule 2. There is now no such thing as a foul kick-off. The decision of the International Board is that if the law is not complied with, the kick-off must be taken over again.

From the foregoing it will be noted how much the powers of the referee have been increased solely with the idea of stopping all kinds of foul play, but it should also be noted by players that the defending side when pushed hard are just as liable to the different penalties as their opponents who, in their keenness to score, may err. Mr. W. Pickford, who has been a member of the Football Association Council since 1888, sums up these alterations in the rules concisely, firstly as regards referees, and secondly as regards players. To referees he says:—

- 1.—No free kick for an improper kick off.
- 2.—Passive interference when in an offside position is a breach of law 6.
- 3.—A free kick for a breach of law 9 may score a goal.
- 4.—The penalty kick need not be enforced if it would benefit the offending side, or inversely, lose the unoffending side a good chance to score.

To players Mr. Pickford says:—

- 1.—Kick off fairly and don't encroach. It is unsportsmanlike.
- 2.—When in an off-side position, "clear out of the way."
- 3.—Notice how the net is closing in on foul play. A free kick from one of your fouls may lose you a goal. The man who tries to stop an opponent at any cost, risking the penalty kick as the lesser of two evils, will gain nothing, as a referee may now ignore the penalty kick and let the play go on. So the player now faces two risks instead of one, and his foul stands a better chance than before of meeting with its merited punishment.

It is also worth noting that when a breach of law by the defending side occurs, when a penalty kick is being taken and a goal is scored, the

referee may ignore the infringement and let the goal stand.

It will probably be a relief to the Rugby players to know that there is no alteration in the rules this year but it may be as well to point out that the old rule referring to "foot up" still calls for a free kick. It reads:—"Being in a scrummage, lifts a foot from the ground before the ball has been put into such scrummage."

OLD HEATHEN.

THE LATE MRS. E. R. FULKERSON.

At her home No. 6 Higashiyama, Nagasaki, at 8 o'clock on Friday morning, October 23, surrounded by her family and members of her Mission, Mrs. Kate Josephine Fulkerson quietly and peacefully passed away. Although in poor health during the past few months, the final serious development of her illness was very sudden and the news of her death will come as a shock to her many friends in Japan and in America. She leaves a husband and three sons in Japan, and a son and a mother and many other relatives in America, to mourn, with the deep sympathy of their friends, their great loss. The bareness of the cables news to the home people in America reveals the inevitable hardness of all exiled life in far away lands.

Mrs. Fulkerson was thirty-six years of age and came to Japan, the first time, in 1887, with her husband. For two years they resided in Aoyama, Tokyo, where Mr. Fulkerson was stationed in the school work of the Methodist Episcopal Mission. Then they were transferred to Nagasaki where, for the last fourteen years, Mr. Fulkerson has been connected with the Chinzei Seminary, of which school he is now principal. During these sixteen years Mr. and Mrs. Fulkerson have made two furling trips to America. Through all his work in this country and in America Mrs. Fulkerson has been a constant help and inspiration to her husband. She has been a devoted mother to her four sons, having supplied unto them together with the home care the additional advantages they would otherwise have lost in a foreign country. Her home has been a centre of Christian grace and hospitality. Her hospitality has been abundant not only to friends but to unfortunate strangers alike. Her husband's position as U.S. Vice-Consul for two years made wider social demands upon her which were always met with the same grace and charm. Her sympathetic heart made her a friend to the needy among both Japanese and foreigners in Nagasaki.

The funeral services began with prayer at the house at 2 o'clock on Saturday afternoon, Oct. 24, by the Rev. A. E. Rigby, of Chinzei Seminary. Then the body was borne to the large chapel of Kwassui Jo Gakko by the honorary pall-bearers, Mr. Walne of the Baptist Mission, Mr. Myers of the Dutch Reformed Mission, Mr. Nakayama, pastor of Kogimachi Methodist Church, Mr. Yoshigaki of Chinzei Seminary, and Mr. Martin and Mr. Berry of the Methodist Mission. There a large concourse of friends, Japanese and foreign, had gathered. The whole front of the chapel was filled with the beautiful floral tributes. The service for the Dead of the Methodist Episcopal Ritual was read by the Rev. H. B. Johnson and the Rev. J. C. Davison, of the Methodist Mission, and Mr. Nakamura, Mrs. Fulkerson's pastor, and Professor Sasamori of the Seminary. Beautiful songs were sung by the Kwassui Choir and a solo by Miss Mabel Davison. The ritual and songs were fittingly delivered partly in English and partly in Japanese. At the close of this service a long procession of the family and Mission and other friends was formed and solemnly conveyed the body to its resting place in the Methodist Mission plot in the foreign cemetery at Urakami. The coffin with cross and wreath of flowers on top was carried tenderly and faithfully the long distance by students of the Seminary. At the grave the committal service was read by the same Ministers. The grave was lined with evergreens and no open earth was visible in the plot. After the interment the grave was covered with evergreens and the whole plot literally covered with the wreaths and crosses of roses and chrysanthemums. In the

thirty years history of the South Japan Methodist Mission but one previous death has taken place on the field, and that of a little child from one of the Mission houses.

On Sunday morning a memorial service was held at the time of the regular Japanese preaching service conducted by the pastor. Memorial tributes were given by representatives from the Seminary students and from Mrs. Fulkerson's class of Japanese women and an address by Professor Sasamori.

On account of the shock of his wife's death, Dr. Fulkerson with his children will probably sail for America on the *China* leaving Nagasaki on Nov. 12. After providing for the welfare of the children he hopes to return to his work again. During his absence Mr. Johnson will be acting Principal of the Seminary, and Mr. Davison acting Treasurer of the Mission.—*Communicated.*

SOIRÉE MUSICALE ET DRAMATIQUE.

The soirée musical et dramatique given in the Public Hall on Thursday evening for the benefit of the Société Française de Secours was a huge success, financially as well as artistically. Indeed, a more delightful evening it would be difficult to imagine and the only regret we feel is that the charming and clever French ladies and gentlemen who took part in the various plays have not given us a taste of their delicate quality before and so have added the joys of a keener anticipation to the evening's delights. But now perhaps that they have taken the plunge and proved the high range of their achievements they will accede to the public demand and not let too long an interval supervene before they announce another entertainment along the same successful and wholly pleasing lines.

After an overture by the band of the *Montcalm*, Madame André sang very charmingly Bemberg's "Chant Hindou," and followed it with Danza's "Si tu m'aimais." Then the curtain went up for the first of the plays, a comedy in one act, entitled "Mon Noyé." It was most spiritedly acted by Mme. Carrillon, Comte M. de Perigny and M. Jamin. The lady's part of course was slight, but she played very artistically and received her reward in loud applause. As the would-be suicide, M. Jamin caused roars of laughter by the clever way in which he turned the tables on his benefactor (the Comte M. de Perigny), finally causing him to imagine that the mere act of saving the youngster's life rendered the saviour under life-long obligations to the saved. The part of *Dasseau* was in equally clever hands and so, as the comedy sparkles with wit, few of the points in the paradox were lost on a highly appreciative house.

"Bonne Recompense" was a comedy in a different vein, being surcharged with sentiment from beginning to end. Mme. Barmont, a new comer to Yokohama, made a very beautiful and charming *Mlle de Barsac* and played up most winningly to the capital *Robert de Normont* of the Comte de Perigny. Mme. Barmont is to be highly complimented on her *début*. The next item was a recitation by Mr. G. G. Brady, "La Nourrice Seche," which, as the programme explained, was an "effroyable catastrophe racontée par un Irlandais avec l'accent de son pays." Needless to say this number brought down the house, Mr. Brady covering himself with glory. The last play was a farce pure and simple. It was entitled "L'Anglais tel qu'on le parle" (English as it is spoken). A French gentleman (*Julien Cicander*), elopes with a young English lady (*Miss Betty*). They arrive at a Paris hotel where the father (*Hogson*) follows in hot pursuit. Not knowing a word of French he meets an interpreter for the occasion (*Eugene*), who is equally ignorant of the English language. The situations grow absurd and complicated to the mystification of the *Inspector of Police*, the *Clerk* and *Porter* of the hotel, who cannot understand a word that *Hogson* says. Finally matters are straightened out and *Hogson* consents to the marriage of his daughter, and, as the French *analyse des pièces* puts it: "Tout est bien qui finit bien! We have

seldom seen a play that went with a merrier swing than this and the ease with which the various situations were developed speaks volumes for the care and time spent on the rehearsals. Mr. Brady as a Briton who exercises to the full his right to speak nothing but his own language in a foreign land was delightful, and he was capably supported by the Comte M. de Perigny, M. Jamin and the ladies.

Throughout the evening the excellent band of the French flagship *Montcalm* filled the intervals with some delightful music, as the programme appended will show. A word of praise should be accorded Mons. A. Fortoul, the designer of the pretty sketch which adorned the front page of the programme, and to the ladies and gentlemen who devised the pretty scheme of decorations on the stage and in the hall, which added so much to the satisfaction of the evening.

LITERARY GOSSIP.

Messrs. Macmillan's autumn list will include a new work by Mr. W. W. Skeat, entitled "Wild Tribes of the Malay Peninsula."

There is grave anxiety among her wide circle of friends over the serious illness that has befallen Mrs. Bishop, better known long ago in the literary and travelled world as Miss Isabella Bird.

Sir Theodore Martin, who attained his 87th year on Sept. 16th, has had a career of remarkable energy. There are few litterateurs whose work, ranging over such a wide field and embracing so many difficult subjects, has been so consistently good; and it is sometimes forgotten that before he became famous in the world of letters, he practised as a solicitor in Edinburgh for several years, and on coming up to London in 1845, became a most successful Parliamentary agent.

The latest news concerning Ibsen's health is grave. A Vienna doctor who recently visited him in Christiania reports that he has practically lost the power of speech; he stammers so that only his nurse can understand him. The doctor said further: "Also his faculties are impaired. His loss of memory is particularly noticeable. In consequence of these defects he cannot work. Ibsen is, in fact, completely broken up. He presents the picture of a helpless old man." Ibsen is now seventy-five, so that recovery seems hardly possible. It is simply a case of waiting for the end, remarks the *Academy*.

Two new books on Chinese subjects are announced as nearly ready. Mrs. Archibald Little's

biography of Li Hung-chang is now completed, and Messrs. Cassell promise it for publication this autumn. Then Mr. E. H. Parker, formerly British Consul at Kiungchow, and now Professor of Chinese at Owen's College, Manchester, for some years has been writing a book on all that should interest us in China. Not only so, but he deals with the whole history of that nation from the earliest times to the present day. It is announced by Messrs. Chapman under the title *China, Past and Present*.

How many people, asks "V.C." have owed their lives to a cigar? M. Guizot, the great French historian, for instance, owed his life to one. Followed about one day by an ill-looking individual, M. Guizot finally sat down on a bench and his unwelcome follower seated himself there also, all the time watching him with a threatening air. The historian was not troubled. He pulled a cigar out of his pocket and lighted it. At that action the strange man arose and muttered that he had been mistaken, as the scoundrel he meant to kill did not smoke. The historian was considerably puzzled by this occurrence until he learned several days afterward that a man answering the description of the fellow who had followed him had been arrested for a murderous assault on a public official, against whom he had a grudge.

Correspondence in the *Spectator* has established the fact that the father of Robert Burns signed his name Burness. Mr. Jerram, writing from Oxford says, regarding this point:—When a certain Walter Campbell moved from Argyllshire to Glenbervie in the Mearns (Kincardineshire) early in the seventeenth century, he assumed the name of Burnhouse or *Burness*. From him the fourth in descent was William Burness, the father of the poet. The family Bible records the marriage of "William Burness and Agnes Brown" in 1757, and I myself copied the name of "William Burness" from the old gravestone in Alloway kirkyard more than forty years ago, which has since been replaced by a new one. The poet always signed himself "Robert Burness" in his letters for about two years after his father's death in 1784, the last extant letter with that signature being one addressed to Mr. Aiken, April 3rd, 1786. After this date he appears to have adopted the spelling with which we are all familiar,—"Robert Burns."

Writers with an itch for political satire are having a happy time of it in England just now, and squibs, cartoons and skits are filling the bookstalls. The question presented to the nation by Mr. Chamberlain naturally forms the *raison d'être* of them all. One booklet recently brought to our notice is called *The Great Inquiry*, and a few extracts from its pages should prove amusing. For instance, Mr. Baines, of Middlesboro, deposes:—"The country is on the verge of ruin. In the iron-trade competition with America, and latterly with Belgium and Germany, had been felt very severely. Mrs. Baines and self had passed through many anxious moments since 1892. For the last eight years he had found it impossible to spend more than one month, or at most six weeks, in London during the season, and that in a hired house. *It was only by an unostentatious and harassing attention to detail that the business had been kept going.*" The remedy proposed by Mr. Baines, that the Government should pay him 25s. a ton for all the pig-iron he produces, or tax all other iron till it brings his up to what he holds a fair price, in return for which he will pay away 5s. a ton in wages, is a humorous exaggeration in amount, though not in principle, of the actual demands of some Protectionist manufacturers. "Mr. Thomas Hepton, draper, swore that he sold in the past year some 50,000 or 60,000 cases of foreign woven stuffs, every one of which had to be paid for. *The profit only remained in England.*" Cross-examined: "He did not himself pay for the goods in gold, but he gave a cheque upon his bankers, who doubtless sent the money abroad in packing-cases, and all that went to the—foreigner. Lord Lansdowne: 'Moderate your language.' Mr. Hepton: 'I am sorry, My Lord, but if you had sent case after case of solid gold away to France week after week for ten years you would feel as I do.'"

Mr. Justice Darling, who lately published a volume of verse and essays called "Seria Ludo," has now found time to prepare a new edition of "Scintille Juris," to which he has added a drawing by the late Sir Frank Lockwood. Mr. Justice Darling in addition to putting his name on the titlepage, has inserted the names of the judges whose decisions are travestied in one of the most amusing chapters of his little book. They are Lord Coleridge, Lord Justice James, Lord Bramwell, Sir Fitzroy Kelly, and Lord Esher, all of whom, of course, have passed beyond the reach of parody. "It is expedient to understand the decided cases; but this cannot be done without examining closely the personal characteristics of those who decide them." His experience of the Bench has not induced Mr. Justice Darling to omit this saying, nor does it appear to have changed his opinion that "anyone who will may satisfy himself, by taking down a volume of reports, old or new, that any given judge will run in a particular direction if he fairly can." Some of the witty sayings in "Scintille Juris" have, perhaps, an added meaning for the Bar now that Mr. Justice Darling has put his name to the book. "Counsel should, in all courts, use more of deference in proportion as the Bench have less of learning." "The chief difficulty in arguing with most men, and, therefore, with a jury, is not to convince them, but to prevent them from too rapidly forming an opinion." "To the Quarter Sessions the barrister of one term's standing goes to make himself acquainted with the law of the land by giving lessons in it to those who administer the one by virtue of possessing the other." "I could wish that the opening of a case were not quite so like the reading of old almanacs, supplemented by an aggregation of comment which has for the most part got stale by the time it is presented." "As a rule, never allow a witness to state what he is most anxious to mention—for it will surely be either slanderous or irrelevant." There are several judges on the English Bench who have enriched the field of legal literature, but only three, including Mr. Justice Darling, wandered in the more pleasant paths of authorship. Mr. Justice Wills is the author of "Wanderings in the High Alps" and "The Eagle's Nest," and Mr. Justice Ridley is responsible for a translation of Lucan's "Pharsalia." No barrister has ever been ingenious enough to find an opportunity for quoting any of these works in the courts.

THE LAW COURTS.

CLAIM ON SHIPPING DAMAGE.

In the Yokohama District Court, before Judge Kano, judgement was given, on Oct. 30th, in the case instituted by the American Trading Company against Messrs. Robert M. Sloman and Co., Hamburg (whose Yokohama agents are Messrs. C. Illies and Co.) claiming yen 485.36 as damage caused to goods brought by the steamer *Verona* from New York and consigned to plaintiffs, dismissing the claim of plaintiffs and ordering them to bear the costs.

LEI CHIEN HSIANG v. J. C. HARTLAND.

This case, in which the plaintiff petitions for the cancellation of the registration of immovable property came up again in the Yokohama District Court before Judge Kano on Oct. 30th when judgement was delivered dismissing the claim of plaintiff and ordering him to pay the costs.

A CLAIM ON THE NIPPON YUSEN KAISHA.

The hearing of a case instituted by Messrs. Callander and Co. of Norway, against the Nippon Yusen Kaisha, claiming yen 450,000 for certain damage, came up in the Tokyo District Court on Oct. 31st when counsel entered into a lengthy discussion. The Court then delivered judgment, dismissing the claim of plaintiffs.

RAZA v. SARDA.

The case brought by Mr. M. A. Raza against Mr. P. Sarda, claiming yen 51.54, came up again in the Yokohama Local Court on Oct. 31st when judgment was rendered in favour of plaintiff.

CLAIM ON A HORSE.

In the Yokohama District Court, the hearing of the case brought by Mr. G. Booth against Messrs. Durand, Cobb & Co. was resumed before Judge Kato on Oct. 31st.

The case was again adjourned till Nov. 6th on account of the non-appearance of the *belto*, T. Shiwozawa, who attended the horse when Mr. Booth purchased it from the stable keepers.

LIN PEH SONG v. NORWICH UNION FIRE INSURANCE CO.

In the Yokohama District Court on Nov. 4th, the hearing of this case was resumed before Judge Kato. Mr. C. Glahn was examined as a witness.

He stated that he had lived in Yokohama for about 26 years, his profession being that of surveyor to marine and fire insurance companies. At the request of the agent of the Norwich Union Fire Insurance Company, he examined the *débris* of the building, No. 134, Yokohama, which was burned down in October, 1899. His examination was carried out a few days after the accident. The *débris* comprised a printing plant and type, which were stored at a Chinese house next to the burnt premises. He found a printing machine and a quantity of type in good condition. Before the examination, the witness received from the Agent of the foreign insurance company a list in which were specified the articles insured by the company. With the list the witness compared the pieces of *débris*, but he did not count the quantity of type. The result of his examination was reported to Mr. J. H. Jewett, of Messrs. Bavier & Co., No. 209, who are agents of the Fire Insurance Company.

Cross-examined by defendant's Counsel, witness stated that Exhibit B-3 was a report given by him to the agents after the examination with regard to the accident and the *débris*. Mr. Crane, engineer of the steamer *Kobe Maru*, or *Yamaguchi Maru*, counter-signed the report. As to the figures described in the specification, he could not give a perfect answer now as so many years had passed and he consequently had forgotten the details. He remembered that the valuation of the *débris* which was stacked in the street was made up under the advice of a Chinaman.

The case was adjourned till Nov. 11th at 1 p.m.

LIBEL CASE.

The case brought by Mr. Osada against Mr. Gonto, proprietor of the Teikoku Dempo News Agency, was resumed in the Tokyo Local Court on Nov. 22nd. The Public Procurator and Counsel for the accused entered into a lengthy discussion after which the case was adjourned till Nov. 4th, when sentence was to be delivered.

RUSSO-CHINESE BANK v. YUEN SIH SONG.

This case came up again on Nov. 5th in the Tokyo District Court. It is instituted by the Russo-Chinese Bank against Yuen Sih Song, former compradore of the bank, and the claim is for yen 170,000. There is a counter-claim of yen 530,000 brought by the Chinaman against the Bank on the ground that the latter had unlawfully sold land in Shanghai which belonged to the compradore. Counsel entered into a lengthy discussion, after which the case was adjourned.

P. SARDA v. GRAND HOTEL.

The hearing of this case, in which plaintiff claims yen 3,407.16 as compensation for the supervision of work, and the Hotel counter-claims for yen 37,267.01 for damage caused by the imperfect work passed by the architect, was resumed in the Yokohama District Court before Judge Kano on Nov. 5th.

Plaintiff's counsel refused to recognize as evidence, Exhibit B. 1-21 brought in by defendant's counsel, and gave a lengthy explanation to the effect that these letters had no connection with the present case.

Plaintiff's Counsel asked the Court for leave to examine Mr. J. Conder as an expert, and two Japanese named Y. Isono and S. Meguro as witnesses. Defendant's counsel also asked that Mr. W. K. Tresize, manager of the Engine and Iron

Works, be examined as a witness, and further that the Court appoint a competent architect to make an inspection of the parts of the building which defendants insisted were imperfect.

The Court agreed to examine the witnesses, except Mr. J. Conder, and ordered the parties to delegate an architect to examine the building. The Court then rose.

GIELEN v. JEWETT.

This case, in which plaintiff presents an objection to the temporary seizure of the business books of Messrs. Bavier and Co., was resumed in the Yokohama District Court before Judge Kano on November 5th.

Defendant's Counsel gave an explanation of his evidence regarding Exhibits B. 11-24, the remainder B. 1-10 having been gone into at the previous hearing, which took place on Sept. 23rd.

Plaintiff's Counsel gave an explanation of his evidence, Exhibits A. 6-19, after which defendant's counsel asked the Court to examine Mr. H. Mita, a bailiff who attended to seize the property. To this the Court consented, and the case was again adjourned.

SENTENCE ON A TEN SEN THIEF.

A man, S. Ito (44) by name, who stole yen 10 on the night of Aug. 25th from the dwelling of a merchant named Ichihara, living at Nakano-go, Honji, Tokyo, was sentenced in the Tokyo District Court on Nov. 4th to 3 years' imprisonment with hard labour and 1 year's police surveillance.

LADY MINTO.

Lady Minto and her daughters, the Ladies Eileen and Ruby Elliott, brought their enjoyable visit to Japan to an end on Friday, when they took ship by the *Empress of China* for Vancouver. Despite the rain, they were accompanied on board by a considerable crowd of friends, among them being Sir Claude MacDonald, who bade them a hearty farewell.

Mr. K. Otani entertained the Countess of Minto and her party at his house in Isecho, Yokohama, on Oct. 28th at 6.30 p.m., the British Minister and Lady MacDonald, Mr. and Mrs. W. T. Payne, the Governor of Kanagawa and Mrs. Sufu, the Mayor and several other gentlemen being present. The following day, the Countess entertained Mr. and Mrs. Otani at the Oriental Palace Hotel.

NOVEMBER MONEY MARKET.

On the authority of the Bank of Japan, Tokyo papers publish a table showing the amount of money that should be circulated during November:

	TO BE PAID-IN.	Yen.
Land tax, 2nd payment.....	5,841,083	
Hokkaido land tax, 2nd payment	11,618	
Business tax, latter half-year.....	3,302,002	
Soy tax, 2nd payment	1,102,522	
Osaka-Kobe Electric Railway Co. shares, 3rd payment	225,000	
Tokyo Street Electric Railway Co. shares, 4th payment	750,000	
Yokohama Electric Railway Co. shares, 2nd payment	250,000	
Hokkaido Colliery and Railway Co., debentures, 4th payment	300,000	
Osaka Shosen Kaisha, debentures,	1,200,000	
Hokkaido Railway Co., debentures.....	1,250,000	
	TO BE PAID-OUT.	
Interest on 5 per cent Pension Bonds	4,076	
Interest on Naval Loan Bonds	207,433	
Dividend of Nippon Yusen Kaisha	1,300,000	
Interest on debentures of Nippon Industry Encouragement Bank.....	44,719	
Refund of debentures of Nippon Industry Encouragement Bank.....	52,000	

NEWS OF THE WEEK.

Eleven cases of cholera were reported on Nov. 2nd at Nagasaki.

I. Obashi, publisher of the periodical *Eimi Club* (Sanitary Club), and one other were arrested on Oct. 31st on a charge of having forged Russian notes.

Baron Komura paid a visit to Marquis Ito on Nov. 1st. The former left after tiffin, and the latter proceeded to his villa at Oiso, on the evening of the same day.

According to the *Asahi*, the Hoden Kerosine Oil Company, Niigata prefecture, held a general meeting on Oct. 26th, when a proposal to pay an interim dividend at the rate of 20 per cent. was passed.

A man named K. Okada (28) living at Ginza, Tokyo, murdered a woman at the Kaisei-ro in Shinagawa, on Oct. 29th, with a sword. He then committed suicide by cutting himself in the throat. The case is not known.

An official telegram states that seven cases of cholera appeared at Nagasaki on Oct. 30th. Another telegram from Fukuoka reports that the sanitary authorities commenced on Oct. 31st to carry out measures to disinfect passengers coming by train and ship from Nagasaki.

The Hongkong Amateur Dramatic Club will present "Lord and Lady Algy" about the middle of November, and the piece is now in active rehearsal. The cast involves 19 characters and among the players we notice an old Yokohama friend, Surgeon Norris, R.N., who takes the part of *Brabazon Tuluway*.

Yamauchi Umekichi, manager of the coal and ice store, Sayama & Co., at the foot of Jizō-zaka, has been found guilty of assaulting Mr. J. B. Gibbs on Oct. 7th and sentenced to ten days' detention. It will be remembered that the assault arose in connexion with a sign-board which the shop-people had refused to remove from Mr. Gibbs' property after being requested to do so. While engaged in removing it himself Mr. Gibbs was assaulted.

The Yokohama Modern School may be congratulated on its magazine, "The Modernian," the first number of which is to hand. Quite neatly got up in a taking cover, it contains a couple of school photographs and a capital view of Fuji's crater, and a variety of contributions from pupils. These include creditably written articles such as "The Cruise of the Mary," "Karuizawa," "The Lava Beds of Asama," etc. The notes on scholastic and other affairs are interesting.

The sale of the property of Messrs. Mourilyan, Heimann & Co., which had been advertised for Wednesday, did not take place. Some question appears to have arisen as to the limits of the various lots as advertised, and eventually it was decided by the Bailiff, Mr. Itaro Kusakabe, and the Auctioneers, Messrs. Eyton & Pratt, to expose the property at the total of the lowest upset prices—yen 174,350. At this there was no bidding and the sale was then adjourned in order that the authorities should re-survey the whole property.

A remarkable operation has just been completed in the Haute Savoie. Eleven years ago a "water-pocket" in the glaciers of "Tête-Rousse," which is a spur of Mont Blanc, burst, devastating several miles of country in the district of St. Gervais-les-Bains, and causing the death of about 100 persons. As the water was known to be gathering again to a dangerous extent, a tunnel was excavated to permit the escape of the water as it gathered. This was finished last year, but was found to have been so badly planned as to miss the desired point, and another gallery of 40 yards had to be begun. This has just been completed, and great blasting operations have set the waters for ever free from danger to the country.

The latest official report on the condition of Finland states that, owing to bad times and failure of crops, emigration, mostly to the United States, has been greater than ever before; but it is pointed out that for the Grand Duchy this is not an unmixed evil, as at least 20 per cent. return to Finland, and the majority of these have already saved up money enough on which to retire. Those who do not, nevertheless annually send to their less fortunate relations at home some millions

of Finnish marks, or francs. No fewer than 25,000 persons emigrated in 1902, which was a very large increase on the preceding year, when 12,881 sought their fortunes in the New World, and, as the increase of population for the whole country is about 35,000, this leaves only some 10,000 as actual addition.

Colonel Villiers Hatton succeeds Major-General Sir William Gascoigne in the Hongkong Command. The *Hongkong Daily Press* says that Colonel Villiers Hatton was born just over 51 years ago in London, his father being Lieut.-Colonel Villiers Hatton. He was sent to Eton for his education and in 1870 joined the Grenadier Guards. Two years later he attained the rank of Captain; in 1882 he became Lieutenant-Colonel, and in 1900 Colonel. In 1898 he served in the Sudan campaign under Lord (then Sir Herbert) Kitchener, being present at the battle of Khartoum, being mentioned in despatches, and receiving the British Medal and the Khedive's Medal with clasp. On the 1st November, 1900, he was placed on half-pay, having commanded the 1st Battalion Grenadier Guards up to then.

OPENING OF TENDERS.

Tenders for 21 miles of rails with fastenings, for the Tokyo-Yokohama Electric Railway, which were received on Oct. 21st, have been opened, according to the *Fiji*, with the following results:—

Mitsui Bussan Kaisha	129,780.00
Okura Gumi	133,129.50
China and Japan Trading Co.	135,050.00

Besides the above tenders, Messrs. Frazer and Co. also lodged a tender, but it was not considered as the material differed from that described in the specifications.

Tenders were opened on Oct. 28th for supplying 6,107 tons of rails for the Seoul-Fusan Railway. The results are:—

Mitsui Bussan Kaisha	377,011.25
Okura Gumi	398,614.03
Jardine Matheson and Co.	442,864.00

In both the foregoing cases, the Mitsui Bussan Kaisha being the lowest bidders the tenders were awarded to them. Their material is reported to be that of the Carnegie mills.

It is stated that the Sanyo Railway Company and the Nippon Railway Company will invite tenders for rails—5,000 tons and 1,500 tons respectively—in the beginning of November.

AN HEROIC ACT IN HONGKONG.

The *Hongkong Daily Press* records an heroic rescue which was recently effected in Hongkong harbour. It appears that Mrs. Dawson, wife of Captain Dawson, of the China Navigation Co.'s steamship *Taiyuan*, was out sailing in a yacht with her son of 17 years of age and her little boy (5) and girl (2) when the boat heeled over and capsized near Jardine's godowns at East Point, about 80 yards from the shore. They were all thrown into the water and were in imminent danger of being drowned when Mr. J. A. Lyons, senior sanitary inspector, came to the rescue. He was passing along the Praya when he saw the accident happen, and as the Chinese boat-people made no attempt to go to the assistance of the yacht he at once ran down to the end of the wharf opposite Observation Place, and throwing off his tunic, jumped off the pier and swam out to the relief of the party in distress. Mr. Lyons is a very fine swimmer, one of the best in Scotland, and it was a very fortunate circumstance that he was at hand to lend assistance. With the aid of a sampan-skiff that came up at his call, Mr. Lyons managed to get the lady and her children into safety, but had to swim to the shore himself. Our contemporary says that the brave action of Mr. Lyons calls for the highest commendation, and trusts it will receive due recognition from the authorities. In jumping from the wharf, the gallant rescuer injured himself, and was further hampered by his trousers and boots. The risk attending the rescue was accentuated by the sails and rigging in which Mrs. Dawson and her

family were entangled, besides the choppy sea and strong current. The lady knew enough about swimming to keep herself afloat; her eldest son also swims a little. The rescued party were further taken care of by Mr. Lyons and his wife at 17, Morrison Hill Road, where restoratives were administered and dry clothing found, with the happiest results. Mrs. Dawson lost a diamond ring and some other jewelry, but otherwise is none the worse for the immersion.

CORRESPONDENCE.

THE YOKOHAMA PEST HOLE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The Authorities do not appear to have profited by my recent letter to your journal regarding the Pest Hole near the Kame-no-hash, where cases of plague are of daily occurrence.

The place is as filthy as ever and while the officials are busy enclosing the infected houses, they appear to be quite indifferent to the disgusting state of the creek at this place.

It is disgraceful that all the dirt and filth of a city should be left in places like these to breed rats and spread disease. Surely some other method could be found of disposing of sewage than dumping it down in the middle of a thickly populated district.

The Japanese have had the credit of taking energetic measures to stamp out the plague. Let some of the responsible officials take a glance at the vicinity of Kame-no-hash, any morning of the week, and they will possibly come to the conclusion that other steps than enclosing houses are necessary.

As a matter of fact nothing like the former energy is now being displayed over the matter of the plague. When the disease first broke out in Kaigan-dori the whole infected area was destroyed by fire, but in the case of Yoshihama-cho, where cases are of daily occurrence, the houses are enclosed for a few days, until another case occurs, when the fencing is taken down and put around the latest infected batch of houses.

It is an extraordinary instance of the callousness or indifference of the Japanese to the danger of infection, that the people living in the vicinity pursue their avocations with apparent unconcern, whilst thousands of people continue to pass through this infected quarter daily, whereas in the ordinary European or America city, the place would be immediately deserted, should this terrible disease appear with anything like the violence it has attacked this quarter of Yokohama.

I am Sir, yours, &c.,

Yokohama, Oct. 30, 1903.

B.

WHY NOT EXPRESS GRATITUDE?

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Prior to the last two meetings of the Nippon Race Club, many and loud were the complaints regarding the parading of race-horses along the Bluff road, and with good reason, for the safety of ladies and children was seriously imperilled thereby. I verbally protested against the practice, and intended availing myself of the courtesy of the press to emphasize the point more strongly, but a more able pen than mine came to the rescue, and with such good effect that the cause of complaint has been entirely removed. Here we are, within a week of the "race days," and yet it is almost a rare sight to see a single race-horse being led along the Bluff, while there is never a sign of the processions of animals which used to alarm pedestrians, and drive ladies and children in-doors. Whether the courtesy of the owners, or the new Police regulation has been the cause, is not quite apparent or material, but the result has been decidedly gratifying, and I for one am ready to acknowledge my gratitude, both to him who penned the anonymous but effective appeal, and to those who were influenced thereby.

As a Briton I claim my right to grumble, and I exercise my privilege right royally, but I hope I also have a streak of the Englishman's love of justice, and therefore I should like to hear a word or two of appreciation of the Yokohama Water-works. How much abuse was heaped upon the heads of the officials last year because they failed to obtain an adequate supply, and were compelled to cut the water off for 18 of the 24 hours. This year we have had an exceptionally long and hot summer, but the much maligned Water-works have maintained a regular and efficient supply. Won't some of those grumblers come forward and own up that things are not as bad as they might be,—or even were? I do not suggest that a deputation of grateful Yokohama citizens should wait upon the Water-works officials, and offer testimonials of their appreciation, or anything equally nonsensical, but I most certainly think that some people who are most ready

to grumble, are the slowest to acknowledge any improvement, and therefore I take this liberty of jogging their memories, and beg to subscribe myself,

Yours thankfully,

GRATITUDE.

THE OUTLOOK IN CHINA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The enclosed is part of a letter written by one of the best known foreigners in China, a missionary who has spent over fifty years in the Empire, and who has always been optimistic about China and the Chinese. This letter shows that he is rather pessimistic now.

AMERICAN.

October 27, 1903.

"You will note in the papers the aspect of the situation in China. Politically, it is gloomy enough, and though China continues to hold together, yet in fact its fate would seem to be fixed. Ichabod is written over all her gates, and sentence has been denounced against her in terms of the terrible prophet, Mene, Mene, Tekel Upharsin. The words are almost audible, and the consternation among her people—the discerning ones—is well nigh as great as at the feast where the handwriting on the wall proclaimed the destruction of a similar empire.

"The attitude of the Manchus toward the Russians on the one hand, and toward the Chinese on the other makes the situation what it is—altogether desperate—and fully described only in terms of that familiar solecism in grammar: 'I will be drowned, nobody shall help me.' It is almost a case of national *felo de se*. For while the great commercial nations of the West and Japan shudder at the thought of the Chinese Empire falling to pieces, and would gladly avert such a world-calamity, China herself, as represented by the Manchus, her present rulers, seems determined on a course of self-destruction; for should she yield to Russia in the matter of Manchuria, disintegration inevitable and fatal, would immediately set in, and the ultimate end of it all would not stop short of the destruction, sooner or later, of the Tartar (Manchu) dynasty, and the dismemberment of China proper. There was never a fate so stupendous and pitiful as that impending over China. And to make it all the more pitiful, she is perfectly helpless to avert it. Only a revolution aided by foreign powers could save the country—by overthrowing the Tartars, and setting up a purely Chinese dynasty. And why should such a thing be thought incredible? Just think of four hundred millions of Chinese dominated by a handful of Manchus, at most not exceeding twelve millions! Revolution or partition is inevitable, and the latter may commend itself to the foreign powers who have already committed themselves to 'spheres of influence,' and thus outlined their claims in advance of a general break-up of the country. Personally I should prefer to see the Empire maintained intact, but failing that, then revolution and restoration of China Proper (the home of millions of Chinese) to the Chinese themselves, rather than dismemberment and partition among the respective European governments. A Chinese gentleman and scholar said to me yesterday, referring to this subject, that should dismemberment come, he would welcome the United States, were it possible, because her rule would hold forth the hope of ultimate independence and self-government on the part of the Chinese. But the feeling is anything to relieve the country from its present distresses."

A PORT ARTHUR WAR SCARE.

(FROM OUR CORRESPONDENT.)

Port Arthur, October 12.

On the 25th inst. O. S. (8th October) Port Arthur was much excited by the receipt of information from a telegraphic agency in St. Petersburg to the effect that Japanese troops had been landed in Korea. The Russians all seemed to regard such a step as equivalent to a declaration of war and at 2 p.m. on the same day the Fleet suddenly left the harbour for an unknown destination. Some of the vessels had been hurriedly painted black—black being the colour they will wear in war-time, and most complete preparations had been made in view of war. A fleet is always, I presume, supposed to be prepared for war but a hundred little things make its departure for combat different from its departure on any other occasion; and in the present instance all these hundred little things were there. Meanwhile the last touches had been put to the defences of the harbour and all the torpedo boats had taken up their places and changed their colour. I cannot say, however, that there was any very noticeable change in the demeanour of the soldiery or of the public. The latter strolled about laughing, sometimes hand-in-hand like the Japanese soldiers, and the former seemed to attend to their business as usual. I suppose these scares are ordinary occurrences in this fortress town

and that they will not cause any real excitement till the guns of a hostile fleet are heard.

Taking of guns, we have heard enough of them for the last two days, for the manoeuvres, which had been interrupted owing to bad weather, were recommenced and brought to a conclusion on Saturday amid a good deal of noise from musketry firing and the roar of cannon.

The report of the Japanese landing was soon contradicted, the higher authorities here having ascertained that no Japanese had landed in Korea and that the report had probably arisen in consequence of the movements of the Japanese fleet at Masampo. Nevertheless a good deal of uneasiness prevailed for it was admitted that Japan was preparing to do something. The following is a translation of an article that appeared on this subject on the 26th September, O. S. in the local newspaper:—

"Although it has penetrated in all directions among the public and has even found its way into the telegrams of the Russian Telegraphic Agency, the information concerning the movements of the Japanese troops in Korea must be placed in the category of rumours, whose origin is unknown. On account of the wide circulation it received, this rumour undoubtedly attained its object, if that object was to produce alarm in the public mind; but we must distinctly state that a rumour it was and nothing else. While on this subject we might first of all direct attention to the fact that these sensational telegrams did not emanate from Russian sources. One of them came from London, which it had reached from Kobe, and the other came from Paris. The first came in all probability from Japanese sources. In No. 109 of our journal we inserted a telegram dated Tokyo, 18 Sept., and probably emanating from a Russian source, in which the 'extensive' warlike preparations of the Japanese are denied. For our own part we must say that, informed on the best authority as to the true state of things in Korea, we do not deny the fact that some warlike preparations are at present going on in Japan and that the Fleet is engaged in manoeuvres. We deny, however, that Korea is the object of these preparations. As to the future events that may occur in the Far East, we shall put our readers in possession of information about them as soon as such information reaches us. But we do not think that anyone can foretell what is going to happen."

On Saturday, as I have already remarked, the manoeuvres of the soldiers belonging to the Port Arthur garrison were brought to a close and the occasion was marked by the sound of cannon and of musketry fire, heard at frequent intervals throughout the morning. The musketry fire was so close to the town that I fancied that an assault was made by the "invaders" on some of the principal defences near the town, perhaps on Gold Hill itself. This hill was, it will be remembered, taken very easily by the Japanese during the China war, but it could not be taken so easily now.

On Sunday there was a Grand Review in the course of which all the soldiers of the garrison, with the exception of the fortress artillery, passed before the Viceroy. I am told by a Russian Colonel that 40,000 men were present on the occasion. They all looked clean and smart-looking, presenting a great contrast to their usual appearance. It was a pleasure to look at the horses and see how the men rode them. The horses of the Cossacks were of the small Kuantung breed, but might perhaps on that account make a better show in a campaign than the heavy horses from Tomsk. Perhaps, they were not suitable, however, for the *djigolka* or peculiar performance of the Cossacks in which, rushing around at full speed, they stand upright on the saddle and go through a number of other extraordinary exercises. At all events that exhibition was not given on the present occasion. The number of spectators was very large and one could not help feeling, as they undoubtedly felt—some of them expressed to me their feelings on the occasion,—that such a magnificent body of men would give a good account of themselves in case of need.

The new hotel at present is neither attractive nor comfortable and to tourists the memory of the town must ever remain a horror on account of its absence of hotel accommodation. The new hotel—a municipal concern, for no one cared to take up such a comparatively unremunerative undertaking as hotel building while there was so much more profit to be made in other lines—the new hotel, I say, is nearing completion and will, when finished, be a fine building, accommodating several hundred guests. It is situated in New Town, a few feet above the level of the sea. Close by are the Public Gardens, not very remarkable gardens as yet, but pleasant to walk in and destined to improve.

In connexion with a proposal to construct a pier at Kaigandori, 6-chome, Yokohama, Governor Sufu requested Mayor Ichihara to give an opinion on the subject. The latter will reply on Nov. 16th after consulting the City Councillors.

THE ORIENTAL HOTEL, KOBE.

The following report of the Oriental Hotel, Ltd., Kobe, to be presented at the twelfth annual ordinary general meeting, to be held on the 5th November, has been issued.

The Directors now have the pleasure to lay before the shareholders a statement of the Company's accounts for the year ending 31st August, 1903.

The total net earnings in working account amount to yen 76,888.90, showing a gross profit of yen 44,413.15. After writing off yen 16,000 for depreciation, and deducting yen 3,725 interim dividend paid on 20th April, 1903, there remains for distribution a balance of yen 24,688.15, which it is proposed to apply as follows:

Final dividend; yen 3.50 on Ordinary Shares	Yen 5,215.00
Dividend 8 per cent. on Preference Shares	3,000.00
Dividend yen 37 each on 80 Founders' Shares	2,960.00
To Reserve account	13,513.15
	24,688.15

The Company's property has been maintained in an efficient manner, and has been increased by the purchase of Lot No. 79, Kio machi, adjoining the main building, and consisting of about 300 *tsubo* of land. The lot has been temporarily made into a garden for the use of visitors and is available for building.

In July the late Chairman of the Board of Directors Mr. T. W. Hellyer, retired from office, as he was about to visit Europe. Mr. A. H. Groom was elected his successor in the Chair, while the vacancy on the Board was filled by Mr. A. Wooley. In accordance with Article 90 of the Articles of Association, Messrs. A. H. Groom and Th. de Herijny retire from office and offer themselves for re-election.

In accordance with Article 129 of the Articles of Association, the present auditor, Mr. W. D. S. Edwards, now retires from office, but is eligible for re-election.

THE "BENJAMIN SEWALL."

Shanghai papers publish the statements made under oath before the acting U. S. Vice-Consul in Tamsui by Mr. H. J. Hollstad, master of the ill-fated *Benjamin Sewall*. He said:—That on 26th August, 1903, left Singapore in the ship *Benjamin Sewall*, whereof I was master, with a full cargo of hardwood, bound for Shanghai. Proceeded up the China Sea by the Palawan passage and along the west coast of Luzon. Experienced fine weather and frequent calms most of the way until the South Cape of Formosa was reached. On 1st October, doubled the cape with a fair west wind, and after doubling the cape set the course N.E. by North when at 4 p.m. on the same day it became calm with a heavy swell rising up from the northward and eastward. At 1 p.m. on the same day the wind came out fresh from E.N.E. and I put the ship on the starboard tack, heading N. by W. At 10 p.m. on the same date the ship close in shore on the coast of Formosa, put about and headed S.E., wind steadily increasing to a moderate gale; carried reefed topsails throughout the night, barometer keeping steady at 29.90. At daylight on the morning of the 2nd, I sighted the island of Botel Tobago, bearing N.N.E., 10 miles off; wore ship and put about heading N.W. by N.; wind kept increasing with occasional rain squalls, with a very bad beam sea, ship labouring very hard. At 8 p.m. the same date was close under the coast of Formosa, wore ship and headed E. by S., put the ship under storm canvas, blowing a very hard gale at the time, with a tremendous sea running. On the morning of the 3rd, sighted Botel Tobago, bearing south, six miles off. Put about heading N.W. Kept tacking ship until the 4th, with the barometer steady at 29.90. At noon on the 4th, wind commenced to blow with a typhoon force; took in everything and hove the ship to under bare poles. During the afternoon of the 4th, the sea was constantly breaking over the ship; barometer then commenced to fall gradually and at 8 p.m. stood at 29.10.

I then realised that the centre of the typhoon was advancing towards me and in order to try to escape the centre I decided to run, which I accordingly did, steering S.S.W. with the yards square, without any canvas, ship going twelve knots on the patent log. My position when commencing to run was 22.35 N. lat. 121.20 E. long, by dead reckoning. At 10 p.m. barometer was 28.90 and at 11 p.m. 28.80, at 12 midnight 28.65 when it reached its lowest level; then I detected a lull in the storm, and I saw a flash of lightning, and the wind sprang round from N.N.W. to S.W. without any other sign, and blew with the same fury. Then the three lower masts went over the side with everything attached and hung on to the ship's side with the wire rigging, thumping fearfully against the ship's side. During the morning on

the 5th, I thought I noticed the ship settling deep in the water and I asked the second officer to try to come along with myself to the pumps; got as far as the break of the house, but the seas washed us back repeatedly. All the seamen were huddled together around the chart house, the side of which was smashed in. We could do nothing until daylight came when we discovered that the main mast had torn a large hole in the main deck and the ship was filling fast from above. I got forward to the forehatch, opened it and looked down the hold and found the water standing up to the 'tween-decks. I immediately ordered all hands to get over the life-boats as I knew that it was only a matter of a few hours before the ship would go down. We succeeded in launching the boats and one, my own boat, was badly hurt, which caused it to leak badly. Got provisions, and I ordered the chief officer to fill the water breakers, which he did, but put all three casks in one boat, the second officer's, which was upset, but no lives lost as I picked the men out of the water. Owing to this accident we were left without water. It was then impossible to turn back and try to board the wreck on account of the sea. The weather gradually became fine and I sighted the top of a high mountain, bearing N. half E., about 40 miles distant. I ordered the mate to steer for the land, but not to leave me behind as he had a much faster boat than myself, and could use five men pulling, and I only two. In the mate's boat were the first mate, Joseph Morris, third mate, Thomas Pickle, with his wife, a Japanese woman, the Chinese carpenter, the Chinese cook, Henry Adams, an American negro, William Reinwald, Russian, Peter Johnson, a Chilian, Julian Salio, Philippino, and three Japanese able seamen. In my boat were myself, wife, and Miss Piper, Stenke, second mate, Chinese cabin boy, Japanese Steward, named S. Hanoy, three Japanese seamen and Bartholemew Pinas, Philipino, and Clovis Vignal, Mauritius negro, able seaman.

We kept the two boats close together until dark, when the wind had moderated considerably, and I thought it was then safe to set sail. Did so and took the mate's boat in tow until 3 o'clock on Tuesday morning, 6th October, when it dropped almost calm. Let go the mate's boat and told him to pull, but again warned him not to leave me as my boat was leaking badly, and I might need his assistance. He answered "All right," but pulled straight away from me immediately and I never saw him again. At daylight on Tuesday, I discovered that the high land which we saw was not the high land of Formosa, but the Island of Botel Tobago. The mate's boat was not in sight, and we waited for two hours to see if he would turn up, but there were no signs of him. I then shaped course for Formosa, position 35 to 40 miles due East of South Cape, and reached the cape safely on Thursday 8th October, landing at Garambi Light-house from whence I communicated with the Japanese authorities. In the afternoon of the 8th, steamer *Sama Maru* arrived and took us on board, hoisted our life boat on deck, and proceeded round the West coast to Takow, where received orders to proceed to the Island of Botel Tobago to search for the missing boat. On Friday, it blowing a hard gale from N.E. the *Sama Maru* put in under Garambi Light for shelter, and stayed until the following morning (Saturday). Then we again went out and arrived at Botel Tobago at 12 noon on Saturday 10th Oct. A search party went on shore and did not return before the following day (Sunday) at 4 p.m., bringing with them two of the missing boat's crew, *i.e.*, William Reinwald and Julian Salio.

The search party stated that when found the men were naked and were employed by the natives to carry wood, the sun blistering their bodies terribly. The remainder of the crew could not be found although the steamer went round to the other side of the Island and landed a large party including my own crew. Some of the clothing belonging to the men was found in a savage village and was identified by us. The steamer then went to the Pescadors and from there went to Kelung via the East coast where we arrived safe on October 16th, where we were taken in charge by the American Consul.

BRITISH POLITICS.

London, October 9.

The discussion over Chamberlain's proposals continues keen, but so far the Liberals have made no organized attempt at a counter demonstration. Mr. Asquith, the Liberal leader, spoke at Cinderford, an iron and coal centre in Gloucestershire, yesterday, and in the course of his speech contended that it was impossible to retaliate upon the protected countries without taxing food or raw material, and experience showed that retaliation did more harm to the retaliated. The adoption of Mr. Chamberlain's proposals would foment quarrels with the colonies. It was a calumny on the colonies to say that the unity of the empire was impossible without preferential tariffs.

Mr. James Bryce, M.P., speaking at Lancaster, expressed similar opinions, and characterized Mr. Chamberlain's statements as "grotesquely untrue and worthless."

Mr. Gerald Balfour, President of the Board of Trade, addressing a meeting at Leeds, reaffirmed that the Government was pledged not to give effect to the fiscal reform proposals until after an appeal to the country had been made, and he intimated the possibility that, after Mr. Chamberlain had concluded his mission, it might be found that the taxation of food was within the range of practical politics.

Sir Charles Tupper, the Canadian ex-Premier, presiding at a meeting in London, expressed his complete approval of Mr. Chamberlain's policy.

The newspapers are industriously collecting prominent colonial opinion on the fiscal question, which, so far, is not unduly enthusiastic, although largely favourable to Mr. Chamberlain's proposals.

Mr. Alfred Deakin, the Federal Premier of Australia, says that the proposals are so precise and practical that they require an equally precise reply. The Federal Government would announce its definite response in about three weeks' time as a basis for the coming Federal election campaign.

The Miners' Federation of Great Britain, at a meeting at Glasgow to-day, after a heated discussion, passed a resolution by eighty-nine to five, "that in regard to the views of the Premier and Mr. Chamberlain the Federation believes that the policy they foreshadow in regard to protection would ultimately lead to the ruin of this country, and hereby resolves to protest against any alteration of the free-trade policy which has existed for the past sixty years."

It was announced that the majority represented 347,000 miners.

Mr. Joseph Chamberlain is losing no opportunity of spreading his fiscal gospel. He started this morning on a day's visit to a friend in Fifeshire, Scotland, and was welcomed on his arrival at Cupar by a large crowd of people. The former Colonial Secretary made a short speech, which captured his hearers, remarking that no one had benefited more than himself in the past by the support of the working class, and he hoped to have the same confidence and support in his present undertaking. On the right solution of the great question he had raised, depended the continuance of the workingman's employment. Without official change, the worker would have to decide between accepting an insufficient wage and leaving the country. The sentiment of his fellow citizens in the colonies must also be considered. They were not free traders. Their martial assistance and moral support enabled Great Britain to hold up her head during the recent war, in spite of the criticisms of foreigners.

London, October 13.

Lord Rosebery spoke to-night at Sheffield, whither he went in order to definitely record his opposition to Chamberlain's fiscal policy. He was greeted with the utmost enthusiasm by an immense audience, which he held in rapt attention for an hour and a half.

Lord Rosebery delivered a characteristic speech of brilliant rhetorical denunciation of protection, interspersed with clever and caustic allusions to Chamberlain and the predicament in which he had placed the Government. The Earl said he doubted if there had ever been any fiscal inquiry. The Ministry had probably investigated not the nation's commerce, but the constituencies. He deprecated a policy of retaliation, which would land the empire in a contest with every nation in the civilized world. He held that free trade had not failed but had been a great success. The new policy, instead of solidifying, would tend to dislocate and probably dissolve the empire.

Lord Rosebery warned his hearers that they could not try a new policy and drop it if it failed. Protection once established, could not be uprooted, and would bring in its train trusts, monopolies and probably corruption. If the country wanted to better itself, he continued, let it cultivate a scientific spirit and better education, and above all keep the universe for a reservoir of food and raw material. He ridiculed the idea that the colonies would consent not to establish new industries for the benefit of the United Kingdom. A fair and practical imperial tariff could not be devised, and heaven protect them from the bad blood and jealousies that such an attempt would engender.

He was very doubtful about the proposition that a fiscal should precede a political union. In any event, what Chamberlain's friends ignored was that everything in the empire had been strong and successful because it was free and spontaneous. Lord Rosebery quoted Sir Wilfrid Laurier to the effect that, not restricted trade, but only the most absolute freedom, political and commercial, would succeed in building up the empire.

In conclusion, Lord Rosebery said that he could not forget the long agony through which the nation had passed from the protective system, which had brought it to the verge of famine and ruin into the better and freer conditions now prevailing. They

could not risk this splendid result on a hazard of the political die. They could not leave the brilliant known under any guidance or prophethood for the dark unknown.

A storm of cheers greeted the Earl's closing remarks.

Lord Rosebery made no attempt to refute Chamberlain's contentions by argument, statistics or a detailed examination of his proposals. He confined himself to generalizations. He evoked applause by describing Chamberlain as the real head of the present Government.

In reference to Balfour's attempts to gag Parliamentary discussion of the fiscal problems, he said: "You cannot prevent a storm by sitting on the barometer."

Lord Rosebery was loudly cheered when he declared that the prospect of worse relations with the United States, Germany, Russia and France was not alluring to him.

The Earl of Rosebery's strong free-trade speech is a great disappointment to the supporters of Chamberlain, who had apparently hoped, basing this hope on the ambiguous speech his lordship made at Burnley some time ago, that he might, be found on the side of the "fair" traders. This disappointment is increased by a hint given by Lord Rosebery in his speech that he is willing to actively lead or assist in the fight against protection, though this reference was exceedingly vague.

The Duke of Devonshire has also signified his intention to actively co-operate with the Unionist Free League. The campaign therefore promises to become increasingly energetic.

Mr. Asquith, the Liberal leader, whose recent speech Lord Rosebery advised should be published in pamphlet form as a "complete and crushing refutation of the new policy," speaking at Newport, Fifeshire, to-night, again attacked Chamberlain's proposals, which he declared would bring Great Britain into conflict with the world at large. The empire was, he said, only a constituent part of the great commonwealth of nations, and it was in the promotion of peaceful and friendly relations between the parts of that commonwealth that the best hopes for the world's future lay.

Lord Brassey, speaking at Rye in defence of the Chamberlain policy, said he had just returned from Canada and believed that only the adoption of a preferential tariff would save the empire from breakdown, because the influx of American settlers tended to the Americanization of the Northwest Territory and an American offer of reciprocity might eventually be accepted in which case a political union of the United States and Canada would be only a question of time. This danger would disappear if Chamberlain's scheme was adopted. Premier Ross of Ontario informed him that if Chamberlain's policy had been in force during the last twenty years the population of Canada to-day would have been 20,000,000 better.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

BRITISH MERCHANTS IN PARIS.

London, October 29.

A large party of commercial men from London have arrived in Paris as the guests of various commercial bodies. At a banquet held in the evening, the Premier and nearly all the Ministers were present. The event was made the occasion for a fresh and enthusiastic demonstration of the Anglo-French *rapprochement*. The speeches delivered during the evening were of the most cordial character.

MR. CHAMBERLAIN'S CAMPAIGN.

Later.

Mr. Chamberlain's fiscal campaign is producing a marked and widespread impression. COUNT LAMSDORFF IN PARIS.

London, October 31.

The view prevails in Paris that Count Lamsdorff's visit aims at reaffirming the dual alliance and at reassuring the French Government regarding the forthcoming meeting with the Kaiser, the importance of which the German and the Russian press has been magnifying. It is declared that there is no prospect of the renewal of the Dreikaiserbund.

The French papers state that Count Lamsdorff brought to Paris strong assurances of Russia's pacific policy in the Far East.

ITALIAN POLITICS.

Signor Giolitti, Minister of the Interior, has formed an Italian Cabinet.

THE YUNNAN RAILWAY.

London, November 1.

M. Delcassé, French Foreign Minister, has announced that the French Minister at Peking and a Chinese representative had signed an agreement for the construction of the Yunnan Railway.

TSAR CONGRATULATES FRANCE.

On Thursday Count Lamsdorff, Russian Foreign Minister, handed to President Loubet a letter from the Tsar congratulating France on recent happy events, instancing the Anglo-French Arbitration Treaty and the rapprochement with Italy, in which he saw fresh pledges of the maintenance of that general peace which was the object of the Franco-Russian Alliance.

VLADIVOSTOCK SEAT OF VICE-REGAL GOVERNMENT.

London, November 1.

Owing to the strategic importance of Vladivostock, Admiral Alexieff is transferring his seat of government thither from Port Arthur.

RAINS AND FLOODING IN ENGLAND.

London, November 2.

The rainfall in England continues without intermission. The Thames is rising steadily. There are serious floods, especially between Windsor and Oxford.

THE COMMERCIAL VISIT TO PARIS.

The British commercial visit to Paris was an undoubted success in cementing the friendliness of the two peoples.

FIRE AT THE VATICAN.

SIGNIFICANT ACTION OF THE POPE.

London, November 2.

Three rooms in the Vatican, situated above the celebrated library, were burned yesterday evening. The Pope, fearing that the Papal firemen were insufficient to quell the flames, ordered the Guard to call in the Italian firemen. The Under-Secretary of the Interior, the Prefect of Police, and the Mayor of Rome accompanied the firemen, and were invited to enter the Vatican and direct the operations. This is the first time since the fall of the temporal power that Italian functionaries have entered the Vatican in an official capacity.

EXTENDING THE PARCELS POST.

The British Embassy at Washington has negotiated a parcels-post treaty with the United States, whereby parcels may be sent by post between the States and Hongkong. It has also opened the question of penny postage between the United States and Hongkong.

THE BALKAN QUESTION.

London, November 3.

M. Tsokarf, the new Bulgarian Minister to London, in an interview with a representative of Reuter's Agency, declared that the situation in Macedonia was absolutely unimproved. Turkish atrocities are increasing, and war between Bulgaria and Turkey eventually was almost inevitable.

TROUBLE IN A GERMAN COLONY.

London, November 4.

The Bondelszants tribe in German South-West Africa are actively rebelling. It is reported that the German garrison at Warmbad has been annihilated.

ADEN HINTERLAND DISTURBED.

One officer and several of the Bombay Infantry have been wounded in a skirmish

in the Aden hinterland. Re-inforcements have been sent to the scene of the fighting.

TSAR AND KAISER.

London, November 3.

The Kaiser has arrived at Wiesbaden, where unprecedented police precautions were taken to secure the Tsar's safety.

THE UNITED STATES AND COLOMBIA.

President Roosevelt's marked displeasure at the continued tergiversation and hostility of Colombia relative to the Canal has ended in the withdrawal of Mr. Beaupré, American Minister at Bogota. Simultaneously telegrams from Colon report general unrest in the Isthmian States, and foreshadow startling developments pointing at the independence of the Isthmus. A Colombia gunboat crammed with troops has arrived at Colon, also the United States gunboat *Nashville*.

November 4.

The independence of the Isthmus was proclaimed last night, and a large and enthusiastic crowd marched to the headquarters of the Government troops, where Generals Tover and Amya who arrived in the morning were imprisoned.

NEW YORK POLITICS.

MacLellan, the Tammany nominee, has been elected Mayor of Greater New York, defeating the reform candidate, Seth Low, by a large majority.

(RECEIVED AT THE LEGATION OF FRANCE.)

THE ANGLO-FRENCH ENTENTE.

Saigon, October 30.

Two hundred delegates of British commerce have arrived in Paris to return the visit paid to London by French merchants. At a banquet which took place, the President of the Council, M. Coombes, and the Minister of Commerce proposed the toast of the *entente* between England and France.

FRANCE AND RUSSIA.

Count Lamsdorff has handed to the President of the Republic an autograph letter from the Czar.

THE FRENCH BUDGET.

Saigon, October 31.

The Chamber of Deputies has finished the general discussion of the Budget.

THE YUNNAN RAILWAY.

M. Dubail, Minister of France in China, has signed the arrangement for the execution of the Yunnan Railway.

THE TSAR AND THE FRENCH.

Saigon, November 2.

In his letter to the President of the Republic, His Majesty the Emperor of Russia declares that he welcomes with profound sympathy the Anglo-French treaty of arbitration and the rapprochement between France and Italy.

NEWS FROM FRANCE.

Saigon, November 2.

Count Lamsdorff and the British commercial deputies have left Paris. The Chamber of Deputies, discussing the budget of home affairs, adopted by a majority of three only an amendment tending to the suppression of sub-prefects.

November 3.

It is announced from Peking that the Russians have re-occupied Moukden.

(RECEIVED IN TOKYO.)

YONG AM-PHO.

Seoul, October 30.

Mr. Hayashi, Japanese Representative in Seoul, reports that the Russian Minister in

that city has informed him of the issue of instructions by Viceroy Alexieff to the Russian officials at Yong Am-pho that in the event of Mr. Hagiwara visiting the place, every possible facility should be given to him.

(RECEIVED AT THE FOREIGN OFFICE IN TOKYO.)

YONG AM-PHO.

Mr. Secretary Hagiwara reports that the officials of the Lumber Company treated him with the greatest courtesy at Yong Am-pho and showed him over the fort which they have begun to build. At present the place is by no means equipped as a fortress, and according to what the officials of the Lumber Company say, the edifice was commenced on the heights because Liu, the bandit leader, having conceived cause of complaint against the Company, had taken to flight, and some hostile enterprise on his part was apprehended. Now, however, the plan has been changed and the place will be used for purposes of exercise.

The Russians in Yong Am-pho number 50 or 60, including 10 women. There are 2 Japanese men and 8 women, 6 of the latter pursuing a shameful trade. All the buildings are nearly finished. A certain number of the Russians are making preparations to leave before the ice closes in. There are some 500,000 logs of timber stored at the place.

(FROM THE "DEUTSCHE JAPAN-POST.")

GERMAN STEAMSHIPS AND THE FAR EAST.

Berlin, October 31.

The North German Lloyd and the Hamburg American-Line, to enable them to make a more profitable use of their ships, have agreed that the North German Lloyd shall in future have charge of the Imperial Mail service and the America Line of the cargo service to the Far East.

COMMERCIAL TREATY.

The German-Russian commercial treaty commission will resume their meetings at the beginning of November for the second reading.

COUNT LAMSDORFF.

Count Lamsdorff assured the officials in Paris that the negotiations pending in Tokyo are giving the best hopes for a peaceful settlement. Also the autographic letter from the Tsar, which the Russian Minister handed to the French President, M. Loubet, contains the desire that peace should be maintained.

THE BAGDAD RAILWAY.

The non-success of the promoters of the Bagdad railway in the conference held in Paris does in no way interfere with the continuing of the enterprise by the Germans.

HERR MOMMSEN.

The celebrated historian, Theodor Mommsen, has suffered a severe apoplectic stroke in Berlin-Charlottenburg.

THE TOKYO NEGOTIATIONS.

Berlin, November 1.

The secretary of M. Delcassé, French Minister of Foreign Affairs, whom yesterday the Russian Minister, Count Lamsdorff, visited at Paris, confirmed to a representative of the Paris *Figaro*, that the negotiations in Tokyo are taking a good course. The Russian Minister has expressed the wish that France might act as intermediary in this matter.

SUGAR.

According to a proposal of the international commission at Brussels, Belgium is negotiating for Russia's assent to the Sugar conference.

MACEDONIA.

France has agreed to the continuance of Austro-Russian action in Macedonia.

DEATH OF MOMMSEN.

Berlin, November 4.

The celebrated German historian, Theodor Mommsen, is dead. The press of the whole of Europe pays tribute to his merits. Kaiser Wilhelm sent a letter of condolence to the relations, deploring the death of the greatest humanistic investigator. Count Bulow has been ordered to erect a bust of Mommsen in the Saalburg, the ancient reconstructed Roman castle in the Taunus which serves as a museum for Roman antiquities found in the Rhine province.

THE FAR EAST.

The *Gaulois*, in Paris, confirms that France is wil-

ing to act as an intermediary between Russia and Japan. The German Government considers the amicable settlement of the Tokyo negotiations to be certain, even without foreign mediation.

THE CZAR IN GERMANY.

The Russian Minister, M. de Witte, as President of the Committee of Ministers, has arrived at Darmstadt, but has not been received by the Tsar. M. Phlebe is not expected to go to Darmstadt. King Edward sent an autographic letter to Kaiser Wilhelm, wherein nothing was mentioned about the Tsar's visit at Wiesbaden.

GERMAN NEWS.

Berlin, November 5.

The semi-official *Norddeutsche Allgemeine Zeitung* in Berlin writes:—The meeting of the Tsar and the Kaiser which took place yesterday at Wiesbaden, is a confirmation of the friendship of both monarchs and with effect a guarantee for the peace of the world. The political value is the exchange of thoughts by Count Lamsdorff and Count Bülow, who agree to preserve the peace of Europe against all troubles and developments directed upon any disturbance.

The Porte has given a refusal to the reform programme note of Russia and Austria, but this answer is considered to be not definitive.

The common audience of the Viceroy Yuan Shikai and Cheng-chitong in Peking, as reported to Berlin, is caused not by the sharpness of the situation in the North of the Chinese Empire, but by the continuing revolution in Kwangsi. Perhaps Yuan Shikai will be commanded for some time from the Chili province to Canton.

The reports concerning some troubles in Korea communicated by Reuter will not make an influence in interrupting the Tokyo negotiations.

(FROM THE "JIJI SHIMPO.")

THE RUSSIAN MINISTER FOR FOREIGN AFFAIRS.

London, October 28.

Count Lamsdorff, Russian Minister for Foreign Affairs, arrived to-day at Paris. The President and Madame Loubet welcomed the Minister. M. Delcasse, Minister for Foreign Affairs, will entertain him. It is believed in connexion with the visit of the Russian Minister that he seems to be expecting that war is unavoidable and intends to define provisionally the sphere of the joint movements of the two countries.

THE WIESBADEN MEETING.

The Czar of Russia is expected to meet the Kaiser at Wiesbaden on November 4th.

THE GERMAN ATTITUDE.

According to the *Cologne Gazette* Germany is expected to maintain a quiescent policy with regard to the Manchurian question.

THE MEXICAN PRESIDENT FIRED AT.

H. E. Porfirio Diaz, President of Mexico, has been assaulted by a man who fired five times at him with a revolver. The President escaped without injury.

ATTACK ON A RUSSIAN PEER.

Prince Kalitchin has been attacked by a number of assassins at Tiflis in Caucasus, sustaining several slight injuries. One of his assailants was arrested on the spot.

REBELS IN MOROCCO.

London, October 29.

The rebels in Morocco have gained a victory. The pretender to the throne has occupied Zaza. The Government troops have been completely routed.

RUSSIANS OCCUPY MOKDEN.

A telegram from St. Petersburg states that a detachment of Russian troops has again occupied Moukden on account of the weakness of the Chinese Government.

FRANCO-RUSSIAN RELATIONS.

London, November 2.

The Paris *Gaulois* states that the French Government intends to join with Russia should Japan bring political pressure to bear, and expresses sympathy with the aims of Russia. The paper further states that the French Minister at Tokyo has already been instructed in accordance with the above policy.

FAMOUS GERMAN HISTORIAN DEAD.

Professor Theodor Mommsen died yesterday at Berlin.

(FROM THE "ASAHI SHIMBUN.")

RUSSIA AND FRANCE.

London, October 30.

Court Lamsdorff, Russian Minister for Foreign Affairs, has had an interview with M. Delcasse, Minister for Foreign Affairs, and M. Loubet, the President. The meeting lasted over an hour.

A RUSSIAN PAPER'S COMMENTS.

A Russian paper (*Novi Krai*) organ of Viceroy

Alexieff, has the comment that Japan possesses no qualification for rank among the European Powers, but she is not objected to as assisting in the colonization of Korea.

(FROM THE "N.C. DAILY NEWS.")

VAGARIES OF AN OLD MAN-OF-WAR.

London, October 24.

The old battleship *Neptune*, leaving Portsmouth for Hamburg to be broken up, broke loose from her tug and collided with a number of vessels. She rent a six-foot hole in the side of Nelson's *Victory*, which was ultimately towed to dock. The *Neptune* was recaptured and proceeded.

ITALY AND THE MULLAH.

London, October 26.

The Italian third-class cruiser *Lombardia*, 2,380 tons, and the torpedo cruiser *Catila*, 1,313 tons, arrived at Illog on the Somali coast on the 12th of October. Six boats from the *Lombardia* approached the shore, but met with a hostile reception. The *Lombardia* shelled the shore on the 15th. It appears that the Mullah had dispatched a party to capture Illog in order to secure a footing on the coast and obtain supplies. The Italian Press is greatly concerned at the activity of the Mullah, and hopes that Italy will not be called upon to replace Great Britain in the struggle against him.

IMMINENT DISTRESS IN RUSSIA.

London, October 28.

Owing to bad crops in Russia, a repetition is feared of the terrible distress of 1890. In many provinces the yield of wheat is almost nil, and the crops of hay and rye are meagre. The distress is causing epidemics of scarlet and typhus fevers.

EBULLIENT ARABIA.

A serious Arab revolt has broken out in Yemen. A thousand Turkish troops are reported killed and wounded. The Porte is hurrying troops to the scene from Smyrna and Adana.

PROGRESS OF THE BRITISH ZOLLVEREIN.

London, October 28.

The Ottawa Government has decided to offer to South Africa the same tariff preference as is granted to Great Britain, in return for tariff concessions from South Africa.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOVEMBER 14TH, 1903.

BIRTH.

On the 11th inst., at 119 Bluff, the wife of Mr. W. Y. SHOWLER, of a Daughter.

MARRIAGE.

On the 7th inst., at 178 Bluff, Yokohama, by the Rev. E. S. Booth, M.A., JAMES MACBETH, of Banerghy, Scotland, to ORIETTA WARNE, daughter of the late W. Voorhees Case, of Philadelphia, U.S.A.

DEATH.

On 12th November, 1903, at his residence 16 Bluff, NICOLAS PHILLIPPS KINGDON in his 75th year.

The funeral takes place on 14th inst. at 9 a.m. from 16 Bluff.

SUMMARY OF NEWS.

LADY SPENCER, wife of Earl Spencer, died on November 1st.

THE father of Mr. Yasuhei Mogi, a well-known raw-silk exporter, died on Nov. 8th, at Nagoya.

THE property of the Iyo Cotton Spinning Company was sold on Nov. 6th for yen 48,666 by tender.

MR. YOZO HAYASHI, confidential secretary to the Minister for Finance, has resigned and joined the Bank of Japan.

A VERY violent shock of earthquake was felt in Yokohama at ten minutes to seven o'clock on Tuesday evening. The premonitory tremor was

very long and distinct and it was followed by the sharpest shock experienced here for many years.

SEVERE shocks of earthquake were felt at Hiroshima on Nov. 9th at 1.50 p.m., the duration being 5 minutes.

THE *Jiji* states that the Australian Government will admit to Thursday Island, Japanese workmen engaged as pearl-shell gatherers.

A HUNDRED and thirty-three Chinese emigrants arrived at Nagasaki on Nov. 10th by the steamer *Iyo Maru* on their way to Canada.

As a result of the proposed administrative reform, over two hundred officials in the Naval Department were discharged on Nov. 10th.

ABOUT six hundred men of the Second Division will leave on Nov. 13th for China to take the place of the present garrison.

A JINRIKISHA coolie named T. Okino (53) living at Kyobashi, Tokyo, committed suicide on Nov. 10th by hanging himself with a cord.

A TRAIN was over-turned on the night of Nov. 4th on the Nippon Railway at a point near Niitaharu station. Two persons were injured.

TOBACCONISTS in Nagoya opposed to the Government's tobacco monopoly, held a meeting on Nov. 5th and organized an association for the purpose.

TOKYO papers state that Mr. K. Goto, superintending secretary of the Otsu branch office of the Progressive Party, was arrested on Nov. 9th on a charge of fraud.

A RICH coal mine, states the *Asahi*, has been found between Teshio and Kitami. It is alleged that the quality of the product is the same as that of the Yubari mine.

A GOODS train was derailed on the night of Nov. 8th near Taketoyo station, having left that point about two hours late. No serious damage seems to have been caused.

A POLICEMAN named Y. Sakatani, of the Tottori police station, Tadotsu, who had absconded with official money to the amount of yen 600, was arrested on Nov. 10th.

THE Mitsui family in combination with others have purchased the plant of the bankrupt Goto Woolen Goods Factory and will recommence operations with a capital of yen 800,000.

THE *Morning Post* says it hears that Mr. John Morley, the Liberal statesman, formerly Chief Secretary for Ireland, will be offered a baronetcy on the occasion of the New Year honours list.

A TREMENDOUS sensation has followed the announcement in St. Petersburg that a defalcation of millions has been discovered in the building and management of the Manchurian railroad.

THE White Star Co. have renamed the *Columbus*, *Commonwealth*, *New England*, and *Mayflower* taken over by them from the Dominion Line, and they are to be called *Republic*, *Canopic*, *Romanic*, and *Cretic*.

THE Gifu Chamber of Commerce held a general meeting on Nov. 8th when it was decided to oppose the proposed abolition of the prefectural government. The City Assembly will support the Chamber.

A. SHRUBB, of the South London Harriers, who is the holder of the 10-miles running amateur championship, has lowered the British amateur record for 1½ miles by running the distance in 6m 47 3/5s.

T. KANDA, Public Notary attached to the

Yamaguchi Local Court, who was charged with forgery of official documents was sentenced in the District Court on Nov. 6th to two years' imprisonment with hard labour.

A HUNDRED and seventy-six Japanese emigrants, who left Kobe on Oct. 15th by the steamer *Shawmut* for Manila, have been permitted to land, with the exception of one man who was probably ill.

ABOUT a hundred workmen of the Miyakawa Iron Works, Kanda, Tokyo, struck on Nov. 7th for an increase of wages and for the discharge of three overseers. The directors of the firm are endeavouring to pacify them.

WORK between Kushiro and Urahoro on the Hokkaido Railway is about completed. Traffic is expected to be opened about Dec. 15th. Work between Kushiro and Ribetsu, according to the *Jiji*, is expected to be finished in July next.

THE Minister for Home Affairs prohibited on Nov. 10th the sale and circulation of a book entitled *jinjo* (Humanity) on the ground that it is injurious to social peace and order. Copies of the book were ordered to be confiscated.

THE Kanagawa Prefectural Assembly has decided to spend yen 9,300 as a subsidy toward the expenses of exhibiting products of the prefecture at the St. Louis Fair. Originally the sum of yen 10,450 was petitioned for by those concerned.

MR. INUDZUKA, Director of the Railway Bureau, and Mr. Nishi, civil engineer of the Department of Communications, will shortly leave for Korea to investigate railway matters in that Empire; more particularly the construction of the Seoul-Fusan railway.

THE American Board of Commissioners for Foreign Missions elected the following officers on Oct. 15th:—President, Samuel B. Capon, LL.D.; Vice-President, Henry B. Hopkins, D.D.; Secretaries for Correspondence, Judson Smith, D.D.; James L. Barton, D.D.; Recording Secretary, Henry A. Stimson, D.D.; Assistant Recording Secretary, E. E. Strong, D.D.; Treasurer, Frank H. Wiggin.

THE Tokyo-Yokohama Electric Railway Co. held an extraordinary general meeting on Nov. 10th at the Doki Club, Tsukiji, Tokyo. Mr. Y. Tatsukawa presided. The shareholders decided to add yen 1,700,000 to the capital, making it yen 2,550,000. The chairman stated in answer to a shareholder, that the railway between Omori and Shinagawa will be completed in March next, that between Kawasaki-Kanagawa probably in August.

ON the application of the Nippon Yusen Kaisha to preserve evidence with regard to the collision between the steamers *Progress* and *Tokai Maru*, the Hakodate Local Court examined the captain and two of the crew of the Russian steamer. The *Asahi* states, however, that no definite statement was obtained, and adds that the owner of the Russian ship claims about yen 20,000 from the Nippon Yusen Kaisha as damages caused by the collision.

THE supposed grievances of Yokohama wholesale greengrocers and vegetable dealers in being removed from their old market behind the Recreation-ground to the somewhat remote quarter of Omote Takashimacho, culminated in a scene at the Kencho on Monday, when a deputation evidently under the influence of liquor, tried to see the Governor. In the end Mr. Taniguchi, Secretary of the Kencho, promised to see that their complaints should reach the proper quarter.

POLITICAL NOTES.

Saturday, November 7.

The Council of the *Tai-ro Doshi-kai*, after a stormy discussion, having come to the conclusion that the long delay in arriving at a settlement of the Manchurian problem was due to Marquis Ito, sent a deputation to wait upon His Excellency. The deputation called themselves *Keikoku-in* (admonitory committee). They repaired to the official residence at Reinan-zaka, where the Marquis happened to be, but they were obliged to carry on their colloquy through the medium of a policeman, for the Marquis declined to meet them. He informed them that if they wanted to talk about political affairs they must address themselves to the officials concerned. Finally they handed in two documents, one addressed to the Marquis, the other a collateral epistle. In the first appeared the phrase *Kunchō wo midare ni shite seifu wo seichū su* (abusing the Sovereign's favour for the purpose of controlling the Government). Marquis Ito, without reading further, returned the documents, conveying at the same time an intimation to the Committee that he knew the limitations of official functions, and that if there were any proofs of this injurious accusation, he challenged their production. Of course the Committee had no proofs. They were obliged to take lame refuge in newspaper stories and street rumours. The upshot was their ignominious retirement, covering their retreat with a silly declaration that they were glad to learn the groundlessness of their apprehensions. A momentary advantage they did gain, indeed, for the policeman on duty was foolish enough to receive their documents, but he had to hasten after the discomfited deputies and restore the two letters. It must be confessed that the *Tai-ro Doshi-kai* are cutting a paltry figure in this business. Their proceedings indicate giddiness, frivolity and a strange want of any sense of responsibility.

We are not surprised to find a very chauvinistic article in the *Nippon*, but it is most unusual and significant to read in a sober business-men's journal like the *Shogyo Shainpo* a column of views which can be interpreted only as the outcome of exhausted patience. The *Shogyo* is wholly weary of the delay in coming to some settlement of the political situation. Many are suffering severely from the uncertainty. But would war improve their condition? Would they be happier in the fire than in the frying-pan?

Monday, November 9.

Naturally the proceedings of the *Tai-ro Doshi-kai* in sending a committee to wait upon Marquis Ito with a message which can only be described as insulting, has caused a great deal of comment and speculation. Of the opinions evoked by the incident one—which seems to have substantial endorsement—is that this is a deliberate attempt to create a breach between the Cabinet and Marquis Ito. That inference is founded on the fact that Messrs. Komuchi Tomotsune and Hiraoka Kotaro, leading spirits in the *Tai-ro Doshi-kai*, are at heart friendly to the Cabinet and would fain convince the nation at this juncture that the apparent hesitancy of Japan's attitude towards the Far-Eastern question is due not to the ministry's weakness but to Marquis Ito's pro-Russian proclivities. Did any such conviction gain ground, Marquis Ito's connexion with the *Seiyu-kai* would be severed, and his poli-

tical influence would almost disappear. It will be the immediate comment of every onlooker that if any Japanese subjects thus play fast and loose with the vital concerns of their country for the sake of advancing party interests, they deserve to be put between the shafts of a *jinrikisha* instead of aspiring to hold the reins of State. We partly agree with the *Nichi Nichi Shinbun* that in this matter the members of the *Tai-ro Doshi-kai* were guided by purely patriotic motives. But for the course adopted by them not a word of extenuation can be found, except that these politicians, whose education and standing ought to raise them out of the atmosphere of giddy passion by which ignorant mobs are swayed, yielded to the excitement of the time and behaved just as mass meetings and stump orators behave in our own country. They insulted the Emperor by suggesting that His Majesty's allows his favour to be abused; they insulted Marquis Ito by declaring that he abused that favour, and they insulted the Cabinet by implying that it remained in office without liberty to obey its convictions as to the requirements of the empire's interests. Moreover, by their own confession, they did all these things on the strength of street rumour and newspaper talk. Probably the chief lesson to be learned from the incident is that the people's patience is sorely tried. Human nature is apt to grow irritable and captious under the pressure of long suspense, and when to this waiting is added the fact that heavy losses have to be borne by business men, we can understand that it must be hard to maintain unbroken the demeanour of calm hitherto shown by the Japanese. If Russia have any honest intention of averting the calamity of war, it is time that she spoke definitely. She is playing with fire at present, and although she thinks perhaps that to extinguish the flames speedily if they break out is within the compass of her great power, we give her Emperor the credit of being a peace-lover and we believe that many of her wisest patriots have no desire to force Japan's hand. The whole responsibility rests with her, and her perpetual procrastination is creating a situation intolerable to all nationals in the Far East. She has some obligations to discharge besides those dictated by her spirit of imperialism.

The youthful members of the *Tai-ro Doshi-kai* are said to be pressing their elders vehemently to push the quarrel so inopportunistically begun by the Association's Committee. These young politicians claim that the Committee were influenced by the best possible motives when they charged Marquis Ito with abusing the favour he enjoys at Court for the purpose of putting constraints upon the Cabinet; that it was never intended to make this matter public; that Marquis Ito himself gave it to the world through the columns of a newspaper controlled by him, and that the *Tai-ro Doshi-kai* being now challenged, must enter the lists. A most extraordinary contention, surely. For here we have a committee composed of men not without political influence and representing an association which claims to be taken seriously—we have such a committee proceeding to the official residence of the President of the Privy Council, handing in documents addressed to him wherein is explicitly formulated one of the gravest charges that could possibly be preferred against a statesman, and then claiming, forsooth, that it was all intended to be a kind of private by-play without any audience but themselves and the recipient

of their injurious epistles. This apologue to the farce is altogether in keeping with the Committee's admission that really they had no evidence except newspaper prattle and street talk to offer in support of their sweeping charge. The *Tai-ro Doshi-kai* may perhaps be benefited by hearing that it is covering itself with ridicule in the eyes of all sober-minded foreign observers. We opine, however, that its leaders are much too shrewd to play those pranks merely for the sake of capering in motley. Whether they wish to lay a train which may be fired in some direction when the Diet meets, or whether they do honestly believe that the time has come for unreasoning passion to take the place of prudent statesmanship, we can not tell, but beyond these two constructions of their procedure we see no plausible hypothesis.

These two politicians have returned from their trip through China and Korea. Our readers may remember a report recently circulated to the effect that Mr. Inukai had admitted a great modification of his views since he had enjoyed an opportunity of observing the situation closely. But he now denies strenuously that any such change of ideas has visited him. Doubtless we shall soon learn the results of the two gentlemen's observations, and great interest will attach to them. At present fragments of their comments are circulating. They are represented, for example, as saying that if Japan took the field, Russia would retire, but whether her retirement would be permanent or not is another question. Her fortresses and other works are not on a scale that suggests temporary occupation or preparation for a single emergency; they have all the appearance of perpetuity. At the same time Mr. Inukai thinks that what she has achieved at Port Arthur does not imply such a vast expenditure as she is said to have incurred.

Tuesday, November 10.

The *Tai-ro Doshi-kai* has published the documents addressed by it to Marquis Ito and Count Katsura. They add nothing to our knowledge of the recent incident, but we observe that in a statement of reasons for the publication, Marquis Ito is charged with general weakness in foreign policy, and with having a strong leaning towards Russia in preference to England. He is warned that the pursuit of such courses will be prejudicial to his country and may be dangerous for himself personally. This last utterance is as unguarded as it is lamentable. It may have influenced the action of the *Tai-ro Doshi-kai*, but it should never have been proclaimed by them.

It is alleged that on the 23rd instant—which, as our readers know, is the New Rice Festival—a journal called the *Dempo Shinbun* (*Telegraph*) will appear in Tokyo. And it is further alleged that this newspaper will be the organ of Viscount Watanabe, who stands before the nation as an advocate of the so-called *seikai-seisaku*, or *welt-politik* of the Germans, as well as the organ of men with whom the Viscount is associated for the purpose of supporting the modified form of socialism that appeals to a section of the Japanese people, notably to certain Christian converts under the leadership of Mr. Shimada Saburo. No sensible publicist thinks of condemning a politician merely on account of a change of view. Only asinine stubbornness can hold a man perpetually steadfast in the same grooves of opinion. Still we should be much interested in any exposition showing how Viscount Watanabe,

who, a short two years ago, declared himself apprehensive of bankruptcy for Japan, has now been induced to look calmly out upon the wide horizon of a *welt-politik*.

Wednesday, November 11.

The *Yamato Shimbun* published an extra on Tuesday evening, stating that on the morning of the 10th at 8 o'clock Count Katsura summoned to his residence three representatives of the *Tai-Ro Doshi-Kai*, informed them that they had been totally mistaken in their expressions about *Genro* interference, and explained that the negotiations now in progress would probably lead to a settlement which Japan might accept with honour. That is a mere outline of the assertions contained in the extra, but whether even the outline is credible we do not undertake to say, the details being altogether beyond belief.

Thursday, November 12.

As we conjectured when referring to the *Yamato Shimbun's* extra of the 10th instant, the detailed references to the negotiation put into the Premier's mouth by that journal were erroneous. The *Yamato* made Count Katsura say that the negotiations were progressing, and that although the whole of the Tsar's Council with the exception of two Ministers—whom the Premier indicated—were advocates of war, a pacific compromise within limits calculated to satisfy Japan's honour, might be considered to be in sight. What Count Katsura really did say is thus given by the *Jiji Shimpō*—

"I have invited the presence of you three gentlemen to-day because it appears necessary to have a friendly talk with you about the situation. In view of the difficulties that the situation offers now, all classes of the people must be equally anxious about the result and must co-operate to discharge the responsibility devolving on the nation. Should any misunderstanding now occur of a nature calculated to impede the consummation the State's interests it would be a matter of universal regret. Therefore I have put you to the trouble of attending. With reference to the state of the situation, I regret that I am unable to offer any specific explanation such as you would find satisfactory, but in that matter I must observe the limitations imposed by my official position, and I trust you will fully appreciate the fact. There has been some talk of want of unanimity between the Elder Statesmen and the Ministers of the Crown. I assure you that nothing of the kind is the case. Both are advancing together in absolute union, and I undertake to affirm that in the future also there will no want of unanimity. I trust therefore that in the interests of the country you will maintain a circumspect demeanour, and that you will have confidence in the earnest desire of the officials concerned to carry to success the national policy. I am well aware of the responsibility that devolves upon me in connexion with the situation, and I hope that you also give me credit for that knowledge. It could not fail to be immediately detrimental to the interests of the State if, in consequence of mutual misapprehensions, difficulties were placed in the path of the country's progress, and I therefore hope that you will communicate to all the members of your Association the remarks I have now made."

It will be observed that the Prime Minister made no reference whatever to the progress of the negotiations nor offered any distinct hope of a pacific settlement in the near future. The *Jiji Shimpō*, however, in commenting upon His Excellency's remarks,

alleges that a certain Minister of the Cabinet has stated that after the Tsar's return to St. Petersburg Russia's sentiments will be definitively conveyed to Japan, and that an amicable arrangement may be anticipated.

The only resource for the opposition journals in the face of the Premier's declaration of unanimity between the *Genro* and the Ministry is to say that Count Katsura acted as Marquis Ito's spokesman. That is what they do say.

In connexion with this matter we may add that in its issue of the 10th instant the *Nippon* published a verse the plain import of which is to counsel assassination at this juncture. Reference is made by the writer to Ching Hwui, who by concessions and temporizing caused the final destruction of the Sung dynasty which he sought to save, and there is little, if any, attempt made to hide the murderous character of the advice based upon that incident of Chinese history. The *Nippon's* disgraceful and dastardly publication is roundly condemned even by journals that endorse its anti-Russian proclivities.

In a speech delivered by Marquis Saionji in Kyoto on the 8th instant, a strong appeal was made to political parties to refrain from squabbling about petty questions, and to maintain towards great problems the attitude of disciplined calm for which Japanese statesmen and Japanese military and naval men were now receiving the world's applause. Japan had made a late *début* upon the stage of international comity and it behoved her to behave with the circumspection of a *débutante*. The officials charged with the conduct of the empire's foreign relations at the present crisis should be left a free hand, and the nation should remember that the real contest lying before it was a peaceful contest, a contest of arts, sciences, industries and commerce. If victory rested with Japan in that fight, armies and navies would be secondary considerations.

Friday, November 13.

Two eminent Japanese students of international law have published interesting views of the situation in the *Gaikō Jiho*. Mr. Ariga is one of them. He says that even supposing Russia's troops to be withdrawn from Manchuria, they will always remain within easy striking distance of the place, and consequently Russia's dominance in that region is beyond dispute. Indeed, he holds that through diplomatic blundering the Manchurian problem has been allowed to drift beyond the range of satisfactory solution—satisfactory, that is to say, from the point of view of those opposed to Russia's territorial expansion. There has been a series of blunders. The first and most flagrant was when Japan surrendered Liaotung and the Yellow-Sea littoral without exacting a promise that no part of it should ever be leased or ceded to a foreign Power. Concerning this we (*Japan Mail*) may remark *en passant* that Mr. Ariga's facts do not seem complete. For that, we believe, is exactly what Japan did. She formulated a non-alienation condition and she asked for the opening of Dalny and another port on the Shinkiang shore. But she received no support from any Power outside the three confronting her and demanding her withdrawal from Liaotung, and without such support she was as powerless to make her withdrawal conditional as she was to refuse withdrawal altogether. However, to resume Mr. Ariga's catalogue of charges: The second blunder was when Japan made no protest in connexion with the leasing of Port Arthur and Dalny to

Russia, and when she agreed to the occupation of Wei-hai-wei by the British after her own rendition of the place. The third was when she failed to interpret fully the agreement between Russia and England by which the former Power was admitted to have the exclusive privilege of railway construction beyond the Great Wall. That agreement unquestionably recognised Manchuria as lying within Russia's sole sphere of influence, and with such a compact staring her in the face it was fatuous on Japan's part to ally herself with Great Britain for the purpose of averting contingencies which were already foregone conclusions. The fourth error was committed when Japan having adhered to the Anglo-German convention, remained silent although Germany declared that she did not regard the convention as extending to Manchuria. The fifth was when, on the occasion of the Peking Council after the Boxer campaign, she allowed the Manchurian question to be left for settlement by Russia and China alone, without the intervention of other Powers, thereby tacitly confirming the discrimination in Russia's favour made originally by the Anglo-Russian agreement and endorsed by Germany's rendering of the Anglo-German convention. There were other blunders but these were the principal, and in their sequel the present attempt to obtain from Russia a settlement of the Manchurian problem such as would satisfy Japan would be like quoting sutras to a horse. Mr. Ariga has more to say, but this is the gist of his argument. His conclusion is that what Japan must now be seeking is to have Korea placed under her sole protection in return for her open recognition of Russia's position in Manchuria. An exchange involving the loss of Korea's independence against the surrender of Manchuria's ownership by China, is a proposition of a questionable character. But there is no open talk of molesting Korea's independence. The aim is merely to have her placed solely under Japan's protection.

That is Mr. Ariga's argument and his interpretation of the lines of the negotiations. He commends such a basis, for much as Japan must regret the absorption by Russia of territory which this country won eight years ago by force of arms, the price obtained, namely, the final settlement of the Korean problem, would compensate.

In the same periodical Professor Tomizu—the leader of the Seven Belligerent Savants—discusses the same subject. He too declares his belief that a virtual exchange between Korea and Manchuria is the basis of the present negotiation, whatever the Government may allege to the contrary, and he has no doubt that thinking men will find their hair stand on end when they learn the fact. Certainly to agree that Russia should have a free hand in Manchuria in consideration of Japan sending troops to Korea would be a settlement averting war for the moment. But would it be a permanent settlement? Surely not. Russia's position in Manchuria would be wholly insecure if Japanese troops were posted in Korea. She would be in a manner forced by the situation to extend her sway across the Yalu and to obtain military possession of the Korean peninsula. The history of Korea shows that although she was invaded by Japanese troops in the past, she was never much subjected to Japanese sway, whereas she repeatedly felt the heavy hand of the Mongols and the Manchus. It may be regarded as certain that she has an intuitive tendency to side

with the great, and that she would gradually incline to Russia if the latter makes any effort to sway her. In view of these facts, it is idle for Japan to waste time attempting to patch up an agreement which can have no permanency, and which will prove as futile for the purpose of asserting Japan's influence in Korea and excluding Russia's as the Rosen-Komura Convention has proved.

This difference of opinion between the two juriconsults is sufficiently cardinal. Mr. Ariga recommends the despatch of a special envoy to St. Petersburg to negotiate his plan. The *Yomiuri Shinbun*, which throughout this complication has steadily contended for a radical settlement by means of the sword, hints very plainly that Mr. Ariga is only the mouthpiece of a certain eminent Japanese statesman.

The eighth meeting between Barons Komura and Rosen took place on the 11th instant at 3.30 p.m., in compliance with the latter's request. The *Fiji Shimpō* believes that the object of the meeting—which lasted only a few minutes—was to convey to the Japanese Minister of Foreign Affairs the views taken by the St. Petersburg Government after the return of the Tsar and Count Lamsdorff.

The *Nippon* has been prosecuted by the public procurator in connexion with the verses to which we alluded in our last issue. No one can deny that the prosecution is well deserved. As to the dangerous and peace-disturbing matter, however, it has already gone irretrievably into circulation.

CHINA.

Saturday, November 7.

There still remains some obscurity about the advice tendered to the Chinese Throne by the Council of Ministers held in the Palace to discuss the Mukden incident. The general belief, however, is that they advised peremptory refusal to accede to the demand for the decapitation of Governor Wang, or to recognise any of the privileges wrung forcibly by the Russians from Viceroy Tso. What this second reservation means exactly we can not read. It may have retrospective significance; it may be prospective. Necessarily we must all sympathise with the justice of declining to serve Wang's head on a charger for the behoof of the Russian General. Again in this case we are confronted with the difficulty of forming any clear judgment as to the justice of the complaint against Wang. So far as we know he merely followed the procedure habitual in Chinese criminal courts; that is to say, he ordered the instantaneous execution of men whose crimes against good order were notorious. If in so doing he placed an obstacle in the path of Russian policy—the policy of policing Manchuria by employing the men hitherto engaged in marauding it—his conduct may have been very annoying to the Russians but can not with any shadow of justice be declared capitally criminal. There may be aggravating circumstances, however. Wang may have violated some distinct pledge given in connexion with the treatment of the bandits. No information is accessible as to that, and we can only now say that, with the knowledge one possesses, the demand for Wang's decapitation is at least as barbarous as was the summary justice he is accused of meting out. Meanwhile he is said to have been seized by the Russians and to be now in durance at Port Arthur. Will they constitute themselves his execu-

tioners? That would appear to be the inevitable outcome should China refuse to undertake the brutal task, and we can scarcely imagine that China will do anything but refuse. As for the other official implicated, Taotai Yuen, he has been summoned to Peking, because—so says rumour—the Chinese Government is anxious about his safety should he remain at Antung.

We can not conceive that the Russian Government will find anything satisfactory in all these complications. They occur at a wrong time. Perhaps we are to regard them as deliberately contrived pretexts for lightening the grasp of the Great Northern Power on Manchuria. But if so they are emphatically clumsy. For the position in which Russia has placed herself, the position in which history will depict her, is that of championing banditti and demanding that against the person of a high Chinese official there shall be committed the very crime of which he himself is accused; a much greater crime indeed, for whereas Wang merely followed the abominable precedents of his country's penal procedure, his summary decapitation at the demand of a foreign Power would be an indefensible departure from all the precedents of civilization. Nothing could be more unhappy for Russia than to figure in such a role. And as for Mukden, she does not want to be there at this juncture, since her obvious game was to lie quiet until the complications with Japan were settled. Besides, she has forgotten the old proverb about the hunted rat. China may have become despicable—though under wise government she might defy the world. But even China, driven to desperation, is not altogether a negligible quantity. This last coup can scarcely fail to drive her to desperation. The demands perferred by Viceroy Alexieff's order seemed to be expressly designed for the purpose of tearing away the last shreds of her illusory sovereignty in Manchuria, and the military seizure of Mukden, the birthplace of the Tartar dynasty, has capped the catastrophe. Viceroy Tso is said to have endeavoured to commit suicide by swallowing opium. He was prevented, but the old official is evidently not without the dramatic instinct, for that close of his career would have greatly enhanced the pitifulness of the Mukden disaster. The upshot of it all is that Russia has stirred the brake and called out serpents when her own interests plainly counselled quiet and self-restraint. We do not pretend to think that she is not powerful enough to play tricks which would drive any lesser actor off the stage. But regarding the matter academically, it seems to us that her procedure in the Far East is compacted of very heterogeneous elements—diplomacy generally suave and subtle, and a mailed fist unhampered by any restraints of intelligence.

Viceroy Yuan, who returned to Tientsin on the 4th instant from the conferences in the Palace at the I-ho-yuen, is said to have informed one of the Foreign Representatives in the capital that at these conferences the empire's policy had been finally shaped, and that he "swore to die for his country's relief." Such a declaration sounds very warlike but what can China do? She is quite powerless against Russia. The programme adopted by Western States after the Boxer *outrage*, the programme of virtually reducing her to a state of helplessness by interdicting the import of arms and munitions of war, has borne its fruits, and she is less capable of self-defence to-day than she was on the morrow of

her crushing defeat by Japan. Many onlookers ventured to affirm, in 1901, when this singular veto was under discussion, that it could not possibly be reconciled with any policy of preserving China's integrity, and that if the Powers subjected her to such disabling conditions, they would be morally bound either to protect her against the consequences of the embargo or to restrain any one of their number from taking advantage of it. There has been neither protection nor restraint, and China is now delivered over helpless to the aggressor. The only thing to be said about Viceroy Yuan's alleged declaration is that he chose appropriate terms when he spoke of "dying for his country." That is about all that any Chinese patriot can now do.

Some changes of Ministers are announced from Peking. They concern the Foreign Office, the Treasury, and the Board of Ceremonies. The first alone has special interest; namely, the removal of Wang Wen-shao from his post, and his temporary replacement by Na Tung. The latter is remembered in this country in connexion with his abortive mission of peace during the China-Japan War, and in connexion with his visit to the Osaka Exhibition last spring. The telegraph has not yet assigned any reason for these changes, and the inference would be that no special importance attaches to them. But they can not be thus dismissed at such a juncture as the present, for they are obviously a sequel of the Councils at the I-ho Palace. Wang Wen-shao has always had the reputation of advocating an essentially pacific and conciliatory policy, whereas Na Tung is known to entertain very strong feelings about Russian aggressions, and to be persuaded, as every intelligent Chinaman should be persuaded, that unless his country strikes for her own independence no outside Power will do her that kindness. It is not pleasant to be involuntary observers of the destruction of anything that has once been great and that still comprises all the elements of greatness. China, considered from the point of view of the physical and moral endowments of her people and from that of her fine natural resources, ought to be one of the world's most prosperous and flourishing Kingdoms, and when it is remembered that throughout the course of the past thirty centuries the Chinese themselves have never shown the slightest symptom of an aggressive disposition, but have remained content to win their living quietly and industriously ever since they moved southwards from their cradle on the Yellow River, there certainly is no discernible reason why they should now become the victims of outside ambition. Nevertheless we appear to be destined to witness their catastrophe in the immediate future, and it is a sad spectacle.

Monday, November 9.

News reaches Tokyo—non-official of course—that the Chinese Government has intimated to the various provincial satraps the imminence of a rupture of the negotiations between the Middle Kingdom and Russia, and has directed that all possible steps be taken to meet the contingency of war. The Viceroys are warned to look carefully to the defence of inland waters and to avoid the catastrophes that resulted in former years from unreadiness. The telegram adds that this adoption of a resolute attitude by China is welcomed by the foreign press of Shanghai. Naturally the question suggesting itself to every onlooker will be, what can China do? Can she offer any

serious opposition to Russia? The answer would depend largely upon the nature of the fighting programme adopted by Russia. If the great Northern Power confined itself to over-running Manchuria and to placing on an unequivocal basis the still somewhat hazy tenure it has established there, then the aggressive role would be forced upon China, and as an aggressor she would be quite helpless, whatever capacity she might possess for defensive purposes. But if, in the event of a declaration of war, Russia took up the gauntlet seriously, and marched upon Peking or harassed the coasts with her powerful squadron, the States of Europe and America could scarcely fail to be drawn into the arena sooner or later. But it is probably premature to discuss such eventualities. Much must happen before China and Russia engage in death grips. We are disposed to regard these rumours merely as an illustration of the extreme gravity of the situation. Every day that passes without a settlement renders the tension more acute and thus accentuates the danger of some untoward happening by which a final crisis would be precipitated.

The *Fiji Shimpo's* Peking correspondent states what he believes to be the reason of Wang Wen-shao's removal from the post of Minister of Foreign Affairs. We gather that the two Viceroys, Yuan and Chang, took advantage of the recent Council in the Palace to urge the inadvisability of leaving the conduct of foreign affairs at this critical juncture in the hands of a man so enfeebled by age as Wang Wen-shao. The Empress-Dowager acknowledging the justice of that view and the gravity of the situation, Wang was relieved of the cares of office and Na appointed in his place.

Apparently Na Tung is to discharge very important and onerous duties for in addition to his post at the Foreign Office he is said to have been instructed to lend his assistance to the Finance Department.

Telegraphic communication between Mukden and Peking continues to be interrupted, except for Russian messages, but the latest news from the former place—published by the *Nichi Nichi Shimbun*—is that the Russians have, under menace, made large purchases of land at Liao-yang, Mukden and Fenhwang. Everything tends to show that the man at the front is determined to defeat any idea his Government may entertain of evacuating Manchuria.

Tuesday, November 10.

Just as we go to press the following items of news reach us from trustworthy sources:—

Taotai Yuan has been ordered to proceed to Peking. That is only a confirmation of intelligence recently received. Yuan, our readers doubtless remember, is Taotai of Antung, and his dismissal from office has been demanded by Russia.

Viceroy Alexieff is expected to start for St. Petersburg at the close of November.

Negotiations are in progress with the Okura firm for the building of the Russian Consulate at Fusan. When the edifice is finished, the present Masampho Consulate will be moved thither.

There is a rumour that Viceroy Yuan is to be invested—or has been invested—with plenipotentiary authority to confer with Viceroy Alexieff concerning the settlement of the Manchurian question, and that during his discharge of this important duty Wang Wen-shao will assume his functions as Viceroy of Chili and Northern Superinten-

dent of Trade. This, as we have said, is only a rumour, but it sounds not unlikely, and should it prove true the plain inference will be that China's policy is to have an unwonted element of stalwartness. But we pity Viceroy Yuan. A negotiator who has virtually to plead in *forma pauperis* is an unhappy individual. Mainly through her own fault but partly owing to the strange policy of the Powers, China is almost helpless for belligerent purposes. She comes into court with manacled hands.

The Tokyo correspondent of the *N.-C. Daily News*, writing under date of October 25th, says:—

I learn on high authority that Japan has now adopted a very firm attitude and a new development of the situation has occurred. The negotiations continue but, in official circles even, it is now confidentially admitted that an appeal to the *ultima ratio* is almost inevitable.

This kind of sensational news would not so much matter did it stand merely on the authority of a correspondent whose access to the "official circles" he claims to represent is perhaps problematical. But the *N.-C. Daily News*, commenting on the above paragraph in a leading article, says:—

Our readers may rely on this being not a random, but a well weighed statement on the part of our correspondent. We have no desire to be alarmists, but we cannot ignore the news that comes to us, and at the moment most signs point to the inevitability of war, a war whose end no one can foresee with any certainty, but in which the sympathy of all generous hearts everywhere will be with Japan, if only for the patience and forbearance she has displayed throughout the long protracted negotiations, during which Russia has been constantly strengthening her position. We recognise the terrible injury that a war will do to the trade of the Far East, but it will not add much to the injury that is being done by the present uncertainty.

The birthday of H. M. Mutsu Hito, Emperor of Japan, who was born on the 3rd of November 1852 at Kioto, will doubtless be a more anxious day than many of the Emperor's recent anniversaries, but His Majesty will be supported by the knowledge of the loving devotion of all his subjects and the deep respect felt for him by foreign nations. Ascending the throne at the age of 15, he has guided his country, aided by able councillors, through the storm and stress of the revolution, and through one war, with great sagacity and prudence up to the point of being recognised as an equal by the Great Powers of the West. The British people everywhere will heartily join with their Japanese allies in wishing the Emperor long-continued health and prosperity, and a happy issue out of the troubles in which, by no fault of his, Japan is at the present time involved.

It is pleasant to read such sentiments in our contemporary's leading column, and we have some reluctance, therefore, in venturing to contradict any part of the letter by which they were evoked. But it is not true, so far as our knowledge goes, that "in official circles even it is now confidentially admitted that an appeal to the *ultima ratio* is almost inevitable." Neither in confidences nor openly have we found any such admission.

Wednesday, November 11.

The *Asahi Shimbun* has a telegram from Peking saying that the Chinese Government, being anxious to consult with Viceroy Tso about Manchurian affairs, has summoned him to Peking, but that Tso is under Russian restraint and will be unable to comply with the order.

We learn from the same journal that Prince Shu has visited the Court and expressed very unequivocal opinions about the necessity of making no concessions to Russia and insisting on her withdrawal from Manchuria. The Prince declares that if Manchuria be surrendered to the great Northern Power, the partition of China will be in sight.

Mr. Wang, an official of the Board of Record, has addressed a lay memorial to

the Throne, insisting on the necessity of fighting Russia.

Su Yuen-chun, the military commander—best known to foreigners as Marshal Su—who was laying under sentence of death for incompetence in dealing with the Kwangsi rebels, has been pardoned in deference to the intercession of the French Representative in Peking, whose action in the matter—according to a telegram published by the *Fiji Shimpo*—was prompted by the fact that Su had been instrumental in preventing an irruption of the rebels into French territory.

Thursday, November 12.

The *Fiji Shimpo* has a telegram from Peking saying that the Russian Minister and the staff of the Russian Legation do not approve of the recent re-occupation of Mukden and are disposed to complain that military acts often mar diplomatic efforts. It must be evident to every one that the re-occupation presents many features which intelligent Russians can not endorse, but we can scarcely persuade ourselves to believe that M. Lessar and his subordinates have been uttering any open censure of the incident.

KOREA.

Saturday, November 7.

If the Russians have been degrading the Yong Am-pho fort to the status of a telegraph station or an exercise ground, and if they have been showing Mr. Hagihara all their doings with engaging courtesy, they appear to be far from "letting up" in the matter of their main enterprise, that is to say, the exploiting of the Yalu Valley. Three hundred Chinese labourers are said to have passed Wiju *en route* for the upper reaches of the River, to extend the timber-felling operations of the company. We opine that the presence of Russia in the Valley will be measured by the life of its forests and that to both alike will ultimately apply the term "primeval."

The Russians, according to the *Asahi's* correspondence, have given to Yong Am-pho the name of "Nikolas Harbour," and apply that title to it in official documents. There are several places in Korean waters which the outside world knows by names unfamiliar to the Koreans themselves—for instance, Quelpart, Deer Island, Broughton Bay and so on. But of course the circumstances attending Yong Am-pho's re-baptism have special significance.

It is further alleged that barracks are being constructed there, nominally for civil residential purposes but probably for troops. Into what celebrity Yong Am-pho has leaped! Six months ago not six people outside Korea had heard the name. To-day it is on everybody's lips. And we shall hear more of it, for the timber-cutting business, in which Russia is legitimately engaged, whatever may be said as to her illimitable rendering of its dimensions, has few elements of finality.

Monday, November 9.

It is stated that the general opinion in Seoul seems to be in favour of allowing the discredited nickels to fall to the value of the metal composing them. The telegram containing this information adds that the Korean Government appears to labour under the mistaken impression that this sharp depreciation is in some sense beneficial to Korea.

Korean nickel coins appear to be descending into a bottomless pit. The latest news says that they are at a discount of 280 per

cent., and that the trade of Japanese merchants is almost at a stand-still. Another report puts the depreciation at 260 per cent. in terms of Japanese silver money. There has been no such monetary debacle in our recollection of the Far East. In 1881 the Japanese paper *satsu* fell to a discount of nearly sixty per cent. in terms of gold, but recovery was quick and in 1885 specie payments were resumed. The nickel is virtually a fiat token, for it has no intrinsic value.

Rumour states that the Korean Government has asked the Japanese Representative in Seoul to allow the Japanese police to protect the persons and properties of Chinese subjects in the peninsula. It is very difficult to credit such a story, for the alleged request would be an acknowledgement of Korea's incapacity to discharge the duties of administration, and the acceptance of such functions by Japan would not in any sense relieve the Korean Government of its responsibility towards China. Another version of the story, published by the *Kokumin*, is that the Chinese Government is endeavouring to make arrangements for employing Japanese subjects to act as police in Korea for the protection of Chinese subjects. That would be intelligible enough.

Tuesday, November 10.

It is stated that in answer to the recently reported remonstrance of the Russian Representative with regard to the employment of Mr. Kato, Adviser to Korea, in the capacities of adviser to the projected central bank and controller of the ginseng farm, the Korean Foreign Office has replied that, after due inquiry, it transpires that Mr. Kato is not to be connected with the Bank and that his functions in relation to the ginseng farm are for the purpose of investigating the action of foreigners only.

This reply, if correctly reported, suggests the inference that Korea admits Russia's right to dictate to her in such matters. Whence is such a right derived? If Russia considers that Japanese financial advice is being unduly employed by the Korean Government, it is Japan that she ought to address herself. That is the plain course indicated by the conventions. She possesses no competence to restrain Korea's freedom of choice in such matters. That would be an unwarrantable interference in Korea's domestic affairs.

Wednesday, November 11.

The *Fiji Shimpō* publishes a telegram from Fusan saying that the people of Tai-ku are endeavouring to contrive the removal of all Japanese in that place and are pressing them to leave the town. Some explanation of this brief and curious piece of intelligence will be forthcoming subsequently, we presume.

Korea has appointed four new Ministers to represent her interests abroad. They are Li Keun-thaik, as yet unattached; Kim Chong-kym, who goes to England; Li Yong-om, who goes to Italy, and Pak Yong-hwa, who goes to Belgium.

Thursday, November 12.

Mr. Hagiwara's decision in the timber complication is that a certain indemnity must be paid by the Japanese to the Koreans with whom they were disputing. It appears, however, that much lumber was taken from the Japanese by Russian soldiers and that whatever portion of it has been carried to Yong Am-pho is regarded as unrecoverable, though there is a prospect of restitution

being made in the case of the timber at Antung. Concerning this latter the telegram says that it was cut and floated down the river by the bandit leader Chang, and that, as some understanding existed between him and M. Pavlov, a settlement may be difficult. In fact, the story is obscure, and the only definite idea we gather from it is that the whole operation of timber-felling in the Yalu Valley requires much closer supervision than it has hitherto received.

It is stated that the Russian garrison at Feng-hwang has been increased by 500 men, and that they are now in possession of all the gates of the town, from which fact the people are disposed to infer an immediate outbreak of war between Japan and Russia. The Russian garrison at Antung also has received an accession of a hundred men. But, as we have already taken occasion to remark, the drawing together of Russia's Manchurian forces into such cities as offer facilities for winter quarters is a natural operation at this juncture.

Friday, November 13.

The Korean Government is said to have consulted Mr. McLeavy Brown about the opening of Yong Am-pho and Un-kai, and to have received his advice in the sense that such operations as the opening of ports are entirely within the sovereign rights of the country concerned and that the interference of an outside Power should not be permitted for a moment. One of the Tokyo journals publishing this report represents the interference in question as emanating with Great Britain and America, but another and much more likely statement is that Mr. Brown's exposition refers to the objections raised by Russia to the opening of the ports in question. According to the latter version Mr. Brown has urged the Korean Government to proclaim the opening of the two places without considering any obstacles diplomatically interposed from without.

News is now published that the recently alleged irruption of Russian soldiers at Un-kwi, on the north-east coast of Korea, has been followed by their withdrawal, and that the region is now quiet. We suspect that these soldiers never existed outside the imagination of the local officials, unless indeed we are to suppose that the Russians suffered last month from a temporary Berserker fit which drove them against every accessible part of Korea in pure wantonness of aggression.

It is stated that the Lumber Company has sent 300 Chinese coolies under the protection of 20 Russian soldiers to cut timber in the upper part of the Yalu Valley. The Company is to be congratulated on the facility with which it can obtain the services of troops for its log-collecting purposes.

The talk of a secret messenger recently sent by Li Keun-thaik to Port Arthur to "borrow" Russian soldiers in the event of an emergency, is revived in the form of a statement that Viceroy Alexieff's answer has been given, and that although the details can not be ascertained as yet, there is reason to believe that His Excellency has consented. The whole incident is swathed in mystery as becomes a secret mission and its sequel.

MESSRS. OISHI AND INUKAI.

These gentlemen having returned from their trip in China and Korea, are furnishing some interesting materials to Tokyo journals. They both deny that their journey has produced any change in their views: it has rather confirmed them. They are still

convinced that war is scarcely to be avoided and that Japan has no reason to shrink from it. Mr. Oishi believes that the works now being pressed forward at Port Arthur with the aid of a multitude of Chinese coolies are designed to render the place a safe retreat for the Russian squadron in the event of war, but inasmuch as any announcement in that sense would produce a dispiriting effect upon the Russians at large, various other pretexts are assigned. He notes that Russia is rapidly increasing her fleet in these waters, but he expresses doubts as to the quality of the personnel, and he points to the fact that with England maintaining an attitude of strict neutrality no stores of coal would be accessible to the Russian vessels and they must soon find themselves unable to keep the sea. In interviews with Viceroy Yuan and Chang the Japanese travellers appear to have convinced themselves that China would be actively on Japan's side in the event of a conflict. Viceroy Yuan they judge to be particularly resolute, and although they did not elicit any definite declaration from him, they carried away a confident faith in his determination. They are further of opinion that the idea of progress is making steady headway all over China, and it was a matter of sincere satisfaction to find that the Japanese who are engaged in various capacities throughout the Middle Kingdom have the entire confidence of the Chinese, and are successfully fostering the spirit of enlightenment. Mr. Inukai observed that whereas Japanese influence in Korea was very great alike in the field of politics and in that of commerce and industry, the substantial profits of the situation were reaped by foreigners. The Japanese acted the part of pioneers and had the usual reward of the pioneer, toil without commensurate reward: just as they had opened the path and seemed to be on the point of making a success, in stepped the foreigner with his command of unlimited resources, and the Japanese pioneer had to see others monopolise the fruits of the crop planted by him. Mr. Inukai found that in Tientsin the Japanese community was remarkable for orderliness and unity. Mr. Consul Ijuin appeared to be a very able official. None the less the special Japanese settlement there showed few signs of enterprise. It served only as the site for a few wooden shanties and much of it was wholly unutilized. At this point Mr. Inukai drifts into politics. He does not regard this stagnation of Japanese enterprise as attributable to either the people themselves or their consular officials. He lays the blame on the Government's policy of self-suppression; a policy which dispels Japanese nationals and restrains them from engaging in any large undertakings. Concerning Mr. Uchida, Japan's Representative in Peking, Mr. Inukai commends his diligence and intelligence, but damns him with faint praise and denies to him any pre-eminent place among the *Chefs de Mission* in Peking. All this part of Mr. Inukai's comments might have been written before he left Japan. Among Chinese officials he appears to have been struck mainly by Viceroy Yuan and Na Tung. The greatest political power is in the hands of Prince Ching, but Yuan and Na are men of much activity and resolution, and Yuan's influence derives considerable increment from the strong military force he has behind him. Mr. Inukai recounts that high Chinese officials greatly resent the hints often published by Japanese journals about Prince Ching or other prominent officials having accepted bribes from Russia,

and are profoundly pained by the matter-of-fact talk of the same publicists about the partition of the Chinese empire. His own observations seem to have convinced him that the generally rumoured lines of cleavage between Russo-philos and Russo-phobes in China are greatly exaggerated and that no such marked division of opinion exists. Another subject discussed by him is the arrangement recently concluded between Viceroy Chang and Mr. Uchida for subjecting to certain restraints all Chinese students privately visiting Japan for the purpose of studying military science, law, politics or sociology. He interprets this arrangement as indicating that Viceroy Yuan, who originated the reform movement in China, has been won over to the side of Kang Yu-wei's enemies, and is oppressed by a nightmare of rebellion and internal commotion in his country if Chinese students be allowed to imbibe undiluted draughts of Japan's atmosphere of free research. Mr. Inukai earnestly insists on the necessity of removing these restrictions, his opinion being that to educate the masses is much more important than to educate the chosen few.

YOKOHAMA STATISTICS.

We have received from Mr. Ichihara, Mayor of Yokohama, a copy of the "Summary of Yokohama City Annual Statistics," being the 1st volume of what we trust will hereafter develop into a valuable record issued year by year. The compilers in a prefatory note apologise for any errors that may have crept in and say that they will be pleased to receive suggestions for improvements; the only suggestion we have to offer at the moment is that a list should be inserted in future issues of the business houses, firms, and partnerships of foreigners, the compiling of which would be an easy matter if the Kencho officials would but co-operate. The book is divided into thirteen chapters or parts, dealing first with the History of the port, then with Meteorology; Land and Population; Education; Religion and Charities; Public Health; City Administration and Finance; Commerce; Manufactures and Industries; Banking, etc.; Communications; Police; Lighting and Water Supply.

From the Chapter on History we learn that when Commodore Perry landed at Uraga, Yokohama was a semi-deserted village, having only 87 dwellings, the denizens of which supported themselves by fishing or farming. The opening of Kanagawa, under the treaties of 1854 and 1855, took place on June 2, 1855, but Yokohama was not opened as a port till June, 1859. We append a few dates which should prove of interest, taken from the chapter under review:—

- 1859, June. Yokohama Port opened.
- " " First Noge-bashi built.
- 1860, April. Sales of raw silk: first transaction between foreigners and Japanese.
- 1862, August. British subject was murdered in a Japanese rebellion at Namamugi.
- 1863, March. Arrival of a British squadron consisting of seven men-of-war at the port caused excitement among the people.
- 1864, January. Opening of East pier.
- 1868, March. Restoration of the Imperial Government.
- 1870, November. First Iron bridge built.
- " " Japanese Newspaper founded.
- " December. Telegraph Office established.
- " " Jinrikisha made and operated.
- 1871, July. Post Office opened.
- " October. Gas Office established.
- 1873, September. Opening of the Railway operated from Tokyo to Yokohama. First traffic in Japan.
- 1874. Kuboyama Cemetery established.

- 1875, February. Branch of the Nippon Yusen Kaisha established.
- 1878, November. Yokohama Ward Office (Present City office) opened.
- 1880, February. The Yokohama Specie Bank opened to business.
- 1882. Commercial School established.
- " The Yokohama Chamber of Commerce established.
- 1885. Small-pox ravages (434 cases).
- 1886. Cholera in Yokohama: fatal cases, 2,199, total number of cases 3,087.
- 1887, September. The water works completed; first adoption of the foreign system in Japan.
- 1888, January, 31st. Large fire at Noge-cho: 1,120 people rendered homeless.
- 1889. Post and Telegraph office established.
- 1889, April. The law on organization of cities came into effect, the first election of the members of the city assembly.
- " December. Electric Light Plant opened.
- 1896, May. The breakwater of the harbour completed.
- 1899. Memorial Ceremony of Treaty Revision.
- 1899, August. Large fire in Kumocho extending over 27 cho; 15,000 people homeless, more than ten lives lost.
- 1901, April. Kanagawa and other suburbs having altogether 70,000 people, incorporated as the city of Yokohama.
- 1901, October. Hiranuma Station established.
- 1902, October. Pest first appeared.
- 1903, January. Mr. M. Ichihara, Ph.D., accepted position as Mayor in succession to the late Mr. Y. Umeda.

The area of Yokohama we learn is a little bigger than that of the city Kobe, covering an area of 1,608 square *ri*; it is 2 *ri* 7 cho in length, from Kanagawa on the north to Honmoku on the south, and from east to west extends 1 *ri* 21 cho 20 ken. The residential Japanese population in 1901 was 299,202, living in 54,674 houses; while the foreign population, exclusive of consular officials, totalled at that date 4,137 males and 1,652 females=5,789. In 1901 the amount of taxes collected in Yokohama was *yen* 1,185,331, showing an average burden per dwelling of *yen* 21.680 and per capita of *yen* 3.962. The taxes we note are steadily growing year by year. The expenditure, both ordinary and extraordinary, amounted in 1901 to *yen* 1,035,568. Seeing that the former foreign settlement has now been completely absorbed in the Japanese commune, it seems strange that no attempt is made to enumerate any of the public, or semi-public, bodies which still exist there, such as the Cemetery, the General Hospital, the Foreign Board of Trade, the charitable and religious organizations, etc. These, like the foreign business establishments, are entirely ignored, though they form a very integral part of Yokohama. It is a pity, too, that the figures in the returns do not deal with a later year than 1901; but a start has been made and henceforth we may expect more expedition. Meanwhile we congratulate the compilers upon the result of their labours.

DEATH OF MR. N. P. KINGDON.

News of the death of Mr. N. P. Kingdon, which occurred at an early hour on Thursday morning, will have come as a shock to a very large number of foreign residents in Japan. Mr. Kingdon was one of the oldest foreigners settled in this country, having come out here in 1863 after a somewhat adventurous career, great part of which was spent in Mexico, where he was once Master of the Mint at Lacateras. Some of the now veteran residents remember well the generous kindness and genial hospitality displayed during the sixties and seventies by this typical English gentleman who has just passed away. In those early days he was one of the first sportsmen in Yokohama; indeed as to the turf, and specially as to Japanese horses, he was an unquestioned authority, and his

stable was deservedly lucky. He was one of the promoters of the first Bluff race-course, which was laid out in the neighbourhood of the Public Hall, and he was one of the founders of the Yokohama United Club, which had quarters at No. 66 and later on the Creek.

As Dent and Co.'s agent and silk inspector Mr. Kingdon had his first place of business at No. 5, where the Club Hotel now is. Later he entered into partnership with Mr. R. S. Schwabe, and though the partnership was severed some years ago, the firm name remained. Mr. Kingdon was always exceedingly popular in every aspect that such a many-sided man could present. He was one of the soundest of business men and his advice was often invoked and, it may be said with safety, seldom refused. His Sunday evening dinner before age and increasing infirmities beset him, formed a recurring event in the "bourg," where the leading men were present and clever talk was the rule. He was President of the Yokohama United Club years ago and his picture in oils by Mr. F. Yates, R. I., and also as a crayon drawing, hang in the library and magazine room respectively of the Club. Latterly Mr. Kingdon divided his interest in horse-racing with yacht-sailing and with his late son Mr. King Kingdon owned and sailed craft that absorbed a large share of his attention day by day. As a prominent and well-known foreign resident he of course found a place in the old-time caricatures, first of Wirgman and later of Bigot, the latest being perhaps a sketch taken at the famous anti-treaty revision meeting, which doubtless old hands well remember.

The deceased gentleman was married to a Japanese lady, who predeceased him, and leaves one son, Mr. Arthur Kingdon, and a daughter, now residing in England, to whom our sympathies are extended.

THE LATE LORD ROWTON.

The late Lord Rowton was the first baron to hold the title. He was the second son of the Rt. Hon. Henry Corry, son of the second Earl of Belmore and of Lady Harriet, daughter of the 6th Earl of Shaftesbury, and was born in London on Oct. 8th, 1838. We take the following from *Men and Women of the Time*:—

He was educated at Harrow and at Trinity College, Cambridge, taking his degree in 1860. Called to the Bar at Lincoln's Inn in 1863, he practised for three years on the Oxford Circuit, and in 1866 was officially appointed Private Secretary to Mr. Disraeli, then Chancellor of the Exchequer. After Mr. Disraeli's defeat in 1858 he declined offers of public appointments which were made to him, and rendered voluntary service to that statesman till his return to power in 1874, subsequently continuing to act as Lord Beaconsfield's private secretary till his death in 1881. He accompanied Lord Beaconsfield to the Congress of Berlin, being then appointed one of the joint-secretaries to the Special Embassy of Great Britain, and, at its close, received the Companionship of the Bath. At the termination of Lord Beaconsfield's Government in 1880, he was raised to the peerage, taking his title from his estate at Rowton Castle in Shropshire. Lord Beaconsfield bequeathed to Lord Rowton the whole of his letters, papers, documents, and manuscripts, leaving it to his absolute discretion to destroy, preserve, or publish any of them, at such time as, in his uncontrolled judgment, might seem fit. It was at first inferred from the terms of the bequest that Lord Beaconsfield had left behind him some sort of diary or memoirs for publication. This, unfortunately, proved not to be the case, and it became evident that the only manuscript, the publication of which was distinctly contemplated by the testator, was that of "Endymion." This work was almost completed at the date of the signing of the will, and was afterwards published during the lifetime of the writer. Lord Rowton was chairman of the Rowton Houses Company, formed for the purpose of providing large and cheap hotels for poor single men of all classes in London.

VICEROY ALEXIEFF.

A Vladivostock telegram to the *Asahi Shimbun* says that the East Asiatic Council, which is to be directly under the Tsar, has been constituted with Viceroy Alexieff, the five Ministers of Home Affairs, Foreign Affairs, the Navy, War and Finance, the Vice-Chief Chamberlain and the head of the Mercantile Marine Bureau. Our Tokyo contemporary analyses these members of council and comes to the conclusion that three out of the eight are avowed supporters of Viceroy Alexieff's imperial policy, and that among the four whose complexion is less definite, two may be regarded as inclining in the Alexieff direction.

A telegram from Tientsin to the *Asahi* says that Viceroy Alexieff will leave for St. Petersburg on the 15th instant, and that the negotiations with Japan will probably be delayed in consequence. If the Viceroy meant what he said to our Port Arthur correspondent—whose letter, dated October 22nd, appeared in our issue of the 9th instant—his presence in St. Petersburg will not add to the chances of peace. But when the Viceroy declared that Russia would arrange with China about the evacuation of Manchuria, we can not reasonably assume that he intended to intimate entire indifference to Japanese opinion and Japanese demands. There are rumours that among certain Russian officials an opinion prevails in the sense that Japan is not minding her own business when she claims to have a voice in Manchuria's destiny. How would Russia have felt in 1895 if the Japanese had returned that answer to her when she formulated her celebrated proposition that the tenure of any part of Manchuria by a foreign Power must imperil the peace of the East? Yet at that time Russia had no shadow of interest in Manchuria that could compare with Japan's actually acquired rights. Japan was in military possession of the Liaotung Peninsula and of the whole coast from thence to the Yalu, and her permanent tenure of those districts had been formally conceded by the Chinese Government. Russia, on the contrary, had not a soldier in Manchuria, had not a ship in its ports and had virtually no trade with its marts. To her comparatively gratuitous protest the Japanese Government might have justly replied, "We have settled that with China, and your interference is superfluous." But Japan yielded to the representations of Russia, Germany and France. She did not yield without some effort to secure the situation. She asked from China a guarantee that no part of Manchuria should henceforth be ceded or leased to a foreign Power. Russia thereupon declared that she must consider such a demand as directed against herself, whereas she had no designs whatever on Manchuria; France pointed out that the demand, if persisted in, must offend Russia, and England sat with folded hands. So Japan had to dispense with all guarantee. Had she been in a position to insist upon receiving one, she would also have been in a position to retain the fruits of her victories. And it is with this record fresh in their knowledge that some Russian officials—among whom our Port-Arthur correspondent places Viceroy Alexieff—would "turn down" as unwarranted and meddlesome Japan's intervention in the fate of Manchuria. We require some confirmation before we construe Viceroy Alexieff's words in such a sense.

KING EDWARD'S BIRTHDAY

His Britannic Majesty's Minister and Lady MacDonald gave a garden party on the 7th instant to celebrate the King's birthday. The weather was not ideal, but happily the rain which had been hanging overhead all day, did not begin to fall until people were thinking of taking their departure, and even then there was nothing like a heavy downpour. Sir Claude and Lady MacDonald received the guests—of whom there were probably five hundred—on the main lawn, and after about an hour had been spent listening to music and witnessing juggling and other forms of entertainment, the party repaired to the eastern lawn where refreshments were served *al fresco* as well as in a large marquee. At the same time dancing commenced in the salons within and was kept up until half-past six. All nationalities were liberally represented and the Japanese mustered in marked numbers, among those present being Count Matsukata, Count Inouye, Count Okuma, Viscount Aoki, the Prime Minister, Baron Komura, the members of the Cabinet now in Tokyo, and many prominent officials and business men. It need scarcely be said that all the Chefs de Mission and the staffs of the various Legations were of the party, which was certainly one of the most numerous attended and the most animated ever given in Tokyo.

At noon on Monday the large fleet of warships now at anchor off the port of Yokohama fired a royal salute of 21 guns in honour of the anniversary of the birth of his Majesty King Edward VII. The weather was beautifully fine, almost too warm for the time of year, and the vessels, lying broadside on to the town, presented a very handsome and inspiring spectacle. Most of the merchant vessels in harbour were dressed rainbow fashion all day. Throughout Yokohama there was a liberal display of bunting and it must have been highly gratifying to every British resident to see how lavishly the purely Japanese portions of the city were decked out with Union Jacks, or the red or the white ensign, in conjunction with the national flag of the Empire of the Rising Sun. The usual official calls were paid by the higher functionaries of Yokohama upon the acting British Consul.

TO HAMLET.

Oh mighty soul! though set in mortal frame
Too fragile for thy stern appointed task,
'Twere hard from thee harsh Destiny should ask
The strength to avenge a murdered father's name,
And rouse a mother from her heartless shame;
Should call thee from thy mystic realm of thought,
To strive 'gainst ills the sins of others wrought—
And that, in failing, thou should'st bear the blame.

Yet those who know the conflicts of the soul,
And learn how reason points men to delay,
Will never blame thy sorry self-control;
For thou, they know, wert human, e'en as they;
Thy crisis came, as it must come to all,
Thou saw'st it not and, faltering, thou did'st fall.
* * *

CHANGES IN THE CHINESE MINISTRY.

Monday, November 9.

There have been further changes in the Peking Government, the names of Ying Kin, Sun Kia-ching and Chang Peh-hi having been added to the Administrative Board. It is also announced that the privilege of entering the enclosure of the Palace on horseback has been granted to Na Tung and Ying Kin.

The rumour is confirmed that all these changes indicate the adoption of a strong policy towards Russia; a policy advocated by Viceroy Yuan, who is said to possess the confidence of the Empress Dowager in an extraordinary degree. It is at any rate evident that the so-called Russo-phils have been removed from power, but how far the programme thus suggested will be carried, who will venture to predict?

Tuesday, November 10.

A circumstantial account of the incidents immediately preceding the removal of Wang Wen-shao from office is sent to the *Asahi Shimbun* by its Peking correspondent. We learn that the Court having received a written statement of the views simultaneously entertained by Viceroys Chang Chih-tung and Yuan Shih-kai with reference to the political situation, summoned Wang Wen-shao to the Palace on the 2nd instant and handed him this statement for perusal. Wang, having read it two or three times, said:—"I will proceed as here indicated." The Empress Dowager made no comment, but the Emperor, whose face showed that he felt much displeasure, addressed Wang, observing that his long acquaintance with and management of foreign affairs should have fitted him to deal with the situation, but that he seemed disposed to evade his responsibility by shifting it to other shoulders. Wang, much perturbed, explained apologetically that the weight of years had rendered him incapable of grappling with a crisis and that he hoped to be relieved of office. The result of this interview was a decree, issued on the 5th instant, which appointed Na Tung to take Wang's place.

Our readers will have remarked that the two men—Na Tung and Jung Ching—brought forward most prominently at this crisis are not pure Chinese. In connexion with this it is said that the Court has lost patience with Chinese officials, who show a marked want of patriotism and of willingness to accept responsibility, and that, consequently, the direction of affairs is now to be placed in Manchu hands.

Jung Ching—whose name has been hitherto read in Tokyo as "Yung Kin," a mistake explained by the difference between local and Mandarin dialects—is a Mongol. His record is that in 1898, having been up to that time a Reader of the Grand Secretariat, he was appointed Director of the Court of State Ceremonial; the following year he became Deputy Commissioner of Transmission, and in 1901 he received the office of Superintendent of the Peking Granaries. The general public had not been conscious of the special prominence he was attaining. Na Tung is a Manchu. He has held many high offices since he became Director of the Court of State Ceremonial in 1899. He was a Minister of the Tsung-li Yamen until 1901, but his connexion with that Department ceased on its re-organization in 1901. He was, however, appointed Acting Minister of the Board of Foreign Affairs in February of last year, so that his nomination to succeed Wang Wen-shao, who was a Minister of the Board, comes in not extra-

ordinary routine. The telegraph does not tell us whether Wang has also lost his post of Director-General of Railways and Mines.

LABOUR AND SHIPPING IN AUSTRALIA.

One of the most interesting speeches made in the House of Representatives of the Australian Federal Parliament with reference to the Industrial Conciliation and Arbitration Bill, was that of Sir Malcolm McEacharn, who, while generally supporting the measure, indicated directions in which important amendments were desirable. Speaking of the losses caused by strikes he quoted from the report of the Labour Department of the Board of Trade to show that the estimated annual loss in wages alone incurred through strikes in England—exclusive of the losses of the employers—is £1,500,000. The same authority stated that in 1892 there were 700 strikes, affecting 372,000 workmen; and that the loss which resulted amounted to £3,900,000. The report of the Commissioner of Labour of the United States showed that the losses incurred by the employés in twenty years through strikes in the United States were estimated at £55,000,000; whilst the employers lost more than £24,500,000. In Australia they had the shearers' strike and the great maritime strike. The shearers' strike alone cost the Queensland Government about £100,000 and the expense and suffering to the men and their families were very great. In the Broken Hill strike, which occurred in 1892, the wages lost to the men represented £200,000, whilst the temporary loss to the employers was £500,000. At the present time a similar dispute there was being settled by means of conciliation and arbitration. Were it not for the fact that a Conciliation and Arbitration Court had been established in New South Wales, he would undertake to say that there would now be a strike at Broken Hill quite as bad as that which occurred there in 1892. What, he asked, had been the effect of these big strikes upon the various States? How far had they been retarded in their progress? He ventured to say that it would be impossible to estimate the years that the States had been put back by the disputes which had occurred. At Newcastle, in New South Wales, the great strike lost that port the major part of its foreign coal trade—a trade which it has never recovered until this day. Moreover, these disputes proved nothing. Either the employer or the employés might have a perfectly just cause, and yet be defeated in a strike. Every one, therefore, favoured their abolition. It appeared to him that there were only three ways by which that object could be accomplished, namely, by voluntary conciliation, by compulsory arbitration, or by conciliation with the force of arbitration behind it, as was proposed in the measure under discussion. Voluntary conciliation had been tried, both in England and America, and had met with only a minimum of success. Sir Malcolm recalled examples of this, notably the great American coal strike which, he said, nearly resulted in civil war in New York and was terminated only by the intervention of the President. It had been said that the Bill was principally for the protection of those engaged in maritime pursuits, and the honourable member gave some interesting figures with reference to the Australian shipping trade. He estimated the steam tonnage engaged in the coastal trade of Australia at 190,000 tons and he put down the value of the vessels at £3,000,000, which included shore plant and other things that belonged to

the shipping business but the value of which was not actually in the steamers themselves. The earnings, including lighterage, towage, and the small coastal trade, he estimated at from £2,200,000 to £2,300,000 per annum. He put down the expenditure on wages arising out of repairs, at £1,100,000 to £1,200,000. The provisions, the supply of of which gave rise to a large amount of employment, he put down as worth £360,000 per annum. Then they must add the coal that was consumed and the labour in connexion therewith, the dues, the staff, insurance, and repairs, and all the other items with which it was unnecessary to deal. The number of seamen and firemen employed in the steamers belonging to the members of the federated steam-ship owners—leaving out those engaged in the river, bay, and small coastal trade—he estimated at 1,750. He did not think there were many foreigners employed in the coastal trade. He estimated the officers, stewards, etc., at 2,500, bringing the total number employed to 4,250, and the number engaged in the smaller trade he put at 1,750. There were 11,787 wharf labourers employed on the Australian coast, so that the total number connected with the trade was 16,787—and that figure did not include the enormous number of persons employed as carters and in the various small vocations that arose from that trade. Sir Malcolm cited figures to prove that the wages paid to officers on the coastal steamers were much in excess of those in operation on the P. & O., the Orient and the Norddeutscher Lloyd lines, and in reply to a question said he thought the rate of captains' wages on the coasting steamers would compare very favourably with those on the other lines. He went on to show how much higher were the wages paid in the Australian trade than those in any other part of the world, and speaking more particularly with regard to the bill, expressed the opinion that five instead of seven years should be the term of members of the Court to be appointed under the bill; declared himself in favour of excluding lawyers from cases where purely business matters were in dispute, and in conclusion said he thought that with the amendments he had indicated the bill would be well worth adopting as an experiment, because the prevention of even one strike would justify the passing of such a measure. At any rate he believed that in supporting it he was studying the best interests of humanity.

WHY WE WEAR CERTAIN GEMS.

Most people will assent to the statement that the two thousand years which have been passed in evolving what there is of Christian civilization, count for little in the scales as compared with the brief moment that suffices to dissipate the result of those centuries, and to cause the product to retrograde to the barbarian or even the savage. It seems as if this truism never appears so conspicuously true as when we think of the superstitions of our ancestors, which either persist in fact or indirectly influence the actions of those who, we usually think, are philosophic of philosophers. How many men quite unconsciously take note of a white horse, who would scout the idea that it will bring them good fortune because most people in England believed so not many centuries ago? How many count the steps when they go up a stairway, forgetting (perhaps not really knowing) that once upon a time it was believed an odd number would bring good results to whatever mission they had to execute at the top

of the flight? How many enter a doorway with the left-foot, influenced by the old superstition that it will bring luck? How many prefer to see the new moon over one shoulder rather than the other or without an intervening obstacle, such as a pane of glass? And how many prefer, they do not know just why, to leave a room or a house by the same door they entered? But perhaps the most persistent of superstitions are those connected with the wearing of gems. The very fact that we do wear them is indirectly the result of superstitions which not one in a thousand know anything about. From time immemorial man has attributed to certain gems miraculous powers, talismanic, curative, or supernatural. Certain of them were thought by our remote ancestors to preserve them from the assaults of vampires and all similar terrors; others were believed to shield them from the powers of sorcery, and when to-day so many mothers like to see their babies adorned with a coral necklace or pin, they rarely know that it was believed not very long ago throughout the known world, to be a charm against diseases of childhood. Coral is even now very extensively worn in Italy as a preventive against the "evil eye."

Nearly all women, and quite as many men, look upon a certain stone as especially appropriate to them, because that one happens to be their "birth-stone;" that is, in ancient times a particular gem was believed to be potent for good during a particular month. This survival of an old superstition appears to be more conspicuous in one sex than the other, simply because men have gradually discarded the extensive use of gems. Yet there are very many men who wearing finger-rings, would never dream of putting a particular stone upon their hands because it is not their birthstone. These birthstones, under proper astrological control, were supposed to have a mystical influence over the twelve parts of the human anatomy (still recognised by astronomers as the "Twelve Signs of the Zodiac"). They were more potent if the natal day of the wearer corresponded with its particular sign, and were supposed to attract, at all times, propitious influences and avert malign effects. The more important stones in this context were: Garnet, Amethyst, Blood-stone, Sapphire, Agate, Emerald, Onyx, Carnelian, Chrysolite, Aquamarine, Topaz, Ruby. A closely related idea is found in the twelve stones which, according to the Jewish cabalists, when engraved with an anagram of the name of God, were supposed to have a mystical power over, and a prophetic relation to, the twelve angels. The Jewish stones are: Ruby, Topaz, Carbuncle, Emerald, Sapphire, Diamond, Jacinth, Agate, Amethyst, Beryl, Onyx, Jasper. These stones also had reference to the twelve tribes of Israel, the twelve parts of the human body, twelve hierarchies of devils, and other things, always in groups of twelve. Hence came the connection of certain stones with the twelve months of the year. The twelve Apostles were represented, symbolically, by precious stones: jasper, St. Peter; sapphire, St. Andrew; chalcedony, St. James; emerald, St. John; sardonyx, St. Philip; carnelian; St. Matthew; beryl, St. Thomas; chrysoprase, St. Thaddeus; topaz, St. James the Less; hyacinth, St. Simeon; amethyst, St. Matthias.

While every stone which, under the most liberal interpretation of the word, could be called a gem, was supposed to be emblematic of certain attributes, and to possess definite powers for good or for evil, there are now

comparatively few which are reckoned as true gems, and it will be found interesting to see what the ancients thought of some of the most important of them, so that we may compare their opinions with the prevailing ideas of the present time. The authority for the various antique opinions is not given, since they may easily be referred to. The amethyst was emblematic of sincerity. As an amulet it dispelled sleep, sharpened the intellect, prevented intoxication, gave victory to soldiers, and protected the wearer from sorcery. It lost its colour in contact with, and was an antidote for, all poison. The bloodstone was symbolical of wisdom, firmness, and courage. Used with the proper incantations, its owner was enabled to foretell fortune, and if rubbed with the juice of the heliotrope, it rendered its wearer invisible. The stone brought safety and long life to its possessor, stopped the flow of blood, and was an antidote for poison. As an indication of the persistency of superstitions, even among those who taught that such were evil, it may be noted that the Bishop of Rennes, in the eleventh century, writing on the talismanic efficacy of stones, asserted that the bloodstone endows its bearer with the gift of prophecy and renders him proof against poison. The Cat's-eye cheers the mind, cures pallor, brings on a safe delivery in case of protracted labour, especially if tied to the hair of the patient. Applied locally, it causes infants suffering from the croup to bring up phlegm. The Hindus group the cat's-eye into four castes, according to their quality, all of which are replete with lucky signs. The diamond, being of all gems the purest, hardest, and most brilliant, was considered to be the most powerful in spiritual influences and was consecrated to all that was holy and heavenly. It was symbolical of constancy, purity, and innocence, and hence was early used in betrothal rings. To the ancients the diamond represented inexorable justice and unchangeable fate; hence the judges of Hades were described as having hearts and bosoms of adamant. In Europe as late as 1700 the diamond was thought to be the most potent talisman against poison, pestilence, witchcraft, etc. Of this gem the legends and superstitions have filled many stout volumes. The emerald was emblematic of happiness. As an amulet it was a preserver of chastity, and betrayed or punished its violation by flying into pieces or losing colour. It was much used by astrologers for the purposes of divination. Mundella, a sixteenth century physician, calls attention to the purchase of a "fine emerald for use as a remedy in the treatment of a disorder which he [a certain Prince] was troubled with." One very quaint statement made as to the superstitions connected with the emerald, is that the possessor of one would never become poor. This gem, too, occupies a conspicuous place in literature. The garnet was emblematic of constancy. Its virtue was to dispel poisonous and infectious airs. During the Middle Ages it was considered to possess the same marvellous and medicinal properties as the ruby, though to a less degree. It gave and preserved health, drove away vain thoughts, and reconciled differences between friends. The agate was emblematic of health and wealth. It was considered an enemy to all venomous things, and was supposed to assuage thirst when held in the mouth, to give victory to its wearer, to repel storms, to sharpen the sight, to preserve and increase strength, and to render its wearer gracious and eloquent. The opal was

symbolical of hope. It was supposed to indicate the state of health of its wearer by change of colour, losing its brilliancy if the wearer were ill and vice versa: this superstition persists to this day among people of education and refinement. The idea that the opal is unlucky is based on a Teutonic superstition and is comparatively modern. The pearl was emblematic of purity, beauty, and nobility; yet this gem has given rise to some of the most conflicting superstitions: a French bride will not wear it on her wedding-day, since it would bring tears to her married life. The theories which have been advanced by the ancients to account for the existence of pearls are both numerous and extremely amusing. The ruby was emblematic of love. It was considered a sovereign remedy, an amulet against plague, poison, evil thoughts, nightmare, and diverted the mind from sadness and sensuality. It forewarned the wearer of the approach of any misfortune by loss of colour. Arabian and Persian writers taught that the wearer of a ruby obtained peace of mind and strength of brain. The sapphire was emblematic of wisdom. If placed on the heart, it was supposed to bestow strength and energy. Because of its extreme coldness it was thought to preserve the chastity of its wearer, hence it was especially suited for ecclesiastical rings. Many superstitions connected with this gem exist at the present day. The sardonyx was symbolical of conjugal bliss. It rendered its possessor virtuous, cheerful, and agreeable. The topaz was symbolical of friendship. It cooled boiling water on being immersed in it; became opaque on contact with poison; restrained anger and desire; cured insanity; checked the flow of blood, and averted sudden death. The turquoise was emblematic of success. It was, and is, highly valued by all Orientals, and is worn by them to insure health and success. It was supposed to preserve the wearer from injury through accidents. In the presence of poison the stone sweated profusely, a property thought to be characteristic of many of the noble gems.

By those who are in January born
No gems save *garnets* should be worn;
They will insure you constancy,
True friendship and fidelity.

The February born will find
Sincerity and peace of mind—
Freedom from passion and from care,
If they the *amethyst* will wear.

Who on this world of ours their eyes
In March first open, shall be wise,
In days of peril firm and brave,
And wear a *bloodstone* to their grave.

Those who in April date their years,
Diamonds should wear, lest bitter tears
For vain repentance flow. This stone
Emblem of innocence is known.

Who first behold the light of day
In spring's sweet flowery month of May,
And wears an *emerald* all her life,
Shall be a loved and happy wife.

Who comes with summer to this earth,
And owes to June her day of birth,
With ring of *agate* on her hand,
Can health, wealth, and peace command.

The glowing *ruby* should adorn
Those who in warm July are born;
Thus will they be exempt and free
From love's doubts and anxiety.

Wear a *sardonyx*, or for thee
No conjugal felicity;
The August born without this stone
'Tis said must live unloved alone.

A maiden born when autumn's leaves
Are rustling in September's breeze,
A *sapphire* on her brow should bind,
'Twill cure diseases of the mind.

October's child is born for woe,
And life's vicissitudes must know;

But lay an *opal* on her breast,
And hope will lull the woes to rest.

Who first comes to this world below,
With dull November's fog and snow;
Should prize the *topaz* amber hue,
Emblem of friends and lovers true.

If cold December gave you birth,
The month of snow and ice and mirth,
Place on your hand a *turquoise blue*—
Success will bless you if you do.

THE "TOKYOKU-MONDAI RENGU KONSHIN." KAI."

This long name—friendly meeting of persons associated to consider the question of the situation—was convened by thirteen gentlemen—among them being Messrs. Shimada, Taguchi, Zumoto, Kuroiwa, Sugawara, Ooka, Minoura, all newspaper editors—and held in the Imperial Hotel at 5 p.m. on the 10th instant. About 200 persons attended, and when we say that they included Baron Shibusawa, Viscount Miura, Viscount Akimoto, Baron Mayejima, Mr. Masuda Ko, Mr. Shiba Shiro, Mr. Kato Masayoshi, Mr. Sugita Teichi, Mr. Komuchi Tomotsune, Mr. Takata Sanaye, Mr. Hirooka Kotaro and so on, it will be seen that the assembly represented an influential section of public opinion. Viscount Miura was voted to the chair. Mr. Shimada Saburo opened the meeting by declaring himself an advocate of peace, and a man prepared to make large sacrifices for the sake of peace. But he could not accept peace at any price, or a peace that represented a mere momentary patching up of difficulties. Eight or nine years ago Japan had obtained such a peace, and had thus sown the seeds of a crop of troubles which she was now reaping. On that occasion Japan has been obliged to surrender Liaotung in the alleged cause of peace. If its partial occupation by Japan then constituted a menace to the tranquillity of the Orient, was there now no such menace in its complete occupation by the Great Northern Power? Already they knew that there was. Their enterprises were impeded, their business was interrupted, and if the crisis were again tided over imperfectly, a heavy legacy of sorrows would be bequeathed to the country. Japan has the heaven-sent mission of preserving the peace of the East. She should have fought in 1895 to assert that mission. Now a second time the occasion presents itself. It will not present itself a third time. She has justice on her side; she has public opinion on her side; she has the sympathy of the nations, and the situation is in her favour. Heaven indicates the path she should pursue. No country loves peace more than America, yet America does not hesitate to fight when the free pursuit of peaceful trade and industry is imperilled. Japan must eschew any imperfect peace that has in its bosom the seeds of future and larger troubles. There is no room for farther hesitation. The country should rise as one man and urge its officials to adopt an unflinching course.

Viscount Miura declared that the meeting was constituted irrespective of parties or coteries; that it comprised all shades of opinion, and that it must be regarded as representative of the nation. Therefore its opinion would have corresponding weight.

Mr. Ooka Ikuo then read the following resolution:—"We believe that to suffer the situation to remain unsettled as at present is not the way to safeguard our country's interests or to preserve the peace of the Far East. Therefore the whole country unites in urging that the officials concerned have

recourse at once to a decided policy. (*Sumiyaka ni dansen naru shochi ni ideshimen koto wo kisu*.)

This resolution was passed without a dissentient voice and amid universal acclaim, men like Baron Shibusawa and Mr. Masuda distinguishing themselves by the vigour of their applause. The meeting then adjourned to dinner and broke up at half-past eight o'clock.

Dansen naru shochi is the expression used in the resolution unanimously adopted by the meeting on the 10th instant in the Imperial Hotel and reported in these columns on the 11th. It is an expression which may signify the *ultima ratio*, or may be read merely in the sense of "resolute procedure." Probably it was chosen because of this ambiguity, inasmuch as many of the most influential men at the meeting would not have endorsed a declaration in favour of immediate war. The *Kokumin* answers the terms of the resolution if read in a belligerent sense, but rightly, as we think, arrives at the conclusion that importance really attaches not to the exact phraseology employed but to the significance of the meeting itself. When such a meeting takes such a line the plain inference is that the nation is weary of the long protracted negotiations, and that its patience will break down altogether if they be continued without a speedy result. Certainly we do think that the people's patience is surely tried. We ventured to express that opinion some time ago, and by some local newspapers we were strangely interpreted as having declared that war was assured. To such interpreters it would perhaps be idle to point out the difference between saying that patience is nearly exhausted and saying that it is actually and completely exhausted. Our own fear—and it must be the fear of every thoughtful observer—is that the situation, if it remain much longer undefined, may at any moment be carried beyond the reach of diplomatic control. We are very far from predicting such an issue, but to deny the danger would be fatuous. The *Kokumin Shimbun* says that the situation has now been carried very close to completion, and that the Authorities will surely put forth their full strength to achieve the remaining portion.

"THE EDUCATIONAL REFORMATION OF CHINA."

That is the title of a short article in *The Independent* of Oct. 15th. It is written by Mr. Leong Kai-cheu, for whose head, according to the editor of *The Independent*, the Empress-Dowager has offered 150,000 yen. We do not know why the figure should be stated in yen, but it is. Mr. Leong, under these circumstances, is not a friend of the Empress-Dowager, and frankly speaks of China's "yoke of tyranny" being "particularly felt under the present illegitimate rule of the Empress-Dowager." At the same time he says "as a body we defy her." The "body" to which he here alludes is the Chinese Empire Reform Association, organized under Kang Yu-wei with the Emperor's approval in 1898. Kang was president of the Association and Leong was its Vice-President. Many people imagine that the deposition of the Emperor and the beheadings and persecutions inaugurated by the Empress-Dowager put an end to the movement. Leong says not. He declares that it is going on vigorously and that many of the principal provincial officials sympathise with

it, though they are obliged to hide the sentiment. After describing how the Emperor's warnings saved Kang Yu-wei's life by inducing him to fly from Peking, and how the British Consul at Tientsin secured for him a safe passage to Shanghai whence a British man-of-war conveyed him to Hongkong, Leong proceeds to make the following interesting remarks:—

My own life was saved by Marquis Ito, ex-Prime Minister to Japan, and through his authority I escaped to Japan. Since that time Mr. Kang Yu-wei and myself have been carrying on the work abroad and also in China through our trusted agents. We have succeeded in arousing the Chinese people everywhere. The movement meets with especial enthusiasm and support in this country, where the Chinese are better able, by actual demonstration, to understand and appreciate the value of education. I first landed at Vancouver, where Mr. Charles Yip Yen was appointed president of the association for the Dominion of Canada.

Our funds are drawn from voluntary contributions and from membership fees, which are nominally placed at \$1. Though the members of our association run into the millions, our chief revenue is obtained from generous gifts on the part of the many wealthy Chinamen who have cast in their lot with us at home and abroad.

I have often been asked whether the Boxer movement is in any way, directly or indirectly, connected with our work. Most decidedly not. Originally the Boxers were bands of robbers who preyed upon travellers much as the brigands of badly governed countries. Owing to national poverty and disorganization these robber bands could not be suppressed and increased rapidly. During the late uprising the Empress Dowager, who hates all foreigners because she fears the introduction of advanced ideas, encouraged the Boxers to drive out the "Western Invaders" and recognized them, unofficially, but none the less emphatically, as a part of her soldiery, thus precipitating the conflict with the allied Powers which threatens the dismembering of the Empire.

For obvious reasons I cannot describe in detail or statistically the extent or character of our work in China, nor name the localities or men most friendly to our movement. I may say, however, that the interior provinces are the most hostile, and in these we find it necessary to work very, very quietly. We have a number of newspapers allied to our cause which are exerting great influence. We have established numerous schools where they are most needed and are circulating widely all sorts of educational literature. We shall continue this work and increase its scope as rapidly as conditions warrant, and until our ideal of religious and political liberty is realized. This will not take as long as might be imagined. The Empress-Dowager is an old woman and cannot live much longer. With the resumption of sovereignty by the Emperor, we shall carry on our work under the protection of the Crown, and, once fairly started, shall be enabled to survive any political upheaval that may arise.

China is working its way, slowly but surely, toward the light of a far greater civilization than it has ever enjoyed before, and I hope to live long enough to see it recognized among the world's foremost nations.

ART AND ACTUALITY.

The typical American of the caricaturist, the world over, is a gaunt, cadaverous individual of a stature long drawn-out. We all know him on sight, and yet after a somewhat extensive acquaintance with the masculine products of the land of Brother Jonathan we must confess to never having met in the flesh a specimen of the "typical sort." Strangely enough the only President of the United States who by any possibility can be said to meet the bill was Abraham Lincoln. He was a lean man all his days, but the worries that attended the years of his Presidency made him if anything more cadaverous still. Since Abraham Lincoln the Presidents of the United States have all been big, burly men, as though the nation had agreed with Julius Caesar in that famous colloquy with Mark Antony:—

Let me have men about me that are fat;
Sleek-headed men, and such as sleep o' nights;
Yon Cassius has a lean and hungry look;
He thinks too much; such men are dangerous.

Mr. Roosevelt's closest friends deny that

he weighs two hundred and twenty pounds, insisting that he tips the level at 196 pounds, which is about the proper weight for a man of his height and years. General Garfield and Mr. Cleveland were heavier men, perhaps at his age; Mr. McKinley was much inclined to stoutness, and so was Mr. Arthur; General Grant and Mr. Harrison were reasonably fat, as were Mr. Johnson and Mr. Hayes. But American Presidents, from George Washington downwards, have been believers in St. Paul's advice, "Be ye temperate in all things." They have been men of moderation both in food and drink, and many resorted to exercise in an effort to preserve health and strength. Not another one of them, however, has been a practiser of athletics and strenuous exercise to the extent that Mr. Roosevelt carries out his theory at every opportunity, and probably none of his predecessors had such physical vigour as Mr. Roosevelt enjoys.

But if the typical American does not exist outside the imagination of the caricaturist, what must be said of that other type which American illustrators have made familiar to our eyes in the pages of magazines, illustrated journals and books—the typical American girl? She also, it must be acknowledged, does not exist outside the imagination of her creators. This is a fact, painful though it be to write it, which the press of America recently went out of its way to print, and then supported its ungallant declaration by proofs the truth and substantiality of which could not be controverted. As a witty American speaker said at one of the Yokohama Literary Society's meetings last year, "America does not export the typical American girl, because she doesn't produce her. Gibson does his best to give our girls an idea of what they should be like, but unfortunately they can't work up to him."

ENGLISH VITAL STATISTICS.

The blue book issued recently by the English registrar-general gives the latest vital statistics available for England. As summarized by the London *Daily News* the most interesting part of the report is that dealing with the marriage rate. This was 15.9 per thousand of the population in 1901 as against 16.1 in 1862, 17.6 in 1873, and 14.2 in 1880. There has been a decided decline in the marriage of minors. "Twenty-five years ago, in every thousand marriages, 77.8 of the husbands were under age, and 217 of the wives. In 1901 the proportions had declined to 50 and 160 respectively. This is excellent. There is no more fruitful source of misery than child marriages, and the disposition to wait until years of discretion is a satisfactory sign of the times. It is gratifying also to watch the gradual disappearance of the illiterate. He is still with us, but he is fast approaching the vanishing point, as the following figures indicate:

Signed by mark in 1,000 marriages.

	Husbands.	Wives.	Both.
1876-80	148	199.8	74.6
1901	95	29.0	8.0

The women still preserve a bad eminence in illiteracy, but another decade or two will make the mark in the marriage register of history.

When we turn to the vital statistics we find decline everywhere. The birth rate, 28.5 per 1,000 of the population, is the lowest on record; the death rate 16.9 per 1,000, the lowest but one on record. In connection with the birth rate it is remarkable that the fewest births in proportion to population seem to be among agricultural

peoples, the greatest number in the mining districts. For example, we have a birth rate of 22 in Sussex and Westmoreland, against 36 in Durham, 34 in Monmouthshire, and 32 in Staffordshire, Northumberland, and South Wales. In regard to illegitimacy there is a decline to 39 per 1,000 births, and in this matter one must congratulate Essex in having the cleanest bill in England and Wales. Perhaps it would be too much to assume that it is the most moral county, but its rate of 26 compares strikingly with those of Shropshire and North Wales (59), Herefordshire (61), and Norfolk (64). For the whole period 1838-1901 the annual rate of mortality has been 21 per 1,000 of the population.

NOTES ON CURRENT EVENTS.

The funeral of Mr. Kataoka Kenkichi took place in Kochi on the 5th instant in the Christian Church, and a simultaneous commemoration service was performed in Tokyo at the Kanda Seinen-Kan. In Kochi about ten thousand mourners assembled, and in Tokyo about a thousand, a number of foreigners being conspicuous in both instances. In the latter city appreciations of the deceased were read by Mr. Sugita on behalf of the Seiyu-kai, and by Mr. Minoura on behalf of the Progressists.

According to present appearances Russia will have a fleet of about four hundred thousand tons in the Far East at the close of 1906 or the beginning of 1907. The *Fiji Shimpō* takes that fact as the basis of a leading article written in its usual convincing style. Possibly Russia's financial perplexities may interrupt her programme; possibly she may find difficulty in manning such a squadron; possibly European complications may hamper her. But it is not for Japan to rely on such fortuitous contingencies. Japan must rely on her own readiness. Her second programme of naval increment has been concluded. She is now about to enter upon her third. That means that for some 18 months hence no additions whatever will be made to her fleet. And in the meanwhile Russia's squadron will be steadily growing. Next year its strength will exceed that of Japan's navy. There is nothing for it but a determined effort. The present eleven-year programme must be shortened to three years. Some may regard such a proposition with alarm. Yet it would only involve an outlay of some thirty million yen annually, whereas if war were forced on Japan she would have to expend from 200 to 300 millions. The insurance of strength is the best economy conceivable. Thus the *Fiji*.

The *Asahi Shimbun* has a telegram from Tientsin saying that the British Thibetan Frontier Commission has been grossly insulted, and that, as a consequence, Colonel MacDonald is about to lead a large force across the border. It seems strange that news of such importance should reach us via Tientsin.

Some idea of the enormous size of the capital of the British empire is given in the thirteenth volume of "London Statistics," constituting the County Council's report for 1902-3, and covering the whole field of the Council's work. The population of the administrative county is given as 4,536,541, and of Greater London, which includes the areas of the City and Metropolitan Police, and of "every parish the whole of which is within fifteen miles of Charing Cross, or of which part is within twelve miles of Charing

Cross," as 8,581,402. This population, it may be noted, is being added to yearly to the extent of more than 20,000, twenty per cent. of whom are foreign-born. This means, of course, a gradual extension of the limits of "Greater London," now rapidly overflowing into the more distant suburbs. Thus the increase in the case of Fulham and Wandsworth is at the rate of 49 per cent., and of Wimbledon at the rate of 61 per cent. London's financial burden is in proportion to its size, for we read that the debt secured on the rates amounted in March, 1901, to £49,910,029; in March, 1902, it amounted to £54,257,005. Truly big are the interests with which the County Council has to deal; and proportionate seem the methods which it is obliged to adopt to deal adequately with them all. Not the least interesting of the smaller points touched in the volume under notice is the information about the places where the 81,000 marriages of the year took place. It is surprising to see that only four-and-a-half per cent. were solemnised at Nonconformist places of worship, while as many as seventy-two per cent. took place at the Established Church. The figures do not carry out an assertion lately made that the popularity of the registry office was on the increase.

The inexpressibly wearisome squabbles of the Street Railway Company seem to have at length reached a natural issue, namely, that the shareholders themselves are to take the matter in hand. They will hold a general meeting on the 25th instant to elect 10 new Directors or to re-elect the old ones, and they will then be asked to vote a solatium of 30,000yen to the outgoing board. Let us hope that R.I.P. may now be written over their unworthy wrangle.

The annual dinner of Cambridge graduates and degree possessors took place in the Bankers' Club on the 5th instant. Barons Suyematsu and Kikuchi were the chief promoters, and among those present were Count Matsukata and Mr. Hamao, both of whom have honorary degrees conferred by the University. Sir Claude MacDonald was the guest of the evening and the gathering appears to have been of a most cordial description.

It is reported from Nagasaki that one of the steamers of the Russian Volunteer Fleet ran on a rock in the neighbouring sea, and that, her boiler exploding, three men were killed and one severely injured. The name of the vessel is the *Yaroslavl*.

Writing in the first week of October, the *Independent* had this to say of the man who has defeated Mr. Seth Low in the election for Mayor of New York:—"Satisfactory as he may be to the rank and file of Tammany, there is nothing about this young man, Congressman George B. McClellan, that can commend him to Reform Democrats. His nomination was undoubtedly 'suggested' by Croker, from that peaceful dairy farm in distant Berkshire, where he plays the rôle of an English squire. To Croker Mr. McClellan owes his seat in the House. At this Boss's bidding he shifted easily from gold to silver. In the last campaign he publicly defended all the Crokerism and foul Deverysm of Van Wyck's administration. That carnival of indecency and corruption was, he asserted, 'a splendid government,' and in no part of it was there anything for which he should 'apologize.' To gain independent Democratic votes for McClellan, and incidentally to punish the

complaining and aged Boss of Brooklyn, the Tammany leader tempted Grout and Forney. They fell. To accept Tammany nominations under the restrictions clearly indicated in their letters of defense to the leader of the reform party, was nothing short of treachery. They are now on the Tammany ticket with McClellan, and they are to be removed from the ticket of the Fusionists, where their names would never have been placed if it had been known that they were engaged in negotiations with Murphy.

THE PLAGUE.

Mr. Ichihara, Mayor of Yokohama, is opening a public subscription for the relief of the unfortunate sufferers by the plague prevention measures now being conducted in certain quarters of this City. Sums of 10 sen and upwards will be received and thankfully acknowledged by the Yokohama City Office. The Mayor in fixing the limit at such a low figure is animated with the desire to make the subscription popular and such as every person in the community can contribute to. He will close the list on November 30th.

While on this subject we would respectfully suggest to Mr. Ichihara that now is a favourable opportunity for removing the pest hole at Kame-no-hashii which has been so frequently alluded to in our correspondence columns. It is a scandal which the Sanitary Authorities should wipe out at once, and we can assure the Mayor that the foreign community will respond much more readily to his appeal if it be known that he will take measures to remove the rubbish barges and the unspeakable filth accumulated at this spot to a place less frequented by the public at large.

Two cases of plague appeared on Nov. 5th at Koyasu. The patients are sons of a farmer named Y. Kayama. One died on the night of the 5th, but the other was removed to Manji Hospital.

A case of plague appeared on Nov. 5th at the village of Koyasu near Kanagawa. The patient is a man named H. Kayama, 42 years old. He died the same night.

The sanitary authorities were to remove, on Nov. 7th and 8th, 713 inhabitants of Matsukage-cho, to the Nagahama Quarantine station in order that they should undergo disinfection and thence be removed to the isolation house at Minami-Ota. The local people have presented to the Kencho a petition requesting (1) to be assisted with half the amount of their living expenses for sixty days after the segregative measures are abandoned; (2) to replace the property damaged in the disinfection; (3) to purchase the whole of the goods stocked in their dwellings; (4) to give the sufferers the medical treatment at official expense; (5) to supply the people in isolation with better food; and (6) the expenses of removal to the isolation house to be paid by the Kencho. The three latter demands were accepted by the Kencho but the others were refused.

To-day and to-morrow (the 9th and 10th) the people at Urashima-cho and Koyasu are to be transferred to Nagahama and thence to the isolation house at Minami-Ota.

A case of plague was again reported, on Nov. 10th, at Yoshihama-cho, near Kame-no-hashii bridge. The patient was a young girl named Haru, 9 years old. She died on the night of the same day at the Yokohama Hospital.

The sanitary authorities commenced on Nov. 12th to burn over 160 houses having thatch-roofs at Urashima-cho, Kanagawa, and at the village of Koyasu.

Y. Iseno and two other inmates of the isolation house, Minami-Ota, Yokohama, escaped on the night of Nov. 10th by breaking through the enclosure.

EDWARD THE PEACEMAKER.

AN interesting custom among the peoples who inhabit the British Isles—a custom whose origin belongs to a time to which the memory of man runneth not back—is the bestowal by the popular voice of a title upon such of their **KINGS** as make an impression, whether for weal or woe it matters not, upon the somewhat sluggish imagination of the nation. These titles, needless to say, are not officially engrossed upon the Acts of the various Kings, but nevertheless they linger in the memory better than all the pedantic phrases of the State scribes, for in each and every case they hit off the leading, or distinguishing, characteristic of the men to whom they were applied. In the lists of the Saxon Kings we find one the recipient of a nickname which historians of the present day deem to be merely a mistranslation from the old Saxon tongue; still for all that the man in the street will perpetually recall him as **ÆTHELRED** the Unready. The Saxon line of our Kings practically expired with **EDWARD** the Confessor, while the incoming Normans began appropriately with **WILLIAM** the Conqueror. His son is better known to the average schoolboy by the cognomen of **Rufus**, rather than as **WILLIAM II.**, and the last of the race, **STEPHEN**, some of us know as the Disturber. The second of the Angevin Kings will for ever shine out a heroic figure on the pages of English story, his grave faults of character notwithstanding, by reason of his popular appellation—the Lion-hearted; while his brother **JOHN** is as famous for his nickname of Lackland as he is for being the reluctant grantor of Magna Carta. The Plantagenets have on their bed-roll a Longshanks; the Scots have a **ROBERT** the Bruce, **JAMES** the GABERLUNZIE, etc., and so we might go on all through the stirring pages of history until we come to the more placid days of the House of Hanover. These furnished us with a Farmer **GEORGE** and with the First Gentleman of Europe—though the latter was distinctly a title of derision. The house of Coburg, which now occupies the Throne, began with the gracious lady who undoubtedly will be known to posterity as **VICTORIA** the Good; and who shall say that the name was not thoroughly well earned during her long, useful life? Public opinion seems already to have decided upon what we shall call her successor, and his title, we think, is the proudest of any in all the long line of popular names bestowed on the British Kings. It is **EDWARD** the PEACEMAKER. Coming to the Throne in the plenitude of his powers, with a long and ripe experience of men and things already behind him, possessing gifts but little understood or even divined by the nation at large, it must now be freely acknowledged that in the two short years of his reign, **EDWARD** the SEVENTH has risen to the supreme level of his unique opportunities and more than justified the high hopes formed of him by those closest in touch with the inner life of

the Royal Family. The writer of this article, still far on the sunny side of forty, can remember when the **PRINCE** of WALES was looked upon with distrust by the great and preponderantly influential middle-class section of the British Isles, and looking back upon those years it seems passing strange that the nation should have been so egregiously misled in its rough and ready estimate of the man. But the feeling of mistrust, even positive dislike, was deep and sincere and well can we remember how a pious, deeply stirred Nonconformist divine presiding at a public meeting in the Eastern Counties, denounced the heir-apparent as a profligate, a gambler, a frequenter of race-courses and other questionable resorts, a man and a prince who sullied the fair fame of England by his flagrant disregard of the purer ideals of life and by his scandalous actions. Time has brought its revenge. Even the most intolerant of his former traducers now gladly acknowledge that their **KING** is worthy of the high position to which under Providence he has been called. Perhaps the long years of obloquy and misunderstanding served a higher purpose than we dreamt of at the time in fashioning and moulding the character of our **KING**. He has passed through the ordeal and is the better for it. But to consider wider subjects. When **EDWARD** the SEVENTH came to the Throne he found the relations between his own country and France strained and fretful; Italy stood coldly aloof, repelled by England's attitude at the time of the Adowa disasters; Portugal also was hurt at the want of consideration shown her at various times and in divers places; while, coming nearer home, the pacification of Ireland seemed more hopelessly impossible than ever. But to-day, mainly through the personal intervention of the **KING**, all this is changed and we find "our ancient enemy" sending a commercial deputation over to London, and London returning the compliment; treaties of arbitration exchanged between the two countries, while the **PRESIDENT** of the Republic has received from the hands of Londoners a reception heartier than any ever before bestowed upon a visiting potentate. Italy—alike in the Quirinal and the Vatican—is once more in friendly accord with English policy; Portugal is again in her ancient place as our oldest ally, and one and all have been charmed back into relations of cordial friendship by the gracious courtesy of the British **KING**. As for the revolution effected in Ireland, a recent visitor there, now touring the Far East, says that the change which has come about within a year is most wonderful; that the visit of the **KING**, following on the passage of the new Land Act, has inaugurated an era of intellectual activity, of social aspirations and of political ideals in Ireland; the old animosities seem to be dying out by mutual consent, and the improvident south and west are stiffening their backbones to face the new order of things with a larger faith and a more confident outlook. The Celtic imagination was fired by the deep compassionate manhood of

the **KING**, who moved among his Irish subjects as a father among his children, and as such freely gave evidence of his sympathy with them in all their trials and tribulations.

Such is the brief record of two years, but it is sufficient, we think, to justify the nation in bestowing the title upon their **KING** of **EDWARD** the PEACEMAKER. The fierce light that beats upon a Throne has so far only served to show the admirable qualities of heart and mind that regulate the course of his life and actions. That he may be spared many years to reign over the British empire is the fervent wish of all his subjects in Japan to day.

THE "GENRO" AND THE MINISTRY.

IT may be considered inevitable that a country which has had such an extraordinary career as Japan, a career of sweeping transformations crowded into the briefest possible intervals of time, should show in its polity some abnormal elements. The most conspicuous of these are the *Genro*. Only four of them survive, **Marquis Ito**, **Marquis YAMAGATA**, **Count INOUE** and **Count MATSUKATA**, but inasmuch as they represent the intellect and resourcefulness which have made Japan what she is, their influence is paramount in the State's councils. No Cabinet can work independently of them, or hope to ignore them and survive. The *Genro* have no organized machinery for giving effect to their views. The *Seiyun-kai* may perhaps be regarded as such an implement; but every thoughtful student of Japanese politics will admit that the *Seiyun-kai* was never formed with any idea of giving support to the *Genro*. It was essentially the offspring of **Marquis Ito's** conviction that, some kind of party Government being inevitable, the abuses evidently incidental to the system should not be suffered to develop themselves uncontrolled. Indeed, so far as the *Genro* were concerned, the organization of the *Seiyun-kai* tended to lessen their influence by impairing their union. But even without any organized machinery their services to the country command such recognition from public opinion that the *Genro* can not be ignored by any Ministry, above all at times of national crisis like the present, and it is well appreciated that their advice is sought and respected to-day. One imagines that the country should be gratified to possess such a reserve of experience and proved wisdom, but it is evident that objections exist in some quarters, and we are surprised to see that they find expression in the columns of the *Fiji Shimpō*. Two circumstances evoke our contemporary's condemnation. One is that the Cabinet itself seems to be divided, inasmuch as the Ministers of Home Affairs, of Communications, of Justice and of Education take no part in meetings held to discuss foreign politics; and the other, that the Cabinet does not adopt any definite course without consulting the *Genro*, who, nevertheless, do

not figure visibly upon the stage. These criticisms have no direct connexion, and if we cite them both it is only because they occur in the same article. Concerning the former, it really appears to us that if any complaint has to be made, it should come from the excluded Ministers, not from an outside source. There is not much difficulty in conceiving that Mr. OURA, Mr. KUBOTA and Mr. HATANO are willing to entrust the direction of foreign affairs just now to the hands of men like Count KATSURA, Baron KOMURA, General TERAUCHI, Admiral YAMAMOTO and Baron SONE, and if that arrangement be judged likely to give the best practical results, the nation need not trouble itself about points of academical etiquette. As for the *Genro* question, will it not be time enough to murmur when one of two things happens; that is say, either when the advice of the *Genro* is proved to be plainly detrimental to the State's interests, or when a Cabinet attempts to shift its responsibility to the shoulders of these camera councillors? Certain folks are disposed to contend that the former conjuncture has already arisen; that had not the influence of the *Genro* restrained the Cabinet, a satisfactory settlement with Russia would have been effected long ago. It is sufficient to observe that associated with these critics are the war party. No one, however, so far as we are aware, has ever accused a Cabinet of hiding itself in the shadow of the *Genro*; or of placing its own sins upon their shoulders. Were such a course pursued, the nation would be justified in complaining of divided responsibility, which is always incompatible with practical efficiency. It appears to us, indeed, that the *Fiji Shimpō*, when it urges the advisability of giving permanent seats in the Cabinet to the *Genro*, ignores a cardinal feature of the situation; ignores that the *Genro* are entirely without political ambition, that they are in no sense self-seeking, that they lend themselves to no intrigue, and that if they are content to sit in the green-room of a stage where they once played such great parts, it is because they value their country's interests far above the dignified ease to which their services justly entitle them. Thus we come round again to our original proposition that the country's sentiment towards the *Genro* should be one of profound gratitude, not merely for what they have done in the past—that goes without saying—but also for their continued willingness to do work which can bring them no reward except a sense of duty fulfilled.

THE MAKING OF HISTORY.

VARIOUS articles and essays are appearing in Western newspapers and periodicals about the Far-Eastern crisis. They are doubtless the materials upon which future historians will draw. One such essay in an American periodical is written in a forcible and broadly-viewing manner. The writer, Mr. CHAS. JOHNSTON, deems that a conflict

between Japan and Russia is inevitable because it springs from economic and ethnical causes. He bases his opinion on statistics. European Russia has now 140 millions of population, and at the present rate of increase will have 200 millions within 27 years, 400 millions within 75 years and 500 millions by the end of the century. This immense mass of people will be distributed in the ratio of 200 millions to Siberia and 300 millions to European Russia, and Mr. JOHNSTON truly says that the pressure of such a multitude "can no more be resisted than the progress of an avalanche or the flow of the Amazon." But at this point of the argument we find a marked lacuna. He does not attempt to show that the pressure has commenced. On the contrary, he tells us that the density of population in European Russia is only about 50 to the square mile; and that for the whole of Russia it is only 15, while, quoting M. DE WITTE, he adds that "there is any amount of good available land in Siberia, both arable and forest, which will provide ample room for Russia's colonists for a long time to come." In fact, Siberia has at least 2 millions of square miles inviting colonization. So then we reach the inevitable conclusion that, according to the showing of Mr. JOHNSTON himself, Russia is not suffering in the remotest degree from plethora of population. On the contrary, she is suffering from a very exceptional paucity of population. Now what about Japan? "Japan," says Mr. JOHNSTON, "is at the other pole. She has an average density of 300 to the square mile." Her case is comparable with that of Germany "and the comparison helps us vividly to understand the storm and stress of the Japanese nation," for Germany's "strenuous efforts" to establish colonies are prompted by the same impulse that drives Japan.

All these figures seem accurate enough. But what is the conclusion to which they obviously point? Mr. CHARLES JOHNSTON takes a very curious view of the data lying before him. He seems to take the view that Russia's present policy of aggression is altogether justified by her economic necessities; that it "springs wholly from the life and growth of the Russian nation." At the same time, the incidental tone of his essay is plainly hostile to Japan. He speaks of her "getting off the Asian mainland with the worst grace in the world"; of the "rage and fury" that impelled her to build big battleships and organise a large army after being compelled to "get off," and of her "fiercely resenting her forced withdrawal." It were waste of time to discuss the propriety of such expressions. They are persiflage or prejudice—little matter which. What has real interest is the situation depicted. Russia with a population of only 15 per square mile of her huge empire is altogether justified in appropriating an immense piece of another country's territories, an area of 360,000 square miles, whereas Japan, with a population of 300 to the square mile, is depicted as the truculent, aggressive party because

she objects to this colossal act of appropriation which would deprive her of nearly all easily accessible arena for expansion. We should really like to hear some serious publicist attempt to formulate a defence of Russia's Manchurian procedure. Never was her case more injured than it is by Mr. CHARLES JOHNSTON's advocacy. If ethnical or economic causes be the sole warrant for territorial aggression, then Russia, according to Mr. JOHNSTON's showing, will not have the shadow of such a warrant for the next hundred years, whereas Japan has it already. It is of no use to say, as Mr. JOHNSTON naively hints, that Russia, by way of reward for rescuing Manchuria from Japan's clutches, obtained a lease of a port and a concession of a railway, thereby acquiring vested rights which justified her in subsequently getting the whole district into her own clutches. That is child's talk. One might as well affirm that a constable who drives out a burglar becomes himself entitled to "burglarise" the rescued property. If some one with a clearer perception of logic than Mr. CHARLES JOHNSTON's essay displays would compose an *apologia* for the Manchurian payment he could be sure of rivetting public attention. For our own part we have never been able to detect in the incident any evidence of economic or ethnical necessities. It seems to be purely imperialistic.

YOKOHAMA GENERAL HOSPITAL.

Those interested in the affairs of the General Hospital will be gratified to learn that the New Operating Room may be considered an accomplished fact, an "Anonymous" contribution of the entire cost of the construction of the building, through Mrs. James P. Mollison, having enabled the Committee to accept the offer of the cost of equipping same, first mentioned at the meeting of subscribers in July last. It is, we believe, a record incident for Yokohama to find itself the recipient of such a beneficent and useful gift from "Anonymous" friends of the community, and it behoves residents to show their appreciation of this exceptional generosity by responding freely to the appeal that is now in course of being made to enable the Committee to place the General Hospital on a substantial and permanent footing. A full report of the present position of affairs is being printed and will be in the hands of the public in a few days.

SENDOES' RACES.

Two races for sendoes, one provided for by programme and the other improvised, as it were, took place on Saturday. Six of the cruisers were started in the first mentioned contest. *Asagao* got away with a good lead which she retained till well out in the bay but *Dainyo* then came in front, and finished an easy first. On handicap, however, the prize falls to *Asagao*. Times:—

	m.	h.m.s.	Hand.	Corrected.
<i>Dainyo</i>	5.12.05	—	—	5.12.05
<i>Molly</i>	5.44.30	10	10	5.34.30
<i>Mosquito</i>	5.45.00	15	15	5.30.00
<i>Surprise</i>	6.00.40	15	15	5.45.40
<i>Asagao</i>	5.25.50	18	18	5.07.50
<i>Virginia</i>	5.37.30	25	25	5.12.30

Eight "Larks" started, each with two sendoes on board. No. 13 got well away at the start, No. 9 in second place. Rounding the home mark first time No. 11 which had got in front of No. 9 refused to gybe and split her sail on *Spray's* bowsprit. No. 13 held her lead to the close No. 12 being in second place.

FOOTBALL.

The game of Association football played on Saturday afternoon between the Navy and the Y.C. & A.C., resulted in a draw, both sides scoring a couple of goals each. The first half of the game was rather dull, neither team managing to score, and the men seemed strange to their work and places, but things changed considerably after half-time. Yokohama began to press at once and made several attempts at keeping the ball in their opponent's territory, but no matter how well the wing-play down the ground had been they went to pieces time and again when in front of goal, and so lost several excellent opportunities. The Navy played a sound game throughout, though their wings at times suffered from over eagerness.

The Association match between the Y. C. & A. C. and H.M.S. *Albion* on Tuesday ended in a victory for the latter team by 6 to 3, although the game was not as one-sided as would appear from the score. The Navy man obtained a commanding lead, 5-0, in the first half, but directly after half-time Yokohama opened its account, and, although they were bombarding most of the time, only scored two more goals whilst the Navy added one more, the final score reading 6-3. There was a very high wind which rather spoilt good combination. The Navy centre and left wing played very well together. The Yokohama goal-keeper was not very brilliant, but in the second half got more used to his position. E. W. Kilby played his usual game and Drummond made a welcome reappearance in the team.

The game of Rugby Football played on Wednesday afternoon between H.M.S. *Albion* and the Y. C. & A. C., resulted in a win for the Club by 6 points (two tries) to nil. Within five minutes of kick-off a piercing hailstorm came down but the game went on. Cartwright scored the first try, struggling through the Navy back lines by sheer determination, having no chance to pass. Moss failed to convert what was an easy kick, the ball passing just under the bar. Early in the second half H. W. Kilby scored from a neat pass by one of the local forwards, but Stuart failed to convert. Yokohama were pressing hard during almost the whole of the second half but no further score was made, although the Navy men were within an ace of scoring at one time. The hall was very greasy during the first-half and neither side excelled in passing, but with a new ball (the first-one having burst) both sides did better in this respect, the Navy being however far more clean and accurate in their passing. The match was keenly contested throughout and had it not been for the hailstorm at the beginning of the game would probably have been faster than it was. One or two of the Yokohama forwards, however, looked (and probably felt) as if they were thankful it was not so. Our local players have still to learn how to play the game when in their opponents' territory.

A football match, part of the series in the British Naval League, took place on Thursday on the Cricket ground by permission of the Y.C. & A.C., when the following teams competed:—

"ALBION"		"CRESSY."	
Mr. Barr.	Goal.	Mr. Trotter.	
Mr. Oliver.	Backs	Mr. Briggs.	
Mr. Train.		Mr. MacDonald.	
Mr. Spencer.	½ Backs	Mr. Hermans.	
Mr. Hargreaves.		Mr. Smith.	
Mr. Holmes.	Forwards	Mr. Martin.	
Mr. McGuinness.		Mr. Townsend.	
Mr. Wallace.		Mr. Bridgens.	
Mr. Williams.		Mr. McCoy.	
Mr. Forman.		Mr. Jackson.	
		Mr. Noyes.	
		Mr. Hill.	

This game resulted in four goals (*Albion*) to two (*Cressy*).

YOKOHAMA LITERARY SOCIETY.

The second meeting for the present session of the Yokohama Literary Society was held in Van Schaick Hall on Friday evening when a very clever and entertaining lecture entitled "China, in Peace and War" was delivered by Mr. T. Cowen. Mr. Cowen accompanied the Japanese army in its victorious march from Pyong-yang to Port Arthur in the China-Japan War; was present during the operations which resulted in the relief of the Legations at Peking in the sequel of the Boxer disturbances; and has also made several extensive tours through parts of China seldom visited by the average foreign resident. He had therefore abundant material at hand and needless to say he used it right skilfully. The lecture was illustrated by some forty lantern slides, many of which were of unique interest. They showed the condition of parts of Tientsin and Peking before and after the Boxer disturbances; gave glimpses of the Forbidden City when the armies of the Allies made their famous march through its grass grown and shamefully neglected courts—courts wherein are carvings of stone and marble of untold value which are falling to decay for the lack of a little foresight and care; these were followed by some gruesome pictures of Chinese executions, the whole concluding with some snapshots taken in the vicinity of the Great Wall of China. On the motion of the President a hearty vote of thanks was accorded Mr. Cowen for his capital lecture and well-selected illustrations. The rest of the programme was as follows:—

Pianoforte Solo....."Pierette".....Chaminade.
Mrs. R. J. Ward.
Song....."The Skye Boat Song".....Jacobite Air.
Mr. Kenneth Dodds.
Recitation....."Little Rocket's Christmas".....{ Vandyke
Brown.
Miss Cameron.
Violin Solo....."Gavotte".....F. Ries.
Mr. H. A. Poole.

We understand that the Committee have arranged so far for the following papers:—

November 20.—"Robert Browning" Mr. T. Satchell.
December 4.—"The Land of the White Elephant".....Mr. T. Petrie.
December 18.—"Antique Coins of Japan" (Illustrated).....Dr. N. Gordon Munro.
December 31.—Christmas Meeting.
January 15.—"An Evening with Sullivan" Mr. W. Karl Vincent.
January 29.—"The Canadian Habitant" (Illustrated).....Rev. L. J. Bates.
February 12.—"North Wales" (Illustrated) Mrs. W. Kirkland Wilson.
February 26.....Rev. G. Wallace.

BOXING CONTESTS.

It is a pity that the men from American ships in Yokohama harbour who had put down their names to take part in Wednesday evening's boxing contest at the Public Hall found it impossible to attend, and it is also to be regretted that longer notice was not given of the event, which certainly would have secured a much larger attendance. The hall, however, was about half-filled and where it became necessary to revise the programme because of absentees quite satisfactory boxers were substituted.

The first event was a set-to between (heavy-weights) J. Morgan of H.M.S. *Vengeance* and T. Pook, a marine from the *Ocean*. Morgan in every way outclassed his opponent (who indeed should not have entered the ring in his unprepared state) and the contest was a disappointment, Pook being knocked out after about 1½ minutes fighting in the first round.

F. Fido, of H.M.S. *Albion*, faced H. Thompson of the *Vengeance* (welter-weights) in the next 6-round bout. This was really one of the best turns of the evening and apparently the referee had some trouble in awarding the verdict, for a seventh round was accorded and by this Thompson—who was the fresher of the two, won on points.

Following should have been a light-weight "go" between P. Gordon of the U.S.S. *Wit-*

consin and H. Batley of H.M.S. *Cressy*, but in the American's absence his place was taken by Franks of the *Cressy*. The last named is a clever young boxer and with added experience should do very well. He was altogether too strong for Batley, who, however, made a game attempt to turn the tide of affairs in the second round but went to his corner in a pretty groggy condition. After that Franks had it his own way and knocked his man out in the fourth round.

An extra event was provided in which two feather-weights, Armstrong of the *Vengeance* met Simpson of the *Cressy*. This was a very good set-to and was given in Armstrong's favour.

After the interval the "Star" bout of the evening took place. In this Tim Halligan, of the *Vengeance* faced P. Murry, of the *Albion*, to decide in 12 rounds the middle-weight championship of the China Station. Both men stripped in good condition, Halligan looking, perhaps, the harder of the two. During the first three rounds both sparred for an opening. The first and second rounds were distinctly in favour of Halligan. In the third, fourth and fifth Murry had perhaps slightly the advantage, but Halligan kept him moving all the time. In the seventh and eighth rounds Halligan did all the leading although Murry was still going strong. Unfortunately at the conclusion of the eighth round Murry was forced to throw up the sponge, not from inability to fight further but because his left hand glove being too small bound the muscles and practically deprived him of the use of that member. Although Halligan appeared to be the keener of the two Murry is a strong fighter and it seemed an open question as to whom the decision would have gone in the eighth round. It would be a treat to see these two men pitted against each other under favourable conditions.

H. Gayler of the *Albion* (light weight) met Dick Crane, a marine from the *Vengeance*, in an 8-round "go," which proved quite the best of the meeting. Both men were exceedingly keen and both seemed to be in the pink of condition. Crane, who is a very clever boxer, appeared to have the fight well in hand in the first round but Gayner turned the tables completely in the second—the spectators indeed being mostly apprehensive that Crane would hardly be able to come to scratch in the third. However, by good ring tactics Crane kept his opponent off in the third, and considering the punishment he had received in the second he appeared remarkably fresh in the fourth round. Thenceforward it was a ding-dong battle with the advantage slightly in favour of Crane who got the verdict by a narrow margin. Both men deserve praise for the fine fight they put up, and certainly no discredit attaches to the loser.

Y. Armstrong of the *Vengeance*, should have fought T. Mullen of the U. S. S. *Oregon*, but for this event another was substituted in which Sewell of the *Cressy* faced T. Parker of the *Ocean*. This was a fast bout at the outset, too fast in fact to last. Parker came perilously near having an adverse decision in the second round on a foul but the referee gave him another chance and he had his man going all over the ring before the conclusion of the third round. Sewell distinctly had enough and very wisely decided to throw up the sponge. This closed a very good evening's entertainment.

It should be added that the prizes were liberally supplemented by subscriptions from residents present.

A NEW JOURNAL.

We have received the first number of a new journal published in Hongkong under the title of *South China Weekly Post*. It is edited by Mr. Douglas Story, a journalist well-known in Fleet Street and at Johannesburg, and is managed by Mr. Alfred Cunningham, late of the *Hongkong Daily Press*. The new paper is very attractively got-up, and its selection of news is all-embracing. The illustrations are rather unsatisfactory, but these, like the letter-press printing, at present rather smudgy, will doubtless improve as the journal increases in age.

AUTUMN MEETING OF THE NIPPON RACE CLUB.

FIRST DAY.—MONDAY, 9TH NOVEMBER.

PATRONS:—H.I.H. Fushimi-no-Miya, H.I.H. Arisugawa-no-Miya, and H.I.H. Kanin-no-Miya:—

PERMANENT COMMITTEE:—Sir Claude Maxwell MacDonald, K.C.B., G.C.M.G., President; Dr. Wheeler, Vice-President; R. D. Robison, Esq., Jas. Dodds, Esq., V. Blad, Esq., Governor Sufu, T. Thomas, Esq., B. C. Howard, Esq., S. Isaacs, Esq., A. J. Easton, Esq., L. Mottet, Esq., A. Bianchi, Esq., M. Pors, Esq., and T. Taniguchi, Esq.

EXECUTIVE COMMITTEE:—A. G. Morey Weale, Esq., Chairman; A. Bianchi, Esq., K. Mori, Esq., A. J. Easton, Esq., P. de C. Morriss, Esq., B. Runge, Esq., and L. Mottet, Esq.

CLERK OF THE COURSE:—B. Runge, Esq.

SECRETARY:—Mr. S. H. Somerton.

The autumn meeting of the Nippon Race Club opened under highly favourable conditions. The course, it is true, was crumbly, lacking elasticity, but everything else was admirably propitious. The sky was clear, the sun shone with sufficient ardour to forbid overcoats and hardly any breeze stirred the air. The racing was close and nearly every event furnished excitement. It is permissible to congratulate the officials on the way in which they carried out the arrangements, every event being rather ahead of than behind time. Mr. L. Mottet was Judge, Mr. F. J. Hall, Assistant Judge, Mr. A. R. Riddle, Starter, Mr. A. J. McClure, Assistant-Starter, Mr. D. Marshall, Handicapper, Dr. Wheeler, Clerk of the Scales, and Mr. S. H. Somerton, Timekeeper. The fine weather drew out a large number of spectators, the Paddock and Grand Stand being well filled while horses were on the course. The ladies wore pretty frocks and the scene was quite animated during the day. Sir Claude MacDonald arrived on the course early in the afternoon and witnessed most of the races. The new building erected by Mr. E. Kildoye was open for this meeting and undoubtedly contributed largely to the comfort of those attending the meeting. Upstairs a large luncheon room has been added to the accommodation appertaining to the Grand Stand and below a branch of the Pari Mutuel offers opportunity of backing one's choice without the crush inseparable from such an operation formerly.

Following were the events:—

1.—THE COSMOPOLITAN PLATE, for All Subscription Horses; winners of more than 10 races excluded; winners of four races or less at date of entry 3lb. extra per win, of more than 4 races 15lb. penalty in all. Entrance yen 5. Winner yen 350. Three-quarters of a Mile.

Mr. May's May-mie, 141lb. (Ichi) 1
Mr. B. Runge's Desdemona, 149lb. (Kato) 2
Mr. Yodo's Cameo, 138lb. (Tsubouchi) 3
Mr. R. Loonen's Rose de France (late Melbourne), 147lb. (Comte de Perigny) 0
Mr. R. Loonen's Suzon, 143lb. (Kurosaka) 0
Mr. Kawakita's The Beetle, 149lb. (Sugiura) 0

The starting was very tedious, Desdemona being the chief offender. Eventually, however, they were got off, Desdemona in front, Rose de France, the favourite, far behind. May-mie and Cameo collared the leader at the turn and the finish was a close one, a neck separating first and second and about the same distance second and third. Time, 1.25.7.

PARI MUTUEL, 5 yen—Rose de France 261, Suzon 11, May-mie 103, Cameo 129, Beetle 12, Desdemona 204; 720. May-mie paid 31.50.

2.—THE CRITERION STAKES, for All China Ponies, to be ridden by full members of the Club, or Visitors, whose names must be sent in to the Committee before the meeting and approved by them; weight as per scale. Entrance yen 5. Winner yen 300. Second Pony yen 50. Three-quarters of a Mile.

Mr. Two Percies' The Leader, 144lb. (Mr. Cox) 1
Mr. Kawakita's Sunrise, 150lb. (Mr. Mottu) 2
Mr. Swarby's Moth, 147lb. (Mr. Riddle) 3
Mr. Iris' Murakumo (late Nippon), 147lb. (Mr. Makita) 0
Mr. Betts' Pinto (late Oneida), 147lb. (Mr. Catto) 0
Mr. Alexander's Mark (late Max Willem) 150lb. (Mr. Hughes) 0
Mr. St. Leger's Aberdeen, 150lb. (Mr. Elliott) 0
Mr. Unverzagt's Bauernfaenger, 150lb. (Comte de Perigny) 0

Bauernfaenger had the best of the start and kept the lead till The Trees when the others came up in a bunch. Murakumo being first to collar the leader. In the Straight Sunrise took first place, but The Leader, well hidden out, came up and won by a bare half length. Time, 1.40.5.

PARI MUTUEL, 5 yen—Murakumo 41, Pinto 43, Mark 86, Sunrise 171, Aberdeen 11, Moth 34, Bauernfaenger 10, The Leader 359; 760. The Leader paid 9.50.

3.—THE CHINA GRAND PRIX, for China Subscription Ponies of Autumn, 1903; a forced entry of yen 30, non-starters half forfeit; weight as per scale. First Prize yen 700; Second Prize yen 150. One Mile.

Mr. K. I. S.'s Tanuki, 156lb. (Kobayashi) 1
Mr. Yezoye's Yakumo, 144lb. (Tsubouchi) 2
Mr. Satsuma's John Bull, 153lb. (Horikoshi) 3
Mr. May's Mayonaise, 150lb. (Ichi) 0
Mr. Alexander's Settler, 150lb. (Yasu) 0
Mr. Tatsuta's Harima, 147lb. (Sugiura) 0
Mr. R. Runge's Fra Diavolo, 147lb. (Kato) 0
Mr. Tytherleigh's Swift, 141lb. (Mr. Easton) 0
Mr. Unverzagt's Hans Sachs, 141lb. (Higaki) 0

Yakumo, next the rails, had a good start, but Fra Diavolo kept close alongside down into the Dip and up the ascent. As they gained the crown of the hill, however, it was difficult to pick out the leader, though Yakumo seemed to be best placed. But as they approached the Shakespeare John Bull drew up and Tanuki almost at the same moment showed in front. At the Trees Tanuki led and into the Straight he still had the field in hand. A hard race in gave John Bull an opportunity but the effort only brought him up to Yakumo's shoulders and so they finished, about a length and a half between first and second. Time, 2.20.5.

PARI MUTUEL, 5 yen—Mayonaise 97, Settler 60, Yakumo 384, Harima 83, Fra Diavolo 29, Tanuki 100, Swift 39, John Bull 290, Hans Sachs 11; 1,093. Tanuki paid 49.00.

4.—THE GRIFFINS GRAND PRIX, for Australian Subscription Horses of Autumn, 1903; a forced entry of yen 30, non-starters half forfeit; weight for age: First Prize yen 1,000, Second Prize yen 200. One Mile.

Mr. Tatsuta's Suma, 130lb. (Takahashi) 1
Sir Claude MacDonald's Stella, 130lb. (Horikoshi) 2
Mr. R. Loonen's La Friponne, 134lb. (Comte de Perigny) 3
Mr. Iris' Mistletoe, 132lb. (Rikizo) 0
Mr. Alexander's Jupiter, 132lb. (Yasu) 0
Mr. M. John's Akatsuki, 130lb. (Higaki) 0
Mr. Norfolk's Pilgrim, 140lb. (Hakodate) 0
Mr. J. W. Thompson's Reliance, 130lb. (Mr. Catto) 0

Some disapproval was manifested as to this, and, though in a less degree as to the previous race, because of apparent failure on the part of the starter to get his horses off at favourable opportunities. Mistletoe went away with a good lead and kept it till they were approaching the trees, Stella lying second. Here, however, Suma rushed, up and passing everything easily won by many lengths. La Friponne was a poor third. Time, 1.53.5.

PARI MUTUEL, 5 yen—La Friponne 203, Mistletoe 93, Jupiter 37, Suma 551, Akatsuki 32, Stella 124, Pilgrim 95, Reliance 72; 1,167. Suma paid 9.50.

5.—THE SYDNEY STAKES, for Australian Subscription Horses of Spring, 1903; weight for age; winners at date of entry 3lb. extra per win. Entrance yen 5. Winner yen 350. Three-quarters of a Mile.

Mr. Yezoye's Izumo, 136lb. (Tsubouchi) 1
Sir Claude MacDonald's Ivy, 136lb. (Horikoshi) 2
Mr. Alexander's Brisbane, 140lb. (Yasu) 3
Mr. Yezoye's Yashiro, 133lb. (Nihonyanagi) 0
Mr. St. Leger's Seabreeze, 130lb. (Sugiura) 0
Mr. K. I. S.'s Hatsukaze, 130lb. (Kobayashi) 0

Mr. Yezoye declared best to win. Izumo led all round, Hatsukaze second, Ivy third. In the straight both challenged the leader and a fine race ensued. Ivy came up too late and lost by a neck. Time, 1.21.5.

PARI MUTUEL, 5 yen—Brisbane 25, Izumo 330, Yashiro 19, Ivy 562, Seabreeze 17, Hatsukaze 194; 1,077. Izumo paid 15.00.

6.—THE MONGOLIAN PLATE, for China Ponies of Autumn, 1903; winner of Grand Prix excluded; weight as per scale. Entrance yen 5. Winner yen 300. Second Pony yen 50. Three-quarters of a Mile.

Mr. B. Runge's Fra Diavolo, 147lb. (Kato) 1
Mr. Alexander's Settler, 150lb. (Yasu) 2
Mr. Yezoye's Yakumo, 144lb. (Tsubouchi) 3
Mr. R. Loonen's Gaulois, 153lb. (Kurosaka) 0
Mr. Tytherleigh's Redstart, 144lb. (Mr. Easton) 0
Mr. Swarby's Willoughby, 147lb. (Takahashi) 0
Mr. Mess' Flutter, 144lb. (Mr. Cox) 0

Gaulois led at the outset but at the five furlong post Fra Diavolo was alongside and in a few strides more took first place. There he kept till the end. Yakumo and Settler lost their chance by lagging the outside rails, for which it may be safe to suppose that Settler's jockey was not responsible, as being the farther out he could not get away. As it was Settler all but reached the leader, a bare neck separating them; a good third. Time, 1.43.5.

PARI MUTUEL, 5 yen—Gaulois 26, Settler 46,

Yakumo 457, Fra Diavolo 132, Redstart 35, Willoughby 91, Flutter 9; 796. Fra Diavolo paid 27.00.

7.—THE NEWCOMERS PLATE, for Australian Subscription Horses of Autumn, 1903; winner of Grand Prix excluded; weight for age. Entrance yen 5. Winner yen 300, second Horse yen 50. Three-quarters of a Mile.

Mr. Kawakita's Osaka, 130lb. (Sugiura) 1
Mr. Iris' Mistletoe, 130lb. (Rikizo) 2
Sir Claude MacDonald's Stella, 132lb. (Horikoshi) 3
Mr. Iris' Morning Glory, 140lb. (Goto) 0
Mr. May's May-sie, 132lb. (Ichi) 0
Mr. Yodo's Mikasa, 130lb. (Nihonyanagi) 0
Mr. Tatsuta's Akashi, 130lb. (Takahashi) 0
Mr. B. Runge's Fiorentina, 135lb. (Kato) 0
Mr. G. Barclay's No Trump, 130lb. (Miyagawa) 0
Mr. John Peel's Starlight, 130lb. (Mr. Cox) 0
Mr. Norfolk's Pathfinder, 130lb. (Hakodate) 0
Mr. Scherz's Annemarie, 130lb. (Sasaki) 0

Mr. Iris declared best to win. Again there was trouble in starting and Anne Marie had the worst of the start when they got off. Mistletoe led all the way round to the Trees where Stella came away and led handsomely in the Straight. Fifty yards out, however, Osaka was started going and easily overhauling the leader won by a length, half a length between second and third. Time, 1.28.5.

PARI MUTUEL, 5 yen—Mistletoe 52, Morning Glory 21, May-sie 251, Mikasa 10, Osaka 361, Akashi 36, Fiorentina 46, Stella 148, No Trump 29, Starlight 13, Pathfinder 25, Annemarie 19; 1,011. Osaka paid 12.50.

8.—THE QUEENSLAND STAKES, for all Subscription Horses; winners of more than 10 races excluded; winners of four races or less at date of entry 3lb. extra per win, of more than 4 races 15lb. penalty in all; winner of Race No. 1 an additional 5lb. Entrance yen 5. Winner yen 350. One Mile.

Mr. R. Loonen's Rose de France, 142lb. (Comte de Perigny) 1

Mr. Yodo's Fujikawa, 155lb. (Tsubouchi) 2
They went off quite level, but at the bottom of the Dip Fujikawa, next the rails, had the better of the turn. As they breasted the hill Rose de France came up and they raced in beautiful fashion along to the Shakespeare where Rose de France showed in front momentarily, being displaced by the other till the Trees. There the brown drew out a lead and kept it to the finish, winning by full five lengths. Time: 1.57.5.

PARI MUTUEL, 5 yen—Rose de France 546, Fujikawa 257; 803. Rose de France paid 6.50.

SECOND DAY.—TUESDAY, 10TH NOVEMBER.

The races on this, the Ladies' Day, were started by Mr. McClure, assisted by Mr. de Cuers de Cogolin, and later by Mr. A. R. Riddle. The skies were rather overcast in the early part of the afternoon, but shortly the sun shone out and the southerly wind lulling a bit the later part of the programme was raced in fine weather. There were two accidents, Seabreeze jumping the outside rail, but without hurt to the rider, and Cameo tilting her jockey over the inside rails and getting inside also.

Among the large assembly present were Sir Claude and Lady MacDonald, Baron Sannomiya and Baroness Sannomiya, Baron and Baroness Rosen, the French Minister, Governor Sufu and Madame Sufu, Mr. and Mrs. Barclay, of the British Legation, etc.

The Emperor's Prize was presented for No. 7 Race, and the trophy was given by Baron Sannomiya. The crush of ladies at the ceremony prevented this journal's representative from listening to the speeches, but it is understood that Baron Sannomiya gave the prize—a fine silver bowl—on behalf of the Emperor. A response was made for Rose de France and cheers were given for the Emperor.

The following were the events:—

1.—THE CHAMPAGNE CHALLENGE CUP, (Presented by Messrs. G. H. Mumm & Company); for Australian Subscription Horses of 1901 and thereafter, that have not run at more than two meetings; to be won three times in all by Horses the *bona fide* property of same owner or owners, with yen 300 added by the Club until the Cup is finally won, when the Second Horse will receive the added money; weight 145 lbs.; winner at the Meeting 7 lbs. extra; entrance, yen 10. One Mile.

Mr. R. Field's Therapis, 145lb. (Mr. Catto) 1
Mr. R. Field's Thracia, 145lb. (Kurosaka) 2

Mr. Field declared Therapis to win if able. Therapis took the lead at the outset and increasing it as they went round won easily in a canter. No time was taken.

There was no Pari Mutuel on this race.

2.—The ALL-COMERS HANDICAP, for all Subscription Horses; winners of more than 10 races excluded; Handicap; weight to be published at close of First Day; entrance, yen 5. Winner yen 350, Second Horse yen 50. One Mile.

Mr. R. Loonen's Suzon, 139lb.(Kurosaka) 1
Mr. B. Runge's Desdemona, 140lb.(Kato) 2
Mr. May's May-mie, 142lb.(Ichi) 3
Mr. Alexander's Brisbane, 133lb.(Yasu) 0
Mr. Yodo's Cameo, 139lb.(Tsubouchi) 0

Suzon and Cameo had if anything the best of a fine start and the latter had the rails and the lead as they turned in the Dip, and retained it to the Shakespeare, Desdemona last of all but closing up. Suzon challenged the leader at the turn into the Straight but could not get level, Cameo won by four lengths. Time: 1.54. A protest was lodged by the owner of May-mie against Cameo for a foul alleged to have occurred when the latter took the lead. This was sustained, so that Suzon was awarded first prize, May-mie taking third place and Desdemona second.

PARI MUTUEL, 5 yen—Suzon 89, May-mie 558, Cameo 251, Brisbane 47, Desdemona 226; 1,171. Cameo paid 21.00.

3.—The MANCHURIAN STAKES, for China Subscription Ponies of Autumn, 1903; weight as per scale; Entrance, yen 5, winner yen 350, Second Pony yen 50. One Mile and a Half.

Mr. Alexander's Settler, 150lb.(Yasu) 1
Mr. Satsuma's John Bull, 153lb.(Horikoshi) 2
Mr. K. I. S.'s Tanuki, 156lb.(Kobayashi) 3
Mr. Yezoye's Yakumo, 141lb.(Tsubouchi) 0
Mr. Tatsuta's Harima, 147lb.(Sugiyama) 0
Mr. Runge's Fra Diavolo, 147lb.(Kato) 0
Mr. Tytherleigh's Redstart, 144lb.(Mr. Easton) 0

Harima got away in front and kept there well round. As they passed the Grand Stand Settler was in second place, Fra Diavolo next with Yakumo close up. As they approached the Trees Harima fell into third place and a close race ensued to the finish, Settler winning by about a length, John Bull second and Tanuki third. Time 3.34.

PARI MUTUEL, 5 yen—194, Yakumo 417, Harima 47, Fra Diavolo 48, Tanuki 438, Redstart 18; 1391. Settler paid 38.00.

4.—The COLONIAL STAKES, for Australian Subscription Horses of Spring, 1903; weight for age; winner at date of entry 3 lbs. extra per win; winner of Race No. 5, First Day 5 lbs. extra; Entrance yen 5. Winner yen 350, Second Horse yen 50. One Mile and a Quarter.

Sir Claude MacDonald's Ivy, 136lb.(Horikoshi) 1
Mr. Yezoye's Izumo, 136lb.(Tsubouchi) 2
Mr. St. Leger's Seabreeze, 130lb.(Sugiyama) 0

Seabreeze bolted and jumped the outer rail. As the others passed the Grand Stand Izumo led by a couple of lengths. This order was maintained to the crest of the hill where Ivy came away fast and at the Shakespeare was three lengths ahead. They finished in this way, some four lengths separating them. Time 2.26.

PARI MUTUEL, 5 yen—Izumo 488, Ivy 932, Seabreeze 130; 1550. Ivy paid 7.50.

5.—The ADELAIDE CUP, for Australian Subscription Horses of Autumn, 1903; weight for age; winners at the meeting 5lb. extra. Entrance yen 5. Winners yen 300, Second Horse yen 100. Third Horse yen 50. One Mile and a Furlong.

Mr. Kawakita's Osaka, 135lb.(Sugiyama) 1
Mr. May's May-sie 130.(Ichi) 2
Sir Claude MacDonald's Stella, 130lb.(Horikoshi) 3
Mr. R. Loonen's La Frigonde, 135lb.(Kurosaka) 0
Mr. Alexander's Jupiter, 130lb.(Yasu) 0
Mr. B. Runge's Fiorentina, 135lb.(Kato) 0
Mr. M. John's Akatsuki, 130lb.(Higaki) 0
Mr. Norfolk's Pilgrim, 140lb.(Hakodate) 0
Mr. J. W. Thompson's Reliance, 133lb.(Mr. Hughes) 0

Mr. Scherz's Annemarie, 132lb.(Sasaki) 0
May-sie led nearly all the way round but was collared as they approached the Straight by Osaka and a splendid race resulted in a win for the latter by a neck, Stella a close third. Time, 2.15.

PARI MUTUEL, 5 yen—La Frigonde 356, May-sie 44, Jupiter 62, Osaka 508, Fiorentina 53, Akatsuki 12, Stella 360, Pilgrim 38, Reliance 20, Annemarie 33; 1,486. Osaka paid 13.00.

6.—The NANKIN STAKES, for All China Ponies; Handicap. Entrance yen 5. Winner yen 350, Second Pony yen 50. One Mile.

Mr. Two Percies' The Leader, 156lb.(Mr. Cox) 1
Mr. Kawakita's Sunrise, 148lb.(Mr. Motu) 2
Mr. Alexander's Mark, 146lb.(Yasu) 3
Mr. R. Loonen's Gaulois, 134lb.(Kurosaka) 0
Mr. Betts' Pinto, 143lb.(Takahashi) 0
Mr. St. Leger's Aberdeen, 140lb.(Mr. Elliott) 0
Mr. Swarby's Moth, 147lb.(Takahashi) 0
Mr. Unverzagt's Bauernfaenger, 135lb.(Higaki) 0
Mr. Satsuma's John Bull, 147lb.(Horikoshi) 0

Moth led most of the way round, Yakumo lying close alongside as they neared the Shakespeare. Here Sunrise came out in front but was challenged by The Leader in the Straight. A dingdong race in resulted in the latter catching Sunrise almost on the post and winning by a bare neck. Time, 2.15.

PARI MUTUEL, 5 yen—Gaulois 30, Pinto 16, Mark 95, Sunrise 347, Aberdeen 40, Moth 130, Bauernfaenger 20, John Bull 34, The Leader 165; 1,483. The Leader paid 8.50.

7.—The NEW SOUTH WALES CUP, for All Subscription Horses; winners of more than 10 races excluded; Handicap. Entrance yen 5. Winner yen 400, Second Horse yen 100. One Mile and a Half.

Mr. R. Loonen's Rose de France, 155lb.(Yasu) 1
Sir Claude MacDonald's Ivy, 136lb.(Horikoshi) 2
Mr. Kawakita's The Beetle, 127lb.(Sugiyama) 3
Mr. R. Loonen's Suzon, 139lb.(Kurosaka) 0
Mr. Yodo's Fujikawa, 139lb.(Higaki) 0
Mr. Yodo's Cameo, 139lb.(Tsubouchi) 0
Mr. St. Leger's Seabreeze, 128lb.(Sugiyama) 0

Mr. Yodo and Mr. Loonen declared best to win. Cameo got off with the lead but Rose de France, The Beetle and Ivy were close up as they took the Dip. Along the road Rose de France showed in front and having once acquired the lead kept it to the end, winning by ten lengths, the same distance between second and third. Cameo's rider was thrown over the inside rail but sustained no serious injury. Time 2.54.

PARI MUTUEL, 5 yen—Rose de France 1164, Suzon 16, Fujikawa 106, Cameo 271, The Beetle 63, Ivy 275, Sea Breeze 16; 2001. Rose de France paid 7.50.

8.—The BRISBANE CUP, for Australian Subscription Horses of Autumn, 1903; winners at the meeting 5lb. extra, of 2 races excluded. Entrance yen 5. Winner yen 350, Second Horse yen 100, Third Horse yen 50. One Mile and a Quarter.

Mr. Tatsuta's Suma, 135lb.(Takahashi) 1
Mr. Alexander's Jupiter, 130lb.(Yasu) 2

Suma took the lead at once and the race was a pure procession. No time was taken.

PARI MUTUEL, 5 yen—Jupiter 140, Suma 954; 1,104. Suma paid 5.00

THIRD DAY.—WEDNESDAY, 11TH NOVEMBER.

Fine weather again smiled on the third day of the Autumn meeting of the Nippon Race Club. The chilly southerly breeze that prevailed during the previous afternoon gave way to a northerly wind which was not hard or cool enough to incommode anybody, and the weather held up well till just after the seventh race, when some rain and hail fell and the temperature followed suit, but the proceedings were over quickly and the sky cleared again at the close. There was a good attendance of ladies, though of course they were much fewer in number than on the afternoon of the second day and the racing was on the whole good. There were some popular wins, notably that of the British Minister with Stella, and of May-mie in the first race. Sir Claude MacDonald was present during the afternoon.

The officials in charge of the arrangements were as on the previous day and everything went off satisfactorily. As will be found from the advertisement, there will be an off-day on Saturday, particulars as to which will be found in another column. Following were the events:—

1.—The PRIX DES HARAS, Handicap; for all Subscription Horses entered at the meeting, Australian and Country Breds; a forced entry of yen 10, non-starters half forfeit; Handicap weights to be published at close of Second Day. Winner yen 500, Second Horse, yen 100, Third Horse, yen 50. One Mile.

Mr. May's May-mie, 147lb.(Ichi) 1
Mr. Kawakita's The Beetle, 135lb.(Takahashi) 2
Mr. Yodo's Cameo, 147lb.(Higaki) 3
Mr. R. Loonen's Suzon, 142lb.(Kurosaka) 0
Mr. Alexander's Brisbane, 136lb.(Yasu) 0
Mr. Kawakita's Osaka, 130lb.(Sugiyama) 0
Mr. Yezoye's Yashiro, 124lb.(Nihonyanagi) 0
Mr. B. Runge's Desdemona, 142lb.(Kato) 0
Mr. Kawakita declared best to win. As Rose de France and Therapis did not accept for this race, weights were put up 5lbs. all round, resulting as given above. Eight horses went out and Desdemona caused some trouble before they could be got off. Eventually, however, they were sent away, Desdemona in front. In the Dip she was still ahead but as they reached the level ground Osaka came up and led. At the Bend, however, May-mie, The Beetle and Cameo rushed forward and raced hotly in, finishing in that order, with about a length between them. Time 1.54.

PARI MUTUEL—Suzon 39, May-mie 127, Cameo 227, Brisbane 5, The Beetle 33, Osaka 199, Yashiro 4, Desdemona 162; 796. May-mie paid 28.00.

2.—The PEKING CUP, for China Subscription Ponies of Autumn, 1903; to be ridden by full members of the Club, or Visitors, whose names must be sent in to the Committee before the meeting and approved by them; winners at the meeting 5lb. extra, of 2 races excluded. Entrance, yen 5. Winner yen 350, Second Horse yen 50. One Mile and a Furlong.

Mr. Yezoye's Yakumo, 144lb.(Mr. Cox) 1
Mr. Alexander's Settler, 155lb.(Mr. Makita) 2
Mr. Satsuma's John Bull, 153lb.(Mr. Catto) 3
Mr. Tatsuta's Harima, 147lb.(Mr. Motu) 0
Mr. B. Runge's Fra Diavolo, 152lb.(Mr. Elliott) 0
Mr. Tytherleigh's Redstart, 144lb.(Mr. Easton) 0

A field of six and a good race all the way. Harima went off first and so passed the Grand Stand, leading up the Dip with Fra Diavolo a few lengths off. Leaving the Trees Fra Diavolo went back and several horses came away with a rush and raced in from the Bend in exciting fashion. In the result Yakumo won by about three lengths from Settler, John Bull close up. Time 2.39.

PARI MUTUEL, 5 yen—Settler 166, Yakumo 232, Harima 67, Fra Diavolo 36, Redstart 34, John Bull 467; 1,002. Yakumo paid 19.50.

3.—The MELBOURNE CUP, for Australian Subscription Horses of Spring, 1903; weight for age; winners at date of entry 3 lbs. extra per win; winners at the Meeting 5 lbs. extra, of 2 races excluded; entrance yen 5, winner yen 300. One Mile.

Mr. Yezoye's Izumo, 141lb.(Sugiyama) 1
Sir Claude MacDonald's Ivy, 141lb.(Horikoshi) 2
Mr. K. I. S.'s Hatsukaze, 130lb.(Kobayashi) 3

Izumo took first place, Ivy and Hatsukaze close together. After galloping along the Dip, Izumo had spun out a long lead from Ivy. At the Trees the latter began to come up and they were neck and neck at the Bend. A close race in ended in Izumo winning by about a length. Time 1.54.

PARI MUTUEL—Izumo 389, Ivy 901, Hatsukaze 165; 1456. Izumo paid 17.00.

4.—The SENIOR CHAMPIONS, for all Subscription Horses except those of 1903; winners of more than 10 races excluded; weight for age; a forced entry for winners at the Meeting, of one race yen 10, of two races yen 20, of more than two races yen 40; optional to beaten horses at an Entrance Fee of yen 25, winner yen 600. One Mile and a Quarter.

Mr. R. Loonen's Rose de France, 135lb.(Yasu) 1
Mr. R. Field's Therapis, 140lb.(Mr. Catto) 2
Mr. May's May-mie, 135lb.(Ichi) 3

Therapis jumped off with the lead and maintained it past the Stand with May-mie close by. At the top of the Dip the favourite came up alongside and all three raced along to the Shakespeare. There Rose de France showed in front and gradually drew away to the Bend. Therapis made a good try but failed to catch the leader, which won by 6 to 8 lengths, May-mie a bad third. Time 2.24.

PARI MUTUEL, 5 yen—May-mie 202, Rose de France 1,240, Therapis 581; 2,023. Rose de France paid 7.50.

5.—The CHINA CHAMPIONS, for All China Ponies; weight as per scale; a forced entry for winners at the meeting, of One Race yen 10, of Two Races yen 20, of more than Two Races yen 40; optional to beaten ponies at an Entrance Fee of yen 25, winner yen 600. One Mile and a Quarter.

Mr. Two Percies' The Leader, 144lb.(Mr. Cox) 1
Mr. Kawakita's Sunrise, 150lb.(Mr. Motu) 2
Mr. Alexander's Settler, 142lb.(Yasu) 3
Mr. K. I. S.'s Tanuki, 156lb.(Kobayashi) 0

Tanuki led the field along the Straight, and down the Dip, Sunrise second. The latter got a little in front as they reached the top of the hill but The Leader was coming up, though manifestly kept in. Nearing the Shakespeare the yellow jacket shot out in front and thence home had the race easily. Sunrise was many lengths behind and Settler was a bad third. Time 2.50.

PARI MUTUEL, 5 yen—The Leader 1,349, Tanuki 257, Settler 195, Sunrise 335; 2,136. The Leader paid 7.00.

6.—The JUNIOR CHAMPIONS, for Australian Subscription Horses of 1903; weight for age; a forced entry for winners at the Meeting, of One Race yen 10, of Two Races yen 20, of more than Two Races yen 40; optional to beaten horses at an Entrance Fee of yen 25, winner yen 600. One Mile and a Quarter.

Mr. Tatsuta's Suma, 134lb.(Takahashi) 1
Mr. Yezoye's Izumo, 132lb.(Yasu) 2
Sir Claude MacDonald's Ivy, 130lb.(Mr. Catto) 3

Izumo made the running, with Suma close behind, till round past the Shakespeare. There, however, Suma came up and got in front, but Izumo made a strong bid and only a length separated them at the finish. Ivy a poor third. Time 2.25.

PARI MUTUEL, 5 yen—Suma 1,043, Ivy 330, Izumo 150; 1,523. Suma paid 6.50.

7.—The GRIFFINS SOLACE, for Australian Subscription Horses of Autumn, 1903, that have started during the Meeting and not won a race: weight for age. Winner yen 250. One Mile.

Sir Claude MacDonald's Stella, 130lb. (Horikoshi) 1
Mr. R. Loonen's La Friponne, 135lb. (Kurosaka) 2
Mr. May's May-sie, 132lb. (Ichi) 3
Mr. Iris' Morning Glory, 135lb. (Goto) 0
Mr. Iris' Mistletoe, 132lb. (Rikizo) 0
Mr. Tatsuta's Akashi, 133lb. (Takahashi) 0
Mr. B. Runge's Fiorentina, 135lb. (Kato) 0
Mr. M. John's Akatsuki, 132lb. (Higaki) 0
Mr. Norfolk's Pathfinder, 130. (Hakodate) 0
Mr. Scherz's Annemarie, 130lb. (Sugiura) 0

Mr. Iris declared best to win. All ten horses were got off to a good start, Stella in front, but in the Dip she was passed by Mistletoe, which then led to past the Shakespeare. There Stella, La Friponne and Maysie pushed up and a good race took place to the post, the first named winning by a length from La Friponne, Maysie a middling third. Time, 2:54.1.

PARI MUTUEL, 5 yen—La Friponne 87, Morning Glory 17, Mistletoe 153, May-sie 521, Akashi 15, Fiorentina 8, Akatsuki 13, Stella 410, Pathfinder 4, Annemarie 10; 1,245. Stella paid 13.50.

8.—The CHINA CONSOLATION, for China Subscription Ponies of 1903, that have started at the meeting and not won a race; weight as per scale. Entrance yen 5. Winner yen 250. One Mile.

Mr. Satsuma's John Bull, 153lb. (Horikoshi) 1
Mr. Swarby's Moth, 147lb. (Takahashi) 2
Mr. May's Mayonaise, 150lb. (Ichi) 3
Mr. R. Loonen's Gaulois, 153lb. (Comte de Perigny) 0
Mr. Iris' Murakumo, 147lb. (Rikizo) 0
Mr. Tatsuta's Harima, 147lb. (Sugiura) 0
Mr. Tytherleigh's Redstart, 144lb. (Mr. Easton) 0
Mr. Swarby's Willoughby, 147lb. (Mr. Cox) 0
Mr. Mess' Flutter, 144lb. (K. Takahashi) 0

Mr. Swarby declared best to win. Moth shortly assumed a good lead and kept pretty well in front but was collared by John Bull; a close finish, Mayonaise being near at hand. Time 1:51.

PARI MUTUEL, 5 yen—Gaulois 14, Murakumo 130, Mayonaise 74, Harima 109, Redstart 3, Willoughby 15, Moth 460, John Bull 470, Flutter 3; 1278. John Bull paid 12.00.

THE KODZU MURDER.

On Nov. 9th at 8 a.m., Mr. Akizawa, the President of the Kodzu Bank, was murdered by his nephew named T. Ishikawa, 24 years old, while on his way to the bank. The murderer fired three times with a revolver, inflicting fatal injuries in the head and breast. The police authorities at Kodzu notified by telephone the Yokohama District Court at noon when Judge Danno, Public Procurator Sudzuki, and Dr. Fujii left immediately for the scene to investigate the affair.

It seems that the murderer of Mr. Akizawa, president of the Kodzu Bank, was a wealthy farmer and had been highly educated in Tokyo. About four or five years ago he requested the banker to give him his daughter in marriage, but was refused. Since then he has been suspected of brain disease and is reported to have attempted to commit suicide on the railway. The murder of his uncle is now ascribed to insanity. He was arrested on the day of the murder in the dwelling of a poor farmer who was formerly a servant of his father's.

FIRES.

Early on the morning of Nov. 7th, fire broke out at the dwelling of Dr. J. Osawa, living at Tobo, Yokohama, destroying the building.

Fire broke out on Nov. 1st at the village of Takashima near Otaru, Hokkaido, burning down over 50 buildings. One child was killed.

Fire was reported to have occurred on the morning of Nov. 6th at Ichigaya, Tokyo. One building was destroyed.

Fire broke out on the morning of Nov. 8th at the Senyu-Kwan Bazaar, Utsunomiya, destroying 15 houses. A merchant named S. Inouye, his wife and their three children were killed, and another man was severely injured. Nearly all the burned buildings, says the *Jiji*, were insured.

MATTERS AMERICAN.

The French jewellery exhibit at St. Louis already amounts to \$4,000,000, and includes a pearl collar valued at \$500,000.

Major-General Charles Heywood, Commander of the U.S. Marine Corps, was placed on the retired list of the Navy on Oct. 3rd, after about 46 years' active service.

It is rumoured in Manila that Mr. Israel Putnam, editor of the *Manila Cablenews*, is to be appointed to fill the vacancy in the Civil Commission caused by the appointment of Governor Taft to the Secretaryship of War and consequent promotions of other members of the Commission.

Mrs. Alberta Hill, who is staying with friends at No. 109 West 105th Street, New York, appeared on Oct. 2nd in the West Side Police Court to press a charge of non-support made against her husband, Marcus Stowe Hill. She is said to have followed her husband from Kobe, Japan, to New York, but lost her first case in the police court as Magistrate Denel dismissed the complaint.

General Bradley T. Johnson died on October 5th at Rock Castle, Goochland County, Va., the residence of his son. He was a native of Maryland and at the outbreak of the Civil War cast his fortunes with the Confederacy, rising to high rank in the Confederate Army by reason of gallantry. After the war he was prominent in Richmond and Virginia politics for some years. He was born in Frederick City, Md., in 1829.

The official statistical report of lake commerce through the United States and Canadian canals, for the month of September, shows a total freight movement of 4,265,650 tons during the month against 4,673,532 tons for the corresponding period in 1902. East-bound freight decreased 731,498 tons, while the westward increased 323,616 tons, making a net decrease of 407,882 tons for the month. Articles of notable decrease were flour, iron ore and wheat on east-bound traffic, the latter commodity falling off over one-half, or 4,803,214 bushels.

Despite delays caused by the great strike, the port of Montreal has this year surpassed all records up to October 7th, and bids fair to do still better till the end of the season. Six hundred and forty-nine vessels have been cleared, a gain of forty-three on last year, while the tonnage is much increased. Not only have the exports grown to an enormous extent, but the imports also show a great increase. The Custom House returns to the end of September for this year show receipts of \$6,897,818, as compared with \$4,935,041 at the same date last year.

The United States Steel Corporation announces that it will at any time during January or February, 1908, pay to every subscribing officer and employee who shall have retained his stock for the full period of five years and otherwise complied with the terms of the circular, \$82.50 per share for the stock less the rebates and benefits he shall have been entitled to under the circular (not including benefits received on account of difference between interest and dividends, which he will in any event retain), provided he wishes to sell the stock for that price at that time. Unofficial estimates of the net earnings of the corporation for the September quarter are now made at \$34,000,000.

Notwithstanding the scare advertisements of health substitutes for coffee, says the *American Journal of Pharmacy*, there is no cause for apprehending danger to the race at large from coffee-drinking. After generations of almost universal coffee-drinkers, our own times see men of gigantic intellect in all realms of activity, our athletes are able to make sudden bursts of effort equal to any in history, and our soldiers acquit themselves manfully in fatiguing campaigns in torrid climes. The life insurance companies, constantly warring against all that lessens longevity or conduces to abnormal organs, nerves,

and actions, seem content to accept the use of coffee as one of the ordinary elements of every-day life.

President Angell, of the University of Michigan, in his annual report to the board of regents, asserts his loyalty to the cause of coeducation. He says: "The discussion of the expediency of coeducation of the sexes has been reopened in some quarters because one large university has decided to try the experiment of separate instruction of the sexes during the first two years of the undergraduate course, and two or three other privately endowed universities have been considering the wisdom of limiting the number of women whom they will admit. It is safe to say that the state universities are not likely to change their policy with respect to the admission of women. So far as I know nothing in their experience suggests the necessity of considering the question whether their long established policy needs to be modified."

The fire loss of the United States and Canada for the month of September, as compiled by the *Journal of Commerce and Commercial Bulletin*, shows a total of \$9,939,450. The following comparative table will show the losses for the first nine months of 1901, 1902 and 1903:—

	1901.	1902.	1903.
January	16,574,950	15,032,800	13,166,350
February	13,992,000	21,010,500	16,090,800
March	15,036,250	12,056,600	9,907,650
April	11,352,800	13,894,600	13,540,000
May	22,580,150	14,686,000	16,566,800
June	9,590,000	10,245,350	14,684,350
July	15,740,000	10,028,000	12,838,600
August	8,334,000	7,425,550	8,428,350
September	7,645,200	9,945,000	9,939,450
Total	120,645,350	114,504,400	114,971,450

"It is stated that an organization has been formed to operate at least 200 automobiles between the hotels and the union station in St. Louis and the fair grounds," says *The Electrical World and Engineer*. "The largest will be trolleyhoes, to carry forty passengers, and the smallest will be runabouts, to seat two persons. Steam, gasoline, and electricity will furnish the motive power. Visitors will be taken direct from their hotels to the entrance to the Exposition or on the grounds, as the case may be. Coupon tickets will be issued entitling passengers to a ride and also to admission to the fair, and those holding such tickets will be deposited at stations provided for collecting and discharging passengers within the grounds. The automobiles will be run through the prettiest residence thoroughfares of St. Louis. It is expected that the proposed automobile service will be popular, as enabling people to reach the fair otherwise than by crowded street-cars. The views of the trolley companies on the subject are not cited. The street-cars will probably have all they can do."

Mr. S. Uchida, Japanese Consul-General to the United States, is quoted as saying that the time is coming when rice will be shipped from the United States to the Far East and sold at a profit. It is not possible now, because the expense of raising crops is greater than in the East and because freights are too high. "With the completion of the Panama canal and the increase of manufactures in Japan, I believe," says Mr. Uchida, "that in future years the United States will ship rice to Japan." Impressed with the suitability of land in Louisiana and Texas for the growing of the best quality of rice, he is planning to interest Japanese capitalists and bring over labourers. It is not the idea of the Consul-General to induce the cheap labour of Japan to emigrate to the United States. He does not believe in the introduction of cheap labour there, and the class of men he means to bring cannot be classed as either common labourers or capitalists, but have sufficient resources to purchase large tracts of land in the rice belt of Louisiana and Texas at the prices that are quoted for such land, and they will bring to the work a thorough knowledge of rice culture.

According to the *National Provisioner*, con-

siderable interest has been manifested recently in the development of the corn-oil manufacturing industry. As an article of commerce maize oil has become of so great value that many millers are investigating the process of manufacture and establishing plants for its manufacture and production with their milling business. The oil is pressed from the germ of the grain when meal, grist, etc., are made. This portion of the seed was practically lost until the present processes of extracting oil were applied. In its preparation the germ is ground and expressed in much the same way that flax and cottonseed are prepared in the manufacture of linseed and cottonseed oil. In removing the germ the corn is first steamed, when it passes to degermination. There is no secret in the process of corn-oil manufacture, although each manufacturer endeavours to keep certain parts of his process secret, much in the same way that certain processes in the manufacture of flour are kept. The machinery for the extraction of the germ is patented, but the process can not be said to be a secret in any sense of the word. It is said that the annual output of corn oil in the United States is about 140,000 barrels, the principal consumers being white-lead and putty manufacturers and soap makers. It is also extensively used by the manufacturers of prepared paints, although few of them will admit it. Its use in the foreign market is said to be principally among the manufacturers of soft soap, and it is said to make a superior quality of soap. The oil is also employed as an adulterant for table oil. It is easily purified, forming a light, amber-coloured, perfectly transparent liquid, without rancidity, and having a pleasant taste. It is also used for lubricating purposes, and may even be used as a lamp oil.

THE LAW COURTS.

G. BOOTH v. DURAND, COBB & CO.

The hearing of this case was resumed in the Yokohama District Court before Judge Kato on Nov. 6th when Shiobara, a former *betto* of Mr. Booth was examined.

He stated that, at the request of Mr. Booth, he took delivery of the horse on June 30th at the stable of Messrs Durand, Cobb and Co. The following day, he took the horse to the office of a veterinary surgeon at No. 37, when the latter advised the new owner to change the shoes for new ones. Subsequently the groom, under orders of his employer, changed the shoes at a Japanese stable in Chinese town. After having examined the horse, Mr. Benney gave the *betto* a tin of ointment to be rubbed on the hooves, and witness did this for about six days. After that period, witness found a crack on the left hoof from which there was a slight flow of blood.

Plaintiff's Counsel asked the Court to inspect the horse in the Court compound for which examination he asked the Judge to summon a professor of the College of Agriculture as an expert.

Defendants' Counsel asked that Ch. Takatsu who changed the horse-shoes should be called. The Court gave consent to both requests and adjourned the case till Nov. 18th.

DOERING v. KANNHAUSER.

In the Yokohama District Court, before Judge Kato, the hearing of this case was resumed on Nov. 6th.

Counsel entered into a brief discussion, after which the case was again adjourned.

MENDELSON BROS. v. FUJIBOKI KAISHA.

The hearing of this case instituted by Messrs. Mendelson Bros. against the Fuji Boeki Kaisha, claiming yen 1,564.99 and interest from April 2nd, 1902, till execution began in the Yokohama District Court before Judge Kato on Nov. 6th. Mr. H. Sato, plaintiffs' Counsel, stated that defendant promised on June 13th 1901 to pay back a total amounting to yen 1,774.99, by monthly instalments—during 1901 at yen 20 per month, 1902, at yen 30 per month, 1903 at yen 50 per month, and at yen 50 per month after the year 1903, until the full sum should have been paid. Defendant, after contract, paid only yen 210 leaving a balance for which the present claim was lodged. Mr.

Ideura, defendant's counsel, contended that the Japanese firm did not owe the money for which the other party sued but that it was a debt incurred by a member of the firm named I. Hirano. He purchased a quantity of curios from Messrs. Mendelson Bros., which amounted to yen 1,774.99 of which a certain amount was paid down and the remainder was set-off by several transactions with the foreign firm.

The parties in presenting their evidence gave explanations, after which the case was adjourned till Nov. 13th.

GROSSER & Co. v. YAZAWA SHOTEN.

The hearing of this case came up again in the Yokohama District Court before Judge Kato on Nov. 6th.

A Chinaman and a Japanese employed by Messrs. Grosser & Co. were summoned as witnesses. Defendant's counsel refused to receive the witnesses on the ground that they were employees of one of the parties. The Court sustained the objection.

The case was then adjourned again.

The Agent of the Tokyo branch of the Singer Manufacturing Company, says the *Nichi Nichi*, has raised an action in the Tokyo District Court against H. Suzuki, living at Sakumacho, Kanda, Tokyo, on the ground that the latter had pawned three sewing machines which the foreign firm had leased to him. The cost of the machines is said to be yen 210.

GROSSER & Co. v. YAZAWA SHOTEN.

In the Yokohama District Court, this case, in which plaintiffs claim yen 6,470 for breach of contract to supply peppermint, came up again before Judge Kato on Nov. 9th when judgment was delivered dismissing the claim of plaintiffs and ordering them to bear the costs.

Mr. K. Amenomiya, directing manager of the Tokyo Merchandise Exchange, instituted an action in the Tokyo District Court on Nov. 11th against Mr. Y. Hotta, a broker belonging to the Exchange Office, petitioning for the return of Government loan bonds of the face-value of yen 8,000. According to the complainant, defendant purchased the bonds from Mr. T. Hirata, former manager of the office, who had stolen the same together with a certain amount of money belonging to the exchange.

NAVAL BOAT RACE.

A very interesting boat race took place on Thursday between crews from the U. S. F. S. *Wisconsin* and the U. S. S. *New Orleans*. The race, which was started at 10.45 a.m., was between double-banked whale boats, 12 men each and coxswain, over a course of three miles, straight away, from outside the Lightship and ending near the breakwater. It was a beautiful contest. The *New Orleans*' boat led slightly all the way, and finished one second, or 10 feet in distance, ahead of the *Wisconsin*. Both crews did splendid work. The time of the winning boat was 28m. 43s. The race excited much interest and enthusiasm among all the ships of the American Squadron now at anchor off the port.

RAILWAYS IN SOUTH CHINA.

The Canton correspondent of the *China Mail*, writing under date of Nov. 2nd says:—It will be possible to run a train through from Canton to Fatshan by the end of this week, but this does not mean that the railway will be open to traffic at that time. Work on the bridges is being pushed day and night, Sundays as well as other days. I have recently had a ride on a velocipede over a considerable part of the line between here and Fatshan. As far as Five-Eye Bridge, the track is well ballasted with broken stone, but from there on sand ballast will have to be used temporarily, as it is very difficult to secure stone ballast. Large gangs of men are now at work straightening the grades and getting the track into condition for running the trains. The telegraph line is already complete as far as Fatshan, and it has

been well constructed. The long stretches of poles, in perfect alignment, make a fine appearance. It is hoped that the introduction of the railway will result in the improvement of the telegraph system in China. Very often now one is told 'wire down,' when a message is presented for transmission. Besides being uncertain and unsatisfactory, the system as now conducted is very expensive. The wire would certainly be greatly used if the service was made anything like what it should be. There are now five engines being used in the construction work between here and Fatshan. They are all small, and were formerly on the New York Elevated Railway. Larger engines will be used to haul trains. They are now *en route* from America. The canals (or borrow pits) on either side of the roadway are being found useful for conveying ballast and other construction material to points along the line. They were made by removing the earth that was needed to make the embankment through the paddy fields.

NEWS OF THE WEEK.

The Crown Prince left Tokyo on Nov. 11th for the villa at Numadzu, where he arrived at 4 p.m.

The Russian Government notified in their *Official Gazette* of Nov. 7th that Nagasaki is cholera infected.

Telegrams from Fukui, Takano and other north-western places, report that hail fell on the morning of Nov. 11th.

The *Asahi* states that the Kwansei Railway Company will reduce its fares on and after Nov. 25th to compete with the Government lines.

The Crown Princess has donated yen 500 toward the repairing of the roads in the neighbourhood of Hayama.

A man named S. Watanabe (50), living at Shitaya, Tokyo, committed suicide on Nov. 5th by cutting his throat with a razor.

The first meeting of Toyama Prefectural Assembly was opened on Nov. 10th. The budget for next year amounts to yen 1,152,348.06.

A telegram dated Nov. 7th from Karatsu states that local coal dealers are in a distressed condition owing to the accumulation of stock.

H. Takawa and three other men were arrested on Nov. 9th by the Harbour police on board the *Hongkong Maru* on which they had attempted to leave for abroad without having passports.

The appeal of Mr. R. Naito, ex-president of the Aichi Prefectural Assembly, who was connected with the text book affair, was rejected on Nov. 5th in the Tokyo Appeal Court.

Mr. Veitaro Komatsuhara, editor of the *Osaka Mainichi*, retired from the post on Nov. 11th. It may be remembered that he was formerly Vice-Minister for Home Affairs.

A case of cholera was reported on Nov. 5th in Osaka. The sufferer is a merchant named K. Tsuyumine who has just returned from Nagasaki where he was staying for some days on business.

The Premier, the Minister for Foreign Affairs, and Count Inouye paid a visit to Marquis Ito on the morning of Nov. 7th. The Marquis is expected to return to-day (the 9th) to his villa at Oiso.

A telegram has been received in Tokyo to the effect that the Russian warship *Cesarevitch*, which started from Toulon on Sept. 12th, and the *Bayan*, which left the Baltic on Aug. 11th, left Colombo on Nov. 3rd for Port Arthur.

A telegram dated Nov. 8th from the Japanese Agent at Bombay says that owing to orders from Europe and Japan, the price of cotton for future delivery rose temporarily but subsequently fell to the condition of the previous week. Another official telegram under date of Nov. 7th from

Lyons states that there was no change in the raw silk market, and that the quotation for Japanese Filature No. 1 was 40 francs and 50 centimes.

The promoters of a new Gas-light company at Sakai, with a capital of yen 200,000, recently decided to commence construction work. Mr. Nakagawa, chief engineer of the Osaka Gas Company, will superintend the scheme.

The Harbour police arrested a Japanese passenger named S. Adachi, who arrived at Yokohama on Nov. 10th by the steamer *Siberia*, from Honolulu, under instructions of the Japanese Consul. The man was removed to the Court. The charge against him is not known.

Some bluejackets of the U.S. warship *Albany* recently presented a sum of money to Mr. G. Sano, Harbour police officer, who was injured by one of the sailors of the ship in a dispute at the English Hatoba, and since then has been staying at the Rokkaku Hospital.

The London *Daily Telegraph* asserts that Hartland & Wolff, the shipbuilding firm of Belfast, have signed a contract to take all the iron and steel they require from the United States Steel Corporation. It is estimated that this will amount to 150,000 tons yearly.

Baron Sone, Minister for Finance, gave an interview on Nov. 11th at 10 a.m. to some leading members of the House of Peers, when he showed them the summarized plan of the Budget for next year, minutely explaining the same, after which he entertained his visitors.

A gold watch belonging to Rev. E. R. Woodman, living in Tsukiji, Tokyo, which was stolen on Nov. 10th while the reverend gentleman was on his way from Asakusa to Kyobashi by omnibus, was received by Mr. Sakai, police-inspector of the Kyobashi station, by parcel post, addressed to him. The watch was at once returned to the owner.

At the end of October, the amount of savings deposited at post offices in the Empire was reported by the *Asahi* to be yen 31,709,260. The figures show an increase of yen 220,386 over last month. Compared with those of the corresponding period last year there is an increase of yen 2,506,973.

S. Watanabe, an official in the Department of Agriculture and Commerce, who was charged with having received a bribe from the merchants patronized by the office, was sentenced in the Tokyo District Court on Nov. 5th to 4 months' imprisonment with hard labour, a fine of yen 15 and the bribes, amounting to yen 1,494, were ordered to be confiscated.

I. Hirai, director of the Tokyo-Yokohama Fire Insurance Company, who was charged with having obtained yen 4,000 from a well-known merchant named H. Kurashima, Hanakawado, Tokyo, by means of a forged draft, was sentenced, on Nov. 9th in the Tokyo District Court, to six years' confinement with hard labour. S. Tanabe, of the same firm, was discharged on the ground that the evidence against him was insufficient.

Mr. Albert Dresden Vandam, the Paris correspondent of the *London Globe* from 1882 to 1887, has died in London, aged 60. His principal books were: "Amours of Great Men," "An Every Day Heroine," "The Story of the Coup d'Etat," "Behind the Scenes of the Comedie Francaise," "An Englishman in Paris," "Paris Notebook," "French Men and French Manners," "Undercurrents of the Second Empire," "A Court Tragedy."

According to the *Official Gazette*, the authorities of the Board of Patents in the Department of Agriculture and Commerce, rendered a decision on Oct. 23rd on a protest brought by Mr. F. E. Giffield, representative of the St. Charles Condensing Company, Illinois. The American firm applied to the Patent Bureau for registration of a trade mark but the officials refused to accede on the ground that the mark of the applicant was

similar to that of trade mark No. 5,558, which was registered in February this year. The applicant insisted that his mark should be patented under the provisions of the 1st clause of Art. 6th of the Conventional Treaty protecting possessive rights. The protest was rejected.

According to the investigation of Nov. 11th, states the *Yorodan*, the stock of raw silk on the Yokohama marked is very heavy. The following shows the accumulation:—

	Bales.
Filatures.....	28,728½
Re-reels.....	6,844½
Orikaishi.....	1,370
Hamatsuki.....	65
Sundries.....	53

Of these figures, 1,374 bales are sold to foreign firms but not yet delivered.

About a hundred and eighty fishermen living on the shore of Samukawa, Chiba prefecture, on Nov. 10th visited the Prefectural Office, petitioning for the prohibition of the *kozarashi* fishing-nets which have been used since a few years ago by the fishermen of neighbouring localities. The authorities endeavoured to pacify them and promised that their complaint should be presented to the Department of Agriculture and Commerce. Tokyo papers state that the fishermen of Funabashi, Kisaradzu and other places are about to support the demonstration, against which the police authorities at the places concerned are taking precautions.

Special telegrams to the *Straits Echo* state that Mr. A. F. G. Tilleke, the managing proprietor of the *Siam Observer*, has been sentenced to six months' imprisonment for feloniously receiving a number of precious stones and jewellery which had been stolen from Mr. Graehert, Bangkok, and that his Burmese clerk has been sentenced to a year's imprisonment. A further telegram is that Mr. H. G. Gough, editor of the *Observer*, has been tried on a charge of contempt of court by making certain allegations in a leader commenting on the trial. Mr. Gough was sentenced to fourteen days' imprisonment, "it being added in the order of the Court that in the event of defendant failing to give satisfactory assurances for good behaviour in the future he will be deported from Siam." Execution of the judgment of the Court has been stayed for one day to allow the Editor time to publish an ample retraction of the statements made in the leading article in respect of which the contempt of court proceedings were instituted.

WHERE THEY FIND THEIR PREACHERS.

There were last year in the United States 540 preachers or ministers, 452 churches, and 71,000 members in the Unitarian Church. On Sept. 23rd this year they held their National Conference at Atlantic City, and from reports "there was much talk from experienced speakers about the training of ministers, the kind of ministers needed, and what the Theological Seminaries could do to supply them." The laymen have a large voice and much authority in the councils of this church. In their speeches the laymen seem to lay the blame or a part of the blame for a lack of ministers upon the theological schools. In defending the theological schools one man as head of the best of their seminaries, said that the schools were not the soil in which ministers grow; the schools can only train them, and then he added this interesting statement:—"Among the twenty-five students who have entered the Melville Theological School during the last two years, not one has come from a Unitarian home. And I am led to believe the condition is similar at Harvard." The natural inference from this remarkable statement is that Unitarian homes are not the soil where preachers grow, they must look for their supply elsewhere. One layman said that he thought it important that there should be a special call to the ministry, and he thought this call was most likely to occur "in connection with evangelical ideas and supernaturalist theology." "And perhaps," he added, "this will account for the superior religious fervour and

power of many of the Unitarian ministers who come to us from Orthodoxy." A prominent layman also called for "ministers who had, not merely ethics, but religion; who had a sense of reverence, and a true call; who were unselfish, and who had, above all things a real gospel to proclaim, and could send it home." These remarks of the various speakers taken from a report in *Harper's Weekly* will be found interesting and instructive to all readers of the *Japan Mail* who take account of the religious problems and difficulties now going on in Japan.

WILL PATILLO.

LITERARY GOSSIP.

The *Scientific American* laments the devastation of forests caused by the increasing novel-plague. Four thousand pitch pines and fir trees had to disappear to produce the paper for the 1,600,000 copies of dime novels recently published.

The Hon. Mrs. Arthur Lyttelton, widow of the late Bishop of Southampton, is about to join the staff of the *Guardian* to conduct the women's section of that paper. The *Churchwoman*, for which she has been largely responsible, will be merged in the *Guardian*.

Mr. Cutcliffe Hyne's new book of stories has for its hero one "McTodd," a ship's engineer—Scottish, drunken, and pugnacious. He has adventures in the Far North, on whaling trips and the like but eventually strikes the road to a fortune, on which he retires.

"Smith of the Shamrock Guards," by "Officer," is a play dealing with "ragging" in the British Army. It has been twice before the Censor, but has failed to receive his benediction. It is published by Messrs. Greening, and the story of its adventures is told in a preface.

Dr. Sven Hedin's next great work, "Central Asia and Tibet: Towards the Holy City of Lassa," will be issued by Messrs. Hurst and Blackett on November 18. It will be in two volumes, containing over 1,200 pages, 420 illustrations from drawings and photographs, eight full-page coloured illustrations from paintings, and five maps.

The book-thief has his apotheosis in a bookcase end which is being carved by the Guild of Handicrafts at Chipping Campden for Lord Beauchamp's library at Madresfield. The general subject of the carving is "The Tree of Knowledge," and the book-thief, in top-hat and livery, is placed among the reptiles at the base of the tree. The design is by Mr. C. R. Ashbee.

Messrs. James Maclehose & Sons, Glasgow, have in the press in twelve volumes "The Principal Navigations, Voyages, Traffics, and Discoveries of the English Nation made by Sea or Overland to the remote and farthest distant quarters of the Earth at any time within the compass of these 1600 years," by Richard Hakluyt, Preacher and sometime Student of Christ Church in Oxford. It was intended to publish Vols. I. and II. in October, and the remaining vols. at intervals of two months.

English translations of Dumas' romances are to be issued by Messrs. Methuen at the price of sixpence each, save in the case of the longer tales, for which a shilling will be asked. The first six are—"The Three Musketeers," "The Prince of Thieves," "Robin Hood the Outlaw," "The Corsican Brothers," "Otho the Archer," "Georges; or, The Isle of France," and "Amaury." To the "Musketeers" is prefixed a very readable account of Dumas and his work, from the pen of Mr. Andrew Lang. The translations are by Mr. Alfred Allinson.

An interesting correspondence was proceeding when the last mail left England, in *Notes and Queries* on John Gilpin's route on the day of his famous ride. The discrepancies in the ballad now being pointed out were discussed some years

ago in a London morning paper, and this article was resuscitated the other day by *T.P.'s Weekly*. It is, perhaps, not very generally known, or is pretty generally forgotten, that the inscription "Here lies John Gilpin" was to be seen until fifty years ago in the churchyard of St. Margaret's, Westminster, where it must have met the eye of the poet in his schooldays.

The many friends of Miss Hesba Stretton will be glad to hear that two volumes bearing her name on the title-page will be published almost immediately. Messrs. Skeffington and Son are bringing out a collection of carefully selected passages from the Apocrypha, arranged under various heads. The title is "Good Words from the Apocrypha." "The Parables of Our Lord" is the title of the second volume, in which the authoress of "The Doctor's Dilemma" and many other standard novels retells and discusses in her own graceful and lucid manner the "good stories of old." The Religious Tract Society are the publishers of this volume.

Correspondents of the *Academy* are discussing with much vigour the admissibility or non-admissibility of such words as "reliable," "laughable," and the like. It is urged, for example, that "reliable," strictly speaking, means only "able to rely," whereas it is actually used as signifying "able to be relied upon." In the same way with "laughable": etymologically it means "able to laugh," but it is used as synonymous with "able to be laughed at," i.e., provocative of laughter. That is to say, "reliable" and "laughable" are words coined arbitrarily, rather than with respect for etymology. To scholars they, and others like them, are offensive because, indefensible from the scholastic point of view. Unhappily, that is a standpoint from which few words nowadays are coined. What is desired in a word is that it shall be, above all things, brief. We talk of sending a "wire," instead of a "telegram," because "wire" is the shorter word of the two, though, in a literal sense, a "wire" cannot possibly be "sent." Admittedly the English vocabulary grows daily less and less classical, but at the same time it gains in conciseness and in force. One would have been glad if the language could always have been drawn from a "well undefiled"; but the modern spirit has decreed otherwise, and in these rapid and strenuous days one cannot stop to be strictly academic.

Mr. Charles Whibley has written for the "Modern English Writers" series (W. Blackwood and Sons) a little book on Thackeray which is based on a full command of the existing material. It is agreeably judicious in its tone, being the work of one who is neither an enthusiast nor a carper. Mr. Whibley is neither Thackeray-ite nor anti-Thackeray-ite. He has evidently done his very best to be fair and just. He will not please any partisan, but he will give satisfaction to the independent reader. The main theory on which he works is that, both as writer and as man, Thackeray embodied two differing personalities. "The truth is," he says, "there were always two men in Thackeray—the sentimental moralist, whose obvious 'lessons' were long since forgotten, and the keen-eyed ironist, for whom life was an amusing game, whose rules were independent of virtue, and in which the scandal was most often victorious. . . . And as the writer was perplexed by a twofold character, so also was the man. It would be easily possible, without suppressing or twisting a single fact to draw two distinct and opposing Thackerays." More generally, Mr. Whibley accepts the verdict on Thackeray of Carlyle—"a big mass of a soul, but not strong in perfection"—"a beautiful vein of genius lay struggling about in him." Mr. Whibley fully appreciates Thackeray's style. "Despite its occasional inaccuracy, despite its loose texture, it has many shining qualities. It is graphic, various, and at times eloquent." It is the style, essentially, of a man—of a gentleman, of a man of the world, of a man of genius. Mr. Whibley further recognises Thackeray's great versatility—that, not only of a novelist, but of a magazinist, an essayist, a versifier, a lecturer, and

so forth. Of Thackeray's verse this little volume says very little.

Mr. Fletcher Moss, of Dedbury, has just brought out a handsome volume entitled, "Pilgrimages to Old Homes, mostly on the Welsh Border," which gives some account of the beautiful old timbered houses to be found in the Marches of Wales. Time has not dealt kindly with the great majority, but here and there the author came across one which has been maintained in all its pristine splendour and thus remains a priceless heirloom for the nation. One such is Moreton Old Hall. It is a house of many gables and overhanging windows. Its gatehouse, which you approach by a stone bridge over the moat, is a mansion in itself. But the great glory of Moreton is its famous octagonal bay windows, which are as sumptuous in decoration as they are elegant in proportion. "The quadrangular pebbled courtyard," to quote Mr. Moss, "surrounded by a bewildering maze of cornered windows, dim recesses, infinite inscriptions, doorways, stairways, carved sentries, ornamental details, all as it was three hundred years ago, is unique." The inscriptions are not the least interesting adornments of the house. Over one window you may read the following:—"God is al in al thing. This window whire made by William Moreton in the yeare of oure Lorde MDLIX." Over another may be seen these simple words:—"Rycharde Dale Carpeder made thies window by the Grac of God." 'Tough the Moretons no longer live in this wonderful house, traces remain of their occupation. The tiny church with a priest's room over the nave, and a rood screen, is as it was on the day of its construction. Even the kitchen has its ancient furniture, its spice-chest, and its pewter decorated with the Moreton arms. Nor does this exhaust the interest of Moreton Old Hall. "The newel post," says Mr. Moss, "round which the stairs wind to the ballroom over the gate house; is one straight oak to the top of the three stories. The doors from the stairs to the rooms all have primitive fastenings, with great bars of oak to bolt right across them into holes in the wall. The ballroom itself is a most beautiful old room. Long and narrow . . . it is panelled with oak to about four feet high, and above that is nearly all windows with richly patterned lead lights, through which the sun and moon may cast fantastic shadows on the rocky floor or oaken walls. The floors are of cement, which time has caused to roll up and down . . . the ceiling is diapered with timber in pattern, and the ends of the room have figures and mottoes. A blindfolded figure of Fortune, with wheel over her head, has 'The wheele of Fortune whose rule is ignorance,' the wheel bearing 'Qui modo scandit corruet statim.' At the other end of the room a figure of Destiny or Fate transfixing a globe has 'The speare of destiny whose ruler is knowledge.'" Though Moreton Old Hall is the best of its kind, it does not stand alone. Oreton Court, Albright Hussey, Lemster Grange, Diulacres Abbey, the Staick House, are worthy competitors. Nor are the towns unworthy the houses in their neighbourhood. The splendour of Ludlow is familiar. But who, remarks the *Spectator*, has visited Ledbury or Weobley? Yet these towns are as strange and as beautiful as anything Brittany has to show us.

CORRESPONDENCE. THE LATE SOIREE.

TO THE EDITOR OF THE "JAPAN MAIL."
SIR,—On behalf of the Committee I wish to express my sincere thanks to the communities of Tokyo and Yokohama for the kind support given to the performance on Thursday evening in aid of the *Société Française de Secours*.
I desire particularly to thank most heartily the ladies and gentlemen who, by selling the tickets, contributed so much to the success of the Soiree, also to the Amateur Dramatic Club for their generosity in putting at our disposal the properties of the Society. The kind help of Mr. J. P. Mollison and Mr. E. Beart was much appreciated, while for the hearty and talented manner in which Mr. Brady gave his invaluable support the Committee are particularly grateful.

To Admiral Bayle, who most kindly lent the band of the *Montcalm* for the occasion, and permitted the sailors to render much assistance, to Mr. and Mrs. Manley, who were so generous as to decorate the hall; to Mr. E. J. Moss for furnishing chairs, tables, etc.; to Mr. C. H. Thorn, who had the kindness to translate so cleverly the synopsis of the plays; to all those ladies and gentlemen who assisted, the Committee desire to express their most sincere thanks.
Yours, etc.,
R. JAMIN, Secretary.

A WARNING.

TO THE EDITOR OF THE "JAPAN MAIL."
SIR,—Permit me through your columns to warn the charitable public against a Eurasian who is going round begging. He gives the name of James Symonson, is dressed in foreign clothes, and speaks in Japanese, saying he does not know English, which is apparently correct. His story is that his father, an Englishman, died in Tokyo about 30 years ago, when he was three years of age, and that he was brought up by his Japanese mother in Nagasaki. He left there a year or two ago to go to Tokyo to try and better himself with the help of his father's old friends, but has not succeeded in this, and now wants to return to his mother's friends in Nagasaki; but for this he has not enough money, hence his appeal.
A friend of mine gave him ten yen to get to Nagasaki on the 29th September, but to-day he turned up at another friend's house with the same story: so he is evidently a fraud.
I am, Sir, Yours, &c.,
November 5.
A. F. CAHUSAC.

[We know him!—Ed. J. M.]

TO THE EDITOR OF THE "JAPAN MAIL."
SIR,—Referring to Mr. Cahusac's letter regarding a young man named Symondson, I beg to say that, as a result of enquiries, I have received information from his father's relatives in England stating that they will do what is right and proper for them to do in the case.
His begging proclivities are only what one might expect from a waif and stray dragged up under such conditions; nevertheless, as they should not be encouraged, I have advised him of your correspondent's "warning," which I hope will be for his benefit.
The young man's story of his life is, I am inclined to believe, substantially correct.
I am, Yours faithfully,
ALAN OWSTON.
Yokohama, 9th Nov., 1903.

TO THE EDITOR OF THE "JAPAN MAIL."
SIR,—I am glad to learn from Mr. Owston's letter that James Symondson's relatives are going to look after him.
The man's story of his life may be substantially correct, but the fact remains that he has been trying to obtain money under false pretences. If he begged openly for his support it would be one thing, but it is quite another to obtain a sum like 10 yen for the specific purpose of going to Nagasaki, and then never going there. I may add that he denied ever having received the money when taxed with it, maintaining that it must have been "hoka no hito," and tried still to get more.
Passing on my warning to him was a trifle superfluous, as he had evidently already taken fright; for I had asked him to come to my office to go with me to someone who might help him, but he never turned up.
Having then satisfied myself by further enquiry of his identity with the "hoka no hito," I reported the matter to the Police, as he seemed to me to be a man who wanted looking after. But on seeing Mr. Owston's letter this morning I showed it to the Superintendent and asked him to take no further steps in the matter at present, as I trust Mr. Owston's kindly interest in the man will enable him, with the help of his relatives, to make a fresh start in life.
I am, Sir, Yours faithfully,
10th November.
A. F. CAHUSAC.

AN INTERVIEW WITH VICEROY ALEXIEFF.

(FROM A CORRESPONDENT.)

Port Arthur, October 22.
On Monday last I had an interview with Admiral Alexieff. The Viceroy is not inaccessible, but he is extremely busy, so that it is no easy matter to see him; and I was very much pleased in consequence on being informed last Saturday that I could call on him at 8.30 on Monday morning. The Admiral's house is in Old Town, and stands on a gentle eminence above the Little Park (or Boulevard as they

call it), commanding a good view of Golden Hill, from which it is separated by the smaller of the two basins composing the harbour. It is a two-storied edifice, new, built of stone, with a gravelled court in front and a naval flag with two anchors waving overhead. It has something of the air of an Indian bungalow about it, with its verandahs in both storeys. Only that the second-storey verandah is shut in by glass and the lower storey is not so open as in India. For a man whose position so nearly resembles that of the Czar, the Viceroy is not strongly guarded. At the gate there are two soldiers who seem to let anyone in unless, as the notices in some public buildings in Japan put it, they are "drunk or insane." These soldiers are accommodated with white sentry boxes traversed diagonally by a large number of broad black bands. At the door there is no guard but in the entrance-hall a few unarmed soldiers in the usual top-boots and loose white blouse fastened at the waist by a leather belt assist visitors to struggle out of their great coats and into them again, and relieve them of their hats and sticks.

The Viceroy's ante-chamber is always filled with people waiting for an audience. Two officers of the Viceroy's suite are also in attendance, one a young naval officer, the other a military man. At the end of this room is a large desk piled with documents; on the walls are maps and plans, old notifications with new notifications placed over them and lists which look like time-tables; while bundles of newspapers are scattered about. One bundle contained the *Temps*, another a miscellaneous collection of Russian papers, a third the "Hongkong Government Gazette."

At the time of my visit this room was filled with a number of the biggest men I ever saw in my life. Most of them were Generals or high military officers, one was a naval officer, two were civilians, two were clergymen. The clergymen wore long flowing robes like lawyers and around their neck were suspended crucifixes of gold. I think one of them was a Lutheran clergyman who had arrived in town the previous day from Vladivostok to attend to the religious needs of the few hundred Letts among the Russian soldiers and civilians in Port Arthur. I may here remark that there are five Russian churches here, mostly for the use of the military; one Jewish synagogue, and no Roman Catholic or Protestant church, although in Port Arthur and Dalny there are about 4,000 Roman Catholics, mostly, I suppose, Poles.

I said that the ante-chamber contained a collection of the biggest men I ever saw in my life. Some of them were giants and their enormous beards, swords, and uniforms made them look striking. Most of them wore decorations, some a very large number of decorations. Two of them were asked to go upstairs at once to see the Viceroy, the rest of us waited about half-an-hour and then went up in a body. We drew up in line along one side of a sumptuously-furnished drawing-room, evidently connected with the Viceroy's private apartments.

I must say that I awaited with great interest the coming of the Czar's representative in the Far East. The extraordinary extent of his power and the reports I had heard of his ability, tact, and endurance excited my curiosity to an unusual extent. I felt that I was about to see a historical personage, a man destined to make history, bloodstained or the reverse. I had been told that during the Boxer troubles the Admiral had worked for sometimes twenty hours a day and that at present the amount of business—naval, military, civil, etc.—that he gets through every day would make the average man break down in a week and would make the average British workman go on "strike" in half that time. And his business does not consist merely in signing papers. He thinks for himself. An American man of affairs once asked him, for instance, why he established his headquarters in Port Arthur and not in Dalny. "I want to buy the stores for my fleet in a large market," said he, "I don't want to pay more for them than is necessary. Now I would certainly have to pay more for them in Dalny than in Port Arthur."

This practical answer might have been made by the first Napoleon. It shows that solicitude for the fighting man which is the foundation of victory. On the whole that American of whom I speak was profoundly impressed by the Admiral's common sense and grasp of detail. He came to the conclusion that he had no mere martinet to deal with, that Admiral Alexieff could cope with matters far beyond the ken of the average naval commander.

The Admiral kept me waiting about two seconds. Then he came in, a man of medium height, pleasant eye and smile, slightly upturned face (perhaps on account of his having to speak so much with abnormally tall men) and short beard. He wore a simple naval uniform and his manner was very quiet and natural. Everyone was standing up and the Admiral walked down the line, shaking hands with each and conversing with each a few moments. When my turn came, he asked me what I thought of Port Arthur and I candidly confessed that it was a

somewhat rough place, adding, however, the saving clause (and not out of more compliment either, for I thoroughly believe it) that I thought the city would be a fine one in about two or three years. He thoroughly agreed with me on this point, but as this is not an important matter I shall pass on. I asked him about the Russian operations at Yong Am-pho, said that it had been distinctly stated the Russians were constructing a fort there, that they had landed cannon during the night. The Viceroy emphatically contradicted this. "We have no fort there," he said, "not a single cannon, not a single officer, not a single soldier. All reports to the contrary are false. They have been fabricated with the object of creating a sensation."

His Excellency did not seem to be alarmed by the opening of Moukden, provided by the American Commercial Treaty. "O, there's nothing in that," he said hastily, "that will be all right. We'll arrange that with America . . . without interrupting our friendship with the United States. . . . International commerce must have its way."

Then I gently approached the most ticklish subject of all—the evacuation of Manchuria. The Viceroy did not say right out that his troops would remain in Manchuria until the Greek Kalends, but indirectly he gave me to understand that Russia would as soon think of evacuating Siberia. "We have much trouble still," he said, "with the brigands in Manchuria, especially in East Manchuria between Harbin and Vladivostok. . . . Many unfortunate incidents occur in the railway zone there."

I asked him if he had not received many petitions from the Chinese inhabitants of various districts in Manchuria begging that the Russian troops be not withdrawn, and pointing out that such a withdrawal would expose the petitioners to the wrath of the bandits. He confessed that such was the case; he had received many such petitions. "And I should have received many more," he said, "if it were not for the mandarins—the mandarins in Manchuria itself. They terrorise the people. They prevent them sending us as many petitions as they would otherwise send." "Then, Your Excellency," said I, "I suppose that on account of this lawless state of things, you will not evacuate Manchuria just yet?"

His answer was short but full of meaning. "We'll arrange that matter with the Chinese," he said.

This phrase settled it. This apparent forgetfulness of the fact that Japan is moving heaven and earth to make Russia settle the matter with her, this implication that no outsider has any right to interfere and that if he did interfere he would gain nothing by it,—this, I say, was enough. It was unnecessary now to ask how the negotiations with Japan were getting on (especially as I felt sure that I would not get an answer to that question) or if there was any probability of a war between Russia and Japan. My interview with Admiral Alexieff convinced me that the Russians will remain in Manchuria.

NEWS FROM CHINA.

(FROM THE TRAVELLING CORRESPONDENT OF "COMMERCIAL INTELLIGENCE.")

Wei-hai-wei, August 14.
An agreement has just been signed by the British Municipality and the Tientsin Gas Company, whereby the latter obtains the right to instal electricity for lighting and power purposes in Tientsin for a period of fifteen years. Under the agreement the Gas Company is empowered to make a charge of (based on the present rate of exchange) eight pence per Board of Trade Unit, and a charge of £8 4s. 9d. per annum for each 32 candle-power lamp for street lighting. The Gas Company is under obligation to furnish electric light within eighteen months after date of the agreement being signed, but should the Company not be able to raise sufficient capital within three months of the signing of the agreement, the same is to be cancelled. I may mention that the Gas Company has had the lighting concession for Tientsin for the past fifteen years, but the undertaking has not been a very successful one. The gas is obtained from kerosene oil, and sufficient allowance had not been made for an increase in the price of oil, or for a fall in exchange. Electrical firms at Home desirous of securing the contract should make application at once to the Tientsin Gas Company, Tientsin. A firm sending out a fully qualified representative to draw up estimates would be in a much better position to get the business. Tientsin can be reached from London, via the Siberian Railway, in twenty-one days, and the return journey would cost about £100.

KIAU-CHOW.

For some time past the trade returns of the German territory of Kiau-chow have puzzled business men in China. According to these returns the trade of the port was increasing at a rate unprecedented in the history of any other port in China. The mystery has just been solved. It appears that the German authorities are in the habit of entering in the returns the whole of the cargo of every ship calling at Kiau-

chou—that is to say, not only the cargo consigned to Kiau-chou, but also all the cargo in the vessel destined for other ports. But the German authorities are not even satisfied with this system, for the same cargo is put into the returns as cleared from Kiau-chou. This is a beautiful system. Say a vessel enters with 1,000 tons of cargo on board, and 100 tons for Kiau-chou, the whole 1,000 tons are entered as consigned to Kiau-chou, and 900 tons are cleared from the port. As a matter of fact, with all their efforts the Germans are unable to attract trade to the port, and have adopted this plan of making people believe the prosperity of the place is greater than it really is. As a leading German business man in Shanghai said to me a few weeks ago, "the authorities are too busy 'colonising' to attend to genuine business."

BRITISH RAILWAY CONCESSIONS.

In the February number of the *Contemporary Review*, Mr. Demetrius C. Boulger, in an article on "Railways in China," stated that "British railway enterprise in China after a long halt is, therefore, about to make a practical start under favourable financial conditions." This start, according to Mr. Boulger, was to be made by the "powerful syndicate represented by the Hongkong and Shanghai Bank and Messrs. Jardine Matheson and Co.," on the Shanghai-Nanking Railway. Six months have elapsed, and the start has not yet been made. This scheme is typical of all British railway enterprise in China. Let us glance at the history of the concession for the Shanghai-Nanking Railway, a line which would be less than 180 miles in length, and which presents no engineering difficulties whatever, while it promises to be the most remunerative railway in China. This concession was obtained in 1898, but nothing was done to carry it into execution. Eighteen months or more were absolutely wasted, and then the Boxer rebellion broke out. Three years have since gone by, and still no work has been done on the line. The new final contract was signed last month, and work was to be commenced within one year from the date of signing. Why the work was not started four years ago is a mystery. Out of the many railway concessions obtained by Britishers since 1898, not one is being worked. It is true the Peking Syndicate is building some short lines in connection with its coal mines, but the right for these was obtained in connection with the mining concessions. The British-China Corporation (represented by the Hongkong and Shanghai Bank and Messrs. Jardine, Matheson) obtained concessions for building the following lines:—Shanghai-Nanking, Nanking-Hsio Yang, Soochow-Hanchow, and Kowloon-Canton. After nearly five years, not a sod has been turned on any one of these lines. Let us see how this state of affairs compares with what other nations are doing. The Peking-Hankow, or Lu-Han Railway, is making rapid progress, work being pushed on from both ends, and it is expected that the entire line, with the exception of a large bridge, will be open for traffic next year. The Germans are pushing the Shantung Railway, and about 300 miles are open to-day. The Canton-Hankow Railway, originally obtained by Americans, but sold to the Belgians, is going forward, and work has been commenced from the Canton end.

Mr. Boulger says that "it is impossible to acquit the concessionaires of apathy in commencing operations on at least one of the sanctioned lines," and I think he might well have used stronger language. Granting that the Boxer troubles stayed operations in 1900, what reason can the British-China Corporation give for having wasted eighteen months previous to the outbreak and then three years since? Then, again, the Boxer troubles did not interfere with matters in the south, and there is no reason why the Kowloon-Canton line should not now be in full working order. In obtaining the four different railway concessions and not commencing work on any one of them after five years, the British-China Corporation exhibits a dog-in-the-manger spirit which is unworthy of the two great firms of which it is composed. It is all very well asking for the assistance of the Government, but the Foreign Office and the British Minister at Peking have gone as far as possible in aiding British subjects in the matter of railway concessions, and it is the fault of the British concessionaires if they are supplanted by foreigners. We claim the Yangtze Valley as our sphere of influence, but what influence can we claim after the Germans, French, and Belgians have established themselves there by means of railways and mining rights?

By our apathy and neglect we are rapidly losing prestige, not only in the Yangtze Valley, but all over China. It stands to reason that the Chinese will have a greater opinion of people they see building railways and opening mines all over the country, than they will of the British, who are content to do their trading at the Treaty Ports. Nowhere is it more imperative for the British capitalist to "wake up" than in China. Generations of our countrymen have devoted themselves to opening up China, and now we allow other nations to reap where they have not sown, while we look calmly on. As Mr. R. K. Douglas says in "Society in China," "our vast com-

mercial interests in that empire are apt to be unduly minimised when viewed from the opposite end of the world. But if our trade is to be maintained and our Treaty rights are to be observed, it will soon become necessary for us to take a far stronger line than we have lately adopted in our relations with the celestial empire. . . . Our commerce in the Far East is not what it was; and this is the more important since signs are not wanting that there is a danger of further contraction, owing to the advance made by other nations, and the growing hostility of the Chinese Government."

AMERICAN COMPETITION.

Two or three years ago there was almost a panic in England, owing to what was termed "the American invasion." It was soon seen, however, that American competition was helpless against a resolute front. This fact has been emphasised by American proceedings in the East during the past couple of years. Three years ago Americans swarmed into China, and all sorts of goods were thrown on to the market at ridiculously low prices, in order to "get a footing." The footing was obtained, but to-day, except in the heavier classes of cotton goods, American competition is conspicuous by its absence.

Even in kerosene oil, America has a hard fight to hold the market against the imports from Sumatra, Borneo, and Batavia. Americans obtained a concession for constructing the Canton-Hankow Railway, but soon found that they could not compete with Europeans. Their interest was sold to the Belgians, and now a pretty fight is going on. The Belgians claim the building of the line, in view of the fact that they are to finance it, but the Americans claim that their engineers must be employed in the construction. It seems that the Americans have not a leg to stand upon in support of their contention—they have sold their rights without any stipulation, and the Belgians are, rightly, claiming the whole control. Unless Americans have the field to themselves, they do not seem to be able to hold any market. They have grown up so accustomed to having their own market to themselves, that they can only do business where they can get the same conditions. Take the Philippines. It is only by putting an export duty on hemp that they can attract this to their own markets, but in all else in the islands they are unable to hold their own against their British competitors, and this fact is deplored by all their writers. In the same way they tried to get a footing in the tin industry in the Straits Settlements, but failed; whereupon they bought the tin at fictitious rates to ship to America, thus destroying the flourishing smelting industry of Singapore and Penang. Then the local Government stepped in and levied a heavy export duty on the ore, which effectually put a stop to American tactics. Now the Americans are howling because the Straits Government have adopted their own plans for protecting an industry.

This tin question has a wider significance. It is notorious that American tin-plate makers have never been able to successfully compete with British makers under the existing drawback system in America, and if the Standard Oil group had not control of the tin produced in the Malay Peninsula they would have been able to dictate their own terms to British makers. The same tactics were tried by the Standard Oil Company in Burma last year, and were again foiled by the Government. Their openly expressed intention was to close down the Burma oil wells, so that American oil could be sold in India. A further illustration of the fact that Americans cannot fight open competition in a legitimate manner is given in the case of the Chartered Bank at Manila. The bank brought in an accountant for its service, but the man was refused admission into the island on the plea that he was being brought in on a contract. It is notorious that American banks have never been able to secure business either at Manila or any other Eastern port. What would the American Government do if we were to prohibit the International Bank at Singapore or Hongkong from bringing in American citizens under contracts? Americans are fine traders when everything in the way of tariffs, freights, and monopolies are in their favour, but are unable to fight competition on equal terms. Perhaps this is the result of high tariffs, trusts, and legislative interferences with natural trade conditions. It would be a bad day for England if tariffs were to kill the spirit of enterprise and doggedness in our traders. The American spirit is seen plainly in England. They could not make any headway in the tobacco, match, or photographic materials industries unless they obtained control of the output. When a bold front is displayed, as in the tobacco fight, they retreat. In an open, equal fight our traders have nothing whatever to fear from American competition, and all round the East proofs of this can be seen.

RUSSIAN NEWS.

(FROM A CORRESPONDENT.)

Port Arthur, November 2.

Russian newspapers are much disturbed apparently about the Yellow Peril! At least, there is a good deal published at the present moment on this original subject not only in the St. Petersburg Press but in the Russian Press on this side of the world.

The Port Arthur paper has a leading article in its issue of 8th October (21st), the gist of which is that unless the Russians hasten to colonise the Primorsk, the Chinese will colonise it with results that will in course of time prove bad for Russia's Far Eastern possessions. In the district alluded to, says the *Norv Krai*, the natives get "by an evil irony the richest land and the Russians the poorest. It would be uncandid to deny that the economic prospects of the Primorsk are improving, but the improvement is slow and hardly visible. The place is almost full, too, and this filling up, which must be placed to the account of the Chinese labourers who have been pouring into the district, cannot but be regarded as a serious danger because . . . it is seriously disadvantageous for us to have on our hands a foreign army in the shape of a multitude of the Chinese population."

The Port Arthur paper then goes on to show that the danger is not visionary, and it recommends the sending to the Primorsk of Russian artisans as well as Russian labourers. Judging by the tone of the Port Arthur article, matters must be becoming serious in the Primorsk.

The St. Petersburg *Vedomosti* seems to be a confirmed believer in the reality of the "Yellow Peril" for it frequently publishes articles on that alarming subject. Its latest harps on the old theme, the impossibility of the Russian labourer competing with the Chinese on account of the latter's low standard of living. Although the writer of the article claims to know the Far East thoroughly he shows that his acquaintance with it is merely superficial by the idealised Chinaman that he presents to us,—a being able to live on a handful of rice per day and having almost no wants whatever. If he had had any lengthy experience of the Far East he would know that as the Chinaman or the Japanese advances in the scale of civilisation his wants become more, and that if he does not advance in the scale of civilisation he cannot compete with the European.

Again, the latest issue of the *Norv Krai* contains a long article by a Mr. Goreinoff who shows that the "Yellow Peril" is, so to speak, thundering at our very doors. He warns Europe that Chinese cheap labour will soon knock them out of the ring, bankrupt them, crush them. As for the Chinese army, everything leads one to believe that a formidable army will be created. Japanese are helping to build arsenals. Chang Chih-tung has got detachments of soldiers trained in European style under the direction of Japanese officers. China is preparing for war; and in the mad "drang nach Osten" that has seized on them, the European Powers do not see, it seems, these terrible graves that are yawning for future generations. And what will you see, once the Chinese army is fully equipped, well-trained, and ready to fight? How many soldiers do you think it will be able to put into the field? As many as you like, 10 millions? Let it be ten millions. Why, a Chinese army can then crush all the armies in Europe. For the Chinese also will be equipped with all the latest engines of destruction invented by Herr Krupp, etc., etc. In short Mr. Goreinoff considers the Chinaman about as peaceful as a live shell. He may explode at any moment and scatter destruction—economic, social, and material,—on all sides of him.

The Russian papers announce that conferences are being held at the Ministry of Finance in St. Petersburg with the object of doing away with some of the formalities connected with the passport system for the benefit of travellers passing through Russia on their way to and from the Far East.

The *Irkutsk Government Gazette* hears that the preliminary surveys of the railway from Kiakhta to Peking through Urga have been completed and sanctioned, and that in August next the work of building the new railway a distance of 1,500 vests will be in progress. Mr. F. O. Hirschmann is to have the principal direction of the works. He will be assisted by Mr. Ammosoff, another engineer.

The St. Petersburg *Vedomosti* of 14th September (27th) has a long article from a correspondent in Japan who signs himself "Z." The letter is headed "Talks from Japan" and that title suits it, for it is mostly a peaceful, grandfatherly monologue in which much is said about the School of Foreign Languages at Tokyo and especially about a Russian drama, "The Niggardly Knight," that was played there some time ago by the students of the Russian language in that school. The writer, who seems to be a resident in St. Petersburg, says that he has just received a letter in Russian from Mr. Kitazima, who describes himself as just received a letter in Russian from Mr. Kitazima, who

describes himself as a student of the Tokyo School of Foreign Languages. "Z" says that he has not the honour of being acquainted with Mr. Kitazima, but that he is thankful to him all the same for his letter. It seems absurd to notice such a slight thing as the reception of a letter from a Japanese student in a *Vedomosti* article, but perhaps the writer's object is to show the intense mental activity of the Japanese at the present moment for he goes on to say:—"Every time we hear that the Japanese have increased their fleet or brought their army into a better state of preparedness for war, we are alarmed. 'There is nothing to be alarmed at, however, for we can also increase our fleet and our army is always ready. But why, I wonder, do we never become alarmed at the mental preparation which the whole Japanese nation is making, at the stern scholastic discipline to which it is voluntarily subjecting itself? Why do we carefully watch one army, the army of the sword, and not the other, the army of students and thinkers who are silently arming themselves with a knowledge of their opponents with a knowledge of our country—an army rich in initiative and tenacity? In fighting that latter army, the weapons to be used are not those with which we are always armed,—the fight, will be more complicated and will require a special kind of strength which it is needful for us to cultivate. Victory does not always crown the efforts of him whose army and navy are the strongest at a given moment, who despises and abuses his opponent, laughs at his youthful culture and his tendency towards wholesale imitation; victory is for the one who displays the most energy and goes to the greatest pains in making himself acquainted with the exact position and resources of the other. Even if it is to be a war with swords and guns let not that fact prevent us from recognising the wisdom of this Government which forced the nation to dissemble its hatred of Europe, which gave its people civilisation and every organ that could ensure its prosperity, which is not dazzled by ambition. But there is going to be no war with guns and swords. A war is beginning in the Far East in which guns and swords and the policy of Governments will not be of much avail. Are we ready to take part in that war?"

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

THE CENTRAL AMERICA REVOLUTION.

London, November 4.

The Panama revolutionists, resenting the non-ratification of the Canal treaty, have seized the federal warships and imprisoned all the naval and military officers. A Government has been organized under a triumvirate. Several American warships have gone to Panama and Colon to maintain free transit across the Isthmus. Colombian warships from Bogota are bombarding Panama. The United States Vice Consul has been ordered to protest.

THE U.S. ELECTIONS.

The elections show the Republicans to be victorious in Ohio, Pennsylvania, Rhode Island, Massachusetts, Nebraska, while the Democrats have been successful in Kentucky, Virginia, Maryland.

THE TROUBLE AT COLON.

November 5.

Fifty American bluejackets landed at Colon, where the Government troops refused to acknowledge the provisional Government. The inhabitants are panic stricken.

THE PANAMA REVOLUTION.

London, November 7.

The State Department at Washington has received a telegram from Panama formally announcing the establishment of the new government. The U.S.S. *Nashville's* blue-jackets have again landed at Colon, which the revolutionists are marching to attack. When Colon is captured the Republic of Panama will be recognized by the United States, and it is expected at Washington that Great Britain and France will also recognize it.

THE DARMSTADT CONFERENCES.

Count von Bülow and Count Lamsdorff

have had a three hours' conference at Darmstadt.

THE REPUBLIC OF PANAMA.

Later.

The United States have recognized the new Government at Panama and it is expected that this means a virtual American protectorate. The Government of Colombia have sent to Washington a strong protest against the United States' encouragement of the revolution. The Colombian federal troops have quitted the field, leaving the Isthmus in the hands of the revolutionists.

Several New York papers are vigorously accusing President Roosevelt of conniving at, and even indirectly supporting, the revolutionists at Panama.

RUSSIA, GERMANY AND THE FAR EAST.

London, November 8.

The *Temps* says that M. Delcassé informed the Cabinet council that pacific prospects predominated as regards the Far East.

The *Telegraph's* Vienna correspondent says that the result of the conference between the Tsar and the Kaiser was a distinct agreement insuring Germany's support in the event of Japan declaring war against Russia and being supported by England.

OPERATION ON THE KAISER.

London, November 9.

The Kaiser William has been successfully operated upon for a polypus in the larynx. The polypus was removed and the medical report emphasizes the non-cancerous nature of the polypus.

The morning bulletin was to the effect that the Kaiser passed a satisfactory night; his temperature was almost normal.

GERMANY AND RUSSIA.

The report that Germany is promising Russia active support in the Far East is doubted. It is believed that the main outcome of the conference between the Emperors will be German support for the Austro-Russian scheme in Macedonia.

GERMANY AND THE SULTAN.

London, November 8.

It is significant that the German Ambassador was the only diplomatist received on the Sultan's Birthday last Friday.

THE KAISER.

London, November 9.

The bulletin regarding the Kaiser's condition is good. The wound will take eight days to heal.

SUICIDE OF AN ITALIAN MINISTER.

The new Italian Minister of Finance has committed suicide by shooting himself with a revolver. The rash act was due to bitter Socialist attacks on his moral character and his son's dissipation.

MR. BALFOUR ON PEACE PROSPECTS.

A WARM TRIBUTE TO OUR ALLIES.

London, November 11.

Speaking at the Lord Mayor's Banquet at the Guildhall on November 9th, Mr. A. J. Balfour, Prime Minister of Great Britain, said that in the Far East as in the Near East there are subjects giving food for thought if not profound anxiety. But with regard to the Far East no one more passionately advocates peace than does the Tsar, and our Allies in Japan are certain to show moderation, discretion, and judgment in making their demands. The Macedonian question was far more complicated. It had been the cause of infinite political complications. It was impossible that Austria and Russia, representing the Signatories

of the Berlin treaty, could allow the reform scheme to be rejected by direct repudiation or incessant delay.

ECCLESIASTICAL TROUBLES IN RUSSIAN ARMENIA.

Later.

The agitation in the Armenian provinces of Russia, owing to the Government's confiscation of Church property, is intensifying. Soldiers surrounded the residence of the Catholicos at Etchmiadzin and forced an entrance. They seized the entire treasury of half a million roubles. The Armenians are bitterly incensed.

The following telegram, received in Tokyo from London, has been kindly placed at our disposal:—

Speaking at the Guildhall banquet on November 9th, Mr. Balfour said that, as regards the two Powers in the Far East, one could feel assured by reflecting that there was no more ardent advocate of general peace than the Emperor of Russia, and that our Allies in Japan were, he was convinced, as certain to show moderation, discretion and judgment in the demands they make as firmness in carrying those demands into effect. With all these influences making altogether for peace, he thought one could look without any undue anxiety at the difficulties not yet solved but, he hoped, to be solved without undue delay.

(RECEIVED AT THE LEGATION OF FRANCE.)

A VIOLENT EARTHQUAKE.

Saigon, November 6.

There has been a violent earthquake at Turschitz in Persia; 350 people were killed.

THE PORTE AND THE BALKANS.

The Porte has replied to various of the points in the Austro-Russian note with reference to the reforms in Macedonia.

THE ITALIAN CABINET.

It is telegraphed from Rome that Sr. Giolitti has reconstructed the Cabinet.

FRENCH POLITICS.

The Chamber of Deputies has voted the budget of the Interior and of the Religiousists. It has adopted by 314 to 225, the appropriation of the secret fund, M. Combes, the Prime Minister, having made this a question of confidence.

CENTRAL AMERICA.

Later affairs in Panama are quiet. The *Bogota* has left the port. The bombardment did little damage, the lives of foreigners are not threatened.

THE U.S. ELECTIONS.

The Republicans have been victorious in the States of Iowa and Colorado. The Democrats have carried the Governorship of Rhode Island.

PEACE PROSPECTS.

Saigon, November 8.

M. Delcassé has informed the Council of Ministers that pacific impressions predominate on the subject of Oriental affairs.

THE KAISER'S OPERATION.

Saigon, November 9.

The Emperor of Germany has been operated on for a polypus of the vocal chords. The operation succeeded perfectly. The state of His Majesty is very satisfactory.

(RECEIVED AT THE IMPERIAL GERMAN LEGATION.)

THE GERMAN EMPEROR.

Berlin, November 9.

A growth on the vocal chords of His Majesty the German Emperor led to an operation, which was performed last Saturday

without any incident. His Majesty's state of health is satisfactory. The microscopical examination showed the growth to be of a perfectly harmless nature. There is no reason whatever for anxiety.

(The above has been kindly placed at our disposal.—ED. J. M.)

(FROM THE "DEUTSCHE JAPAN-POST.")

THE TWO EMPERORS.

Berlin, November 6.

At the gala dinner held at Wiesbaden in accordance with the wishes of the Kaiser and the Tsar, no toasts were given.

Count Bulow yesterday at Darmstadt had a few conferences with Count Lamsdorff. The German chancellor offered his visitor assurances of the neutrality of Germany concerning the Near as well as the Far East. The Russian Minister expressed his full conviction that peace will be maintained in Eastern Asia, but the Balkan question has become more acute.

The *Journal de St. Petersburg* emphasizes the importance of the two Emperors' interview, stating that the same must result in the most favourable effects for the maintenance of peace.

THE PANAMA REPUBLIC.

Berlin, November 7.

The constitution of the Panama Republic as a preparatory step towards the great mercantile waterway at Panama, is cordially acclaimed in Germany. German interests so far have not been violated, and Germany does not deem it necessary to order men of war to Aspinwall.

THE LATE PROF MOMMSEN.

The funeral of Professor Theodor Mommsen took place in Berlin. The crown Prince was present as a representative of the Kaiser and left a wreath on the steps of the coffin.

THE FAR EAST.

The *Times*, London, has published an article of a provocative nature saying that Germany urges on the Russo-Japanese conflict. This statement is rejected here in the sharpest terms. Germany is for a peaceful arrangement of the dispute.

From Lyons it is reported that the French East Asiatic Commercial Union has expressed the wish that France, supporting French commerce, may watch the developments in China and Japan.

GERMAN COLONIAL RIOT.

Berlin, November 8.

Riots have broken out in German South-west Africa. The Bondelzwaarts attacked Warmbad. A military expedition is going to punish them. Many reports coming via Capetown are exaggerated.

MOROCCO.

Commercial circles in England object intensely to the monopolization of Morocco by the French.

THE FAR EAST.

The French Minister of Foreign Affairs, M. Delcassé communicated at a Cabinet Council that a conciliatory settlement of the Tokyo negotiations may be expected soon.

MACEDONIA.

The European Powers support generally the Macedonian programme arranged by the Austrian and Russian Emperors at Murjsteg near Vienna. A discussion of details will not be necessary.

The Sultan anticipates the demands of the Powers by granting a general amnesty in Macedonia.

PANAMA.

The new Panama republic has already opened semi-officially negotiations with the United States. No other Power objects to the conclusion of a Canal treaty between the United States and the Panama republic.

END OF THE CONFERENCE.

Kaiser Wilhelm and Count Bulow after the meeting with the Tsar returned to Berlin.

THE KAISER.

Berlin, November 10.

Kaiser Wilhelm, who underwent an operation last Saturday on the larynx, must avoid using his voice for some time to come. It was a polypus, a non-malignant hypertrophy of the cellular tissue. The operation was performed with great success, and the general feeling of the Kaiser is good. He is working hard, writing and listening to the reports of the Chancellor and the Chief of the Civil Cabinet. It is expected that the healing of the wound will be finished in a few days.

GERMANY AND RUSSIA.

The report from Vienna that Kaiser Wilhelm has promised help to the Tsar in East Asia, is nonsense. The Tsar does not consider the situation in the Far East as critical. The principal worry for Russia is the Balkans, and for this matter the German Emperor has promised his support.

SAN DOMINGO RIOTS.

At San Domingo riots have broken out. The consuls of the foreign nationalities demand that men-of-war be sent there. A German vessel is being despatched to the island.

A FALSE REPORT.

The report that the Russian Minister of War, General Kuropatkin, has ordered the tenth army corps to be mobilised for East Asia proves false.

SUICIDE OF AN ITALIAN MINISTER.

The new Italian Minister of Finance has shot himself.

THE KAISER.

Berlin, November 11.

The Kaiser Wilhelm's health has so far improved that he has already been able to work in the open air.

THE SIBERIAN RAILWAY.

The Siberian railway has added a further express train, making the fifth. This month an international congress will meet in St. Petersburg to discuss all kinds of questions regarding communication between Europe and China via Russia.

THE KAISER.

Berlin, November 12.

Kaiser Wilhelm is in good health, but he must still be careful in using his voice. He listens every day to reports and is working hard. The foreign press, especially the English newspapers give expression to very sympathetic remarks regarding the Kaiser's illness.

GERMANY AND JAPANESE POLICY.

Reuter's reports concerning the war feeling in Japan are answered in Berlin by a declaration of confidence in Japanese policy.

M. ISWOLSKY.

The report of the *Figaro* that the Russian foreign Minister, Count Lamsdorff, will be replaced by Mr. Iswolsky, Minister to Copenhagen, is unconfirmed.

COMMERCIAL TREATY.

The second reading of the Russo-German commercial treaty will begin in Berlin on November the 16th. The discussion will last three weeks.

THE WEST AFRICAN TROUBLE.

The rebellious Bondelzwarts in German Southwest Africa were attacked by a German military column and fled across the boundary to the Cape Colony.

RECALL OF AN AMBASSADOR.

The Russian ambassador to Rome, Mr. Nelidoff, has been recalled and replaced by Mr. Urussov, until now ambassador to Paris.

(FROM THE "JIJI SHIMPO")

THE CENTRAL AMERICAN REVOLUTION.

London, November 4.

A revolution has broken out in the Panama isthmus the promoters of which declare for independence and have arrested the Military and Naval officers of the Colombia Government. The cause is supposed to be the non-ratification of the Canal treaty. The U.S. squadron is in the vicinity in order to protect American interests.

NEW MAYOR OF NEW YORK.

In the election for the Mayorality of New York, the Tammany section has gained the victory. Mr. Macellan was elected by a large majority.

RUSSIA.

According to information from Russia with regard to the Manchurian question, the Russian Government is prohibited the giving of passports to officers in service. Three regiments are now being mobilized in a view to being sent to Manchuria.

FIRE AT THE VATICAN.

By the recent fire which occurred at the Vatican, thing of artistic or historical importance was ruined.

TSAR AND KAISER.

London, November 5.

The Tsar and the Kaiser have met at Weisbaden. The German press believe that Germany will have thing to fear from the Franco-Russian alliance as many has revived the confidence of Russia by adherence to neutrality with regard to Russo-Japanese relations.

THE PANAMA TROUBLE.

Panama has been bombarded. The insurgents captured a number of warships and are using government ammunition. A temporary government has been organized. Three thousand revolutionists are advancing toward Colon which is still held by the Government.

The U.S. Government is concentrating a powerful squadron in order to avert the interference of many.

London, November 6.

The Colombian Commander-in-Chief has evacuated Colon. The revolutionists hold the whole isthmus.

It is expected that the United States will recognize the independence of the Panama Republic.

AN IMPERIAL INTERVIEW.

The *Journal de St. Petersburg* states that the interview between the Tsar and the Kaiser which took place yesterday at Wiesbaden, and the meeting between Count Lamsdorff and Count von Bülow have a specially important relation to political conditions. The Foreign Ministers exchanged their views as to present political questions.

Other Russian papers publish similar views.

U.S. GOVERNMENT AND MUKDEN.

According to trustworthy information from Washington, the U.S. Government is decided on the Mukden question, and resolved to maintain the interests secured by the U.S. Chinese Commercial Treaty.

RUSSIA AND GERMANY.

London, November 7.

According to information from Vienna, the Tsar and the Kaiser have concluded a convention in which it is provided that Germany will support Russia with regard to the Far Eastern question should Great Britain assist Japan. This rumour is received with reserve however.

MILITARY COMMISSION.

A Commission enquiring into military affairs has been organized. Viscount Esher, Admiral Fisher (? the original says *Sotoku*, which means Governor-General or Commander-in-chief) and Colonel George Clarke who is now in Australia have been appointed members.

RUSSO-GERMAN CONVENTION.

London, November 9.

The rumour from Vienna to the effect that the Tsar and the Kaiser had concluded a convention with regard to the Extreme East is contradicted.

THE PANAMA REPUBLIC.

A representative of the Panama Republic has reached Washington. Negotiations with reference to the Canal Treaty will immediately be opened. On account of the Canal works, the U.S. Government will secure a perpetual lease of the land involved in the Canal construction.

Great Britain has asked the U.S. Government to protect the interests of British residents in the Isthmus.

The new Government has been firmly established.

ITALIAN ROYALTIES.

The King and Queen of Italy are expected to go to England on Monday next.

THE OPERATION ON THE KAISER.

The Kaiser of Germany has undergone a successful operation of the larynx.

DEATH OF BARON ROWTON.

Baron Rowton is dead.

BOVRIL is food and
drink combined. It is
not only a delightful
beverage, but a valuable
nourisher and energiser
as well.

Cooks find that BOVRIL
doubles the value of
soups, gravies, hashes,
made dishes, &c.

MELLIN'S FOOD

For INFANTS and INVALIDS.

Purely Vegetable and Untouched by Hand.

MELLIN'S FOOD is free from Starch. When prepared
is similar to Breast Milk.

Mellin's Food Works, Peckham, London, England.

SWISS WATCH INDUSTRY. 20/- ONLY

To Every Commis-sioner, Post Office and Railway Servant, and Persons Requiring a Splendid Watch, we offer this opportunity of their obtaining this "Original Swiss Watch" of our Exclusive Property. The Watch in question is made on the Swiss-Improved "FLASH-UP" SYSTEM, and received the Highest Award at the PARIS EXHIBITION IN 1900. IT IS THOROUGHLY TESTED, LATER, A SILENT TIME-KEEPER, AND CARRIES WITH IT A THREE YEARS' WRITTEN WARRANTY. It has Three 11,000 Cases—Savonette, which are made of unbreakable Gold Metal, Electrically Gold Plated on the Latent Principle, and the Best Chronometer, and of Swiss Gold. THE DIFFERENCE BETWEEN OURS AND THE USUAL GUINEA WATCH. It saves the Real Gold and is the only watch of 12,000 having that advantage. To introduce this watch to the British Public, and to enable us to deliver EITHER LADIES' OR GENTS' for 21/-, we have, for formerly costing 21/-, on receipt of Money Order for that amount, a "Ladies' Case" is also given gratis with every Watch. Fashionable Chain, Albert, or Buckle, and the same Metal can be had for 2/-, or 12/-, according to weight. Any Article bought and not approved of will be exchanged. The Exchange of our Price, according to our daily orders and Unimpaired Testimonials, proves the soundness of our Advertisements. Post Office or Postal Orders should be made payable to MESSRS. BOUTIQUE, BAILE (SWITZER).

HOLLOWAY'S PILLS

Cure Indigestion,
Bile, Sick Headache, Giddiness,
Palpitation,
and all Internal Disorders

**THESE PILLS
ARE PURELY VEGETABLE;**

they contain no deleterious
matter, and may be taken by
the most delicate.

Manufactured only at 78, New Oxford St. (17, 188, Oxford St.)
London. Sold by all Chemists and Medicine Vendors.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOVEMBER 21ST, 1903.

BIRTH.

At Kamakura, at 5.43 a.m., on the 19th inst., the wife of J. E. DE BECKER, of a Son.

SUMMARY OF NEWS.

BARON G. MIURA died on Nov. 16th at Wakayama.

An old woman was run over by a train on the evening of Nov. 16th near Shinagawa.

A LARGE number of gamblers quarrelled on Nov. 15th at Nara. Four of them sustained severe injuries.

THE *Asahi* states that the Ryugasahi Railway is in such a defective state that the night trains have been suspended.

K. NISHIWAKI and Y. Takai, students of the Imperial College of Law, were arrested on Nov. 13th on suspicion of fraud.

THE *Official Gazette* states that money orders issued during the year 1902 amounted to 9,299,849, yen 96,174,220. The fees paid for them reached yen 185,597.75.

ACCORDING to official investigations, between January and September, this year, in Yokohama city, births numbered 3,909; deaths, 2,377; marriages, 1,248; and divorces, 216.

THE reconstruction of the British Ministry was completed by Mr. Charles Scott Dickson becoming Lord Advocate, and Mr. David Dundas Solicitor-General for Scotland.

TSURU KURAYASHI (86), living at Hayashi-cho, Honjo, Tokyo, was found on the morning of Nov. 17th, strangled to death. Since her husband

died many years ago, she had been keeping a small retail shop.

THE Emperor despatched a telegram from the Nagoya detached palace to the Kaiser expressing sympathy in the latter's indisposition, to which the German Court cordially replied on Nov. 13th.

THE Osaka Municipal Assembly held a meeting on Nov. 16th when a resolution was passed to the effect that the city office will manage the street electric railway which it is proposed to construct.

THE Russian Administrator at Newchwang proposes to organise a municipal council there with two British and one American members, their decisions to be subject to the Administrator's approval.

FROM the *Hongkong Daily Press* of the 3rd inst we learn that it is feared that some two thousand lives were lost in the wholesale destruction of fishing-boats in the recent typhoon off Swatow.

THE construction of the Nippon Yusen Kaisha's steamer *Ceylon Maru* (6,000 gross tons) at the Nagasaki Shipbuilding Yard will be completed in January. The ship is to be employed on the Bombay line.

D. YANAGAWA (24) formerly in the employ of the Tokyo Gassed Yarn Company, Tokyo, was arrested at Honjo, on Nov. 16th, on a charge of having counterfeited *sen* 50 silver with two *sen* copper pieces.

THE Academy of Sciences at Copenhagen has decided to award the Nobel prizes this year as follows: Literature, Henrik Ibsen and Bjornstjerne Bjornson; physics, Signor Marconi, and medicine, Dr. Finsen.

THE Imperial Court despatched on Nov. 11th a telegram to the Italian Court offering birthday congratulations in connexion with the anniversary of the King, to which the latter cordially replied on the following day.

PROBATE has been granted of the will of Phil May, the artist, a native of Leeds. The sole executrix is Mrs. Lillian May, the testator's widow, by whom his estate has been valued at £803, with net personalty nil.

A CONVICT, T. Sato (20), escaped on the night of November 14th, breaking through a part of the Negishi jail, Yokohama. He was arrested however, on the following morning in the compound of the Bugenji temple, Kanagawa.

ON charity and religion, it appears from his books that the late Mr. Gladstone spent from 1831 to 1890 upwards of £120,000, and in the rest of his life £13,500, and these sums do not include the £30,000 left for the hostel and library at St Deiniol's.

MR. D. ISEYAMA, a mechanical engineer, was taken off the train at Altoona, Pa., on Oct. 18th, suffering from smallpox. He had been sent to the States to make a study of some railroad matters, and bore a letter from the Japanese Minister. He has been in America less than a year.

AN official report from Formosa, states that on Nov. 3rd over thirty savages attacked the district of Linci, in Yee-Ran prefecture, destroying fourteen houses by fire and killing nine male and eight female inhabitants. Mr. Nakada, Governor of the prefecture, proceeded to the scene accompanied by police.

THE *Daily Telegraph*, which originated the report that Harland & Wolff, the Belfast ship-

builders, had contracted to take their iron and steel exclusively from the United States Steel Corporation, has since withdrawn the statement without reserve.

A TELEGRAM under date of Nov. 15th from Tsuchiura, Ibaraki prefecture, states that the district office of Nihamu was entered and a watchman murdered. The intruders stole an amount of money belonging to the office. No arrests have yet been made.

MR. K. INOUYE, M.P., who was charged with an infringement of the Election Law for Prefectural Assemblies, was sentenced on Nov. 13th in the Otsu District Court to six years' imprisonment with hard labour, a fine of yen 50 and to four years' suspension of election rights.

COUNT OKUMA and over eighty members of the Progressionists held a welcome dinner party on the afternoon of Nov. 14th at the Maple Club, Shiba Park, Tokyo, to entertain Messrs. Inukai and Oishi, who recently returned from visits to China and Korea. Mr. Inukai made a speech with regard to his observations in the two countries.

MR. BALFOUR is said to have mortally offended the Commander-in-chief, Lord Roberts, by his appointment of Mr. Bromley-Davenport as Financial Secretary for the War Office. Mr. Bromley-Davenport is at variance with the Commander-in-chief on several military questions, and Lord Roberts is said to regard his appointment as a personal affront.

MR. K. MEGITA, M.P., and two others were arrested on the night of Nov. 15th. The charges are reported by the *Jiji* to be connected with those against the officials of the Hamada Tax Office, who are now undergoing trial in the Court. It may be remembered that the latter are charged with having forged official documents, with fraudulent intent.

Y. YOOSHI (25), committed suicide on Nov. 14th by drinking a quantity of morphine, at a hotel called Muneya, Kyobashi, Tokyo. The cause is reported by Tokyo papers to be that he was suspected in connection with the loss of yen 10 which was missed at the shop of a confectioner named K. Tamura where he had been employed.

MGR. MERRY DEL VAL, who has been appointed Papal Secretary of State in succession to Cardinal Rampolla, is 38 years old. He was made Bishop of Nicaia in 1900 and a year later was prominently mentioned for the post of papal delegate to the United States. He is to be made a cardinal at the next consistory. Mgr. Merry del Val is of English extraction on his mother's side; his father is Spanish.

THE Annual Autumn Athletic Sports took place on Nov. 14th in the compound of the Imperial University. Before the sports commenced Mr. Kubota, Minister of State for Education, delivered a speech congratulating his hearers on the occasion. Many foreign and Japanese ladies and gentlemen were present. The various events passed off pleasantly in the fine weather.

A WOMAN named Yoshi (49) living at Haneda, Tokyo, is alleged to have attempted to murder her husband by giving him poisoned tea on several mornings. Being rendered ill by the beverage the man at length informed the local police station and handed over a bottle of the tea. The woman was arrested on Nov. 22th. Tokyo papers, allege she wanted to get the property of her husband.

POLITICAL NOTES.

Saturday, November 14.

We must be getting very near the psychological moment in the negotiations between Russia and Japan. Of course, in consequence of the discreet and remarkably thorough silence hitherto observed in official quarters, it is impossible to say what kind of proposals have been formulated and what reception they have met. But, piecing together the fragments of intelligence that have leaked out, we can arrive with tolerable certainty at the conclusion that when *pourparlers* were originally opened in St. Petersburg the Russian Government showed a placable spirit and did not afford any indication that serious objection would be taken to Japan's suggestions for a basis of understanding. Difficulties would seem to have arisen after the transfer of the negotiations to the East, a result easy to comprehend since Viceroy Alexieff's councils are subject to influences not so directly potential in St. Petersburg and since the statesmen of the central Government would naturally be willing to accept diplomatic responsibilities from which negotiators on the distant scene might shrink. Be that as it may it does not appear that when Japan formulated her proposals under the new conditions they were considered altogether acceptable, and some modification would seem to have then been made. It is for Russia's answer to that modification, apparently, that Japan is now waiting. The reply was evidently postponed until after the Tsar's visit to neighbouring States where, it may be assumed, the Far-Eastern question formed a topic of discussion. But Count Lamsdorff is said to have returned to St. Petersburg on the 9th inst., and we are now at the 14th, so that there ought to have been time to learn at least what final attitude Russia assumes, if not to receive her definite official reply. Japanese journals still speak as though Baron Rosen's visit to the Foreign Office on the 11th instant was for the purpose of communicating that reply. We do not perceive how that can have been possible, and indeed nothing of the kind seems to be believed in well informed circles. Possibly before these words come under our readers' eyes, the Russian Government will have answered, but even in that event and even supposing the answer to be generally favourable, there may be, and probably will be, some further delay. Nevertheless the final issue can not be much longer delayed. Japan appears to be fully prepared for any eventuality, and that she will stand to her guns rather than accept any humiliating settlement may be taken for granted.

Monday, November 16.

The *Tai-Ro Doshi-kai* leaders are said to be much dissatisfied with the position into which they have now been thrust. They have lost credit with the public altogether since the Premier's definite denial of their conception as to Marquis Ito's attitude, and they are reported to be consequently planning some emphatic assertion of their views. The fact is that a certain element of mystery attaches to this association. Some publicists profess to believe that if not directly inspired by the Cabinet, it possesses at least the latter's secret sympathy. That hypothesis has probably no basis other than the fact that some of the prominent figures in the *Tai-Ro Doshi-Kai* are men who have hitherto been reckoned supporters of the Katsura Ministry. But it is of course easy to conceive that even politicians favourable to the Cabinet may

exceed the latter in strength of view as to a particular phase of foreign policy, and one need not have had much experience of Japan to know that connexions attributed to a Ministry by its enemies are often of the most imaginary nature. No one ventures to suggest that there is more than a leaven of pro-Cabinet yeast in the ranks of the *Tai-Ro Doshi-kai*. What the mystery-mongers pretend is that the latter's recent attack upon Marquis Ito was prompted by these friends of the Cabinet, and that the leader of the Cabinet having repelled the attack with crushing directness, the *Tai-Ro* folks are at once discomfited and discredited. It appears to us that they would be more discredited were there any confirmation of these charges of fatuous obedience to interested wire-pullers. They can easily reassert themselves, however, by breaking away from their false advisers, supposing the latter to have any existence. Meanwhile Count Okuma has been turning the occasion to clever account as is his wont. Through the columns of the *Yomiuri* he suggests that Marquis Yamagata is the Cabinet's father and Marquis Ito its mother, which is quite as it should be. Why then does the Cabinet profess to be independent of these Elder Statesmen? And why does it cry out when its mother behaves unkindly? That is the key-note of the Count's comical refrain. He makes himself heard from Waseda now and again with all his familiar sarcasm.

According to a telegram from the *Fiji Shimpō's* Peking correspondent, the foreign diplomats in that city interpret Mr. Balfour's recent utterances to mean that a convention will soon be signed between Japan and Russia, favourable to the latter and unfavourable to the former. They base this conclusion on the hypothesis that whatever secrecy may have been observed by Japanese statesmen, England must be in their confidence, and Mr. Balfour must consequently have been speaking of things familiar to him when he alluded to the moderation of Japan's demands. These diplomats go on to infer that Japan is abandoning all attempt to rescue Manchuria from becoming a part of Russia's dominions, and that so far as the Three Provinces are concerned, the policy of China's integrity and the open door is a thing of the past.

Very likely Mr. Balfour does know what Japan is asking for. We can scarcely suppose him ignorant. But he is familiar also with the declaration made by himself some time ago in Parliament—a declaration received by the Opposition with a certain measure of derision—that Russia has interests in Manchuria which must be practically acknowledged. The Japanese Government, we have no doubt, entertains the same view, and is consequently indisposed to constitute itself the sole champion of an unwarrantably exclusive policy. But whatever proposals Japan may have formulated we are altogether confident that they do not sacrifice the empire's interests or impair its honour. It is an old but a true saying that no settlement of a dispute can be sound or lasting unless both parties find it reasonably satisfactory.

Tuesday, November 17.

The *Fiji Shimpō* continues to employ its leading columns for the purpose of advocating the enrollment of the *Genro* in the Cabinet, or at any rate their addition to it. Evidently our contemporary appreciates the difficulty of giving practical effect to its own proposition, for it leaves the choice open

between two methods, namely, the giving of portfolios to the *Genro* and their admission to Cabinet Councils as direct nominees of the Emperor. We can not see, for our own part, that anything substantial would be gained by the latter method. The *Fiji* fully admits that the advice of the Elder Statesmen is invaluable and that neither the Ministers of the Crown nor the people can have any idea of dispensing with it. But there seems to be an idea that the giving of that advice should carry with it a certain measure of responsibility. How would responsibility attach to counsels given by men independent of Ministerial changes; men who, as Imperial nominees, would retain their seats in every Cabinet? Evidently no greater responsibility would attach to advice given under such circumstances than attaches to *Genro* advice now given in camera. On the other hand, if the Elder Statesmen had seats in the Cabinet and were held answerable for the Cabinet's doings, then they would naturally insist on the Cabinet following their direction, and in the end they would occupy the position of virtual dictators. That seems perfectly plain. For surely if they are to hold portfolios, it can not be expected that they will consent to occupy subordinate positions. The *Fiji Shimpō* thinks that their patriotic sense of the country's needs would easily reconcile them even to that sacrifice. Well, we have some idea of Japanese patriotism and our admiration for it is sincere. We have seen its practical working of late, when Baron Kodama gave up the high position of Minister of Home Affairs to become Vice-chief of the Head-Quarter Staff—a Major-General's office—and Vice-Admiral Togo descended to the post of commander of the Standing Squadron. But we can not quite conceive men like Marquis Ito, Marquis Yamagata, Count Inouye and Count Matsukata accepting portfolios in a Cabinet presided over by one of the junior statesmen. It would have been as easy to conceive Lord Salisbury becoming Foreign Secretary under Mr. Balfour's premiership. The fact is that if the Elder Statesmen be enrolled in the ranks of a Cabinet, they must inevitably control it; and if, without holding portfolios, they take responsible part in a Cabinet's council their advice must be accepted by that Cabinet. In the former case we should merely have a *Genro* Ministry; in the latter it is doubtful whether the country could have any Ministry at all.

Wednesday, November 18.

The *Chuo* and the *Asahi* both complain loudly of the long delay in settling the pending question with Russia. They call the present state of affairs a merely nominal peace, and they deny that a pacific solution is by any means assured. What is certain is that Japan will not accept any dishonorable solution.

The growing bitterness of this cry should not be underrated.

Thursday, November 19.

The opening of the Diet being now imminent, political parties are beginning to raise their heads. For the moment they will doubtless find some occupation in deciding who shall be the new President of the Lower House, but whatever may be their inclination to maintain a quiet and unobtrusive demeanour, we can scarcely hope that they will refrain altogether from approaching the question of the political situation, unless, indeed, it be definitely solved before the session commences, a consummation scarcely to be looked for. It would certainly be

better in every way could a solution be reached ere that time, for, when all is said and done, the responsibility of delay rests wholly on Russia. Certain proposals have been made to her, proposals which, though unknown to the public, have been described by the British Premier as "moderate," and until she gives some definite reply to these proposals, it is impossible for the negotiations to progress. One can easily understand that from her point of view nothing presses. She has comparatively little to gain by a speedy settlement and she has much to lose by precipitating a collision. But Japan is suffering—suffering not economically alone, but also from the sense that her claims are slighted and her proposals treated with *insouciance*. If any one can undertake to guarantee that when the country is in a position to speak through the Diet, it will remain content to endorse the Government's markedly courteous patience, he must be a sanguine man. There are few that do not sincerely desire a peaceful solution of this business, and since we ourselves are strongly animated by that wish, we can not but express uneasiness at the prospect of the Diet's meeting before the basis of an *entente* has been clearly agreed to by both sides. The Diet is not absolutely amenable to reason, nor can we think, in view of the recent action of some of its members, they will refrain from endeavouring to commit the Lower House to some resolution or some demonstration dangerous to the placable conduct of the negotiations. We do not profess to understand the inwardness of Russia's leisurely procedure, but we are emphatically persuaded that she may carry her procrastination too far, and that the amicable settlement which the Tsar doubtless desires will be imperilled if the Diet opens on a continuance of the present uncertainty.

The *Seiyun-kai* held a meeting at Nagoya on the 17th instant, and passed two resolutions, one that the Party should labour for the achievement of administrative and financial reform; the other that the problem of foreign policy should be settled at once. These somewhat colourless declarations were supplemented by a speech from Marquis Saionji, the gist of which was that the Party's present duty was to preserve silence as to foreign politics and to leave the officials a free hand. The Marquis plainly declared his confidence in the competence of those now having the direction of affairs, and in view of such confidence was evidently disposed to counsel a patient, trusting attitude on the part of his followers. He took care, however, to deny emphatically that the *Seiyun-kai* is in any way connected with either the Government or any other political party. The somewhat brief reports of his speech telegraphed to Tokyo represent him as having dwelt on the fact that the present is a transition period, but we fail to detect the connexion between that part of his remarks and the main import of the speech.

Journals like the *Hochi Shimbun* are beginning to contend that the Cabinet has assumed an unwarrantably yielding attitude towards the Manchurian problem, and that the *Tai-Ro Doshi-kai* are planning a coalition with the Progressists for the purpose of impeaching the Government. These papers predict that the session will be stormy from its outset, and some anticipate a change of Ministry, the control of affairs being placed in the hands of Marquis Ito and Marquis Yamagata.

This kind of commotion is evidently inevitable. What it portends is that the

nation, growing weary of suspense, which is inflicting heavy losses daily, may force the Government's hand and precipitate a collision with Russia. The latter may then be disposed to disavow the responsibility of a bloody issue. But unless the public are greatly mistaken it is Russia and Russia alone that causes the delay. Rumour says that Baron Rosen has again been obliged to refer to St. Petersburg for instructions, and probably St. Petersburg will behave with its wonted leisure in formulating them.

Thirty newspaper representatives who attended the autumn manoeuvres are reported to have given an entertainment on the evening of the 15th instant in Akashi to Major Arita and the other officers upon whom had devolved the duty of caring for the members of the press. There were altogether fifty persons present at the entertainment and they passed the following resolution:—"In view of the present situation we consider that there is no longer any margin for diplomacy, and we believe that the best interests of the country would be consulted by the Government adopting a final decision." It must of course be understood that Major Arita and his brother-officers had nothing to do with the passing of this resolution.

CHINA.

Saturday, November 14.

News from Peking and Tientsin suggests that a pro-Japanese and anti-Russian feeling is growing in the capital and elsewhere throughout China. Princes Shu and Kung are said to have memorialized the Emperor strongly with reference to the necessity of adopting that policy; and Viceroy Yuan, after his return to Tientsin, is reported to have addressed a long document to the Court declaring that although China had suffered much, she still ranked among the great Powers of the world, and that it would be an everlasting disgrace to her should she allow Manchuria, the birthplace of her sovereigns, to be permanently over-run by Russian soldiery. The document pointed out that England, America and Japan were unequivocally opposed to the absorption of Manchuria into the Russian empire, and that an additional duty devolved upon China inasmuch as she had declared that certain parts of that region should be opened to those nationals. Yuan's memorial would seem to point to immediate war, and it is added that several of the high Chinese officials in the south of the empire have lost patience with Russia and have addressed the Throne urging a resolute policy. But what can be the outcome of it all? China is virtually powerless. We read in a recent article published by the *N.-C. Daily News* that a combat between Russia and Japan would be greatly complicated for the former did China interfere actively in the latter's favour, since, in the first place, that conjuncture would necessitate a division of Russia's forces in order to guard against an attack from the West, and would also mean such hostility on the part of the native population of Manchuria as must greatly increase the task of guarding the Russian lines of communication. It is certainly undeniable that if Viceroy Yuan could move thirty thousand men to the eastern frontier of Chili, and menace Manchuria from the direction of the Shanhai-kwan-Kinchow line, the Russian forces available for repelling a Japanese attack from the east would be proportionately reduced. But as to the inhabitants of Manchuria, we can

not forget that at the time of the Japanese invasion of that region in 1894-5, these same people never moved a finger to assist the troops of their country. What reason is there to suppose that they would show themselves more helpful in the event of a war against Russia?

Meanwhile it is alleged that the Peking Government has instructed its Representatives abroad to ascertain the latest phase of the various Powers' sentiment toward the Manchurian question.

It is stated that in consequence of the recall of Taotai Yuan to Peking the Russian soldiers—now reported as 3,000—who had occupied Mukden, withdrew from that city. Yuan would have started at once, but in order to arrange some dispute about timber felled in the Yalu forests he agreed to have a meeting at Antung with M. Stromiloff before setting out. It would seem, however, that owing to the presence of an unexpected number of Chinese troops at that place M. Stromiloff did not proceed thither, and as to what subsequently happened we can not decipher the purport of the news. At any rate it does not seem to be of cardinal importance, for although the statement as to the withdrawal of the troops from Mukden is positive, little credence is said to be attached to it in well-informed quarters.

Monday, November 16.

It is reported that the district outside the "front gate" of Peking is infested with bandits, and that the police seem powerless to repress them. But the latter statement is not easily reconciled with the fact that on the day before the despatch of this intelligence, forty of the bandits were executed in a batch. This is one of those shocking events which folks have come to regard as normal in China. The lesson it teaches, we believe, is that the struggle for existence in some parts of that densely populated empire taxes men's faculties to the verge of desperation, and renders them callous to the issue of any course which promises temporary relief from imminent starvation. The working man of the West does not reason very closely. Who shall say, however, that instinct does not guide him wisely—wisely, that is to say, from a selfish point of view—when it impels him to postpone, even by apparently uncivilized legislation, the advent of that cruel ordeal which nature has prescribed as the route to survival?

From Fen-hwang news comes that the number of Russian troops there is 900 of all arms, and that barracks for the accommodation of 3,000 have been prepared. We presume that the concentration of Russian forces in the direction of the Yalu is not merely fortuitous. They do not march hither and thither at their own sweet will. What then are they doing at Fen-hwang and Antung? Viceroy Alexieff, in his remarks recently made to our Port Arthur correspondent, alleged that the activity of Chinese brigands in the northern part of Manchuria rendered it impossible for Russia to withdraw her forces without exposing important interests to obvious peril. Northern Manchuria is a far cry. No one knows accurately what is happening there, and though we may all wonder that if Tartar brigands are making themselves so active as to necessitate the posting of a hundred thousand Russian soldiers in the Three Provinces, the veil of impenetrable secrecy thrown over the "excursions and alarms" of these formidable *basoku* should be so complete, still we are bound to credit what the

Viceroy says. But places like Antung and Fenhwang are under immediate observation. Nothing is heard or seen of the bandits there, except, indeed, that they seem to be utilized by the Russians, and that Chinese officials are in serious trouble for executing peremptory justice against one or more of their leaders. What, then, we can only repeat, is Russia doing along the northern bank of the Yalu?

A telegram from London to the *Jiji Shimpō* quotes the *Svet* as saying that the re-occupation of Mukden by Russian troops is St. Petersburg's answer to the importunity of the United States with reference to the opening of that place. The same telegram represents the *Novi Krai* as attributing the occupation to the conclusion of the revised treaty between America and China, which provides for the opening of certain places in Manchuria.

Such are the interpretations put upon Russian acts by Russian journals. We should hesitate greatly ourselves to assign to the re-occupation any such import. If the *Svet* and the *Novi Krai* be credible, Russia is showing herself to the world in a very invidious light, for at Seoul we see her opposing the opening of Yong Ampho where her own subjects have established themselves by methods which, so far as our knowledge goes, are flagrantly illegal, and now we are asked by her own newspapers to believe that the distant contingency of Mukden's opening has provoked her to re-assert her dominance in Manchuria by a thunder-clap coup. The public will hesitate to take Russia at this estimate suggested by the *Svet* and the *Novi Krai*.

Tuesday, November 17.

Accounts from Peking continue to indicate that an element of unwonted firmness has been imparted to China's attitude by the Russian re-occupation of Mukden. The new Foreign Ministers, Na Tung and Jung Ching, are now reported to be consulting as to the steps to be taken in the sequel of the Russo-Japanese negotiations. Recently the subject of their reflections was said to be union with Japan, but it is now described as association with Japan. We recognise no difference except one of nomenclature, nor do we imagine that any real hope can exist of saving Manchuria except at the point of the sword.

A collision between a Japanese steamer and a Russian steam-launch is reported to have taken place at the entrance to Port Arthur on the afternoon of the 13th instant. The Japanese vessel was the *Kwanko Maru* (348 tons), the property of a German-Japanese firm—so, at least, we infer from the name—and was going out of the harbour when, in order to avoid the *Askold's* tender she starboarded her helm. Seeing, however, that her new course would involve collision with a hospital ship, she went full speed astern, but her momentum carried her against a launch which seems to have been in tow by the *Askold*. The launch was sunk and two lives were lost.

A telegram from Shanghai says that a Belgian syndicate has just obtained a concession for a railway from Kai-fong in Honan to the city of Honan, and that it will probably be ultimately carried to Hsiang in Shensi. This line would be a connecting link between two of the already conceded roads from Peking to the Yellow River and the Yangtse. Both systems of roads are represented by a single line from Peking as far as Ching-ling, whence the Yellow River lines trend westward and the Yangtze line

runs nearly due south. The projected Kai-fong-Honan road would cross the Yangtse line *en route* for Honan, which is on the Yellow River system. That is intelligible enough, especially as the Kai-fong-Honan road might ultimately be carried eastward so as to form a junction with the German line from Shantung to Nankin. But we do not understand the statement as to a concession for ultimately pushing this new road from Honan to Hsian. The Honan-Hsian line has already been conceded and has long been regarded as an imminent enterprise; hence there is something inexplicable in this talk of its forming the object of a new concession. It may be observed, *en passant*, that the Kai-fong-Honan road, like its now newly indicated prolongation to Hsian, would run almost parallel to and within a short distance of the course of the Yellow River throughout the line's entire length. The interest of that position consists not merely in the serious competition that the river must offer to any rival machinery of transport, but also in the physical question of the Hwang-ho floods. The districts between Kai-fong and Honan are notably subject to those terrible inundations which have rendered the Yellow River a name of terror in Chinese ears. It must be assumed that the Belgian experts see some method of securing their work against dangers which have afflicted China since the twentieth century before the Christian era.

Wednesday, November 18.

There are rumours that the people in the south of China are growing very much disquieted about the progress of events in Manchuria, and that many public-spirited men are making their way to Peking. It is added that the Central Government has issued orders to the provincial authorities to watch this unrest carefully.

The onlooking public can not be disposed to pay much attention to these reports. Were there to arise some influence capable of welding the Chinese nation into a patriotic unit, its force would at once command the world's attention. But the vital spark seems to have been buried under the indifference of accumulated centuries.

News from Mukden says that the Russians are issuing proclamations to ease the people's minds and that steps are being taken to lighten imposts, especially those in the nature of *likin*. Every house in the city is said to have been compelled to raise the Russian flag, and extensive barracks for occupation by the troops are in process of erection outside the walls. All this bears no kind of resemblance to evacuation. The execution of the Tartar bandits seems likely to prove a most opportune incident from Russia's point of view. Perhaps the re-occupation of the capital of Manchuria could be explained upon grounds entirely remote from bandits or other visible reasons. But hypotheses are futile things in the face of accomplished facts.

Major-General Wogack has arrived in Peking from Port Arthur, and as he has become an important figure in Far Eastern affairs there are various conjectures about the cause of his visit. Most general, apparently, is the impression that some difference of opinion has arisen between M. Lessar and Viceroy Alexieff, and that the Major-General has been sent to effect an understanding.

Intelligence from Peking sent by the *Nichi Nichi's* correspondent says that since France succeeded in obtaining a concession for a railway in the south, Great Britain has

been pressing for the Szechuan concession, and that there is now a good prospect of her obtaining it. Szechuan is incomparably the largest province in China. Its population is estimated at 80 millions and its productive capacities are enormous. But among all the provinces of China, not even excepting Yunnan, it is the most difficult of access, and were it tapped by railways, the consequent development could scarcely fail to be enormous.

Thursday, November 19.

Viceroy Yuan is said to have addressed a warning to all his subordinates, urging them to spare no effort in preparing themselves for an emergency. This Viceroy is now the eminently resolute statesman of China, but we greatly doubt whether his resolution can sensibly affect the situation.

The telegraph says that the first section of the Canton-Hankow railway has been completed and opened to traffic, that is to say, the section from Canton to Fatshan. This line is in the hands of an American syndicate and is regarded as a work of the utmost importance. We recently reprinted from the columns of the *China Mail* an interesting report upon the progress made by the engineers of this line.

Friday, November 20.

News from Peking continues to indicate that Chinese statesmen are much perturbed about the situation, and that memorials are constantly addressed to the Throne urging the necessity of a strong course towards Russia and impeaching the vacillation and incompetence of those charged with the conduct of the empire's foreign affairs. These latter, on the other hand, are depicted as doubtful about the true character of the Russo-Japanese negotiations and about the ultimate attitude of France and Germany—questions which they are seeking to have resolved by Mr. Uchida. But when all is said and done what can unfortunate China effect with Russia in the field? To use her own proverb, she might as well be spitting against the wind. The only policy for her, we venture to think, is to set her house in order so that what remains to her of sovereignty and dominion may be preserved intact. Manchuria is gone from her grasp—irrevocably gone. Any attempt to recover it would only involve further sacrifices and useless blood-shed. If its loss awakes her, she may still arm herself so that her residuum of goods shall be in safety, but that is about the limit of her feasible ambition.

KOREA.

Saturday, November 14.

In the *Jiji Shimpō's* Seoul telegrams it is stated that whereas the affair of the recent fracas between Russian marines and Japanese residents at Chemulpo remained at first in the hands of the consuls of the two Powers, M. Pavlov has suddenly addressed himself to Mr. Hayashi, who happens to be the Doyen of the Corps Diplomatique in Seoul, asking that a meeting of Chefs de Mission be held to consider the question. The *Jiji's* correspondent attributes this remarkable action on the part of the Russian Representative to the alleged fact that Japanese detectives have been stationed, since the incident, in restaurants frequented by Russian marines, but an account given by the *Asahi* appears more intelligible, namely, that certain residences of Russian subjects at Chemulpo having been visited and searched

by the Japanese at that port. M. Pavlov resents what he considers a violation of domicile, and has deemed the matter of sufficient importance to be submitted for consideration by a Council of Ministers. It is now stated that ten Russians were wounded in the affray.

It is alleged that the United States Representative in Seoul has been instructed by his Government to officially ask for the opening of Yong Am-pho simultaneously with that of Wiju, the former to serve as the latter's port. This action on America's part has greatly strengthened the hands of the advocates of opening, and, indeed, Russia alone stands resolute in the opposition. Our information comes from the *Nippon's* correspondent. Russia knows her own business, of course, but it certainly seems a pity that her interpretation of her interests impels her to assume such equivocal positions. She represents herself by her acts as hostile to all expansion by which other Powers might benefit, and determined to be herself sole mistress of the situation in the Far East. We may not assume that she deliberately formulates such a rule of conduct, but others must inevitably read it into her proceedings when they observe her doings in Manchuria and the Yalu Valley and contrast them with her opposition to the opening of Yong Am-pho. Truly in the face of these circumstances very little confidence can be placed in assurances that the final inclusion of Manchuria in Russia's dominions will tend to the development of the world's trade with the Three Provinces.

Monday, November 16.

It appears that on the 11th instant a meeting of Foreign Representatives was held in the Japanese Legation at Seoul for the purpose of considering the question of the security of the foreign settlements. This meeting seems to have been asked for by the Russian Minister, who is said to have raised some objection to the conduct of the Japanese police subsequently to the recent fracas between Russian marines and Japanese residents. The point to be debated was the proper depository of executive authority in the event of any exceptional occurrence. Mr. Hayashi, Japan's Representative, is reported to have suggested that were the tranquillity and good order of the Settlements threatened, the Japanese police should have competence to enter houses and conduct the necessary investigations, but M. Pavlov urged that when marines landed from ships they should be accompanied by an overseer. Such is the bald statement sent over the wires, but it leaves a great deal to be desired in point of lucidity. For by what contrivance could any effective authority be exercised by a petty officer sent on shore in charge of a party of liberty men? So long as the men kept together under his orders he would doubtless be able to exercise restraint, but from the moment of their separating—as separate they certainly would from the nature of things—the petty officer would be practically impotent for disciplinary purposes. We can not suppose that M. Pavlov advanced any project so plainly ineffectual. The result is not without interest, for though this conference of Representatives had its origin in a drunken brawl possessing no direct importance whatever, the question at issue has its roots in a very old problem, the problem of governing without administering, which for many years defied the best intelligence of wise-heads in Japan.

A telegram from Seoul to the *Jiji Shimpō*,

dated the 14th instant, says that little success has attended the negotiations for which Mr. Hagiwara stipulated on the occasion of his recent visit to Yong Am-pho. The arrangement made was that a conference should be held *in loco* for the purpose of identifying the timbers said to have been taken from Japanese owners illegally by Russian subjects. We explained some time ago that before starting logs or rafts on their voyage down the Yalu, it is customary to put some distinguishing mark on them, and we also explained that there is a Japanese lumber company acting in cooperation with Chinese and Korean concessionaires. Originally some doubt appears to have been entertained as to the validity of this triangular association's alleged rights, but that question seems to have been solved in favour of the company. At all events, there has not been any interruption of their work, and from the fact that they are receiving Japanese official protection we must assume them to be duly entitled to it. For quite a long time they have claimed that timbers bearing their marks and floated down the river by them, were appropriated by Russian subjects, whose position on the embouchure of the Yalu affords special facilities for such enterprises. This claim having failed to obtain practical recognition, the Secretary of the Japanese Legation in Peking was sent to investigate it, and the public are already familiar with the difficulties he encountered at Yong Am-pho in the beginning. Finally, however, he reached with the Russian officials an understanding that the whole matter should be settled by joint commissioners. A commissioner was then duly nominated by the Japanese consular representative—Mr. Shinjiyo—at Wiju, but the latest telegrams say that when this nominee proceeded to Yong Am-pho, the Russian Consul there refused to acknowledge him, and further that whereas the Japanese lay claim to some 50,000 logs, the Russians admit their title in the case of a thousand only. It is a case, we suspect, of *beati possidentes*. The logs have passed into Russian hands, and Mr. Shinjiyo's efforts to recover them are not likely to be crowned with much success.

The *Jiji Shimpō* urges that Japan is much inconvenienced by having no coaling station in the northern part of Korea. She has a station on Zetsu-yei-to (Deer Island) at Fusan and on Wol-mi at Chemulpo, but she has nothing farther north, and she is considerably inconvenienced in consequence. Our contemporary recommends the Ta-dong as a convenient situation. It was used for the purpose in the war of 1894-5, and the *Jiji* thinks that no Power could reasonably object to Japan establishing a depot there now, as Russia has Port Arthur, England Wei-hai-wei, and Germany Kiaochow.

Tuesday, November 17.

The Japanese Representative in Seoul is said to have applied to the Korean Government for a whale-fishing concession in the waters of Phon-chong, which forms part of Kong-won-do. From the term employed we gather that the concession is to include a boiling station as well as fishing privileges.

The question of opening Yong Am-pho continues to be discussed in Seoul. It is stated that in reply to the Japanese Representative's urging, the Korean Foreign Office has explained that the matter is now under consideration by the Court, and that its indecision is the cause of the delay.

Some time ago there was confident talk

of Japan having obtained the concession of the Seoul-Wiju Railway. Concerning this the *Niroku Shimpō* now alleges that there has not been any direct transaction between the Japanese and the Korean Governments on the subject, but that the thing has been managed through the intermediary of a Korean Company. Our readers are aware that the Korean Government decided some years ago, to take the building of the line into its own hands and that work was actually commenced on the Seoul-Songdo section, an office being established under a Korean superintendent with a French technical adviser. The concession having originally been in the hands of a French Syndicate, it is not improbable that some hope of restoring that position animated the French adviser. In fact, when the works came to a virtual standstill for lack of capital, he is said to have endeavoured to obtain money in France, a resource which would have involved obvious consequences. But, from a financial point of view, there is nothing in this enterprise to tempt capitalists, and M. Lefebvre, if he ever really entertained such a project, could not carry it to maturity. Then a Korean Company is reported to have been formed, and the concession having passed into its hands, has been acquired by Japan, presumably for a consideration. That is the *Niroku's* account. But whence is the money to be obtained? Even for the purposes of the Seoul-Fusan line, which has a much better commercial outlook and is under the fostering care of dozens of Japanese bankers and business men, no little difficulty is experienced in procuring funds. Nothing short of State responsibility can be expected to succeed in the case of the Seoul-Wiju road. Twenty million *yen* is the sum considered necessary. Our Tokyo contemporary alleges that the Cabinet contemplates asking the Diet for 3 millions next session; but it is obvious that if the Diet be asked to make any appropriation and if it consents to do so, then virtually the country will stand pledged to carry through the undertaking, and it would therefore be more statesmanlike and prudent to seek parliamentary sanction for the whole scheme at once. The *Niroku* says that this problem is now receiving attention.

Should the above account be correct—and, speaking broadly, we see no reason to query it—an interesting question will ultimately arise as to the connexion of the Japanese railway system in Korea with the Russian in Manchuria. The new uses of railways, the uses invented and exploited by Russia, present some embarrassing features when their natural functions and their imperial potentialities have to be co-ordinated.

Exact details have now been officially furnished with regard to the recent fracas at Chemulpo. What happened was this:—On the 1st instant about thirty blue-jackets from the Russian man-of-war *Bobr*, while walking along the jetty, quarrelled with a Chinese fruit-seller. A Japanese having some knowledge of the Russian language happened to pass by. He tried to mediate, but was knocked down by one of the sailors. Thereupon several Japanese, whose attention had been attracted by the disturbance, ran to assist their country-man, and a collision of some magnitude ensued, in which ten of the Japanese were wounded, three of them very seriously. A few of the Russian sailors also are said to have been more or less injured, but as to that there does not seem to be any certainty. A Japanese policeman, while trying to

restore order, had his arm broken by the Russians, and another was hurt. After the fight, when the sailors had returned to their ship, a rumour went abroad that some of them were concealed in Russian residences, and a few of these were searched by Japanese subjects, whose indignation had been much aroused by the incident. The Japanese Consul immediately received instructions to deal with the trespassers according to law. The matter is now under discussion between him and his Russian colleague.

Wednesday, November 18.

Once again, in the face of a fresh exhibition of impurity by the Powers desiring to see Yong Am-pho opened, M. Pavlov is said to have addressed to the Korean Foreign Office a note inquiring by what State's desire this opening was to be effected. The answer elicited was—according to rumour—that such a step lay entirely within the province of Korea's sovereign choice and that she did not move at the instance of any outside Power. One of our Tokyo contemporaries interprets this to mean that the opening of Yong Am-pho and Un-kwi has been again deferred.

M. Pavlov's proceedings are not always easy to associate with the acts of a clever diplomatist. The question is, however, does he do all the things attributed to him. We doubt it. But even when the usual equation of error has been worked out, there remains enough to suggest that Russia's policy is to enhance the value of ultimate self-effacement in the Yalu Valley by accentuating the potentialities of present self-assertion.

Last year the Japanese Representative in Seoul—according to Tokyo newspapers—obtained from the Korean Government a concession granting to the Kawakita Company—a name that should be familiar to our readers in this context—privileges of whale fishing on the shores of Kyong-sando, Kang-won-do and Ham-gyong-do. In this arrangement Mr. Hayashi merely sought to have his countrymen placed in the position already occupied by a Russian firm. It appears that the agreement, though duly concluded, has not yet been carried through the stage of exchange of ratifications, and that no instructions have been issued to the local officials in the above three districts as to giving the necessary facilities to the Kawakita company. Mr. Hayashi is therefore pressing for a settlement of the question. It must be confessed that Japan, in her dealings with Korea, shows a great deal of patience. We hear of a question one year, an apparently simple question which a slight exercise of goodwill on the part of the Korean Government ought to settle at once; and we hear of it a year afterwards as approaching a settlement, the interval having apparently been passed in quiet expectancy on one side and exasperating dilatoriness on the other.

Thursday, November 19.

If M. Pavlov be really innocent of the many strange proceedings imputed to him by rumour, he is one of the most cruelly maligned diplomatists existing. In our last issue we quoted Japanese telegrams from Seoul saying that he had questioned the Korean Government as to the source of its project of opening Yong Am-pho. That intelligence is now supplemented by a cablegram to the *Nichi Nichi Shinbun*, in which M. Pavlov, having received Korea's reply that in such matters she acted on her own authority and not at foreign instance, is

reported to have made answer in the sense that the opening of Yong Am-pho to foreign trade would injure the rights already acquired there by Russia, and that if the idea were not abandoned, his Government would adopt whatever measure the circumstances might indicate. This, if credible, would be a worthy sequel to the story of Yong Am-pho. The Russians have no recognised rights at Yong Am-pho, so far as we can see. They established themselves there in the first instance without in any way consulting Korea and under the pretext that the timber-felling concession in the Yalu Valley invested them with competence to establish whatever stations might be necessary for the prosecution of the lumber enterprise. We have never seen this timber concession. Its text is among the impenetrable arcana which would materially assist public judgment were they revealed. Not having seen it, we have no warrant for assuming that it does not assure to Russia the privileges of establishing stations in the Yalu Valley, though we are certainly justified in assuming that an indiscriminate title to exercise that privilege quite irrespectively of Korea's wishes can not have been conferred on Russian subjects. But even if the concession be construed as possessing the full scope asserted for it in this respect, the most that can be affirmed as to the Russian settlement at Yong Am-pho is that it is a station connected with the timber-felling industry. In that character it can not, by any stretch of reasonable imagination, be regarded as a place closed to all foreign trade except that of Russia. Such a contention would be plainly monstrous. Its logical sequel would be that Russia has obtained an exclusive right of entry to the Yalu Valley, for she claims competence to establish stations wherever she pleases in the Valley, and she further claims that such stations have the effect of closing the regions where they are situated against all other Powers. If M. Pavlov has formulated such a proposition, he must be singularly indifferent to public opinion, and if he has not formulated it he is very cruelly maligned. The *Kokumin Shinbun's* correspondent says nothing of this wonderful claim but does report that the Russian forces at Fenhwang and Antung are receiving accessions, that provisions and munitions are being landed at Yong Am-pho, that seizures of timber-rafts continue at Wiju, and that M. Pavlov is still obstinately resisting the opening of Yong Am-pho.

The incidents of the Chemulpo affair have already been reported in these columns. From the information officially collected there seems to be no doubt that the fracas had its origin in an innocent attempt on the part of a Japanese subject to mediate between some Russian sailors and a Chinese fruit-seller, and that the sailors behaved with great violence. The matter would have attracted no more attention than usually falls to the share of an open-port brawl, where the drunken escapades of foreign sailors have been perennially recurring incidents for centuries, had not some Japanese subjects subsequently taken the law into their own hands, and, in their search for the Russian sailors, violated the domiciles of certain Chemulpo residents. The Japanese Consul was immediately instructed to proceed against these law-breakers but, at the instance of the Russian Authorities, the matter was subsequently taken up by the consuls in conclave at Chemulpo. They had to consider two propositions: one for

investing the Japanese police with full powers to preserve order; the other for arranging that whenever a foreign warship allows its men to go on shore, they must be accompanied by a warrant-officer who will be held responsible for their behaviour. The conference rejected the former proposal and decided that the latter should be endorsed and submitted to the Ministers in Seoul for approval. It must be very doubtful, however, whether such a system can have any practical efficacy. We can not see how any warrant-officer could accept such a responsibility unless he subjects the men placed under his charge to a degree of restraint quite inconsistent with the idea of "leave." He would have to keep the party always together; to compel them to drink *en masse* at the same saloons and to enjoy in common whatever other legitimate pleasures they might desire. The thing seems quite comical. Were it proposed that every war-ship while in harbour must land a squad of blue-jackets to act as constables for preventing excesses on the part of liberty-men from the vessel, the proposition would be at least practical, but we have little doubt that if the Ministers in Seoul endorse and transmit this consular programme, the officers in command of naval squadrons will treat it with ridicule.

The Japanese subject Maki Rokuro, who was wounded by Korean soldiers some time ago at Wiju, where he remained for many days without medical assistance, reached Seoul on the 15th instant and was admitted to the Kanjo Hospital there. But he expired on the morning of the 17th. It will be remembered that according to the investigations made by Mr. Hagiwara at Wiju, the Koreans were the least guilty in the complications which led ultimately to the assault on Maki and his comrade. Mr. Hagiwara's inquiry showed that a kind of triangular spoliation had been going on. The Japanese had been purloining Korean timber-rafts and the Russians had been stealing the stolen property. Therefore Mr. Hagiwara ruled that the original robbers must compensate the Koreans, and that a commission should be appointed to identify the rafts taken from the Japanese by the Russians. This commission seems unlikely to contrive more than a very fractional measure of restitution, but that is still in the lap of the future. Under all the circumstances, however, Maki Rokuro's death, though pitiable enough, will not be greatly pitied.

VICEROY ALEXIEFF AND THE JAPANESE AT DALNY.

It is pleasant to read in these troublous times the addresses of welcome and goodwill presented by the Japanese residents of Dalny to Viceroy Alexieff on the occasion of his recent visit and the reply by the Viceroy to his welcomers. The former document alludes in warm terms to the protection the Japanese have received and to the liberty of trade they have enjoyed under the wise and prudent administration of the Viceroy, and expresses the hope that he will continue to extend the same degree of protection to them. The Viceroy, replying, declares that he has always entertained friendly feelings towards the Japanese; that he regrets to see any discrimination exercised against them in the matter of privileges as compared with other nationals, and that he is taking steps to have the defect remedied. The Viceroy's allusion is to the fact that Japanese subjects were not allowed to bid for land at the last auction sale; a disability which has now been removed.

MR. INUKAI.

On Saturday the 14th instant, Messrs. Inukai and Oishi were entertained by the Progressists at the Maple Club, on which occasion, by invitation of Count Okuma, Mr. Inukai delivered an interesting account of the impressions produced on him by his recent trip through China and Korea. Briefly summarized his conviction is that Japan is doing virtually nothing in those regions. Whatever fitful displays of activity she makes are prompted by Russia's acts. If the great Northern Power stretches out a hand, Japan is immediately galvanized into spasmodic action, only to sink back into quiescence when the exciting cause ceases to be operative. She has no settled programme of procedure; no tenacity of purpose; no purpose. Everyone can see how essential to the security of Korea is the maintenance of the Yalu and the Tumen lines. But Korea and Japan have stood idly by while Russia is gaining slow and sure possession of those lines. Folks talk of Japan's doings in China and Korea. What is she doing? Where are there any visible evidences of her activity? She has no basis of operations in northern China, whereas Russia in Liaotung and Germany in Shantung are steadily pursuing the celebrated *fugen jikko seisaku* (policy of deeds without words) which the Katsura Cabinet credits itself with pursuing. Should things continue in their present course Russia and Germany will presently be mistresses of North-China's destiny, and no outside nation will be permitted to trade without their permission. Mr. Inukai, returning from visual contact with these evidences of activity, is more than ever convinced that the situation is steadily setting towards a goal whence there will be no return. He wished much to get to Harbin but was unable to gratify his hope. Harbin evidently bulks largely in his imagination. He asks for what purpose Russia has planned the construction there of a city measuring 7 miles in every direction. Does that indicate any idea of evacuating Manchuria? On the contrary, everything goes to show that her 25-years lease of Liaotung is a mere figure of speech, and that she is there for all time. Possibly were Japan insistent St. Petersburg might consent to terminate the military occupation of Manchuria, but even in that event would there be any reasonable prospect of the development of Japanese enterprise on such a scale as to extend her influence materially in these regions? There are no earnest of such a result. Besides, evacuation, as Russia evacuates, is a mockery. There is an object lesson at hand. Recently she marched her troops out of Mukden. So far so well. But she left behind them a colonel who retained all the substance of administrative authority, abandoning the shadow alone to Viceroy Tso. It is easy to re-close one's hand when the grasp has never been relaxed. One may talk of evacuation and one may talk of war, but one ought to talk also of the sequel of evacuation and the sequel of war. One has to ask whether any hope offers that after war or after Russian evacuation, Japan could win for herself in the Three Provinces such a material situation as would justify her previous efforts.

Mr. Inukai found many views among Chinese publicists. Some held that the districts outside the Great Wall were irrevocably lost to China, but that she would be able to preserve the districts inside the Wall in consequence of the mutual jealousies of the

Powers. Others considered that Japan and Russia entertain equally ambitious views with regard to Manchuria, and that since in the event of their coming to blows, the district must belong to the victor, China's interests would be best furthered by keeping things in *status quo*. Mr. Inukai himself thinks that China's fate will not be settled until the Manchurian problem is solved one way or the other, but he is disposed to question the commonly urged assumption that community of race and literature induces China to place strong reliance on Japan. His conclusion is that the Japanese people should devote their whole energies to developing their material interests in Manchuria and China, since by no other means can the situation inure to this empire's advantage. He is inclined further to think that the enterprise of the Germans in Shantung tends to overshadow that of the Russians in Manchuria, and that the territorial aggressions of the latter will not be felt as much by the Japanese people in the long run as the commercial and industrial competition of the former.

"MY MEMOIRS."

Under this simple title is given to the reading public the autobiography of Henri Stephane de Blowitz, one of the most accomplished journalists the world has ever seen. The book had been eagerly anticipated and from the reviews which appear in the London papers we gather that the critics have not been disappointed, for the famous correspondent of *The Times* seems not only to have placed on record some of his journalistic achievements, but has also provided material of which future historians of Europe will be glad, nay obliged, to avail themselves. The personal note, of course, vibrates throughout, and it is, also quite naturally, a note of triumph and self-satisfaction. M. de Blowitz was not a Frenchman. He was a native of Pilsen, in Bohemia, and one of the most notable events of his childhood was the declaration of a fortune-teller that he would "sit down with kings and have princes at his table." That prophecy he did not forget, although it was not till very many years afterwards that he had the satisfaction of finding it come true. How he drifted to Paris and ultimately became attached to *The Times* he tells in the chapters, "Early Youth" and "How I became a journalist." In those days he was on friendly terms with M. Thiers, and these are the particulars he gives of his first journalistic hit:—

I went to Versailles. I found M. Thiers in a very irritable state of mind. He was indignant with all French political parties. . . . I left him without daring to speak of my new occupation, but on reflection on what he had said I drew up a note which I sent to Mr. Oliphant. He was very much pleased with it. "A genuine hit," he said. "There is not a word to alter in it. You are a born journalist." He then sent off my first telegram to *The Times*.

Next day M. de Blowitz read his telegram in the *Liberte*, experienced "one of the strongest emotions" that he had ever felt in his life, and there and then resolved that he would remain in Paris and become a journalist. Later, a lucky incident secured for him the approbation and good-will of the great Delane of *The Times*. They were present together at a sitting of the Chamber at Versailles, where Thiers made a great speech:

"What a pity," said Delane on leaving me, "that things are so badly organised! If we could have given that speech from one end to the other in tomorrow's paper, what a glorious thing it would have been!" When he had left a wild idea came into my head. . . . I went at once to the telegraph office. I obtained writing materials in an empty

room. There I put into operation my mnemonic process. Alternately I shut my eyes to see and hear M. Thiers, and then opened them to write out the speech for the wire. I was able to recall and report all the speech, which was, of course, instantaneously transmitted to London. When Mr. Delane next morning opened the *Times* in England he found in it two columns and a half reporting the speech he had heard on the previous afternoon at Versailles.

That was the beginning, practically, of a long series of triumphs. As the *Academy* points out, M. de Blowitz's only defect was one for which he was in no way responsible; his appearance was decidedly against him. "Figure and face did not make a favourable impression at first, but all this was forgotten as he talked, and his bright eyes flashed with intelligence. He was personally amused at his own insignificance, but declared that he had never found it an impediment in his work. That this was the case is obvious from the manner in which he was received and welcomed in circles absolutely closed to other journalists. Not only was the name of *The Times* in itself an almost magic *pass-partout*, but de Blowitz most worthily represented his employers. He never blurted out things by cable which had been told him confidentially. His account of the fall of Bismarck is a case in point. He was discreet, reliable, trustworthy—and statesmen knew it. Where others would have babbled he bided his time and much of his success was owing to this wise reticence. That he was vigilant, daring, resourceful, is proved by his *coup* at the Berlin Congress, of which, by the way, this volume of memoirs contains an interesting souvenir in the photograph of the historic fan, signed by all the diplomatic representatives and presented by *The Times* correspondent to Mrs. Walter."

Among the stories of the Berlin Congress which are printed for the first time is one relating to Prince Bismarck and Lord Beaconsfield. M. de Blowitz had been talking to the Iron Chancellor upon matters germane to the Congress, when Bismarck flashed out: "Beaconsfield has the most extraordinary presence of mind. He is accommodating and energetic, and never allows himself to be disturbed by anything." Such a compliment from such a quarter was rather unexpected, says the great journalist. To this Congress, M. de Blowitz owed another, perhaps his greatest, triumph, the publication in *The Times* of the Treaty of Berlin at at the very hour it was being signed. The circumstances of how the feat was achieved are told in the book at considerable length, but the discreetest of men does not give the name of the diplomatist who did him the good turn. Bismarck, five years afterwards, tried in vain to make him reveal the secret. Blowitz says, "Nothing more will ever be known," and we may take it, therefore, that the secret has gone to the grave with him. Perhaps the most absorbingly attractive of all the chapters in these "Memoirs" is de Blowitz' account of what happened at San Remo, when the old Emperor William was dying at Berlin, and when the doctors were trying to keep the Crown Prince Frederick alive, at least long enough to succeed to the Imperial throne. How *The Times*' correspondent happened to go to San Remo was rather curious. One morning he received the following anonymous letter in a mauve envelope:—

If you wish to know all about the tragedy of San Remo, why do you not try to find Madame Zirio?

He adopted the suggestion, went to San Remo, and found Madame Zirio. He showed her the mauve letter, and she at once said that the day before she also had received an anonymous letter to this effect:—

If you receive the visit of a celebrated journalist why not tell him the truth about the tragedy of San Remo?

Madame Zirio, it may be explained, was the proprietress of the villa occupied by the Crown Prince Frederick, and she told de Blowitz all that there was to tell of the struggles and rivalries of which her house had been the scene. After reading the sad, sad story one cannot help but agree with the narrator that those days at San Remo saw the enacting of "a great historical tragedy." M. de Blowitz had a fixed theory to govern him throughout life. He says in one impressive paragraph, doubly impressive by reason of its genuine sincerity, "I believe in the constant intervention of a Supreme Power, directing not only our destiny in general but such actions of ours as influence our destiny. When I see that nothing in nature is left to chance, and immutable laws govern every movement, that the faintest spark that glimmers in the firmament disappears and reappears with strict punctuality, I cannot suppose that anything to do with mankind goes by chance, and that every individuality composing it is not governed by a definite and inflexible plan. . . . Everything moves by a fixed law, and man is master of his own destiny only because he can accept or refuse by his own intervention and action the place he should fill and the path traced out for him by the general decree which regulates the movement of every creature."

We conclude our notice of the interesting volume by quoting and endorsing the *Academy's* critic, when he says:—"My Memoirs" is a book to be read straight through; it is full of information and anecdotes innumerable of historic personages. It is open to question which deserved the greater meed of congratulation, *The Times* for having been represented by M. de Blowitz, or M. de Blowitz for having represented *The Times*."

CHILD LABOUR IN RELATION TO TRAMPS.

Towards the end of August a book was published, simultaneously in London and New York, entitled "The Woman who Toils." It was written by Mrs. John von Vorst and Miss Marie von Vorst, two ladies of culture and refinement who, in order to obtain material for the book and also to get the "inside view" of the subject, voluntarily became working girls for a few weeks, braving the discomforts, hardships and privations which beset this class in their struggle for bread and clothing. The revelations in the book—told in the soberest language and unadorned by any "purple patches"—came as a great surprise to the outside world, particularly with regard to the conditions prevailing in the Southern States. Miss Marie von Vorst entered a Southern cotton mill as a worker and she found a terrible state of things existing. Indeed, it is difficult to believe that it is of modern America we are reading when we come across such a passage as this:—"I found these people degraded because of their habits, and not of their tendencies,—which statement I can justify. Whatever may be their natural instincts, born, nurtured in their unlovely environment, they have no choice but to fall into the usages of poverty and degradation. They have seen nothing with which to compare their existences, they have no time, no means to be clean, and no stimulus to be decent." It is under this system too, that little children of six, seven, and eight work long hours in the same mills and are quickly reduced like their unfortunate

mothers to the lowest depths of degradation it seems possible for poor human nature to reach. Here are some of the cases which Miss von Vorst saw in South Carolina:—

By my side works a little girl of eight. Her brutal face, already bespeaking knowledge of things childhood should ignore, is surrounded by a forest of yellow hair. She goes doggedly at her spools, grasping them sullenly. She walks well on her bare filthy feet. Her arms and hands are no longer flesh-colour, but resemble weather-roughened hide, engrained with dirt. Around the tangle of her hair cotton threads, and bits of lint make a sort of aureole. But there is nothing saint-like in that face, nor in the loose-lipped mouth, whence exudes a black stain of snuff as between her lips she turns the root she chews. "She's a mean girl," my little companion says, "we-all don't hev nothin' to say to her." "Why?" "Her maw hunts her to the mill; she don't want to go—no, sirc—so she's mad most the time."

Through the looms I catch sight of my landlord's little child. She is seven; so small that they have a box for her to stand upon. Even so her head is not high enough to be visible. I can only see her fingers as they cluck at the flying spools. I go over to her. "How old are you?" "Ten." She looks six. It is impossible to know if what she says is true. The children are commanded both by parents and bosses to advance their ages when asked. "Tired?" She nods without stopping. She is "a remarkable fine hand." She makes forty cents a day. See the value of this labour to the manufacturer—cheap, yet skilled; to the parent it represents \$2.40 per week.

Here is a little child, not more than seven years old. The land is a hot enough country we will concede, but not a savage South Sea Island! She has on one garment, if a tattered sacking dress can be so termed. Her bones are nearly through her skin, but her stomach is an unhealthy pouch, abnormal. *She has dropsy.* She works in a new mill—in one of the largest mills of South Carolina.

Here is a slender little boy—a birch rod is not more slender, but the birch has the advantage: it is elastic—it bends, has youth in it. This boy looks ninety. He is a dwarf; twelve years old, he appears seven, no more. He sweeps the lint and cotton from the mill aisles from 6 p.m. to 6 a.m. without a break in the night's routine. He stops of his own accord, however, to cough and expectorate—he has advanced tuber-culosis.

Pneumonia and lung trouble are rife in these labour towns, where at certain seasons of the year the poor, unhappy children, die off like flies.

But their general health is bad all year round; their skins and complexions have taken the tone of the sandy soil of the southern country in which they are bred and in which their martyrdom is accomplished. I never saw a rosy cheek nor a clear skin: these are the parchment editions of childhood on which tragedy is written indelibly. You can there read the eternal condemnation of those who have employed them for the sake of gain.

Miss Jane Addams, one of the foremost among the band of earnest, practical philanthropists who are doing so much good through the agency of the Hull House in Chicago, declares in a recent issue of *Charities*, a New York magazine, that it is child-labour which is producing the large army of tramps which is now one of the great curses of America. An examination of the hundreds of tramps that apply for shelter at one of the boarding-places supported by Hull House, leads her to declare: It is surprising to find how many of them are tired to death of monotonous labour and begin to tramp in order to get away from it, as a business man goes to the woods because he is worn out with the stress of business life. This inordinate desire to get away from work seems to be connected with the fact that the men have started to work very early, before they had the physique to stand up to it, or the mental vigour with which to overcome its difficulties, or the moral stamina which makes a man stick to his work whether he likes it or not.

But an even more serious indictment is laid by Miss Addams against the door of child labour. It tends to pauperize the parents. "The parents, getting tired of work, become more or less dependent on the earnings of the child. For instance, Italian men who work on the railroads in summer find it a great temptation to settle down in winter upon the earnings of their children." Miss Addams tells of an Italian who was mourning the death of his twelve-year-old daughter,

and who remarked to her: "She was my oldest kid. In two years she could have supported me, and now I shall have to work five or six years longer until the next one can do it."

It was high time that light should be let into such dark places of America, for we feel sure that public opinion only needs arousing to make a clean sweep of these places of iniquity. For it is iniquitous that little children should become factory slaves like this. Fifty years ago England made such a state of things impossible for her little ones; America, for the sake of her fair fame, must do the same for hers.

DOWIE.

John Alexander Dowie, who made such a stir in and around Chicago by his Zionist propaganda, is now engaged in a campaign in New York. His first few days in the big city seem to have been crowded with disappointments and accordingly, in a sermon delivered in Madison Square Garden, he took an opportunity of "sizing up" the people of the huge metropolis. The trouble with New Yorkers, he said, "is that they know all about what the newspapers say; they know all about what everybody says, except God. New Yorkers are all busy listening to each other; they know what the politicians are doing, what the gamblers in Wall Street are doing, what the thieves and murderers are doing; how the walking delegates are stealing labour's birth-right." He then personified New York as sneering at him and jeering and asking: "Who are you? What authority have you? If you say to me, here in New York, 'Get!' I won't get. I'll stand still. They said to me in Chicago, 'We'll drive you out!' I said 'If Christ lets you kill me, you may drive me out in a hearse.' When I was ready I got. And now they come 42½ miles out of Chicago to see me." There are several Australian residents in Japan who remember Dowie when he was a Congregational Minister in Sydney. They will be interested no doubt to read how he appears in these latter days of his notoriety. We quote the *New York Commercial*:—"Dowie was attired like an Episcopalian bishop. His outer robe of black was lined with purple. The sleeves of his surplice were very full and soft. At his back hung a hood lined with the colours of Zion, blue, white and gold. It was explained later that though this looked exactly like an academic hood, it was not one at all. It was simply the hood of the General Overseer of the Restoration Host." That Dowie's crusade at Chicago has brought him a very great deal of this world's goods is shown by a statement made by Mr. Benj. J. Ridgeway, of Cincinnati, who was sent to Chicago on behalf of the Book-keepers Association to disentangle the accounts of Zion. Mr. Ridgeway finds that Dowie has in his absolute control \$35,000,000. The value of the properties held by the Christian Catholic Church of Zion he places at \$20,000,000. When Mrs. Dowie arrived in New York it was announced that she had been robbed of a diamond and ruby brooch of the value of \$1,500. Sceptical persons at once asked if this was only another of her husband's advertising dodges, a dodge resorted to by *prima donne* when about to open a stalling tour. Reading the accounts of Dowie's doings, whether in the secular or religious press it matters not, one cannot help wondering what fanatic zeal directed by Yankee 'cuteness, will do next.

MR. KONDO REMPEI'S SPEECH.

The following is a translation of the speech delivered by Mr. Kondo Rempei, President of the Nippon Yusen Kaisha, at a meeting of the Bankers' Club:—

My recent journey gave rise to misconceptions at home and abroad. At home it was reported that, having received secret instructions from the Government, I was travelling for purposes relating to the political situation, and when I reached Vladivostok people at once began to say that this pleasure-trip taken by the President of the Nippon Yusen Kaisha might be interpreted as a sign that peace was assured. I need scarcely say that these expressions were the purest conjectures. My journey was for no other purpose than to inspect the properties recently acquired by the Nippon Yusen Kaisha from a British firm in the Yangtze Valley. It happened to be the hot season, and as I had been advised to make some change to cooler latitudes, I thought that I would examine the East-China Railway also and the effects it is likely to produce on the intercourse of the nations, so I went by that line *via* Vladivostok to Peking, and thence travelling to Shanghai. I finally ascended the Yangtze. Such being the circumstances I have nothing particularly novel or strange to relate, but I may be permitted to speak of two or three features of my trip.

When I visited these regions in 1899 it was just the time after the China-Japan war and all countries were competing to obtain privileges in matters of mining, railways and navigation. Viewing the situation from the stand-point of the Nippon Yusen Kaisha, I concluded that it was a matter of cardinal importance to secure for Japan the principal place in the navigation of Far Eastern Waters, and after my return I carefully explained that conviction to the Ministers of the Cabinet, which led to a minute discussion as to what should be done for opening lines and what steps should be taken with regard to the financial machinery of trade. Since then five years have passed, during which the Government has interested itself largely in the maritime carrying trade of the Far East and has promoted its development in various ways. The Yusen Kaisha also has had its own programme. Thus it has established the Honan S. S. Company and it recently purchased a line of steamers on the Yangtze, which measures are nothing more than the practical application of one part of that programme. As to the financial machinery of commerce, the Specie Bank has established branches in China and has made considerable efforts to extend its operations there. The Government, too, is at last planning the establishment of a China-Japan bank and is taking active steps to promote it, all which facts furnish ground for much satisfaction with regard to our enterprises in China. Turning to statistics of China's foreign trade, we find that it aggregated 500 million dollars in 1898, of which Shanghai did 300 millions' worth. But in 1902, the total was 700 millions, an increase of forty per cent. in 5 years. It had been anticipated by me that when the various railway-schemes and other enterprises so diligently pursued by the several Powers reached completion, the development of China would make extraordinary progress, and an incalculable growth would be witnessed in her trade. But even before those enterprises are accomplished, we are to-day confronted by a rapid growth of 40 per cent., from which fact the nature of her future development may be inferred, and as the railway projects now in hand approach completion traversing the whole Yangtze Valley, it can not be long before China's foreign commerce reaches the figure of 1000 million dollars. A trade of 700 millions and a population of 400 millions, gives an average of less than two *yen* per head. In Japan, the foreign trade represents an average of from 12 to 13 *yen* per head of the people, and in India the figure is said to be 5 *yen*. It may be several years before China reaches the degree of Japan's development in this matter, but that she should attain the level of India can not be called an idle hope. In that event her commerce would amount to 2,000 millions of dollars, a prospect the significance of which need not be dilated on. In the face of these facts, what enterprises has Japan planned in China during the past five years? Examining the matter at the actual scene of the work, there are no discernible evidences that any enterprises have been projected. On the other hand other nations are actively pushing their undertakings to completion and are daily extending their prestige. Five years ago when I travelled through these districts I concluded that there were grounds for great energy on Japan's part, and I entertained the same sentiment on the present occasion, so that I was all the more disappointed when confronted by facts. My travels led me to an inspection of the Korean coasts *en route* for Vladivostok. I did not find that those coasts had undergone any marked change since my visit five years previously. The population

and the trade of Fusan do indeed show some development and doubtless the prosperity of the place will receive an impulse on the completion of the Seoul-Fusan Railway, which is looked forward to, the inhabitants being engaged in making preparations. At Yuen-san and Söng-jin no change was perceptible. Vladivostok, as compared with its state on my preceding visit, seems to be a more complete town, the former wooden buildings having been largely replaced by brick edifices and the aspect of the streets altogether improved. As to the place's capabilities in the sense of a military station, I have no competence to form a judgment, but in the character of a trade port it has much to attract notice. The wharves have been greatly improved and their connexion with the railway established, among other things. Having seen Vladivostok I travelled by the East-China Railway and in passing through Manchuria I observed many places of great natural resources. Harbin and its vicinity were especially noticeable in that respect. Owing, however, to paucity of inhabitants it is inevitable that the progress of productive industry should be displayed. The world is already aware of the great producing capacities of Manchuria and of its abundance of gold mines, but at present its output is limited to agricultural products. Of these the total is said to be 15 million *koku*, including 8 million *koku* of millet which is used for the people's food; 4 million *koku* of beans, the greater part of which goes to Japan; and 3 million *koku* of barley and miscellaneous cereals. In short, the actual products of the region do not bear any visible ratio to its natural capacities.

When I saw the East-China Railway five years ago, only one small section of it was open to traffic, but now I found trains running over the whole line, and was astonished at the rapid progress the work had made; for it was progress representing 300 miles yearly, or nearly a mile a day. It is true that the districts traversed, being, for the most part, level, offered few engineering difficulties, but none the less this rapidity of construction is unparalleled. Of course the exact cost of the enterprise is not publicly known, but 430 millions of *yen* are said to have been spent on it. The laying out of Dalny also is reported to have cost 18 million *yen*. But the correlated structures and works have not yet been carried to completion, and it would seem that a large outlay must still be incurred on their account. I had heard that the Railway was inconvenient and disagreeable, but I found that the first-class carriages were 9 feet wide and 9 feet high, that the sleeping cars were well furnished and that the oscillation was small, so that I did not experience any discomfort. The speed was from 12 to 13 miles an hour and the stoppages at stations were from 20 to 40 minutes, which figures are doubtless due to the incomplete condition of the line. I had been informed that the journey from Dalny to Moscow could be performed in ten days, and that mail matter sent from Japan would be delivered in Europe in 18 days, and from what I saw I formed the impression that this estimate was not incorrect. At present letters by the trans-Pacific route take 24 or 25 days to reach Europe, and however much the transit be accelerated hereafter it can scarcely be made shorter than 20 days. If, then, matter can be sent by the other way in 17 or 18 days, an important question presents itself for future consideration.

As to Dalny, it is declared by the people of Vladivostok to be unsuited for the purposes of a commercial port, whereas Vladivostok, they say, is suitable, and consequently to spend labour on the former place is futile. Probably the inhabitants of every locality have the same remark to make about other places, and I presumed that the people at Dalny would take the opposite view to that of Vladivostok. But when I went to Dalny and examined it, I felt that what the Vladivostok folks said might be correct. It is true that the breakwater is a very fine affair, 5,000 feet in length; that the wharfrage measures 1,900 feet, and that an area of 400,000 *tsubo* is included in the harbour; but no merchants are to be seen carrying on business on Dalny. The reason may be apprehended after a little thought. European products can not find a large market there. Rates of transport by rail are high at present and the total population of Manchuria does not exceed 20 millions, most of whom wear cotton clothes, eat cheap food and live in an economical manner. Under the circumstances whatever Japanese goods find their way thither are merely for the use of the railway officials and employees, and there is no reason to think that such goods will go there increasingly in the near future. As to exports again, I learned that it is in contemplation to divert to Dalny the 4 million *koku* of beans now shipped at Newchwang, but I think that Dalny will find difficulty in depriving Newchwang of the position the latter has long enjoyed as a place of exit. Besides, the cost of transport is very different, and even though reductions be made, I do not look to see Dalny a flourishing harbour of export in the near future. Thus Russia has spent already 430 million *yen* and is still occupied in building stations

and carrying out other work which will require large outlays, but there seems to be no hope of her obtaining a return commensurate with the amount of capital sunk, and from this point of view it may be that the judgment of the people of Vladivostok is correct. On the other hand, at Port Arthur a new town is now in process of construction, and handsome edifices are being built by Vladivostok merchants who were engaged mainly in supplying the wants of the garrison troops and their families. Vladivostok and Port Arthur being alike, this business relation is not unnatural. It would seem to me that the spending of four hundred and odd million *yen* upon the railway was inspired by some ulterior purpose. If the money be regarded as the purchase-price of Manchuria, it may not be a bad bargain, but as a financial enterprise looking to future profit I deem it questionable.

With regard to Chinese railways, the line from Newchwang to Peking and that from Peking to Chinging are finished. Of the Lu-Han road the section of 130 miles from Hankow to Kioh-shan is constructed, and in two years more the whole will probably be finished with some small exceptions. At Kiaochow the Germans are working, their project being to carry a line from Chinkiang on the Tsin-chin road *via* Shanghai and Hangchow to Nanking and to connect it with the Chin-tsu railway.

The Yangtze Valley is an object of ambition to the various Powers. Here when the Lu-Han and the Yueh-Han lines are completed, communication with Canton by rail will be effected. Szchuan is not easy to get at, and in connexion with that various efforts were made to effect the navigation of the river to Chungking. But they have not been altogether successful. An English steamer reached Chungking without difficulty, but a German steamer was lost *en route*. England has been trying to obtain a concession to build a railway to Sichuan, but according to recent newspaper reports the Chinese Government is about to do the work itself. When these various railways are built the question is, what relation will be established between the Yangtze Valley and the development of China. The Yangtze is one of the largest rivers in the world. It has a length of some ten thousand miles, and steamers of 3,000 tons will be able to get as far as Hankow, it is said, which forecast, should it prove correct, will place the Yangtze first among the world's navigable waterways. The chief business centres along the Yangtze are Chinkiang, Nanking, Wuhu, and Kiukiang. Chinkiang has beautiful scenery and a large trade. Nanking is one of the old capitals of China. It has a population of 900,000, and its future development is expected. Wuhu has recently become prosperous. It exports 2 million *koku* of rice alone. Kiukiang is at the entrance of the Hanyang Lake, and there also commerce seems to be growing. Hankow, with Wuchang and Hanyang has a population of 1,200,000, and constitutes the great station of central China. This river is of the utmost importance to China, and even without railways is her chief artery of transport. The people along its banks are notably liberal and the soil is very rich. England appears to regard the Valley as within her sphere of influence. Hankow may be compared to Chicago and Shanghai to New York. The effect that the development of the Yangtze Valley must exercise upon the prosperity of Shanghai is said to be incalculable, and I must say that I received that impression. China's future is full of hope. So soon as the railway from Canton to Hankow, on the one hand, and that from Chinkiang to Hankow, on the other, are opened, so as to establish complete communications between the north and the south, with concomitant exchange of products and manufactures, the development of the interior will probably reach a point not easy to estimate. That Japan, separated as she is by only a narrow sea from this land of promise, should take no share in the privileges that the various Powers are obtaining, but should look on with folded hands is indeed regrettable. What I would hope is that some enterprise in China, no matter what, may be taken up and capital invested so as to lead to work of great profit. A day's delay now means a year's regret hereafter. Whenever I go to China I am struck by this thought. How is it that the Japanese do not get to work? There are a considerable number of them in China, but it must be confessed that many of them, being without capital, are engaged in menial trades or professions. Thus they give the Chinese a bad impression. For instance, they attach themselves to the Russian troops and travel from place to place selling lemonade, doing washing, acting as barbers, and some are carpenters or masons. All are working as individuals, and there is practically no one that contracts for a big job. Japanese contractors seemed to be confined to Sato Masahisa, of Dalny, who sells milk; for the rest, they all follow the Russian troops from place to place. In northern and southern China alike the Japanese settlements have not undergone the least change during the past five years. At Tientsin alone, as a consequence of the

Boxer affair, there is some improvement, the Japanese settlement there being fairly on a level with its foreign competitors. But everywhere else weeds are in occupation and Japanese trade is conspicuous by its absence. Can we expect that Japan's interests, her prosperity and her prestige will thus hold their own in China's future? I fear that we can not. If without appearing presumptuous I may be permitted to speak to you about the Yusen Kaisha, I would say that we have already made appropriate arrangements in the Yangtze Valley. Again, as to financial machinery, if the Specie Bank put forth its strength and if the Government start the China-Japan Bank, there will gradually cease to be any deficiency in that respect. It is a great pity that the Japanese people should stand idle at this juncture. May I be allowed to say that it was with the hope of helping to put an end to that state of affairs and of assisting to promote the trade of China and Japan, that I employed my summer leisure in travelling through those districts. I wish that many of my countrymen instead of spending their time at Hakone or Ika would visit China and observe it thoroughly for themselves. There is nothing new in what I have told you. Every one knows it, but I wish that such words had not to be spoken. (Loud applause.)

SOCIAL FESTIVITIES IN TOKYO.

On the 17th instant Mr. and Mrs. Sonoda held a reception in Tokyo to celebrate the wedding of Miss Sonoda and Mr. Hayashi, grandson of Viscount Hayashi. The scene of the fete was the Imperial Hotel, and so great was the number of persons who assembled that even the extensive space available in the chief salon of the building and on the lawn outside barely sufficed to accommodate the guests. As tribute to the universal popularity of Mr. and Mrs. Sonoda the affair was most striking. It would be altogether beyond the limits of our space to give any list of the many notables present, from the Maharajah of Kapurthala downward, but certainly we may say with truth that almost every prominent person in Tokyo was included. After about one hour devoted to conversation, refreshments were served in the large dining room on the west of the building. His Excellency Baron d'Anethan, Doyen of the Corps Diplomatique, proposed the health and perpetual prosperity of the happy couple in a few well chosen words, and the bridegroom replied suitably, concluding his speech by inviting the Japanese guests to drink to the health of their foreign friends. This brought to a close a party which Mr. and Mrs. Sonoda may justly regard as the heartiest possible demonstration of respect and affection, and which will prove, we trust, a true omen of the future lying before the beautiful young bride and her fortunate husband.

On the 16th instant His Excellency the British Minister and Lady MacDonald gave a reception and ball at the Legation in honour of their Imperial Highnesses the Maharajah and Naharani of Kapurthala who are now staying in Tokyo. Their Imperial Highnesses the Princesses Higashi Fushimi and Kanin were also present. The guests numbered about four hundred, and dancing, which commenced at ten o'clock, was kept up until the small hours. For supper was a spacious marquee—entirely closed except on the side of the main salons, and draped completely with flags—had been erected in the manner of an extension of the western verandah; an arrangement which afforded special facilities of ingress and egress. The British Legation no longer lacks that essential of modern buildings, a ball-room. Such a defect would have been intolerable to a Minister of Sir Claude MacDonald's hospitable instincts. But there yet remains the inconvenient necessity of some special construction for refreshment purposes when large parties like that of Monday last are

given. The Indian Prince and Princess, as well as the members of their suite, wore the costume of their country, and very picturesque and beautiful it looked in comparison with the sombreness of the European gentleman's equestrian "swallowtail" and the undress of the Western lady. Many of the high dignitaries of the capital being absent at the Autumn manoeuvres, the assemblage at the Legation was not as fully representative as it would have been at another time, but in all other respects the party was brilliant. Yokohama was largely *en evidence*, and for its convenience a special train left Shimbashi at half-past one o'clock.

A brilliant ball was given by Viscount and Viscountess Aoki at their Naka-roku-bancho residence in Tokyo on the 14th instant. It was attended by most of the notables in the capital, and was marked by all the pleasant features that invariably grace the hospitality of the Viscount and Viscountess.

Count Okuma's Chrysanthemum Party shares with the Imperial Garden Party and the Birthday Ball the honour of being one of the great annual fetes of Tokyo. It took place on the 16th instant in ideal weather. Count and Countess Okuma received the guests, of whom there were about two thousand, and after the orchids had been viewed, the magnificent collection of chrysanthemums attracted delighted attention. There were nearly a thousand different varieties, many of them exceedingly rare. The garden itself looked beautiful in its autumn dress, and the interior of the handsome Japanese building being fully exposed to view offered a feature of special interest. Refreshments were served with the wonted profusion, and the party may fairly be described as a brilliant success.

DEATH OF ADMIRAL BULLER.

Many old residents of Japan will read with regret the news which we publish below, recording the death of Admiral Sir Alexander Buller. These words are written with reserve, but it seems to us that young Buller, as a newly promoted lieutenant, was on board the *Princess Royal* when that ship landed parties to deal with the great Yokohama fire of 1866, and that he himself was among those deputed to arrest the progress of that conflagration. In 1877 Captain Buller returned to this station and it should be matter of considerable interest to local Free Masons that, having been initiated elsewhere, he joined the Yokohama Lodge on Jan. 16th, 1878, being only a few months junior in that sense to the late regretted District Grand Master, Mr. E. Flint Kilby, who joined in Oct. 1877. Captain Buller resigned membership at the end of his commission and was elected an honorary member of the lodge; and in 1895 as Commander-in-chief on this station, he visited the Yokohama Lodge and renewed his relations with the brethren. Admiral Buller was the first president of the Hongkong Devonian Society.

The following is from the *Tiverton Gazette* of Oct. 6th:—

It is with great regret we record the death of Admiral Sir Alexander Buller, K.C.B., of Erle Hall, Plympton St. Maurice. The gallant admiral had been staying at the Crown Hotel, Exford, hunting with the Devon and Somerset Stag-hounds for the first time for eleven seasons. He was accompanied by his two sons, Lieut. Henry Buller, of the Indian Army, who is at present on leave, and Mr. Herbert Buller, and all were looking forward to an enjoyable time, especially deceased, who was one of the keenest sportsmen in the country.

The run on Saturday was a very fast one, from Yard Down to Badgery. In the course of the hunt in the afternoon the Admiral was riding in company with two ladies near Black Pit, one of the widest parts of the moor. The party became hopelessly involved in the boggy district, and had been trying for some time to find an exit, leading their horses. Suddenly the Admiral fell down while endeavouring to extricate his horse from a bog into which it had sunk up to its girths. Uttering a groan, the Admiral remained motionless. One of the ladies, with the greatest difficulty, managed to struggle to the roadway, where, fortunately, she met Mr. Fred Day and Miss Day, of Southmolton. Leaving his horse with Miss Day, Mr. Day immediately went to the spot where the body was lying. He could find no signs of life. The body was left in charge of Viscount Ebrington's groom. Mr. Day at once telegraphed for Dr. Holcroft, of Northmolton, and also for an ambulance from Exford. The Admiral's horse was extricated with the greatest difficulty by Mr. Day, the latter sinking nearly up to his waist in his struggles. Mr. Day took the animal to Simonsbath, and dispatched assistance to the scene of the sad occurrence. Lady Buller was away from home at the time, staying with her daughter, Mrs. Turner, of Newbury. The deceased leaves five sons and one daughter. He was 69 years of age. Admiral Buller had had a distinguished career, having seen service in the Crimea, and in other parts of the world.

THE BUDGET.

In some quarters it is stated that the Diet and the Cabinet will find themselves immediately in hostile camps about the Budget. The point of probable contention is that the Cabinet has included in its new estimates of revenue the income accruing from the proposed tobacco monopoly and the proposed amalgamation of prefectures. But neither can the monopoly be established nor the prefectures amalgamated without the Diet's consent. Hence the Cabinet, when it presents a Budget including these items, may be said to be acting in excess of its competence, and the House of Representatives will rise in rebellion against the irregularity.

Such technicalities are unworthy of serious attention. The Government will assuredly accompany the Budget with drafts of whatever laws may be necessary for giving effect to its provisions. As we understand the position taken by the Ministry, it is that certain measures are financially essential. These measures taken, a satisfactory Budget can be compiled. Otherwise the Finance Minister declines the task. If the Diet thinks the measures unnecessary and inadvisable, it should reject them on their merits, instead of seeking to whip the devil round the post by objecting to the form in which the measures are first brought to its notice.

THE MANOEUVRES.

In his general order to the troops after the manoeuvres the Emperor expressed satisfaction with the performance of the soldiers but reminded the officers that ability to handle large forces could be obtained by practical experience only. The order concluded with an exhortation to all ranks to be zealous in the discharge of their duties.

Vice-Admiral Sir Cyprian Bridge, G.C.B., was present at the manoeuvres, as were also Colonel Hume, Captain Troubridge, R.N., Captain Vincent, R.H.A., and Captain Jardine the last two being late arrivals in Japan, specially sent by the War Office to make themselves acquainted with the Japanese language and the Japanese Army.

WILLIAM EWART GLADSTONE.

It was hardly to be expected that even so distinguished a writer and man of letters as Mr. John Morley should please everybody when writing the biography of such a man as William Ewart Gladstone. Gladstone played so leading a part in the controversies of his day, was so exceptionally gifted in many ways, and yet so strangely limited in others, that even now with the grass waving green above his quiet, secluded grave he is the subject of violent partisanship or equally violent dislike. To write the life of Gladstone there seemed only one man in English letters sufficiently qualified and he, by general consent, was John Morley. His qualifications were exceptional. A trained publicist, the master of a captivating style, not devoid of grim humour, he yet betrays in this biography a sympathy with ideals that are manifestly not his own which is at once a surprise and a gratification. For the last thirteen years of Mr. Gladstone's life Mr. Morley was the most trusted of his lieutenants, and towards the end of the long drama he had been drawn into a personal intimacy with him so close that, together with Lord Rosebery, he was the last person outside the household who was admitted to the bedside of the dying statesman. And so when it was known that Mr. Morley had accepted the onerous task, the reading public expressed content and quietly awaited the publication of the book. Now, all in due time, the Biography has appeared and is being as eagerly read and discussed in distant quarters of the world as in the old country. To the admirers of Gladstone the book is all that can be desired; to those who disliked him Mr. Morley's work is said to be an elaborate apologia; while those who are indifferent declare that a clever man of letters has contrived to be amazingly discreet and has displayed a reticence and wise suppression most highly to be admired in delineating the character of a man who was a past-master in the arts of making staunch friends, creating implacable enemies, and of explaining away "previous convictions." Mr. Morley tells us that when he applied to Queen Victoria for permission to publish certain State documents relating to his old political chief, Her Majesty strongly impressed upon him "that the work he was about to undertake should not be handled in the narrow way of party." The injunction has, on the whole, been very laudably obeyed, though in the nature of things it was impossible to always keep to the circumscribed path indicated by the Queen. The first volume opens with an autobiographic fragment of Mr. Gladstone's childhood, and carries his life down to the junction with the Liberal party in 1859. These recollections of his boyhood were prepared by Mr. Gladstone in his declining years. He appears to have been anxious to dispel the idea that he was in any sense a prodigy.

"The best I can say for it is that I do not think it was a vicious childhood. . . . But truth obliges me to record this against myself. There is no recollection of being a loving or a winning child; or an earnest, or diligent, or knowledge-loving child."

Mr. Gladstone goes on to say that he was a boy of singularly slow development. "There was more in me, perhaps," he adds, "than in the average boy, but it required greatly more time to set itself in order; and just so in adult and in middle and later life I acquired very tardily any knowledge of the world, and that simultaneous conspectus of the relations of persons and things which is necessary for the proper performance of duties in the world."

Religion was the principal controlling and

directing force of his career, and, as Mr. Morley points out, no estimate of the man could pretend to anything like completeness which did not take account of that fact. At all the most critical moments of his life, as shown by these posthumous papers and notes, he sought refuge in his spiritual beliefs, and tested every act by a high standard of religious conduct. The Bible was everything to him. "On most occasions of very sharp pressure or trial," he writes in one place, "some word of Scripture has come home to me, as if borne on angels' wings."

A chapter headed "Characteristics" contains an admirable panegyric of Mr. Gladstone expressed in a literary form that is unexceptionable.

"He was never very ready to talk about himself, but when asked what he regarded as his master secret, he always said 'Concentration.' Slackness of mind, vacuity of mind, the wheels of the mind revolving without biting the rails of the subject, were insupportable. Such habits were of the family of faintheartedness, which he abhorred. Steady practice of instant, fixed, effectual attention, was the key alike to his rapidity of apprehension and to his powerful memory."

It was well-known to the general public in his life-time that much of Mr. Gladstone's policy as Prime Minister in his later administrations was distasteful to the late Queen Victoria, and Mr. Morley has given some interesting particulars concerning the relations between the greatest Commoner of the nineteenth century and his Queen. It seems clear too that although he valued the Queen's advice very highly and placed perhaps a greater reliance upon her influence in the councils of Europe than did his rival, Lord Beaconsfield, Gladstone yet failed to conciliate her Majesty in private, and this failure is attributed to his habit of "addressing her as if she were a public meeting." The wise judgment of her late Majesty, as well as that of King Edward, has permitted the publication of many of the minutes and reports transmitted by Mr. Gladstone after Cabinet meetings and after nightly sittings of Parliament. These documents fully bear out the popular estimate. The Queen, as her Minister admits, was never failing in personal consideration, and more than once pressed an Earldom upon him, but there was constant constraint, and even her frequently-expressed solicitude for his health and suggestions that he should not over-exert himself contained a somewhat galling *arrière pensée*. The Queen was a stickler for punctilio, and on one occasion Mr. Gladstone was rebuked for paying an informal visit to Copenhagen without acquainting Her Majesty. The explanation, as Mr. Gladstone stated in a note to the Queen, was that he originally embarked for a cruise among the Western Isles, and never intended setting foot on foreign soil. As events turned out, the Emperor and Empress of Russia, the King and Queen of Denmark, and the King and Queen of the Hellenes visited the ship, and there was a dinner with speeches. Mr. Gladstone replied to the Queen as follows:

"Mr. Gladstone presents his humble duty to your Majesty, and has to acknowledge your Majesty's letter of the 20th, 'giving him full credit for not having reflected at the time' when he decided, as your Majesty believes, to extend his recent cruise to Norway and Denmark."

"He may humbly state that he had no desire or idea beyond a glance, if only for a few hours, at a little of the fine and peculiar scenery of Norway. But he is also responsible for having acquiesced in the proposal (which originated with Mr. Tennyson) to spend a day in Copenhagen, where he happens to have some associations of literary interest; for having accepted an unexpected invitation to dine with the king some thirty miles off; and for having

promoted the execution of a wish, again unexpectedly communicated to him, that a visit of the illustrious party to the *Pembroke Castle* should be arranged. Mr. Gladstone ought probably to have foreseen all these things. With respect to the construction put upon his act abroad, Mr. Gladstone ought again, perhaps, to have foreseen that in countries habituated to more important personal meetings, which are uniformly declared to be held in the interests of general peace, his momentary and unpremeditated contact with the sovereigns at Fredensborg would be denounced, or suspected of a mischievous design."

But the greatest estrangement of all arose when Mr. Gladstone, on the rejection of Home Rule, appealed to the country. The Queen objected to his oratorical crusades, as she "did not approve of the first Minister of the Crown addressing meetings outside of his own constituency," but he declined to be restrained, pleading the example of the leaders of the Opposition. The memorandum of the Prime Minister's final audience with the Queen is headed:—

"The conversation at my closing audience on Friday was a singular one, when regarded as the probable last word with the Sovereign after fifty-five years of political life, and a good quarter of a century's service rendered to her in office."

"The Queen was in good spirits; her manners altogether pleasant. She made me sit at once. Asked after my wife as we began, and sent a kind message to her as we ended. About me personally, I think, her single remark was that I should require some rest. I remember that on a closing audience in 1875 she said she felt sure I might be reckoned upon to support the Throne. She did not say anything of the sort to-day. Her mind and opinions have since that day been seriously warped, and I respect her for the scrupulous avoidance of anything which could have seemed to indicate a desire on her part to claim anything in common with me."

Mr. Gladstone's letter to Queen Victoria announcing his retirement from public life, contained the following:—

Mr. Gladstone will not needlessly burden Your Majesty with a recital of particulars. He may, however, say that although at eighty-four years of age he is sensible of a diminished capacity for prolonged labour, this is not of itself such as would justify his praying to be relieved from the restraints and exigencies of official life. But his deafness has become in Parliament, and even in the Cabinet, a serious inconvenience in which he must reckon on more progressive increase.

More grave than this, and more rapid in its growth, is the obstruction of vision which arises from cataract in both eyes.

Accordingly he brings together these two facts, the condition of his sight and hearing and the break in the course of public affairs brought about in the ordinary way by the close of the season. He has, therefore, felt that this is the fitting opportunity for the resignation which by this letter he humbly prays Your Majesty to accept.

The pathos of this letter must appeal to every reader. Scarcely less interesting than his relations with the Queen are the chapters which tell of Mr. Gladstone's manner towards his colleagues. It is strange, when one remembers his reputation for overbearing masterfulness, to read that in the judgment of his biographer he too frequently allowed himself to be over-ruled, adopting the practice of taking votes and counting numbers. "Lord Granville said to him in 1886, 'I think you too often counted noses in your last Cabinet.'" What he described as the fiercest fight that he had ever known in any Cabinet occurred in 1883 upon the removal of the Duke of Wellington's statue from Hyde Park Corner. A vote took place, and three times over he took down the names. He was against removal, but was unable to have his own way over the majority. During the crisis before the fall of his Government in 1885:

"Between the middle of April and the middle of May he jots down, with half-rueful humour, the names of no fewer than nine members of the Cabinet who within that period, for one reason or another, appeared to contemplate resignation. Of one meeting he said playfully to a colleague, 'A very fair Cabinet to-day—only three resignations.'"

One cause of his retirement from public

life in 1894, apart from his eyesight, was failure to induce his colleagues to dissolve upon the Lords' amendments to the Parish Councils Acts; but Mr. Morley definitely tells us that the last straw was the Naval Estimates, which, in his opinion, were unjustifiably and unwarrantably extravagant.

Of course Mr. Morley has much to say about Mr. Gladstone's Irish policy and he is successful in showing that Home Rule as a possible solution of the Irish question had taken tangible shape in Mr. Gladstone's mind prior to the dissolution of 1885. We print an extract from the book at this point which will astonish a good many people, we imagine.

"In October (1877) he paid his first and only visit to Ireland. It lasted little more than three weeks, and did not extend beyond a very decidedly English pale."

In the light of that remark it is strange to think that Mr. Gladstone was responsible for the disestablishment of the Irish Church, the passing of two Irish Land Acts, and the introduction of two Home Rule Bills.

We have not space to refer at length to the many activities outside politics which filled up Mr. Gladstone's busy life: his translations from Homer; his writings on purely theological subjects; his devotion to Dante; his unbroken record of devoted service to the High Church party (and this notwithstanding that he was the idol and rock of defence of the Nonconformists of the three Kingdoms)—for these things we must refer our readers to the three portly volumes themselves. We conclude with a quotation from Mr. Wilfrid Meynell's criticism of the book:—"One miscalculation Mr. Morley makes when he traces Mr. Gladstone's circumlocution and ambiguity of language—he thinks 'sophistical' and 'verbosity' rude words of Disraeli's—to the tortuous influence of the Oxford Movement. That was a bad school, says Mr. Morley, with its 'dreadful tangle of economies and reserves, so largely practised and for a long time so insidiously defended.' The Oxford Movement did not begin till 1833 and did not develop to 'Tract 90' till the 'forties, but already in 1832 Gladstone had given proof of his verbal legerdemain in his defence of the nominee system—himself the nominee of the Duke of Newcastle at Newark; and his first speech in Parliament is a defence of the slave-owners that owes, as it had to owe, all its persuasions to casuistry."

Mr. Morley's biography of his great chief will take a high place in English literature.

FUNERAL OF MR. N. P. KINGDON.

The funeral of the late Mr. N. P. Kingdon took place on Saturday morning, when the mortal remains of this old and greatly respected resident were followed to the Yokohama General Cemetery by a very large concourse both of Japanese and foreigners. Leaving the house, No. 16 Bluff, about nine o'clock a procession, which was marked by the great number of wreaths and other floral tributes to the memory of the deceased gentleman, was formed and made its way along the Bluff main road. Mr. Arthur Kingdon, the sole surviving son, walked behind the hearse as chief mourner, being followed by other relatives and the general body of mourners. The pallbearers were Dr. Wheeler, Messrs. H. C. Litchfield, Jas. Walter, Capt. Jas. Martin, Messrs. James Dodds, Thos. S. Baker, W. H. Percival, R. D. Robison and J. P. Mollison. At the grave side the last rites were performed by Rev. W. P. G. Field, and few of those pre-

sent could suppress emotion when their turn came to throw earth upon the coffin of one who has been so prominent a figure in this community.

NOTES ON CURRENT EVENTS.

The Tokyo share market showed a marked appreciation of all kinds of securities—with very few exceptions—on the 11th instant. Few of the appreciations reached the dimensions of one yen per share, those that did being the *Densha Tetsudo Kaisha's* (Electric Tram) shares (a rise of 1.90 yen); the *Keihin Denki Tetsudo Kaisha's* (a rise of 7.20 yen); the Street Electric Railway's (a rise of 10.20 yen); the Tokyo Gas Company's (1.20 yen); the Electric Light Company's (1.50 yen), and the Stock Exchanges (1.40 yen). The quotations in the case of the Keihin Electric Railway and the Street Electric Railway are regarded as speculative. But the appreciation continues.

We understand that Mr. W. K. E. Vincent, Mus. Bac., has resigned the position of Organist of Christ Church, which he has held to such general satisfaction for several years. The news, we feel sure, will be received with regret by all who have the interest of the Church at heart. Mr. Vincent put in some excellent and devoted work at Christ Church, spending himself without stint, and the high standard of music which he set himself to maintain will be remembered with gratitude by past and present members of the choir and congregation.

It is rumoured that the new Port Arthur English journal will see the light of day at about the middle of December or the beginning of January, and that it is an enterprise started by Colonel Artemieff, proprietor and editor of the *Novi Krai*. There is talk that its object will be to bring about an Anglo-Russian entente, and that M. Levitoff, a well known literateur of Port Arthur, has prepared a long series of historical articles designed to show that the story of the past contains many reasons for the two Powers to come together. Presumably a corollary of this entente would be the severing of the Anglo-Japanese alliance. Indeed that is remotely hinted, but we do not for our own part see why the three Powers should not come to a clear understanding. Probably the main difficulty in the way would be that some, if not all, of them would be reluctant to confess exactly what they want.

London financiers are evidently apprehensive as to the outcome of the Far-Eastern complication. Japanese underwritten 5 per cents. are quoted at £96.9-4½; the stock of the 50-million securities is at £93.3-0½ and the 4 per cents are selling at £81-5. Considering that Chinese 4½ per cents are quoted at £90-15s. the figure for the Japanese 4 per cents is conspicuously low. And this, too, in the face of Mr. Balfour's optimistic speech at the Guildhall banquet.

It is stated that the Cabinet will ask the Diet to endorse the abolition of no less than 19 prefectures—Saitama (which will be incorporated in Tokyo); Shiga (incorporated in Kyoto); Nara (incorporated in Osaka); Wakayama (partly in Osaka and partly in Miye); Gifu (in Aichi); Yamanashi (in Nagano); Ibaraki (in Chiba); Gumma (in Tochigi); Yamaguchi (in Hiroshima); Yamagata (in Akita); Iwate (partly in Aomori and partly in Miyagi); Toyama and Fukui (in Ishikawa); Tottori (in Shimane); Ehime (in Kagawa); Tokushima

(in Kochi); Saga (in Nagasaki); Oita (in Fukuoka) and Miyazaki (in Kagoshima). This means that instead of 3 fu and 43 ken, Japan would have 3 fu and 24 ken, and that an annual saving of yen 489,000 would be effected. There are doubts whether the programme can be carried out, though it is founded on the indisputable fact that means of communication have been vastly improved since the original system was instituted.

China seems to have sent a great many officers to the manoeuvres in Hyogo prefecture. We find the names of no less than forty of these officers gazetted as recipients of Japanese Orders, from the First to the Sixth. It does seem a pity that when Japan followed the example of instituting decorations she did not ignore the evil precedent of making them so terribly common.

We need scarcely add that various European officers also have received Orders, two Germans, two Frenchmen, two Dutch and one Russian. English officers, of course, are conspicuous by their absence from these lists.

There is much talk just now about the poisonous nature of purple and red lead-pencils. In April of this year a student in Kyoto lost the sight of one eye in consequence of some of the dust of a purple-pencil having flown up to the eye-lid as he was paring the lead. Several medical experts took the matter in hand, and it has now been proved that these red and purple leads contain *gentiana violet* and *methyl violet*, which have the effect of producing decay in organic substances. In every-day language the fact appears to be that aniline dye-stuffs are used to colour the lead, and that such stuffs are poisonous. What happens, we wonder, when a child puts such a pencil into its mouth, as children habitually do. The Authorities are expected to take some action in the matter.

The *Straits Echo* publishes a statement from its London correspondent, dated the 14th of October, to the effect that the Tsar was favourable to a suggestion that the dispute with Japan should be submitted to the Hague Tribunal, but was over-ruled by his military advisers. From the same source we learn that Dalziel's agency in London was informed that Admiral Alexieff had assured the Tsar that Japan would back down if Russia were firm. It is not in our power to say whether these rumours be true or false, but as publicists sincerely desirous of peace we enter our protest against the notion that a firm attitude on Russia's part will eventuate in a "back down" on Japan's. Such a misconception is altogether opposed to an amicable settlement of the complication. If we know anything at all about the Japanese, they are as resolute in this instance as any nation ever was.

In connexion with a project to carry the Rhodesia railway across the Zambesi at a point just below the Victoria Falls, *The Times* mentions a fact with which the general public were not previously acquainted, namely, that the Victoria cataract is the largest in the world, being roughly twice the width of the Falls of Niagara and having a depth of descent between twice and three times as great. "They present, indeed, by far the most stupendous phenomenon of their kind in the world." They excel Niagara not alone in magnitude but also in special characteristics due to the remarkable conformation of the black basaltic bed of the Zambesi at this point. Immediately above the falls, the bed is about a mile wide, but at the point

where they commence "the rock is crossed by a transverse fissure between four and five hundred feet in depth, into which the water pours in one broad and unbroken sheet; but at the bottom of this fissure it finds only a single outlet, comparatively narrow, at the mouth of a gorge which is said to be about twenty miles in length, and which pursues a zigzag course deeply channelled through the rocks." There can not be much doubt that if this wonderful cataract were within reach of railway communication, the travelling public would soon make its acquaintance.

Baron Hisaya Iwasaki has returned from his three months' trip abroad. The manner of his journeying, without any interpreter or any suite, is made the subject of a leading article by the *Shogyo Shimpō*, which justly lauds the fine example set by the Barons Iwasaki to their compatriots. These gentlemen, who are among the wealthiest in Japan, eschew all ostentation or luxury, and work with as much diligence as though their fortunes had still to be made. Baron Hisaya Iwasaki not only attends his office with unfailing punctuality and oversees the affairs of an extensive business, but also, when he feels that his experience needs to be widened, takes ship for the West, entirely without attendants, welcoming the treatment and undergoing all the hardships of an ordinary traveller.

Mr. Marshall Field, the well-known millionaire draper and silk mercer of Chicago, and one of the shrewdest business-men in the States, spent his summer holiday in England. He stayed there something like three months and returned to America absorbed with the idea that Mr. Chamberlain will win over the English constituencies to his tariff policy, and that if he does it will be a punishing blow to American industries. "There seems to be in this country," Mr. Field said in an interview on reaching home, "an impression that a tariff in England would affect us very little; that we would hardly notice it, but it is wrong. Our export business in iron and steel, in textile fabrics and in breadstuffs would suffer. Since I reached this country I notice a general impression that Chamberlain is already beaten, but I certainly believe he will win."

News comes from London that a number of verses printed in a Russian periodical over the signature of Olaf, are generally believed to have been written by the Czar. They are said to be expressed in exquisitely poetical language in the original Russian. The following is a translation of the second and third stanzas:

My happiness was born at night and succoured in the gloom,
My pleasures have dissolved in flight, heart-stricken at my doom.
My soul strives blindly for relief, chilled as the drifting snow,
By doubts which scoff at the belief, of finding peace below.

The King and Queen of Italy are paying their first visit to the British Court this week, and the nation, we note from home papers, are prepared to give them a warm welcome. From an interesting article in *The Times*, written by Signora Paola Lombroso, we learn that King Victor Emmanuel has received an exceptionally thorough education, that he is no genius, but a prudent man who readily understands all facts brought before him, and is completely free from vanity. He is believed to swerve slightly towards the Liberal parties, detests Court parade, and has suppressed

much of it, and likes nothing so genuinely as quiet domestic life, unadorned, it would seem, by much feeling for the arts. The Queen entirely sympathises with him, and having been simply bred in Montenegro, makes it her pleasure to be a good wife and mother, and to occupy herself in works of charity. These are qualities to endear her to Englishwomen.

A passenger by the *Buyo Maru*, which arrived at Shimomoseki from Liaotung on the 16th instant, is said to have stated to a correspondent of the *Jiji Shimpō* that Viceroy Alexieff is likely to leave for Russia at the close of this month, and that he will probably be succeeded by General Kuropatkin. This informant adds that people at Dalny are persuaded as to a pacific issue of the Manchurian complication, and that everything is calm there.

In a recent number of the *British Medical Journal*, an article, entitled "Prehistoric Sanitation in Crete," draws attention to certain discoveries made by Mr. Arthur Evans, F.R.S., during the course of his excavations at the site of the ancient city of Knossos, in Crete. These discoveries, as we pointed out in the *Japan Mail* when the news was first known, are of great interest, not only to sanitary experts, but also to the general public, showing as they do that the early Cretan people, who lived and flourished about 4,000 years ago, put into practice methods of sanitation which were believed to be of modern growth. Our contemporary enumerates the remains of a complete drainage system for a water-borne system of sewage, the means taken to ensure a pure water supply, and, perhaps the most interesting find of the kind, the discovery of several sections of terra cotta drainage pipes still in situ. These pipes, besides being beautifully made, were laid with all the precautions presented by modern text-books on this subject. The article, we learn, was written by Captain T. H. M. Clarke, M.B., D.S.O., R.A.M.C., medical adviser to H.R.H. the High Commissioner of the Powers in Crete. He has been in Crete since the early days of the international occupation, and was wounded at Kandia during the massacres of September, 1898, when the military hospital was attacked by Bashi Bazouks. Prince George of Greece, whose younger brother has just been married, as Governor or High Commissioner of the island, is proving himself an able administrator. Under his rule the island enjoys tranquillity and justice.

Rear-Admiral F. T. Bowles, Chief Constructor of the United States Navy, devotes part of his annual report to some pungent remarks concerning the delays that are occurring in the building of American warships. Admiral Bowles asserts that progress during the past year has been far from satisfactory. "This," he adds, "is particularly the case with the five battleships of the *Virginia* class. In July, 1902, these vessels were about a year behind their contract dates. During the past year they have fallen still further behind, and, on the average, have progressed only about one-half as much as would be required to conform to the contract rates." The completion of the battleship *Missouri*, it is unofficially explained, has been delayed somewhat by necessary alterations in turret supports, while all the vessels under construction on the Pacific coast have been delayed considerably by strikes. Insufficient capacity for the production of nickel-steel protection deck plates has been the alleged

cause of inadequate deliveries by the ship-builders, and this is said to have embarrassed and delayed their work to a considerable extent in the past year, and it still exists. The United States now have forty-five vessels under construction.

The meeting of representatives of various Chambers of Commerce now sitting in Tokyo is discussing the question of protection. Nothing has been yet decided, but it is plain that the general tendency is in favour of protection, or, at any rate, discrimination. Mr. Chamberlain's new "break" has influenced the Japanese. At a meeting on the 17th instant, Mr. Okura Kiha-chiro alluded to this fact as a final proof that a protective policy was inevitable. The chambers of commerce throughout the empire are to be invited to give the subject their careful consideration within the next few months, and a representation has been presented to the Government urging that official steps also be taken in the nature of investigation.

An interesting romance of martial law was enacted in October before a military tribunal at Verdun. In 1889, one Sergt.-Major Le Bail, of the 162nd Foot, stationed in the town, after serious embezzlements, deserted, and was sentenced, in contumacy, to 20 years' penal servitude, to military degradation, and to 20 years' interdiction of domicile. While these stern measures were being taken, Le Bail re-enlisted in the name of Danserec in the Foreign Legion, in which he made the campaigns of Algeria, Dahomey, Siam, and Tonquin, was decorated with the military medal, rose to be major and adjutant, and finally, with his 14 years of meritorious service upon him, presented himself at Verdun the other day in his true name, made restitution of all embezzled money, and asked to be tried. Taking all which things into consideration, the court pronounced a unanimous verdict of acquittal.

The *Graphic* Christmas number, which came to hand by the Canadian mail, is as usual beautifully illustrated. There is a fine portrait of King Edward in his uniform as Colonel-in-Chief of the 1st Prussian Dragoons of the Guard, and a variety of short stories written specially by well-known authors, which, taken with the mixture of serious and comic pictures, tend to make the publication quite readable and interesting.

Among the list of successful candidates in the public examinations of the London Academy of Music, held in July, appears the name of Miss Helen Lloyd Thomas, of Yokohama. There were over 400 candidates in the examination and Miss Thomas won the Silver Medal. We understand that Miss Lloyd Thomas and her sister are due back in Yokohama on December 20th.

His Excellency M. Harmand returned to Tokyo by the train arriving at 9.30 a.m.

Business continues to be in a depressed condition. All the best authorities in Japan appear to be agreed that if the war clouds lifted a wholesome recovery of activity would be witnessed in trade and industrial circles. It is not easy to learn exactly on what foundation they base that hope, apart from the splendid rice crop, which could scarcely have failed to produce some effect had it not been counteracted by exceptional influences in other quarters. Whatever may be the true measure of the effect produced by the political uncertainty, it is at all events unquestionable that the unemployed funds

lying in the banks are steadily increasing. The latest figures published are:—

	Yen.
First Bank.....	2,939,000
Mitsui Bank.....	2,837,000
Mitsui Bishi Bank.....	2,408,000
Fifteenth Bank.....	1,462,000
Third Bank.....	1,119,000
Yasuda Bank.....	1,069,000
Hundredth Bank.....	1,059,000
Imperial Commercial Bank.....	1,030,000

In this table are shown only the Banks having unemployed deposits of over a million yen. Many others are said to be similarly embarrassed though on a smaller scale.

On the evening of the 18th instant the President of the Nippon Yusen Kaisha gave a dinner to the Directors and chief members of the Head-Office staff for the purpose of testing the abilities of the cooks and stewards recently engaged in England, who are to serve as instructors to the company's officers in those branches of service. We append the menu, and add that according to the opinions said to have been expressed much ability was displayed by the new employees:—

WINES.

Sherry: Liebfrauenmilch. Chateau Margaux.
Heidsieck. Dry Monopole. Liqueurs.
Curacao. Brandy.

HORS D'ŒUVRES.

Tartines à la Danzic. Devilled Sardines.

POTAGES.

Mulligatawny. Consomme à la Royale.

FISH.

Fried Smelts sauce tomate. Salmon with Cucumber

ENTREES.

Larded Fillets of Beef with Champignons.

Lambs Tongues, sauce Epicurienne.

Quail on toast.

REMOVES.

Roast Saddle of Mutton, Red Currant Jelly.

Wild Teal Duck, Madeira Sauce.

Prawn Curry.

VEGETABLES.

Roast Potatoes. Mashed Potatoes.

French Beans. Asparagus.

SALAD.

SWEETS.

Black Cap Pudding. Gateaux Japonaise.

Fruits in Jelly. Parisienne Pastries.

SAVOURY.

Omelet au Fromage.

Dessert. Coffee.

VANILLA ICES.

COLD BUFFET.

Roast Baron of Beef York Ham.

The Japan Society of London issues the following forecast of its season's doings, showing that it has lost nothing of its vitality:—

Wednesday, November 11th—"The Japanese Soldier in the Field," by Frederic Coleman, M.J.S.

Wednesday, December 9th—"Hokusai from the National Geography of Japan," with Translations of the Prefaces and Description of the Contents of the Mangwa," by F. Victor Dickens, C.B., M.B., M.J.S.

1904.

Wednesday, January 13th—"The Bringing-up of Japanese Girls," by Chikuro Kadono, B.A., C.E., Member of Council J.S.

Wednesday, February 10th—"In Memory of Will Adams, the First Englishman in Japan," by Arthur Diosy, F.R.G.S., Chairman of Council J.S.

Wednesday, March 9th—"Japanese Sword Blades and Arrow Heads," by Miss E. R. Scidmore, M.J.S.

Wednesday, April 13th—"Is Interest in Japanese Art on the wane in Europe and America?" by Marcus B. Huish, LL.B., Hon. Librarian and Curator, J.S.

Wednesday 11th—"The Nun Rijōnen; Fragments of a Japanese Biography," by Lafcadio Hearn, late Lecturer on English Literature, Imperial University, Tokio, Hon. M.J.S.

Wednesday, June 8th Annual General Meeting. A Conversation will be held during the Session, the date and other particulars of which will be duly announced.

Thirteenth annual dinner—Wednesday, May 4th, in the Whitehall Rooms, Hôtel Métropole, His Ex-

cellency the Viscount Hayashi, LL.D., D.C.L., President. J.S., in the Chair.

CHARLES HOLME } Hon. Secs.
Gōji UKITA }

The *Chuo Shimbun* publishes a list of the articles of trade that would probably be affected by the protection proposals now under discussion by the Chamber of Commerce in Japan. The list is as follows:—

EXPORTS.	Yen.
Tea.....	10,000,000
Lily Bulbs.....	240,000
Straw Braid.....	3,000,000
Cotton Yarns.....	20,000,000
Cotton Fabrics.....	6,000,000
Soap.....	200,000
Cigarettes.....	2,000,000
Brushes.....	620,000
Fans.....	800,000
Glass.....	830,000
Camphor.....	3,500,000
Nankin-mame.....	350,000
Silk stuffs.....	82,000,000
Haburaye and silk handkerchiefs.....	30,000,000
Matches.....	8,000,000
Beer.....	500,000
Buttons.....	370,000
Umbrellas.....	1,000,000
Fancy matting.....	5,500,000

IMPORTS.	Yen.
Timber and Boards.....	540,000
Oil dregs.....	10,140,000
Machines.....	12,000,000
Steamers.....	1,400,000
Sugar.....	15,000,000
India-rubber articles.....	500,000
Cotton stuffs.....	18,000,000
Paper.....	3,700,000
Wines and Spirits.....	1,000,000
Plate glass.....	1,800,000
Rope and Twine.....	300,000
Barley and Potatoes.....	760,000
Iron.....	19,000,000
Railway Cars.....	2,500,000
Bicycles.....	1,000,000
Kerosene.....	16,000,000
Cotton Yarns (gassed).....	3,040,000
Woollen Fabrics.....	17,000,000
Pumps.....	570,000
Hats.....	230,000
Hemp Articles.....	2,000,000

HECTOR MACDONALD.

"The irreproachable character of so brave, so glorious and unparalleled a hero."—Commission of Enquiry.

"Man's inhumanity to man, makes countless thousands mourn"—Robert Burns.

"Blow, blow thou wintry wind

Thou art not so unkind

As man's ingratitude."—Shakespeare.

A LAMENT.

Peace to the gallant dead, beside his grave

The weeping willows wave;

The turf is green, that hid the hero's shame.

No refutation, cancelling of blame,

No tardy praise, to vindicate his fame,

No plaudits, such as used to greet his name,

Can bring him back, the Bravest of the Brave.

No sob of penitence, nor anguish deep

Can change eternal sleep

Or wring forgiveness from the silent clay.

The past lies with the past, and memory,

That binds the living to the dead for aye,

Dissolves in tears its woeful phantasy.

Yet Honour lives. This may we stainless keep.

N.G.M.

THE PLAGUE.

Two cases of plague were reported on Nov. 13th at the isolation house, Minami-Ota, where it may be remembered that over a thousand inhabitants from Yoshihamacho, Matsukagecho, Urashimacho and Koyasu are detained on account of disinfection arrangements. One of the patients is a youth named T. Noguchi from Yoshihamacho, and another is an infant girl named Fuku from Koyasu. They were immediately removed to the Manji Hospital.

BOXING CONTESTS.

The Boxing contests were continued on Thursday night before a good audience. The display made was capital and altogether these two entertainments were highly creditable affairs. Some dissatisfaction was manifested on Thursday in parts of the hall at a decision in which judges and referee were unanimous but this was a temporary "kick" and the proceedings generally were watched by a keenly appreciative and orderly audience.

The first bout was between Coleman of H.M.S. *Vengeance* and McCane of the U. S. S. *Rabigh* (feather-weights) and it proved a very fast fight. McCane was near disqualification for foul fighting, but nothing of this kind affected the decision, Coleman being knocked out in the fourth round.

Abbott of H.M.S. *Cressy* met Bellfield of the *Albion* (middle weights) and between them they put up a most plucky contest. After Abbott had been practically beaten he came up most gamely, but Bellfield was evidently the cleverer of the two and in all likelihood would have received the verdict. Most unfortunately, however, in the seventh round, and purely in the excitement of the moment he hit Abbott while the latter was getting on his feet, and as the foul was plain and palpable Bellfield had to be disqualified. A very plucky fight.

Two light-weights, Turner of the *Vengeance* and McNamara of the *New Orleans*, made a close fight during the first three rounds of the next bout, but Turner had slightly the better of it in the subsequent work. McNamara was twice warned by the referee and a clear foul in a clinch on the ropes disqualified him. Probably Turner would have had the verdict any way.

Gordon of the *Wisconsin* and Thompson of the *Vengeance* (welter-weights) went into the ring for the purse offered by residents to be fought for by a man from the British navy to meet an American at 142 lbs. This was a very fine bit of fighting in the first two rounds, but in the following four turns Thompson had the advantage as it appeared to the judges and referee and the decision was given in his favour. There was quite a loud protest against this action on the part of a considerable section of the audience. The fight was beautifully clean; there was scarcely a clinch, and the men broke away splendidly without any body having to say a word. It would be a pleasure to see them in a longer contest—this was only six rounds.

The Bantam championship of the China station was competed for by Layton of H.M.S. *Albion* and Lacey of the *Vengeance*, in a twelve round contest. When the men were called from their corners they went at it in ding-dong style, and the general notion was that they would not be able to last. But so evenly matched were the two that at the end of the bout the referee gave a draw, which seemed to indicate the general opinion. The fight was a game and gallant business from start to finish.

FIRES.

On the morning of Nov. 14th, fire occurred at Haramachi, Koishikawa, Tokyo, destroying one house. The cause is reported to have been tobacco ashes.

A telegram dated Nov. 15th from Fusan, Korea, states that fire had occurred at Nanlin burning down about twenty buildings.

Fire broke out on Nov. 15th at 9 p.m., at the Akaike coal mine, Chikuzen province, where about eight hundred coolies were working. About thirty of the men are missing. Usually, over two thousand coolies work in this mine, but on the day in question many of them were waiting to receive their half-monthly wages. According to an official telegram, thirty-five coolies were burned to death.

A telegram from Yamashi states that Mum: Nakayama (22) living at Wakamatsucho, was found murdered on Nov. 17th. She was to have married a prominent merchant on the following day.

MR. CHAMBERLAIN'S PROGRAMME AND
BRITISH SHIPPING.

IT is plain that if a system of preferential tariffs were adopted by Great Britain with the object of discriminating in favour of her colonies, there would be a diminution in the quantity of goods carried between the United Kingdom and the countries discriminated against. On the other hand, there would be an increase in the quantity of goods carried between the United Kingdom and the colonies. Would the increase in the latter case balance the decrease in the former? That is a question of great importance, for it concerns the shipping industry which is one of England's chief enterprises. The matter is admirably discussed in a series of essays published by *The Times*. A remarkable new departure made of late by the leading journal has been the employment of the most competent experts to examine minutely and fully any vital problem that presents itself. Such work can not be done satisfactorily within the compass of a leading article. It requires much more detailed treatment and much more space than editorial columns permit. Therefore *The Times* has adopted the serial method, with results which can not be too highly commended. It would be hopeless to attempt any summarizing of the great journal's essays in this particular instance. Every word they contain is material and must be carefully perused. But a few special points may be noted. One is that foreign tonnage is increasing more rapidly than that under the British flag, and that whereas the British share in the shipping at foreign ports has almost ceased to grow since 1896, the foreign share is developing at the rate of nearly 12 million tons a year. In a word, foreign nations are beginning to do their own maritime carrying business, and as their over-sea commerce increases, so also does the tonnage of the vessels they employ. But in colonial commerce, which increases at even a faster relative rate than foreign commerce, British ships fully retain their command. Unfortunately, however, the foreign carrying trade is at present much more important than the colonial. The writer in *The Times* goes into this part of the subject with great statistical accuracy, and the conclusion he reaches is that "a change in the British fiscal policy on the lines of Mr. CHAMBERLAIN's proposals, would be a great and growing benefit to about 39 per cent. of British shipping, would injure 47 per cent., and would have little or no effect upon 14 per cent." But this calculation does not include the contingency of retaliation by foreign Governments in the form of tonnage dues. As to that, *The Times*' expert says:—"If foreign Governments desired to retaliate by hitting at our great shipping industry, it must be confessed that it offers a noble target. The total tonnage entered and cleared at foreign ports under the British flag is now 106,000,000

tons in a year. The total tonnage under foreign flags entered and cleared at British and colonial ports is now 48,600,000 tons. Tonnage dues could therefore be levied on twice as much British shipping as we could levy on foreign shipping. But—and here we have a pre-eminent advantage, which, at a pinch, would, I venture to think, give us the victory in a battle of tonnage dues—we could kill foreign shipping at our ports, while foreign Governments could not for a long time to come kill British shipping at their ports. Why? Simply because we could do all our over-sea carrying without the aid of foreign ships, and foreign countries could not do all their over-sea carrying without the aid of our ships. And so it follows that, until foreign countries have built up mercantile fleets sufficient for all their needs, the necessities of their over-sea trades and their desire for cheap freights must compel them to send goods in British bottoms. Splendid as is the target which British shipping offers to the world, it might still be too dangerous to attack it directly by tonnage dues, if it were adequately and persistently defended. If it came to a fight we have two powerful weapons—one, the roping off of the Empire's shipping trade for British ships; and, the other, the destruction by dues of foreign tonnage at the Empire's ports—and it would be saying little for British skill in diplomacy, if, with two such weapons in reserve, we could not prevent retaliation, should it be found desirable for us to alter our fiscal policy, and, at the same time, extort a greater degree of consideration for British shipping than it at present secures."

DISCRIMINATION.

THE *China Times*, quoted by the *N.-C. Daily News*, publishes a copy of certain rules which went into operation at Port Arthur on the 1st instant. The gist of them is that a non-Russian ship entering the port has to pay tonnage dues twelve times as great as those paid by a Russian vessel. Of course Russia is entirely within her right in exercising such discrimination, but the meaning of her procedure in its bearing on the Manchurian question can not be mistaken. If Manchuria come wholly in to her possession she will most unquestionably extend to it the system of discriminatory tariffs approved by the economical wisdom of continental Europe and of the United States of America. Why should she not indeed? Assuming that system to be the most advantageous in the judgment of the country applying it, then to adopt any other system would be suicidal folly. That is precisely what many publicists have predicted about Manchuria's commercial future in Russian possession, and it is precisely what we ourselves have predicted in the face of some adverse criticism. We fail to realize the probability of free trade being adopted in its outlying possessions by an empire which practises discrimination in

its dominions at home. Russia will unquestionably enforce a system of discriminatory tariffs in Manchuria if her hands be unfettered in the matter. How is that undesirable result to be averted—undesirable, we mean, from the point of view of outsiders, not from the point of view of Russia who is bound to consult her own interests first? Obviously the only avenue of escape is by means of open ports. The Powers of the West still hold China in a vise. They do not allow her, do not think for a moment of allowing her, to exercise in her tariff arrangements the discretion they claim for themselves. In their own cases they have recourse to protection, or to discrimination as suits their circumstances, but the Middle Kingdom they compel to be the arena of free trade. It may be hard upon China, but a great many things are hard upon China, and will become harder unless she develop the only means of safety a nation possesses in this enlightened age—brute force. It is plain that if Mukden, Tatung and Antung become open ports such as Shanghai is, and if Newchwang continue in the same category, then the possibility of applying discriminatory tariffs in the import trade of Manchuria will be very remote for Russia. That is the only shred of hope that remains for the spectators of the drama of colossal aggression now taking place in the Far East. They can save their trade from something like annihilation, and if they do not struggle so to save it, they will not deserve to have it. As to turning Russia out of Manchuria, no one, we imagine, is going to attempt any such task; and as to her walking out of her own free-will, to talk of anything of the kind is the merest persiflage. Russia might have invested this incident of her imperial progress through Asia with an air of much greater respectability than she has given it. She might have avoided the signing of futile conventions and escaped their flagrant violation. Her twentieth century diplomacy has failed as completely as her mediæval practicality has succeeded. But fast as her hand is closed on China's three Eastern Provinces, she has not yet brought the open-port question within reach of her own arbitrary control, nor is it apparent that she can do so in any way except by defeating Japan in arms. Should war break out, and should Russia be found in its sequel standing victorious in Manchuria, it is at least doubtful whether she would bow to any repetition of the San-Stefano episode. As a conqueror she would probably claim for herself rights which she can scarcely attempt to exercise now in the face of the promises she has allowed China to make. On the other hand, the value of Manchuria to Russia as a field for the development of her own commerce would be enormously diminished were she denied the privilege of applying discriminatory tariffs. Indeed she would then have acquired this vast tract of Asia chiefly for the benefit of nations with which her own people have shown themselves quite incompetent to compete commercially on equal

terms. It can scarcely be doubted that the problem is greatly exercising the minds of her statesmen, and that the commanding position conferred by a victorious war for fiscal purposes may tend to reconcile them to that means of eluding the dilemma.

THE OPENING OF YONG AM-PHO.

ALL accounts agree that the Korean Court had actually consented to the opening of Yong Am-pho and that instructions had been given for conveying the intelligence officially to the Foreign Representatives on the 17th instant, when the Russian Minister interfered in an almost peremptory manner, and in consequence of his strong action the EMPEROR suddenly ordered the Foreign Office to suspend the despatch of the proposed intimation. It appears that what ultimately moved the Korean Government in the direction of a liberal policy was a pressing application by the United States Minister, who, by his ability and tact, has enhanced the great influence naturally enjoyed by his country in Seoul. Dr. ALLEN's counsels, supplementing those of Great Britain and Japan, convinced the Korean Government of the wisdom of the step recommended, and the opening of the place would be by this time an assured fact, had not M. PAVLOW interfered. He is said to have gone so far as to detain a Russian warship at Chemulpo for the purpose of strengthening his protest, but we apprehend that no great credence attaches to that item of intelligence.

There can not, we think, be any second opinion about this action of the Russian Representative, taken, it must be presumed, at the instance, or, at any rate, with the approval, of the Government in St. Petersburg. Not only is it unlawful and illiberal action, but also it is in violation of Russia's conventions with Japan. The former phases of the question have already been elaborated in these columns. Russia's position at Yong Am-pho is indefensible even though her own defense of it be fully admitted. For although it were proved—and it has not by any means been proved—that the timber-felling concession granted to a Russian company in 1896 carried with it the right of establishing stations at any and every place in the Yalu Valley without previously consulting the Korean Government, such stations could have no *raison d'être* except as adjuncts to the special enterprise they are intended to facilitate. They are not in any sense settlements leased to the Russian Government and reserved solely for the uses of Russian subjects. Such a character can no more be claimed for them than a river can rise above its source. According to M. PAVLOW's interpretation, however, a station thus arbitrarily chosen by Russia within Korean territory, a station which can not possibly have any legal status except in so far as it contributes to the development of a Russian

timber-felling company's industry, is to be regarded as a place over which the Russian Government has acquired an exclusive right of control, and to which all other nationals must be denied access unless Russia sanctions their advent. No demonstration, however adroitly framed or with whatever goodwill received, can invest such proceedings with any semblance of legality, and as for the fact that Russia thus places herself deliberately in the path of Korean development and imposes a selfish barrier to the expansion of foreign commercial interests, there is no occasion to elaborate it. Then, in fine, there is the conventional question. In the last article of the NISHI-ROSEN Protocol of 1898, it is explicitly provided that "the Russian Government shall not impede the development of the commercial and industrial relations between Japan and Korea." Of that provision M. PAVLOW and his Government seem to have completely lost sight. For when the Russian Representative interferes peremptorily to prevent the opening of a port to which Japan desires access for trade purposes and which Korea is quite willing to open, how can it possibly be claimed that Russia is not impeding the development of the commercial relations between Japan and Korea? Thus M. PAVLOW's course is in direct violation of his country's treaty engagements as well as being illegal even on his own showing. We do not, of course, lose sight of the fact, or invite our readers to lose sight of the fact, that this question has features which raise it above the domain of mere trade considerations. Russia's political position in the Yalu Valley is plainly involved, and while emphatically condemning her action from the points of view of law or treaty, we make due allowance for its motive. Imperial ambition, however, must be draped in some garments of decency if it hopes to be tolerable in the eyes of the world, and in this case Russia makes no attempt to hide the nakedness of her aggression. She appears to be virtually reckless in the whole conduct of her Far-Eastern policy. At all events she has achieved with regard to Manchuria and Korea a record which shocks her friends and incalculably strengthens the hands of her enemies.

THE GENERAL HOSPITAL.

Our readers will have derived considerable satisfaction from perusal of the report of the General Hospital Committee, the chief portions of interest in which we published on Saturday. There is at last prepared a scheme which promises to be workable, and for this the thanks of the community are due primarily to the Committee. The arrangement between Mrs. Davies and the Committee, which was appended to the report, seems to be a fair and reasonable agreement. It recognizes the rights that Mrs. Davies undoubtedly had acquired and it places the community once more in control of the institution. The sum of yen 4,300 is to be paid to Mrs. Davies for her interests and rights, and she is to be employed for a term of three years as matron and head nurse, being provided with furnished residence on the

hospital compound (with board, firing, lights and servants) and will receive yen 125 per month. A proper nursing staff will be provided and paid for by the Committee, but the control, selection, engagement and dismissal of such staff are vested solely in the matron, who is to have the management and control of all the departments of the hospital and whose accounts of the expenditure and receipts are to be audited every month. In the event of the operating building being established, but not placed under the control of a resident physician, a special English nurse will be engaged as assistant matron, to have full charge of the building, under the supervision of the surgeon for the time being nominated by the committee, such English nurse being selected by Mrs. Davies with the approval of the Committee. Such are the chief points of what cannot but be regarded, we think, as a satisfactory settlement of the questions that had arisen.

Classed, like the payment to Mrs. Davies, under the head of "Immediate," the Committee place an item of yen 3,200 needed as a cash reserve to cover overdraft and provide for current expenses, and a third similarly pressing requirement, urgent repairs, sanitary apparatus, etc., calls for yen 1,500. These expenditures must be faced at once and so far as appears they must be incurred in full. The rearrangement of the hospital buildings, for which yen 4,000 are necessary, and the expense of a boiler, engine, dynamo, pump, etc., yen 4,000, are not put forward by the Committee as urgent in the same sense as the items previously referred to, but they are emphatically believed to be necessary or they would not be there. The Committee have decidedly done well for the community and it now remains for the latter to show its appreciation by generously supporting the scheme.

We have received the following letter:—

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In handing you a copy of their report, the Committee hope that you will give it as favourable a consideration as possible. It represents much time and thought on their part. The question of the Hospital is now squarely before the public and the crucial test of asking subscriptions applied. The Committee after full investigation is unanimously in favour of carrying out the proposed plans as quickly and completely as possible and to that end any assistance which you may render will be appreciated. The following amounts have already been pledged and authority obtained for publishing the names. An insertion in your paper would, it is thought, assist in stimulating others.

With thanks in advance,

I remain, Dear Sir,

Yours Faithfully,

E. FRAZAR, Chairman,
Yokohama General Hospital.

We have pleasure in appending the Special Report alluded to above:—

A Special Report prepared by the Committee for the purpose of clearing up past complications, a presentation of present facts and an earnest appeal for contributions to enable improvements and alterations whereby it is hoped and believed the Hospital may be placed on a firm footing and possibly made self-supporting.

At the General Public Meeting held on the 17th August, 1903, the following Committee was elected:

E. FLINT KILBY.
H. W. BUCKLAND,
E. W. FRAZAR,
A. M. KNAPP,
T. M. LAFFIN,
L. MOTTET,
M. SCHELLENBERG.

The Committee held its first meeting on August 20th, and elected Mr. E. Flint Kilby as Chairman and Mr. E. W. Frazar as Treasurer and Secretary.

The general situation was discussed and plans laid for a full investigation. Following this, many meetings were held to consider reports regarding a settlement with Mrs. Davies, finances, ways and means, etc., etc.

Acting upon the power to add two more members, as conferred upon the present Committee by the general meeting, it was decided to invite the Hebrew Benevolent Society to suggest the names of two or three candidates, willing to serve. Their response was immediate and Mr. Maurice Russell was duly elected. A special House Sub-Committee consisting

of Messrs. Buckland, Knapp and Frazar was appointed to take charge of the General Hospital Buildings, Infectious Disease Ward and also to confer with the Ladies' Hospital Fund Association.

Another sub-committee consisting of Messrs. Knapp and Schellenberg was appointed to confer with Mrs. Reidhaar and Munro with reference to their engagement as visiting doctors.

By the death of Mr. Flint Kilby, which took place on October 4th, the committee experienced a sad and very severe loss. Mr. Kilby had been the active head and moving spirit of the new committee from the commencement of the organization. By his untiring zeal, his comprehensive knowledge of Yokohama public affairs, his intense interest in the welfare of the Hospital and his warm sympathetic nature, he had won not only the confidence of the committee but their individual personal admiration and esteem and his sudden death came as a heavy blow to all. It is a matter of record that his last public service was rendered in the cause of the Hospital on the occasion of the General Public Meeting held by the Ladies' Hospital Fund Association on September 28th. In continuing their efforts to carry out the plans so ably advocated by Mr. Kilby the committee feel they are assisting to honour the memory of one who has done much for the welfare of Yokohama's Foreign Community. At a meeting held on October 13th, Mr. E. W. Frazar was elected Chairman and Mr. M. Russell, Treasurer.

Briefly stated, the present situation is as follows:—Mrs. J. P. Davies has been carrying on the Hospital since the departure of Dr. Davies but for many reasons it is considered much better for the control to revert to the committee.

After repeated conferences, Mrs. Davies has consented to assign all her rights and properties as transferred to her from Drs. Meere and Davies for the sum of yen 4,300 and to accept the position of Superintending Matron upon certain conditions which will be found fully set forth in the copy of the proposed agreement herewith attached. It is the committee's opinion that she is well fitted to occupy this important position and under the proposed new arrangements can be depended upon to conduct the Hospital in a satisfactory manner.

The committee is informed by Mrs. E. C. Bellows, President of the Ladies' Association, that there remains in their hands a balance amounting to about yen 2,600 but which can only be used for the purpose of defraying the expenses of bringing to Japan a European nurse and providing for her maintenance. The amount is sufficient to maintain such a nurse for about two years and if it is proposed to include this item in the general plan to reorganization. A special committee of three ladies has been appointed to work with the general committee and their advice and help will be gladly availed of.

Upon mature deliberation it is considered inadvisable to engage a resident doctor, for the following reasons:

1. There is not sufficient to occupy a doctor's entire time.
2. The expense would impose too severe a burden.
3. Local doctors are available, fully competent, close at hand, and having knowledge of several languages including Japanese. Later on if the need arises, a resident doctor could easily be secured.

An agreement has been made with Mrs. Reidhaar and Munro whereby each is to take charge of the hospital attendance on Ward and Charity patients for three consecutive months in rotation at a total cost to the Hospital of yen 200 monthly. Later on a fixed scale of charges for daily, weekly or monthly attendance on Room patients will be arranged for those who desire to avail themselves of their services.

The balance taken over from the old committee showed a slight credit. This has been gradually changed to a debit of yen 1,070.72 as will be seen from the accompanying balance sheet.

The main hospital building at No. 82 is in fair condition but sadly in need of sanitary equipment as well as an outside coat of paint. The other buildings on the compound are not only in great need of repairs but are so poorly situated that they are of little use, the narrow approach and entrance to the Hospital being extremely awkward.

To better these conditions it is proposed to entirely remodel the premises as shown by the accompanying plans. By so doing, an attractive and convenient approach from the main bluff road can be had and the present structures changed to provide many much needed additions, such as a detached ward for private patients able to pay extra rates, an isolated tuberculosis ward, an observation ward for suspected patients, and comfortable quarters for the Superintending Matron and two or three foreign nurses.

The Infectious Diseases Hospital at Nakamura Bluff, is in good condition and needs no further expenditure for the present at least.

The present room used for surgical operations at the General Hospital is good and sufficient for ordinary cases, examinations, etc., and would continue to be used, but there is no question in the minds of the

committee that a separate building erected on modern plans and fully equipped with the latest up-to-date appliances would not only prove of inestimable value to save life but serve to attract patients and also to secure the services of the best surgeons.

The committee are much gratified to be able to report that owing to the generosity of an anonymous friend the funds required to construct the operating building have been guaranteed while the previous offer of instruments and appliances has been confirmed. The success of the plan is therefore assured. Plans and estimates have been prepared (see sketch attached) for a brick structure with slate roof and concrete floor and the work will be put in hand as soon as the general subscriptions have reached an amount justifying the committee in proceeding. With this model building equipped with modern appliances in the charge of interested and competent persons, operations of the most serious and delicate nature can be performed with chances of success now beyond the reach of Yokohama residents.

The Committee have under consideration the establishment of a special ward for Chinese patients in a building to be situated at the extreme rear of the premises and separated by a wall from the Main Hospital grounds.

It is quite probable that the Chinese residents will subscribe sufficient to erect a suitable building including a substantial sum towards its up-keep with a certain proportion for the General Hospital support. Everything of course to be under the full management and control of the committee.

It is proposed to repair and enlarge the present plant to permit of electric light and power being generated on the grounds and to centralize the heating and cooking arrangements on a more economical basis.

To carry out such a programme means a large sum of money, but with this report before the public it is hoped a generous response will be met. Should the amount not reach the figures enumerated, then the committee must proceed with those parts of the programme most urgent, and in the order of their necessity but they earnestly hope the full amount will be subscribed so as to give them an opportunity of demonstrating their belief that the General Hospital can be made a success.

It seems not out of place to remind the public that should the Hospital have to be closed for want of support the land must, by the terms of the lease, revert to the Japanese Government, a contingency which everyone would surely regret.

With this statement the Committee places the decision in the hands of the public and by their subscription will be known the true vote of the community.

E. W. FRAZAR,
H. W. BUCKLAND,
A. M. KNAPP,
T. M. LAFFIN,
L. MOTTET,
M. RUSSELL,
M. SCHELLENBERG, } Committee.

Appended to the report is a statement of accounts showing the buildings (both at No. 82 and at Nakamura) furniture, etc., to be valued at yen 45,500, insurances being held by the Committee for yen 27,700 and by Mrs. Davies for yen 17,500.

The regular hospital expenses are estimated at yen 16,346 per annum, and the receipts at yen 16,620.

The following tables are given:—

GENERAL HOSPITAL SCHEME.—FUNDS REQUIRED.
[In the order of their necessity.]

IMMEDIATE.	9,000.00
To purchase 3 buildings and to cancel lease held by Mrs. Davies	4,300.00
To cash reserve to cover overdraft and provide for current expenses	3,200.00
To urgent repairs, sanitary apparatus, etc.	1,500.00
SECONDARY.	8,000.00
To re-arrange Present Buildings and Grounds	4,000.00
For Boiler, Engine, Dynamo, Pump and various Machinery.	4,000.00
	17,000.00

Plans are given of the proposed operating building, and showing proposed alterations in the hospital proper and the terms of the draft agreement between the Committee and Mrs. Davies are also included.

PRESENTATION TO MR. A. MASON.

Mr. A. Mason who leaves to-day for home on holiday after a stay of eight years in this country, was the recipient on Friday afternoon at the residence of Mr. and Mrs. Mollison of a handsome silver cigar box (bearing a suitable inscription), from the ladies and gentlemen who have been associated with him in recent productions of the Amateur Dramatic Club.

Mr. J. P. Mollison, who made the presentation, said:—

LADIES AND GENTLEMEN:—We are met this afternoon to do honour to our good friend, Mr. Mason, and to show our appreciation, in however small a way, of his unselfish, untiring and unfailing services as accompanist to the Amateur Dramatic Club, as accompanist to the ladies and gentlemen who have so kindly assisted the Amateur Dramatic Club, and I may say in fact is accompanist to the whole community. Because whether for the Literary Society, for concerts, for theatrical representations or for entertainments of any kind he has always most willingly and most obligingly placed his talents at the disposal of all alike.

More unsparring devotion to the art of which he is such a past master, than Mr. Mason has shown in promoting the pleasure, and from an artistic point of view, I may say the profit of his fellow residents, it is impossible to imagine. In his departure I am sure we all feel that the community is suffering a real loss, and that his absence will create a blank difficult to fill. We can ill spare him from our midst, but console ourselves with the thought that his absence will be a brief one, and that in a few months we shall have him back again amongst us after what we know is a well earned, and we trust will prove a thoroughly enjoyable holiday.

A few of those present perhaps only know Mr. Mason in what may be called his public character, and others may know him both publicly and privately, but there are some of us, I am happy to say, my wife and myself amongst the number, whose privilege it has been to know Mr. Mason intimately, and I have no hesitation in saying that a truer character and a more lovable disposition it would be difficult to meet with. We both of us feel that a real friend is leaving us, and whilst we would not for a moment grudge Mr. Mason his well earned holiday we can say from the heart that we shall give him the warmest of welcomes on his return. I am sure that all present will do the same. With these few and altogether inadequate words, I would now ask Mr. Mason to accept from his friends present this little tribute of affection and esteem, with every good wish for his health, happiness, and prosperity.

Mr. Mason briefly acknowledged the compliment.

Trains collided on Nov. 18th at 9 a.m. at Ogaki station. Both locomotives were damaged and two cars derailed. Fortunately no person was injured. The accident was due to the negligence of a pointsman.

CONCERT AT THE SEAMEN'S INSTITUTE.

A highly successful concert was given at the Seamen's Institute on Monday evening to the men of the British squadron now in port. The room was well filled with an appreciative audience, who seemed to thoroughly enjoy the excellent programme provided. We append the programme:—

1. Overture.....Band of H.M.S. Ocean.
2. Pianoforte Solo.....Mr. W. K. Vincent.
3. Song—"Life's Lullaby".....Mrs. Irwine.
4. Song—"What Care I".....Mr. B. C. Foster.
5. Song—"The Chimney Corner" by Frederick Cowen.....Miss Vincent.
6. Song—"The Storm Fiend".....Mr. S. H. Somerton.
7. Violin Solo.....Mr. H. A. Poole.
8. Song—"Kathleen Mavourneen".....Mrs. Irwine.
9. Band.....H.M.S. Ocean.
10. Pianoforte Solo.....Mr. W. K. Vincent.
11. Song—"The Water-Lily's Answer," Pinsuti.....Miss Vincent.
12. Song—"The Flight of Ages".....Mr. S. H. Somerton.
13. Recitation—"John Hardy".....Mr. G. Tremayne.
14. Pianoforte Solo.....Miss Poole.
15. Song—"The Mermaid".....Mr. B. C. Foster.
16. Song—"Annie Laurie".....Mr. Irwine.
- Finale—"God Save the King,"

Band of H. M. S. Ocean.

A Concert was given to the Seamen of the U.S. Fleet, at the Seamen's Institute, on Thursday evening, under the presidency of Mr. G. H. Scidmore, Deputy Consul-Gen., U.S., which, as usual proved most enjoyable. We append the programme:—

1. Overture.....Band of U. S. S. Oregon.
- 1.—Pianoforte Solo.....Mr. Bathgate.
- 2.—Song....."My Pretty Marquise" Mrs. Jas. Walter.
- 3.—Violin Solo....."Romanza".....Mr. C. H. Thorn.
- 4.—Song....."The Mermaid".....Miss Poole.
- 5.—Recitation....."Little Rocket's Christmas" Miss Rosie Cameron.
- 6.—Song....."Arabian Love Song" Madame Henckler.
- 7.—Quartette.....{ Miss F. Mendelson, Mr. F. Pollard, Mr. and Mrs. W. K. Wilson.

BAND.

- 1.—Pianoforte Solo. { a. Air de Ballet..... } Miss A. Mendelson.
- { b. Song without Words..... } Mrs. Jas. Walter.
- 9.—Song....."A Winter Lullaby".....Mrs. Jas. Walter.
- 10.—Recitation.....Mr. G. Tremayne.
- 11.—Song.....Mr. S. H. Somerton.
- 12.—Violin Solo....."Pizzicati".....Mr. C. H. Thorn.
- 13.—Song....."What are they to do".....Mme Henckler.
- 14.—Pianoforte Solo....."La Polka".....Mrs. R. Ward.
- 15.—Quartette.....

"Good Night, Beloved".....{ Miss F. Mendelson, Mr. F. Pollard, Mr. and Mrs. W. K. Wilson.

BAND—THE AMERICAN NATIONAL ANTHEM.

"BLACK BEAUTY."

Kurouma Monogatari, by M. Honda, Tokyo, Naigwai Shuppan Kyokwai.

The following is a translation of a review appearing in the *Fukui Shinpo* of a rendering of *Black Beauty* into colloquial Japanese:—"This story of a horse, translated by Mr. Honda Masujiro, is certain to make its mark in the reading world. The original is a favourite book for family reading in Europe. The translator has rendered it in a beautiful easy style true to the original, in a way that can not be improved upon. Though the Society for the Prevention of Cruelty to Animals has published this book for the purpose of furthering the aims of the society, the feelings aroused in us by the reading of the book go beyond and above feelings of pity for animals. The horse teaches us not a few lessons and, besides, John and Jerry, though only humble grooms, are true gentlemen. Of late *Sosen* has enriched the waste field of home reading by the translation of *Sans Famille* (*Madu Minu Oya*), and we believe that this work, together with Mr. Honda's will be of great benefit to many. Captain, an old horse who passed through the Crimean War, speaks thus:—"I, with my noble master went through many actions together without a wound; and though I saw horses shot down with bullets, pierced through with lances, and gashed with terrible sabre cuts; though we left them

dead on the field, or dying in the agony of their wounds, I don't think I feared for myself. My master's cheery voice as he encouraged his men, made me feel as if he and I could not be killed. I had such perfect trust in him, that whilst he was guiding me, I was ready to charge up to the very cannon's mouth."

Ore wa erai danna wo nosete iku do mo senji ni deta ga, hitotsu mo kizu wa shinakatta ga, tama de ita osaretari, yari de tsukaretari, osoroshii guni kintukerareta uma ga shinde oru no ya, shini-kakete oru no wo ato ni mite ita ga jibun de wa go mo kowai to wa omowanakatta. Shujin no isei ite koe de hagenasrete, shujin mo jishin mo keshite kotosareru koto wa nai to iu kokochi ga shita shin kara shujin wo shinyo shite ita kara kono hito ni mawabikarete nara taiho no kuchi made mo asosare kakugo de atta.

"Had we as strong a faith as that of this horse how happy we should be. . . . When we read this book we feel the strong love that exists between men and animals; and the ready pen of the translator makes the horses behave as if they were men. We can not help shedding tears when we come to the chapter which describes the close bonds between the man and the horse as they appear at the time of parting. We hope that many such books will be published and that this one will be widely read by boys and girls, men and women," F.M.

THE LAW COURTS.

THE CAMPHOR MONOPOLY CASE.

Under instructions from the Tokyo Appeal Court, to which Messrs. Samuel, Samuel and Co. appealed against the judgment given in favour of the liquidator of the bankrupt estate of Messrs. Mourilyan, Heimann and Co., the first hearing of which took place on Sept. 29th, counsel for the appellants asking the court to examine Mr. H. C. Pigott, which was entrusted to the Yokohama Local Court, Mr. Pigott was summoned and examined in the Local Court before Judge Nagatsuka on Nov. 13th.

Mr. Pigott stated that several transactions with reference to the camphor monopoly business had taken place between Messrs. Samuel, Samuel and Co. and Messrs. Mourilyan, Heimann and Co., but he did not remember when they commenced. Of course a contract had been arranged between them. A contract certainly existed between the parties. The witness could not speak about the items of the contract as it consisted of over 20 pages. The principal point of the contract was that Messrs. Mourilyan, Heimann and Co. should join Messrs. Samuel Samuel & Co. in the camphor monopoly business with a certain portion of its capital. The whole amount of the security for the monopoly to be deposited with the Formosan Government was yen 1,000,000. Out of this sum, Mourilyan, Heimann, & Co. paid one-eighth. It was paid in to Messrs. Samuel, Samuel & Co. in 3 instalments, viz. yen 12,500 in May, yen 106,875 in June and the same amount in August, 1900. Mourilyan, Heimann & Co. received the sums from the Hongkong and Shanghai Banking Corporation and then delivered them to Messrs. Samuel Samuel & Co. when the latter were obliged to deposit the security with the Formosan Government. The bankrupt firm received from the bank the cheques payable to Messrs. Samuel, Samuel & Co. in the name of the former. The security money was at first deposited in the Bank of Formosa from which Messrs. Samuel, Samuel & Co. obtained in return Formosan Government loan bonds at market value corresponding to the sum of the security required. The Formosan Government did not take bonds of the central government. With regard to the cash transaction, Messrs. Mourilyan, Heimann & Co. acted as the intermediaries between Messrs. Samuel, Samuel & Co. and the Hongkong and Shanghai Bank.

At this point, Mr. Pigott said to the Court: interpreter that the explanation was very important for the case. The witness wished the interpreter to take great care in the translation, otherwise he would prefer to find a competent one to give a correct interpretation to the Court. This statement was not interpreted by

the interpreter to the Conri, and the Court was about to proceed with the further examination, when Mr. Akiyama, Counsel of the appellants presented to the Court the wishes of the witness. Mr. Hioki, the liquidator of the bankrupt firm, opposed the objection of the witness, insisting that the witness had no necessity to prefer an interpreter of his own selection when the Court recognized the competency of the Court official.

The examination was resumed. Mr. Pigott stated that Mourilyan, Heimann & Co. received the cheques from the Hongkong and Shanghai Bank, and these were transferred to Messrs. Samuel Samuel & Co. in order to enable the latter to purchase the Formosan Government loan bond. The sums received from the Hongkong and Shanghai Bank in May, June and August, 1900, were delivered to Messrs. Samuel Samuel & Co. as a portion of the security to be deposited with the Formosa Government for the monopoly. Messrs. Mourilyan, Heimann and Co. did not directly receive the money or cheques from the Hongkong and Shanghai Bank, but the bank delivered it to Messrs. Samuel, Samuel & Co. in the name of Messrs. Mourilyan, Heimann and Co. The foreign Bank well knew the fact that the money was to be deposited with the Formosan Government as security for the camphor monopoly business, as there was a special arrangement between the three parties. The money was promised to be paid back to the bank after the expiration of the three years, which was the period of the contract between the Formosan Government and Messrs. Samuel Samuel & Co. The witness did not remember to whom the cheques were payable but may be to Messrs. Samuel Samuel & Co. The receipts for the money were made by Messrs. Mourilyan, Heimann & Co. He did not remember whether any arrangement was concluded between the three parties before the cheques were issued by the bank. Messrs. Samuel, Samuel & Co. guaranteed to the bank the repayment of the borrowed money by the bankrupt firm—to be paid back after three years. For the promise of the bankrupt firm to pay back money to the bank and for the guarantee of the camphor monopoly contractors, both companies drew up a letter which was countersigned by each and presented to the bank. The letter meant that Messrs. Samuel, Samuel and Co. would redeem the money if Messrs. Mourilyan, Heimann & Co. failed to pay it back. The witness did not remember the date of the letter, but it might be in April, 1900. The exact date of the letter, would be found at the bank if applied for there. Beside the camphor business, the money borrowed from the bank was not employed in any other way. The witness knew well because he was confidential clerk of the bankrupt firm, being engaged there from 1893 or 1894 down to the end of 1901. He attended personally to the monopoly business and money transactions with the bank.

Cross-examined by Counsel for appellants—Witness knew the letter (Exhibit B. 5-1) which was sent by both firms to the Hongkong and Shanghai Bank. The receipt for security deposited with the Formosan Government was given to Messrs. Samuel, Samuel & Co. He knew the letters (Exhibits B. 5-2 and 3) which he wrote while in the firm. He knew the letter (Exhibit B. 4-2) as he wrote it. He knew also two documents (Exhibits B. 6 and 7, the two receipts of the Bank of Formosa for the money deposited by Messrs. Samuel Samuel & Co.) He believed that he had seen them but he did not quite understand their nature because they were written in Japanese. He knew the signature to the documents written in English. Witness sent himself the two receipts of the Bank of Formosa to the Hongkong and Shanghai Bank, which documents Messrs. Samuel Samuel & Co., endorsed before delivery to the bank. The bank would not have received the two documents without the endorsement of Messrs. Samuel Samuel & Co., under an arrangement between the parties concerned as shown by the letter (Exhibit B. 5-1). There was one more receipt for yen 12,500 besides the foregoing two documents. The witness knows the letters

(Exhibit B. 8-2, 3, 12, 14, and 15) whose contents he believed he had seen. The contract of the Campher business (Exhibit A-1), he knows. Beside the three sums, Messrs. Mourilyan, Heimann and Co. did not invest more in the monopoly business. When there would have been necessity for any more funds, Messrs. Samuel, Samuel and Co. promised to pay it on behalf of Messrs. Mourilyan, Heimann & Co. as to the proportion of the invested capital of the latter, who of course were to pay interest at a proper rule.

Cross-examined by the liquidator of the bankrupt firm, witness stated that it was a very strange question to be asked whether the bankrupt firm is the same as Messrs. Mourilyan, Heimann and Co. who concluded a contract with reference to the Campher Monopoly business with Messrs. Samuel, Samuel & Co.

Mr. Hioki liquidator of the bankrupt firm, stated that one of the objections of the appellants was that there are two firms under the names of Mourilyan, Heimann & Co.—one is in bankruptcy and another is the one who made a contract with Messrs. Samuel, Samuel & Co.

Mr. Pigott replied that there is only one firm under the name of Mourilyan, Heimann & Co.

Cross-examination by the liquidator followed. The witness stated that the sum of yen 226,250 borrowed from the Hongkong and Shanghai Bank was entered in the Cash Ledger under the heading of "Samuel, Samuel & Co.'s Account." Messrs. Mourilyan, Heimann & Co. issued three promissory notes to the bank for the borrowed money. The notes are just the same as receipts for money. Even if the security should be confiscated by the Formosan Government the debtors are of course bound to repay the money to the bank under the promissory notes. The money was to be paid back to the bank after the expiration of the camphor monopoly business. Witness did not remember the date of its conclusion. Therefore when the security was to be paid back by the Formosan Government to Messrs. Samuel, Samuel and Co., the firm will refund the money to the bank on behalf of Messrs. Mourilyan, Heimann & Co.

Witness stated to the Court that the question whether Messrs. Samuel Samuel & Co. were still responsible even if the security were confiscated by the Formosan Government is explained by the letter (Exhibit B. 5-1) which provides that Messrs. Mourilyan, Heimann & Co. will be bound to pay back the amount with their own money.

Cross-examined by the liquidator—The witness stated that the bankrupt firm paid interest to the bank for the money borrowed in May, June, and August 1900. The fact was that Messrs. Mourilyan, Heimann and Co. received interest several times from Messrs. Samuel, Samuel and Co. for the invested capital of yen 226,250, for which the latter firm received the interest from the Formosan Government by coupons on the bonds. Messrs. Mourilyan, Heimann and Co. paid the interest to the Hongkong and Shanghai Bank at the rate of 7 per cent. while the rate of that received from the Bank of Formosa through Messrs. Samuel, Samuel & Co. was 5 per cent. The difference of 2 per cent. was paid by Messrs. Mourilyan, Heimann & Co. with their own money. The interest from the Bank of Formosa was paid half yearly while that to the Hongkong and Shanghai Bank was paid every three months as was the business custom of the bank. The witness did not remember the entry in the "Private Ledger" of the bankrupt firm with regard to the money borrowed from the bank and consequently could not say anything unless he saw the book. He knew the sheet (Exhibit A-2, a copy of an extract from the private ledger, concerning the question on which he made the entry under the instruction of the partners of his firm.

Cross-examined by the appellants witness replied that the letters (Exhibits B. 9 to 11) are copies of the originals which he had seen.

The Court then rose, closing the examination.

MEDELSON BROS. v. FUJI BOYEKI KAISHA.

In the Yokohama District Court the hearing of this case in which plaintiffs claim yen 1,564.99, was resumed before Judge Kato on Nov. 13th when defendants' counsel insisted that Mr. Hirano, a representative of the Japanese firm, had promised to pay plaintiff on which contract defendants jointly arranged another promise with plaintiffs. As plaintiffs did not execute the joint promise, defendants hesitated to make the payment claimed by plaintiffs.

Plaintiffs' Counsel asked the Court for leave to examine Mr. I. Hirano, but the Court did not give a decision whether to examine him or not and again adjourned till Nov. 25th.

THE ALLEGED SILK FRAUDS.

The trial of Messrs. Le Prevost and C. Bremer, and of three Japanese—Nishida, Okazawa and Sawada—will be resumed on Nov. 18th, in the Yokohama District Court before Presiding Judge Watanabe. Mr. F. W. Eastlake will attend as interpreter for the accused.

INFRINGEMENT OF PUBLICATION REGULATIONS.

The appeal of Fong Yit-Nan, proprietor of the Chinese Printing office, Che-San Bros. No. 56, Yokohama, who was sentenced in the Yokohama Local Court on Oct. 23rd to a fine of yen 30 on a charge of having contravened the Publication Regulations in connexion with the recent circulation of anonymous sheets, was dismissed on Nov. 14th in the Yokohama District Court, and the sentence of the lower Court was confirmed.

LABEL CASE.

The hearing of the appeal instituted by Mr. A. Hofmann, of Kobe, against the three Tokyo journals, *Hochi*, *Yorodzu*, and *Niroku*, was resumed in the Tokyo District Court before Judge Mochizuki on Nov. 17th.

Mr. S. Kobinata, a member of the *Yorodzu*, was examined as a witness. He stated that he had seen on two separate occasions, Toyo, the girl concerned in the case. At first he was told by her that she had been insulted. The next time he saw her she replied very vaguely to his questions. She was deficient in intellect in his opinion. The witness based his belief in the matter on the replies given by her when he saw her first.

The Court thereupon declared that the hearing must be adjourned to obtain a declaration regarding the condition of the girl's mind, which it instructed the Kobe Local Court to procure.

S. NAKAMURA v. THE SINGER MANUFACTURING CO.

The case instituted by Mr. S. Nakamura, ex-employee of the Singer Manufacturing Company, No. 80, Yokohama against the firm claiming yen 192.55 with interest from July till execution of judgment, came up in the Yokohama District, Court before Judge Kano on Nov. 19th. Plaintiff was absent and not represented. Mr. Akiyama appeared for defendants.

For not entering an appearance the Court threw out the case and ordered plaintiff to bear the costs.

CUSTOMS DECISIONS.

The Director of the Yokohama Customs delivered decision on Oct. 23rd on a protest filed by Messrs. H. Ahrens & Co. Nachf, No. 29, Yokohama. The firm imported glass wares with the certificate of origin on which the Customs appraisers imposed 20 per cent. *ad valorem* duty in accordance with No. 172 of the general statutory tariff. The importers insisted that the goods were materials to be used for lens, and that the duty should be levied at the rate of 10 per cent. *ad valorem* under No. 496 of the tariff. The protest was sustained.

Another decision was given on Nov. 10th on a protest instituted by the same firm—Messrs H. Ahrens & Co.—who imported glass wares of milk colour on which the Customs appraisers imposed 20 per cent. *ad valorem* duty under

No. 172 of the tariff. The importers held that the goods were materials for the measures of thermometer, and that the duty should be No. 496 of the tariff. The protest was not sustained on the ground that the goods in dispute were manufactured.

On October 26th, the director of the Customs rendered decision on a protest brought by Messrs. Cornes & Co., No. 50, Yokohama. The firm imported 14 cases of cotton tissue with the certificate of origin, on which goods the appraisers imposed 10 per cent. *ad valorem* duty in accordance with No. 17 of the conventional tariff between Japan and Great Britain. The importers insisted that the duty should be at *sen* 1 $\frac{1}{10}$ per square yard. The protest was not sustained on the ground that the goods in dispute differed from the tissue provided for handkerchief cloth for which similar protest the Minister for Finance gave decision on Oct. 27th, 1900, dismissing the appeal.

The Director of the Customs rendered decision on Oct. 23rd on protest brought by Mr. R. Schuffner, No. 25, Yokohama, who imported coloured leather on which the appraisers imposed 15 per cent. *ad valorem* duty in accordance with No. 197-A of the tariff. The importer held that the duty should be imposed at the rate of *yen* 12.70 per 100 *kin* under No. 197-B. The protest was rejected on the ground that the coloured leather was not involved in No. 197-B which, however, provides for such leathers as colourings or any other works are added to.

Another decision was given on Nov. 10th by the Director of the Yokohama Customs on a protest brought by Mr. C. Bretschneider, Yokohama, who imported "balls" to be used for water works, on which the appraisers imposed 20 per cent. *ad valorem* duty under No. 497 of the general statutory tariff. The importer held that the article was one made of rubber and wood, and to be used on water-pipes, and that the duty should be at the rate of 10 per cent. under No. 20 of the tariff. The protest was rejected on the ground that No. 20 of the tariff provided only for pumps and parts thereof and that the goods in dispute were not included in the same provision.

Baron Sone, Minister of State for Finance, gave a decision on Nov. 16th in an appeal brought by the Nazawa-gumi, No. 24, Yokohama. The Japanese firm imported on May 20th a quantity of "ribbed glass" on which the Customs imposed 20 per cent. *ad valorem* duty in accordance with No. 172 of the general statutory tariff. The importers protested that the duty should be levied under No. 167-B as the goods in dispute were ribbed window glass of a thickness not exceeding 4 millimeters. The appeal was rejected on the ground that No. 167 of the tariff provided only for ordinary window glass, and that these goods were to be used for roofing.

The Minister delivered the same day another decision on an appeal brought by the Okura-gumi, Tokyo. The firm imported, on May 12th, 160 cases of iron and copper materials for an electric railway on which the Yokohama Customs imposed 20 per cent. *ad valorem* duty under No. 271 of the tariff, which provides for manufactures of metals not classified in the table. The importers claimed that the duty should be 10 per cent. under Nos. 10, 17 and 25 of the tariff. The protest was not sustained on the ground that Nos. 10 and 25 of the tariff are applicable to electric light and telephone apparatus or parts thereof, and No. 17 to various kinds of machinery.

FOOTBALL.

The game of Rugby football played on the Cricket ground on Saturday afternoon between the Y. C. and A. C. and a team from H.M.S. Ocean, turned out a victory for the local representatives by three goals to nil. The Navy men played an unexpectedly loose game and were entirely lacking in the combination that has characterized previous teams sent in to the field by His Majesty's ships. The home side, it must be acknowledged, are improving every game, and this also must be taken into account. Wheeler, as usual, was the pick of the bunch and all the goals were made from his tries, one in the first half and the other two in the second.

MONTHLY SUMMARY OF JAPANESE CURRENT LITERATURE.

In the *Taiyō* Count Okuma states his views on "The Policy to be adopted towards Russia." The following is the substance of his article. What steps our Government is taking to put an end to the present crisis it is impossible for an outsider to know. But if we are to judge by certain things that have leaked out, the policy pursued is not one that, were it fully known, would commend itself to the common-sense of the nation. Certain it is that the occasion calls for a thoroughly resolute and broad policy. Whether any policy adopted will prove successful is a matter that cannot be determined now. But we must do our best to settle the questions at issue by diplomacy before talking about appealing to the sword. The action taken by the seven bellicose professors cannot be defended. It was irregular. To advocate war while there is any possibility of settling disputes in an ordinary way is impolitic and mischievous. . . . It is said that our Government has warned China and Korea against certain dangers to which they are exposed. What attitude has it adopted to Russia? I attach no credit at all to the tale about alleged negotiations respecting the bartering of Korea for Manchuria. Of course Russia would only be too pleased to turn aside our attention from Manchuria and the promised withdrawal of her troops by raising knotty questions connected with Korea. But Japan must not allow herself to be diverted from the great Manchurian question by any attempt to make a separate issue of the fate of Korea. To me it seems that the fate of Manchuria will eventually decide the fate of Korea. For if Russia is allowed to settle in Manchuria and to govern it, she will have no difficulty in raising from among the 6 million inhabitants of that province an army of 500,000 men. And we must remember that Manchuria is inhabited by the descendants of the soldiers who fought with such success under the Great Genghis Khan and that this great general himself came from this part of China. If once Russia be allowed to settle herself in Manchuria, the fate of the whole of China is sealed. Is it not because Russia sees such grand prospects in this part of the world that she has decided to sacrifice her minor interests in Eastern Europe to the acquisition of the Far Eastern big prize? If Russia appropriates Manchuria, England will assume control over the Yangtze valley; Germany will govern Shantung; France, Kwangtung; and Japan will then have to concentrate all her efforts on Fuhkien. But if China is divided up in this way, the maintenance of peace in the Far East for any length of time will be very difficult. And such a state of things would be most disadvantageous to us. As long as we have the whole of China as a market for our goods, our industries will go on flourishing. But with protective tariffs set up by European powers all over China, Japan would be in a very poor way. Hence Japan must insist on China's not giving to another country power that will be used against her. Japan has right on her side in this Manchurian affair, and she has only to stand her ground in order to come off victorious, whether it be by diplomacy or by an appeal to the sword. . . . The notion that this country could not stand the expense of a great war with Russia is not to be entertained for a moment. We are more than three times as prosperous as we were when we went to war with China. And, moreover, if once war were determined on, the whole nation would back the Government.

Mr. Shimada Saburō discusses in the pages of the *Taiyō* the hackneyed subject, "Administrative Reform," in a somewhat new fashion. He contends that it is not so much new business methods or changes in organization that are demanded, but officials actuated by a new spirit. The officials of the various departments seem to be waiting for some outside agency or influence to bring about radical changes in methods of administration. We constantly hear it said that great things could be done were more money available, and

so on. But the truth is that it is not money that is wanted so much as the right kind of men. While this is so, there are several spheres which expenses might be reduced by the abolition or amalgamation of Departments. It is well known that when any sweeping reforms are proposed, the principal opposition comes from the War Office and the Naval Department. These two Departments seem to enjoy extraterritorial rights and privileges. Now one way of lessening the evil of this state of things would be to unite the two offices. One academy would suffice for both army and navy cadets and thus much expense would be saved. The Department of Justice and that of Agriculture and Commerce might well be abolished. The former Department was necessary when the codes were being compiled and the various courts were being organized, but now the country would get on very well without it. The existence of the Department of Agriculture and Commerce is no longer conducive to the highest interests of agriculture and commerce. The state of things that led to the creation of this Department no longer remains, and many of the industries which began with Government patronage are now able to pay their way without State aid. And there are not a few particulars that could be named in which Government interference with private enterprise has done far more harm than good. The desire of the Department to have a finger in every pie is not one that can be commended. There are other ways in which expense could be curtailed. Every Department has its building bureau. Now it would pay better to have a Board of Public Works, as there used to be (the Kōbushō, abolished in 1880), and to entrust all building to its management. . . . To come to the Mombushō, had the Department adequately fulfilled the functions for the discharge of which it was originally created, instead of abolishing it, one would advocate the increase of its power. But it is felt throughout the country that as a superintendent of education it is inefficient. There is at the present moment a very strong feeling against the Department among Government high officials, among graduates of the University, and even among ex-officials of the Department. And so I say let it go. When we find that among even the teachers specially appointed to lecture on ethics to the scholars there were some who were involved in the text-book scandals, it is high time to agitate for placing the superintendence of schools in other hands. . . . What is wanted in government is simplicity in the means used, officials with minds and character, practical efficiency in the discharge of various functions. The radical improvement of methods of administration and the adjustment of finances, were they taken in hand resolutely by the right kind of men, could certainly be accomplished to the satisfaction of the nation. The notion that effecting of changes depends on a greater supply of money than the Treasury can find is a ridiculous notion. Let the Government act on the proverb, *Nai ya iken no sō-jinai** Isay to the Government officials, "Reform your own minds," and all else will come right. It is most unfortunate that all our political parties have become too eager to exercise much influence on the Executive. The pressure from without is insufficient; the movement within is feeble, and so it would seem that the clamour about reform will end in smoke. *Taisan meido* (鳴動) *shite, nezumi no dam, Parturient montes; nascetur ridiculus mus.*

Among the character sketches recently published in the *Taiyō* there are two of sufficient interest to foreign readers to be reproduced here. The first furnishes a short history of the career of a great Jingoist leader, Mr. Kōmichi Tomosune, a very well known member of the Shimpotō, from which we extract the following observations. When Disraeli was in power in England the English Government adopted what is called a "spiritual foreign policy," that is, became jingoistic, specially in its attitude to Russia. Mr. Kōmichi has for many years past acted the Disraeli in our

* The spending of the last penny is the last and most effective counsel that a good-for-nothing man receives. The absence of money is the final proof.—(WRITER OF SUMMARY.)

politics and has recommended a stalwart policy *vis-à-vis* foreigners. Some 30 years ago when he served in the Yokohama Custom House under Mr. Hoshi Tōru he was an advocate for enforcing the letter of the treaties in every dispute with foreigners and was against the adopting of a conciliatory policy. Later on when Ito was in power Mr. Kōmuchi caused no little commotion by advocating in the Diet a new enforcement of the provisions of the treaties.* Though in his views on foreign policy Mr. Kōmuchi is decidedly flighty and unreliable, on the subject of finance, his specialty, as an old employee of the Finance Department, his views are most sober and thoroughly trustworthy. Though a member of the Shimpotō, he has no sympathy with the aspirations of the party, that is, with its desire to obtain political spoils, and hence there is no saying but what his connection with the party may cease at any time. It is his patriotism rather than his political views that keeps him in the party. He thinks to serve the country by using the party as a medium for making known his views on foreign policy and the like. Like the late Mr. Takahashi Kenzō, Mr. Kōmuchi is conservative and anti-Occidental in his general views. To the Occidentalization of Japan he is strenuously opposed and hence he always displays great hostility to that incarnation of the spirit of Europeanization, Marquis Ito. The late Mr. Takahashi and Mr. Kōmuchi for many years worked side by side against the pro-foreign section of the nation—Mr. Takahashi as the academical expounder of the principle of independent and somewhat exclusive nationalism; and Mr. Kōmuchi as the applier of the principle to the topics of the hour. The two constituted the backbone of the conservative party. . . . In personal character Mr. Kōmuchi resembles Mr. Takahashi. They were both serious-minded and very unsophisticated, holding in light esteem both pecuniary profit and the world's praise, and having supreme contempt for anything resembling vain display.

* * *

The *Taiyō* publishes a full account of the views and designs of the present Minister of Education, Mr. Kubota Jō, which we can only transcribe in a very curtailed form. The new Minister is discussed in the various capacities or functions in which he has figured in the past. We retain the headings of the *Taiyō* article. (1) *The Minister as an assailant of the Mombushō*.—Though Mr. Kubota has opposed the notion of abolishing the Department of Education advocated during the past few months, he has for more than 10 years past figured as the leader of an anti-Mombushō party in the House of Peers. He is now placed in a position to carry out the reforms and reorganization which he has been advocating so long. The world expects much from him. (2) *The Minister simply as an Administrator of Education*.—Mr. Kubota is neither a great statesman nor a great educationist, but we do believe him to be what the age most needs just at present, a great administrator. The trouble with the Mombushō in the past has been that successive ministers have all had certain fixed principles and have endeavored to bring everything into conformity with these principles. So we have had constant change. We have had pro-Confucian and anti-Confucian Ministers. One Minister has been a strong advocate of thoroughly Europeanizing the schools. Another has held to time-honoured methods and doctrines. And so the whole of the educational world has been thrown into a constant state of unrest. We want this no more. All we need is efficient organization and administration. As to the nature of the teaching imparted, that should be left to the discretion of individuals. Constant official interference with the working of schools and with the teachers does nothing but harm. And as for the attitude of the Mombushō towards private schools in past years, it cannot be condemned too strongly. Mr. Kubota understands all this. He understands that hitherto the Mombushō has been run in the interest of cliques and not in the interest of the nation at

large. Unless we are much mistaken impartiality will mark the administration of education under the present Minister. (3) *The Minister as a leading Advocate of a new System of Education*.—Mr. Kubota has always maintained that the existing school course stretches over too long a period, including as it does at the very least, 6 years at a Primary School, 5 years at a Middle School, 3 years at a High School and 3 or 4 years at a University. He also thinks that there is too much mere cramming, and that there are too many subjects taught. He proposes to shorten the course and to simplify it. The Primary Schools, Mr. Kubota considers, should be run on an entirely different principle to that now acted on. The Primary School at present tries to accomplish too much and fails. It tries to prepare lads for Middle Schools while preparing the sons of the poor for a business life. Mr. Kubota is of opinion that the proper and main function of the Primary School should be to prepare the children of poor parents for the occupations they intend to follow, giving them what theoretical teaching they need and also supplying them with instruction in industry and handicrafts, &c. The practice of utilizing the Primary School as a preparatory institution for the Middle School, Mr. Kubota proposes to abolish. This work should be relegated to private schools or to local Government preparatory schools, says Mr. Kubota. As things are now, the interests of the whole nation are being sacrificed to the convenience of the comparatively few boys who desire to receive the highest education the country has to give. The higher education is a privilege that ought to be paid for by those who desire it, and it is undesirable for the State to lay out so much money on this item, when the poorer classes are still unprovided with suitable schools. It is the poorer classes that the State ought to help most. Other classes may well be left to shift for themselves. The present system of making the Middle Schools preparatory institutions for the High Schools he would change, converting the Middle Schools into preparatory schools to the Universities. The present High Schools he proposes to deal with in various ways. The First High School Mr. Kubota would connect with the Tōkyō University, making it a simple Preparatory School to the higher institution. The Third High School, situated at Kyōto, he would treat in the same way. The status of the other High Schools he would raise to that of Universities of a limited scope, none of them to have more than 3 separate colleges. The Second High School, to be called the Sendai University, and to have Science, Engineering, and Medical Colleges only; the Fourth High School to be called the Kanazawa University, and to have a Literature College and a College of Medicine only; the Fifth High School to be called the Kumamoto University and to have the same colleges as the Sendai University (Science, Engineering, and Medicine). This is the scheme which Mr. Kubota championed in the House of Peers and which we may see carried out later on. (4) *The New Minister as a veteran educationist*.—Mr. Kubota is essentially a practical man who has spent the best years of his life in attending to educational business. It is now 29 years since he was first appointed to the Mombushō as a very small official. He worked his way up and in 1892 became Vice-Minister. There are three men in the country who have had a long career in the Mombushō as prominent managers of its affairs; namely Mr. Tsuji Shinji, Mr. Hamano Shin and Mr. Kubota Jō. The present Minister of Education is not the kind of man to be content to take office and leave his promises to the public unfulfilled. He is far too earnest and too efficient a business man to allow of this.

* * *

Dr. Inoue Tetsujirō publishes in the *Taiyō* a short history of the teaching of Philosophy in the Tōkyō Imperial University. The late Dr. Toyama was the originator of the movement for founding a Chair of Philosophy and also the first University Professor to lecture in Philosophy as distinct from Ethics. He championed Herbert Spencer's system and made it intelligible to the students. The first foreign professor was Mr. E. F.

Fenollosa, who was a strong Hegelian. He was followed by Mr. Charles James Cooper, M.A., LL.D., an English barrister, possessing a very genial disposition.* In philosophy Kant was his master. Dr. Cooper did not remain long. He was followed by Dr. Busse, who belongs to the Lotze school of philosophy, and who accordingly expounded the Lotze system. He is now a Professor in the University of Berlin. The present occupant of the chair, Professor R. von Koeber, is a follower of Schopenhauer, but is a man of broad views and is very well read, and hence the students may be congratulated on possessing such a lecturer.

* * *

In our last Summary we gave an extract from the *Chūshōron* on the physical defects of the Japanese and proposed remedies for the same. Another article on this subject, written by Mr. Terata Yūkichirō, has appeared in that magazine. These are some of the facts given by this writer. Among the working classes it has been found that about 65 young men out of every hundred are physically fit for military service, but among the student class there are not more than 20 out of every hundred who reach the required standard. And, examining the careers of students, we find that the average age of the more intelligent of the University graduates is 27 or 28, but not a few do not graduate till they are 30. At 50 they cease to be of any use; so that the working life of such men does not exceed 20 years, that is, it is 17 or 18 years less than the lives of educated Europeans. The foreigner at 60 years of age is hale and full of energy. Our schools suffer much from the number of days in the year in which Japanese teachers absent themselves on account of alleged ill-health. Our foreign instructors are very seldom absent. In Germany many teachers, after working all day, take night classes, or give instruction in business and industry in addition to the discharge of ordinary school duties. Our teachers are not equal to any such protracted exertion. . . . In our present school system sufficient importance is not attached to gymnastic exercises. In Germany, England, Belgium and Switzerland physical training occupies the first rank in the school system. With us it stands third. In England, though the forenoon is spent in study, most of the afternoon of every day is spent in out-door games or in walking. . . . It would be well for us to establish some State gymnastic exercise schools, such as they have in Sweden, a country which has paid enormous attention to physical development. The calisthenics taught in Government schools now are very much disliked by both the students and the teachers. Most of the teachers take little exercise, spending their holidays in playing *go* or *shōgi*, or in idle talk. The teacher of calisthenics in State schools is always a poorly paid, inferior kind of an instructor, whose chief object it is to conciliate the students as much as possible, for fear they should start a school strike. . . . The origin of the weakness of Japanese women is to be found in the fashionableness of idleness. The ambition of Japanese women among the middle classes is to be able to do nothing but give orders to servants. Many of these say that they would lose their delicate looks and would get fat if they were to work. Hence the sickly children they bear. The men are greatly to blame for this state of things, as they openly express their admiration for pale-faced, slight, delicate-looking women. In order to reach the required standard many a girl forbears to take a hearty meal. While this fashion lasts physical improvement of the Japanese race will prove to be impracticable.

* * *

A very well-written article appears in the *Jitsugyō no Nihon* (Business Japan) entitled *Bummei Koku saru koto nao tōshi* ("We are still far removed from being a civilised county"). The writer says that the success of some nations and the failure of others are to be traced to national

* Relative to the tenure of land by foreigners under Japanese names, and the like.—(WRITER OF SUMMARY.)

* Dr. Cooper and Mr. Fenollosa were contemporaries, Dr. Cooper lecturing on Philosophy and History, while Mr. Fenollosa was lecturing on Political Economy in 1880-1881. After this Mr. Fenollosa lectured on Philosophy till he was succeeded by Dr. Busse.—(WRITER OF SUMMARY.)

character. He then proceeds to speak in very flattering terms of the English nation, calling attention to the invariable love of fair-play and the unwillingness to act in an ungenerous manner even to foes which characterizes a typical Englishman. The article then proceeds to discuss the manner in which the miserable Electric Railway contest has been carried on in Tōkyō. Here, says the writer we are quoting, are a number of Japan's leading citizens engaged in discussing a highly important question connected with the future prosperity of the metropolis, and yet their behaviour is quite beneath contempt. Nothing could exceed the pettiness and meanness of their conduct. The whole affair is a disgrace to the nation. If the shareholders of whom we have heard so much are a fair specimen of the type of business man which modern Japan has produced; if this is the kind of stuff that the nation has to rely on in its competition with westerners, says the *Jitsugyō no Nihon*, then nothing could be more depressing than Japan's outlook in this 36th year of Meiji.

In the *Jitsugyō no Nihon* from month to month we find a number of interesting and important business questions discussed in a very sensible and liberal manner. We proceed to epitomize a few recently published articles. There is a call for a change in our manufactures, says one writer, in several particulars. (1) Our home market is now so fully supplied that there is no room for the starting of any more business concerns that aim at deriving profits from goods sold in the country. It follows that we must prepare goods for foreign markets. In doing this it is best for us to begin with the lowest grade countries, like China and Korea, and gradually work up to the higher grade Western countries. Our practice up till now has been to try and stop the importation of foreign first-class articles by manufacturing cheap, counterfeits here. This has been a very bad preparation for entering into competition with countries which produce first-class articles at moderate prices.

Mr. Katō Masayoshi, writing on Japanese business enterprises in China, says:—Our road to wealth lies in the direction of foreign trade and the nearest as well as the most advantageous countries in which to carry this on are China and Korea. Politically it is highly important that we should hasten to obtain railroad construction rights in both these countries to a greater extent than we have hitherto done. The nation should be prepared to cheerfully sustain pecuniary loss for a time in such enterprises for the sake of the subsequent political advantages to be gained. Southern China is still open to us, not having been appropriated by any Western Power. We might do much in the way of navigation on the great rivers of this thickly populated part of China. The construction of very long railway lines might prove too great an enterprise for our purse, but in connection with our river transport service in that country we might make any number of short railway lines. Many of the short lines which have been constructed in China by other nations have paid very well. In opening up river traffic we should be creating markets for our manufactured goods in the centre of China. Competent persons have asserted that capital laid out in such enterprises would certainly realize quite 30 per cent. per annum.

In the same magazine Mr. Ikeda Kenzō discusses Japanese emigration. He says that even including Hokkaidō, Japan now has a population of 1,800 to the square mile. Owing to the circumstance that machinery as compared with hand labour is so little used, Japan's 45 million people do not produce more than about the quantity turned out by 4 or 5 million Americans. What is needed is a much more extensive use of various mechanical appliances and a large diminution of the surplus population by means of emigration. Emigration has not hitherto been a great success owing to the fact that sufficient care has not been exercised in choosing emigrants. It is not young men with a knowledge of English, who can argue and theorize endlessly that are wanted, but farmers, carpenters, fish-

men and the like—men who can work without disputing. The raw youths who, with their smattering knowledge of English combined with no little conceit, go to foreign countries do not favourably impress foreign employers of labour. . . . It is a promising sign that of late years our consuls have been paying more attention to the subject of emigration and have been collecting information for transmission to our Foreign Office. Guided by fuller intelligence and exercising greater care in the choice of the men to be sent abroad, there is no reason why an exit for our surplus population should not be found by our Government which would prove a source of strength and revenue to the State.

* * *

A leading article in one of the most recent issues of the *Jitsugyō no Nihon*, entitled "A Welcome Turn of the Tide," notes that during the past few years Japan has shown clear signs of a desire to get hold of the mainsprings of Western civilisation. We are beginning to see, says this magazine, that it is quite impossible to get the real thing without possessing the mental qualities which in the past have gone to make Western civilisation so prolific in every direction. We are learning that in politics as in other lines we may have the form of government without the reality, and that the latter depends very much on the character of the people governing and governed. Local government in Japan has hitherto proved in many places a fiasco on account of the corruption rife among local officials. Business has been sadly interrupted by the lack of the right kind of moral stuff for making business men. This is now fully realised throughout the country and there is a serious effort being made to build up character in young men such as shall enable them to trust each other and to act together when occasion calls for it. The Bushidō does not supply all that is required for this purpose, but it is no difficult matter to devise a system of ethical teaching that shall be abreast of the age in which we live. This is actually being done and this is the welcome change which we have alluded to in the title of this article.

"The Times Call for Caution" is the title of an article from the pen of Mr. Sonoda Kōkichi published in No. 21 of the *Jitsugyō no Nihon*. There are at present, says Mr. Sonoda, not a few signs of coming prosperity in our business world which may be thus set down. (1) We have a good rice crop. (2) The demand for our silk is good and the market is very active. (3) The sale of tea is also most encouraging. (4) Our foreign trade returns show an excess of exports over imports. (5) The Bank of Japan's specie reserve is rapidly increasing. (6) The price of silver has risen. (7) The rate of bank interest is low. Against these have to be set the following:—The Manchurian question lowers like a big cloud across the sky of the business world. But not even this is sufficiently far-reaching in any of its possible consequences to nullify the prosperity alluded to above. The only part of the business world which is seriously affected by the unsettled state of this question is the stock-market. Capitalists are naturally distressed by the low rate of interest along with those who are engaged in promoting various money-making undertakings. The low-rate of interest is apt to tempt agriculturalists and others into starting enterprises somewhat rashly. Then the rice yield this year being 10 million *koku* more than it was last year, this means 100 million *yen* to the good. The danger of the present situation is that it will afford an opportunity to mere speculators to start a number of unsound concerns and it may even tempt sober-minded business men to launch out prematurely into various enterprises. The present financial situation calls for extreme caution.

Forged ten *yen* notes have again been found in Yokohama. It appears that a man purchased sundry articles on Nov. 17th at the tailor's shop of Y. Sudzuki, Hagoromocho, which cost *yen* 40 in all. The buyer gave four notes of *yen* 10 which were found to be counterfeits.

NIPPON RACE CLUB.

THE OFF DAY.

Again splendid weather attended the proceedings of the Nippon Race Club, when the events of the Off Day were brought off on Saturday. The racing was on the whole good, though there were one or two disappointments. A conspicuous example was the match between Sir Claude MacDonald's Stella and Mr. Barclay's No Trump. The former could not be brought level and after a number of attempts they were sent off badly, Stella being two lengths behind. She was never again as close to her opponent and the race could properly be called a procession. Another disappointment was The Leader—Rose de France match—not in the sense that it was won by the latter, because most people expected that—but that the racing was not of more value. When the Australian came like a brown streak past The Leader and pacer alike and thundered up the Straight far in front there was quite a scene of excitement. There is nothing special to say of the five-furlong match except that Mark had the race in hand all the way round. As to the other match between Flutter and Willoughby it created a good deal of amusement. Mistletoe won the Tatsuta Trophy rather easily from Fiorentina. Mark and Sunrise made a good finish for the Leader Cup, but the former won by two lengths. No. 3 race fell to The Beetle, and No. 4 (for the Rose de France Prix) was probably the best of the afternoon and Mayonaise's victory was much cheered. The fifth race on the card was a game struggle between La Friponne and Annemarie, the former just getting the verdict by a bare length.

There was a moderate attendance of ladies, the paddock was fairly well occupied, and there was quite a good business at the Pari Mutuel.

Following were the events:—

1.—The TATSUTA TROPHY. Presented by Mori Kengo, Esq., with *yen* 50 added by the Club. For Australian Subscription Horses of Autumn, 1903, that have started at the Meeting and not won a race. Handicap. Winner *yen* 150, Second Horse *yen* 75. Third Horse *yen* 40. Three-quarters of a Mile.

Mr. Iris' Mistletoe, 139lb. (Rikio) 1

Mr. B. Runge's Fiorentina, 130lb. (Kato) 2

Fiorentina jumped off the sooner in a fine start but at the top of the hill Mistletoe had raced in front and was increasing the advantage. At the Shakespeare half a dozen lengths separated them and thence it was easy business for the Blue and White stripes, which won easily by over 20 lengths. Time, 1:28.

PARI MUTUEL, 5 *yen*—Mistletoe 534, Fiorentina 197; 731. Mistletoe paid *yen* 6.16.

2.—The "LEADER" CUP. Presented by "The Two Percies." For China Ponies (Subscription of Autumn, 1903, excluded) that have started at the Meeting and not won a race. Handicap. To be ridden by full Members of the Club, or Visitors, whose names must be sent in to the Committee before the Meeting and approved by them. Second Pony *yen* 50 added by the Club. One Mile.

Mr. Alexander's Mark, 146lb. (Mr. Hughes) 1

Mr. Kawakita's Sunrise, 153lb. (Mr. Motu) 2

Mr. St. Leger's Aberdeen, 140lb. (Mr. Elton) 3

Mr. Swarby's Moth, 144lb. (Mr. Easton) 0

Moth had the worst of this start, Aberdeen and Sunrise leading off. In the Dip Mark came up and at the crown of the hill he led. Aberdeen and Sunrise raced together to the Trees, where Mark led by a couple of lengths. Sunrise made a game effort in the straight but could not reach the winner. Distance between first and second a couple of lengths, Aberdeen a bad third. This was a delightful event to Mark's 64 backers. Time, 2:13.

PARI MUTUEL, 5 *yen*—Sunrise 563, Moth 163, Mark 64, Aberdeen 48; 828. Mark paid *yen* 58.

3.—For Australian Subscription Horses (Subscription of Autumn, 1903, excluded) that have started at the meeting and not won a race; handicap. Winner *yen* 150, Second Horse *yen* 50. One Mile.

Mr. Kawakita's The Beetle, 134lb. (Sugihara) 1

Mr. Alexander's Brisbane, 132lb. (Yasu) 2

Mr. B. Runge's Desdemona, 145lb. (Kato) 3

Desdemona had not a good start. The Beetle at once showed in front and kept there in the Dip, up the hill and along the back straight, Brisbane a length away. At the Shakespeare Desdemona was six lengths away from Brisbane, which was falling back, and at the Trees about half a dozen lengths separated the three horses. Brisbane came up in

NEWS OF THE WEEK.

A telegram dated Nov. 12th from Nagasaki states that cholera has now almost disappeared.

Mr. T. Kimura, barrister, was arrested on Nov. 17th at Oita. The charge is reported by the *Asahi* to be one of fraud.

"Japanese Growing Naval Power" is the title of an article in the October *North American Review* by a Mr. A. S. Hurdy.

The directors of the Tokyo Electric railway were to meet on Nov. 16th in order to discuss the rate of fare between Shimbashi and Uyeno.

On the morning of Nov. 12th snow visited Kyoto. The thermometer read 37.4 degrees Fahrenheit and the pressure showed 760.2 millimeters.

L. C. Page & Co., Boston, publish a book on "Japanese Art" by Sadakichi Hartmann. It contains 288 pages, is illustrated in colour, and sells at \$1.60 net.

Six hundred and twenty-four soldiers were expected to leave Ujina on Nov. 16th for China by the steamer *Omi Maru*, to take the place of the present garrison.

Yasu (23), wife of a tin-smith living at Shin-Sakurada-cho, Tokyo, attempted to commit suicide by drinking an ounce of chloride acid. The couple had lately quarrelled.

The Victors' Cup at Tientsin on the 4th inst. was won by Sweetrush from a large field. He had only one backer in the pari-mutuel, who carried off the whole pool, amounting to \$324.

The ordinary meeting of the Tokyo Municipal Assembly was held on Nov. 12th at 4 p.m. when Mr. Usugi, the president, suddenly tendered his resignation. Mr. I. Ooka was elected to the chair.

A telegram dated Nov. 12th from Kanazawa states that the property of Barons Y. Okumura, S. Okumura, and K. Mayeda have been seized by their creditors. The property will be sold at auction.

Mr. S. Hayashi, Japanese Consul at Bombay, on Nov. 14th telegraphs that in sympathy with the rise in America, cotton quotations at Bombay have risen from 10 to 15 rupees. The market is very steady.

The raw silk market at Lyons, says a telegram dated Nov. 14th from Mr. T. Yamada, Japanese Consul at that city, is still dull. Japanese filatures, No. 1, 9 to 11 deniers, are quoted at 48½ to 49 francs.

A telegram under date of Nov. 14th, from Mr. Ijuin, Japanese Consul at Tientsin, states that the Chinese Government notified that day that vessels from Newchwang will hereafter not be examined at quarantine stations.

The Nippon Yusen Kaisha's steamer *Mikawa Maru*, which had her boiler damaged on the way to Nagasaki and put into Aburatani bay, was expected to arrive on Nov. 17th at Shimonoseki in tow of the steamer *Kosai Maru*.

An official telegram from Formosa states that savages attacked the district of Harisa, Yuran prefecture, and seven were killed, and five others captured, three being women. In the trouble a policeman and a native coolie were injured.

G. Masuko (42), who was sentenced to death on a charge of murder, applied to the Superintendent of the Ichigaya Jail, Tokyo, on Nov. 16th for a reprieve. The execution was temporarily suspended and his appeal transferred to the Department of Justice.

The *Official Gazette* publishes a telegram, dated Nov. 13th, from Mr. Uchida, Japanese Consul-General at New York, stating that the raw silk market remains unchanged. Buyers seem awaiting the lowering of prices. Demand is scarce. Cotton transactions are very active.

Prices closed at \$11.50 on the 13th. Stock amounts to 34,295 bales. Speculative transactions in futures continue brisk despite disease.

The approach of another year is heralded by the first of the insurance companies' calendars—that of the New Zealand Fire and Marine Insurance Company, which we receive through Messrs. Frazer and Co. We note that the net revenue of the company for 1902 was £408,923.

A. Toriyama and another policeman of the Koishikawa station, Tokyo, were severely injured on the night of Nov. 15th by two men, while watching Hisakata-cho. It appears that the officers found two suspicious men walking slowly along the street and when they began to examine them the men drew swords. The culprits escaped.

Miss Anna Duncalfe, of Spokane, has again broken the world's record for women throwing a league baseball. On October 22nd, before four witnesses she threw the ball 214 feet and one inch, surpassing her former mark at 212 feet, which was 24 ahead of Miss Burgett, the former champion. She now stands in a class by herself, with no competitor nearer than 26 feet.

A man named M. Tanaka (27) living at Kyobashi, Tokyo, attempted on the evening of Nov. 14th, to murder a woman named Nobu Watanabe (32) who lived at the same place, by inflicting severe injuries on her with a short sword. The culprit gave himself up to the police. The cause is reported by Tokyo papers to be money matters over which the woman had taunted Tanaka.

The prize given by Mr. F. J. Bardens for presentation to the member of the K. R. & A. C. Cricket Club who during the past season gave the best exhibition of fielding, has been awarded to E. C. Jeffery. Mr. H. E. Bottlewalla's Cup, designed for the player adjudged to have shown the best all-round play during the Inter-port cricket match at Yokohama, has been won by A. H. Gillingham.

Professor Robert H. Thurston, who, since 1885, had been the head of the Sibley College of Mechanical Engineering at Cornell University, and was one of the best-known engineers in the United States, died of heart disease on Sunday, Oct. 25th at his home in Ithaca, under painful circumstances. He was 65 years old, and friends had gathered to celebrate his birthday when he fell dead.

The strange death of Charrere, a wine grower of Aosta, may interest the drinkers of Italian wines. Each season Charrere was accustomed to take a bath in the juice, with the object of securing a year of prosperity. This year he entered his cellar as usual. His sister found him unconscious in the wine. She was also overcome by the fumes, and both died before assistance could be summoned.

The office of the Sango-Shokai, sharebrokers, 55, Yokohama, the principal proprietor of which is Mr. Y. Hayashi, was entered by a thief on the night of Nov. 16th. Over ten thousand postage stamps of different values, a small amount of money, and sundry articles were stolen. The following morning Mr. Nakajima and another detective of the Kagacho station examined the place but no traces of the thieves were found.

CORRESPONDENCE.

A METEOR.

TO THE EDITOR OF THE "JAPAN MAIL."
SIR,—Last evening, about 8.20 p.m., while walking along Uchi-Hon-machi, not far from the castle, I was startled by a bright light that suddenly shone all around me. It was sufficiently brilliant to light up the road, which is a dark one,—and create well defined shadows of trees and other objects. At first, I supposed some one had turned on an electric light and so glanced around. I then looked toward the zenith when I saw a rapidly disappearing meteor which left a train of vivid white light, tinged slightly blue. The "tail" was fully 60°, or more, in length but was very soon dissipated.

the straight but was full three lengths to the bad at the finish, Desdemona arriving in time to make it a close call for second place. Time, 1.53½.

PARI MUTUEL 5 yen—The Beetle 602, Brisbane 174, Desdemona 402; 1.178. The Beetle paid yen 9.
4.—The "ROSE DE FRANCE PRIX." Presented by R. Loonen, Esq., and le Comte de Perigny. For China Subscription Ponies of Autumn, 1903, that have started at the Meeting and not won a race. Handicap. Second Pony yen 50 added by the Club. One Mile.

Mr. May's Mayonaise, 150lb.(Ichii) 1
Mr. Swarby's Willoughby, 144lb.(Takahashi) 2
Mr. Tytherleigh's Redstart, 143lb.(Mr. Easton) 3
Mr. Tatsuta's Harima, 148lb.(Sugiura) 0
Mr. Mess' Flutter, 134lb.(K. Takahashi) 0
Mayonaise led from the outset and was still ahead in the Dip. Flutter second. On the hill Harima came up but Mayonaise drew away again and Harima came once more at the Trees. They ran together round the bend and up the straight, a fine race resulting in Mayonaise's favour by a length and a half. Time, 2.20.

The Rose de France Prix was presented to the wife of the owner of Mayonaise by Mr. Loonen after the race and cheers were given for the donors.

PARI MUTUEL, 5 yen—Harima 441, Mayonaise 196, Willoughby 56, Flutter 36, Redstart 78; 777. Mayonaise paid yen 18.00.

MATCH—½ MILE.

Mr. G. Barclay's No Trump, 130lb.(Miyagawa.) 1
Sir Claude MacDonald's Stella, 133lb.(Horikoshi.) 2

After some trouble with No Trump they were sent away but Stella was two lengths behind as they passed the starter. It was a procession after that, for though Stella wiped off some of the lengths that lay between them at the Bend she fell back in the Straight to her former position.

PARI MUTUEL, 5 yen—No Trump 370, Stella 693; 1.003. No Trump paid yen 12.

5.—For Australian Subscription Horses of Autumn, 1903, that have started at Meeting and not won a race. Handicap Winner yen 150. Second House yen 75. Third Horse yen 40. One Mile and a Furlong.

Mr. R. Loonen's La Friponne, 135lb.(Comte de Perigny) 1
Mr. Scherz's Annemarie, 130lb.(Sugiura) 2
Mr. M. John's Akatsuki, 135lb.(Miyagawa) 3
Mr. Iris' Morning Glory, 133lb.(Goto) 0

Morning Glory led as they passed the Stand, La Friponne second and Akatsuki third. In the back straight La Friponne had come up. Annemarie moving into second place. The leaders raced almost level past the Trees, and in the Straight, but La Friponne retained her advantage and won by a length. Time, 2.14½.

PARI MUTUEL, 5 yen—Annemarie 156, La Friponne 316, Akatsuki 89, Morning Glory 100; 671. La Friponne paid yen 9.50.

MATCH.

THE LEADER V. ROSE DE FRANCE.—Distance One Mile and a Furlong. The leader having a furlong start and 5 lbs. allowance, also two pacers.

Mr. R. Loonen's Rose de France, 148lb.(Yasu) 1
Mr. Two Percies' The Leader, 143lb.(Mr. Easton) 2

Rose de France started before The Leader at the mile post had got in motion. There was a pacer in the Dip and another at the crown of the hill, but the first was very slow to move, and could have been of little assistance. The other, when set a-going, kept The Leader in motion but Rose de France was only twelve lengths away at the Shakespeare. Coming out in fine style the Australian was level half way to the Bend and easily ahead in the straight, winning a sensational race by ten lengths.

PARI MUTUEL 5 yen—Rose de France 650, The Leader 273; 923. Rose de France paid yen 6.50.

MATCH—5 FURLONGS.

Mr. Alexander's Mark, 150lb.(Yasu) 1
Mr. Unverzagt's Bauernfaenger, 150lb.(Mr. Mottu) 2

Mark led all the way and though it was a good race in the straight Bauernfaenger having early taken second place, Mark won by three lengths.

MATCH—¼ MILE. CATCH WEIGHTS.

Mr. Swarby's Willoughby(Mr. A. J. McClore) 1
127 Mess' Flutter(Mr. F. E. White) 2

Flutter had the better of the start but went to the outside rails, consequently Willoughby won by many lengths.

We understand that Mr. G. G. Brady has been robbed of a valuable collection of songs which were handsomely bound. Suspicion is cast on a former house-boy who has already been convicted of purloining his master's wines and cigars.

The light of the meteor far surpassed that of any of the fixed stars, or even Venus at her maximum. I have never seen a more brilliant one. I hope others of your readers enjoyed this remarkable sight.

Judging from the brightness of its tail, I think the meteor was near the earth. It probably dissipated itself wholly into tail, or fell into the sea. Its direction was towards the north-east.

ONE OF YOUR READERS.

Osaka, Nov., 10th, 1903.

PORT ARTHUR NEWS.

(FROM A CORRESPONDENT.)

Port Arthur, October 31.

The Yalu Timber Company has now had notices printed in Chinese and Russian announcing that it has obtained from the Korean Government the privilege of cutting timber along the Yalu and its tributaries, and that anyone not authorised by the Company who cuts timber in these places, will be prosecuted and have his timber confiscated. The Timber Company is now prepared to sell its timber to the public at Dainy, Port Arthur, Yingkou, and in all other places where it has agencies. I suppose Japanese and American timber merchants will suffer to some extent in consequence.

Writing under date of 14 (27) October, the Shanghai correspondent of the *North China Herald* attacks his countrymen and the non-British residents of the settlement in general for humouring the English so much by a simulated enthusiasm for cricket. Here is what he says:—"At the beginning of this year, I informed you that with the departure of the foreign troops from Shanghai, the non-English part of the community, lost much of the sense of support they derived from the presence of these troops, a presence which encouraged them to live in their own way and relieved them from the necessity of a slavish submission to the fads of the English society in which their lot was cast. The non-English portion of our society tended more to unite, inasmuch as it is more numerous than the English portion but this union, a union exhibiting what I may call a manifestation of the national life of each group that composed it, was hardly born when it began to disappear and this notwithstanding the fact that none of its component parts are very sympathetic towards the English."

"To what an extent we all servilely imitate the English may easily be seen from the following facts. Yesterday afternoon and all day to-day, all the banks and offices were shut just because the English people of Shanghai took it into their heads at that time to amuse themselves by looking at the game of cricket played by the Shanghai exponents of the game with Hongkong players who came here expressly for this match. The strangest part of the whole proceedings was that most of the people present of the non-English part of the community had not got any idea at all of how the game was played and did not even care to look at it. They simply celebrated the occasion in order to please the English. Now I do not object to the English having their relaxation in this way but it may be asked why, because the English community takes it into its head to go to see a cricket match, that all business must be stopped? In this connection I may say that according to the Custom House reports, only 0.6 of the trade belongs to the English, the rest of the Shanghai trade being in the hands of Russians and of merchants belonging to other nations. As to the number of banks there are only two English banks here, while on the other hand there are Belgian, Dutch, German, Russo-Chinese, French, and Japanese banks, all of which, with the exception of the Russo-Chinese, employ only men belonging to their own nationality if we do not count the Portuguese from Macao who, as a general rule, occupy all the inferior offices in the local banks. The Portuguese do not, however, take any absorbing interest in the game of cricket; hence my amazement that all the non-English establishments I have just mentioned, closed their doors in honour of such an event."

"The English, seeing that all endeavour to imitate them, become day after day more and more insupportable in their dealings with other nations. The strangest part of this strange state of things is that while one finds everywhere hatred of the English social yoke, or rather, I should say, the Anglo-Jewish yoke, there are to be found foreigners who obligingly chime in with the English instead of making a determined effort to shake off that yoke."

Now, I do not think that this represents the sentiments of the average foreigner (meaning by that, non-Britisher) or even of the average Russian in Shanghai. It certainly does not represent the views of the Russians with whom I am brought in contact here. I find that these Russians desire nothing so much as a rapprochement, social and otherwise, between the two great white races that, between them, practically rule Asia. I also find that there is a cricket club here to which some Russians belong. At the same time it must be confessed that the Russian

gentleman whose letter I have just translated, is right in insisting on fact that a slavish pretence of liking games that you do not like in order to please people of another nationality is strongly to be reprehended; and I think we would be the last people in the world ourselves to welcome foreign spectators who are attracted to our cricket matches by these motives. But if there is no servility in the intention, but only that amiable desire to please which makes the gentleman, no matter of what nationality he may be, often hide his real feelings and pretend to interest where none exists, I think that foreigners are only performing an act of courtesy when they attend cricket matches in which they take no interest in the play and do not understand it. I think that the foreign banks in Shanghai were animated by these feelings on the occasion in question and not by a servile desire to propitiate John Bull; and I think that the English community would be glad, from similar motives, to oblige the Russian or any other community. Of course there is the broad question of whether we are not paying too much attention to cricket. Some of our most earnest and well-intentioned critics at home are quite as fierce in their denunciation of "the flannel'd fools at the wicket" as the Shanghai correspondent of the Port Arthur paper could desire. There is also the question of whether the banks do not give themselves too many holidays as it is; and I may here remark that the bank in Port Arthur seems to have a fair number of holidays as it is, and if it also began to close on the occasion of cricket matches it would only be open on rare occasions. These, however, are questions apart.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

MACEDONIAN REFORM.

London, November 11.

The Austrian and Russian Ambassadors on Tuesday handed to the Porte their reply to the Porte's answer, renewing their recommendations in connection with the latest reform scheme.

Later.

Telegrams from Constantinople sent by an indirect route to avoid the censorship, show that the Austro-Russian reply insists on the acceptance of the proposals.

THE KAISER WILHELM.

The Kaiser's condition continues to be favourable, and the wound is healing.

MR. BALFOUR'S SPEECH.

Mr. Balfour's Guildhall speech has created the most favourable impression on the continent; his endorsement of the Macedonian reform scheme; his pacific remarks regarding the Far East; and his advocacy of arbitration alike evoking the most cordial comments.

ITALIAN ROYALTIES TO VISIT ENGLAND.

London, November 12.

It is officially announced that their Italian Majesties, King Victor Emanuel and Queen Helene will arrive at Portsmouth on the 17th of November on board the King's Yacht, the *Victoria and Albert*. They will be escorted from Cherbourg by a British squadron.

THE MACEDONIAN TROUBLES.

Seven hundred and eighty men of the Prizend battalion have been tried at Salonica for atrocities committed in the vilayet of Adrianople. Out of this number 75 were acquitted and the remainder were banished to Yemen.

CHURCH AND STATE IN FRANCE.

A SIGNIFICANT DECLARATION.

Later.

M. Coombes, President of the French Council of Ministers, speaking in the Senate, said that in the course of the session the Government would introduce a bill prohibiting any members of Congregations from engaging in education in any form. The Government had deferred applying the prohibition to the

ordinary clergy, pending a decision of the question of the separation of church and state, which would probably come before parliament in 1904. The Government was determined to end the present situation which was disturbing the moral tranquillity of the country.

THE KAISER'S OPERATION

London, November 11.

The Kaiser has prohibited the press who operated on his throat from giving an account of the operation to the Medical Society of Berlin.

HUGE EUROPEAN PETROLEUM TRUST.

Preliminary arrangements have been made to combine all the European naphtha springs into one gigantic petroleum trust in opposition to the American oil trust.

THE NEW REPUBLIC.

London, November 11.

President Roosevelt, in receiving the credentials of Senor Varilla, as Minister of the Republic of Panama, hoped that a new state in harmony with the United States would be a providential instrument of benefit to the civilized world, through the opening of a new highway for universal commerce.

THE ROYAL VISIT TO LONDON.

London, November 11.

The King and Queen of Italy will start for London to-morrow. In connection with their visit the police have arrested a dangerous anarchist at Cherbourg. He arrived there on Thursday. He has already been imprisoned for anarchist offences.

THE SOMALILAND EXPEDITION.

Four thousand Abyssinians will co-operate with General Egerton. They comprise some of King Menelik's old regiments.

THE ISTHMUS TROUBLE.

London, November 11.

Colombia threatens to attack Panama. General Neyes, who is nominally the Panamanian Commissioner, is reported to be marching on the Isthmus with the Colombian forces.

The American authorities are determined not to allow any hostile encounter between the forces anywhere near the rail-road, and will if necessary expand the neutral zone as far as the northern and southern boundaries of the New Panama Republic.

THE CAPE ELECTIONS.

The elections for the Cape Legislative Council at present indicate that the Afrikaner Bond will have a majority.

THE CENTRAL AMERICAN TROUBLE.

London, November 11.

It is stated that the Colombian President has issued a strong appeal to the Latin American republics asking them to support in a war for the purpose of retaining Panama. The United States Government has decided to place a warship at the disposal of General Neyes on the arrival at Panama in order to avert unpleasantness. A warship will also be assigned to the Panama Government if the latter desires to confer with General Neyes. (? Neyes).

THE KAISER.

The German Emperor's wound is almost healed but he is able to speak only in whispers.

THE BALKAN SITUATION.

M. Sarafoff (the Bulgarian leader) was reported to have been killed and returned to Sofia and received an ovation.

in thousands. He addressed the people and declared that the revolution was unsubdued and was only beginning.

CRUZON'S VISIT TO THE PERSIAN GULF.

Later.
Lord Curzon has started for the Persian Gulf, escorted by four cruisers.

ACCIDENT TO LORD KITCHENER.

Lord Kitchener was riding alone through a tunnel near Simla when his horse took fright, and the General was thrown against a projecting tree, and lay there helpless with both bones (? of the knee) broken for an hour before he was discovered.

TIBET.

Reuter is informed that it has been decided to occupy the Bhumba valley, which is a key to Tibet, and to advance to a point which is 150 miles from Lhasa. It is possible that the expedition will include British troops.

AMERICA AND THE FAR EAST.

London, November 18.

It is explained in Washington that the United States is co-operating with Great Britain and Japan to secure the opening of Hong-Ampho, in addition to Wiju.

NEW ZEALAND PARLIAMENT.

Mr. Richard Seddon has proposed in the New Zealand Parliament that an increase should be made over the existing duties of 10 per cent on tea grown in foreign dominions, and of grown in British dominions to be free.

THE ISTHMUS REPUBLIC.

Later.

A Commissioner from the Republic of Panama has arrived at Washington to negotiate a new Canal Treaty.

France recognizes the new republic.

THE ITALIAN ROYALTIES.

Their Italian Majesties have been at Windsor.

THE KAISER.

The Kaiser is doing well.

THE ISTHMIAN TROUBLE.

London, November 19.

Representatives of the Panama Government have met the Colombia peace commissioners on board an American warship. The former declined to re-unite with Colombia, stating that the latter's assurances regarding concessions and the further consideration of the Canal Treaty were too late. The Peace Commissioners returned to San Francisco.

Mr. Hay and the Panama delegates have already prepared a draft canal convention.

KING EMMANUEL AT WINDSOR.

At a state banquet at Windsor King Emmanuel, toasting the British King and Queen, said "the ever-increasing sympathy and friendship uniting England and Italy constitute for my people a tradition and for my Government important factors in their policy which, like that of England's, is one of peace and civilization."

(RECEIVED AT THE LEGATION OF FRANCE.)

SUICIDE OF M. ROSANO.

Saigon, November 11.

The new Italian Minister of Finance, M. Rosano, has committed suicide in consequence of domestic troubles.

SPAIN.

In the Spanish Municipal elections republicans were returned in many towns. There were some disorders and some persons wounded.

FRENCH POLITICS.

Saigon, November 14.

The Senate continues the discussion of the project of law on secondary teaching. The first Article, which abrogates the Falloux Law, has been adopted by 223 votes to 31.

FRENCH NEWS.

Saigon, November 15.

The Chamber of Deputies has voted by 360 to 203 a motion tending to nominate a commission charged to examine into the political complications of the Humbert affair.

November 16.

The King and the Queen of Italy have left Pisa for England via Nice and Cherbourg.

Saigon, November 17.

An English journal announces a rupture in the relations between France and Siam, but the news is not correct. In any case if Siam were to refuse to continue *parleys* engaged in on the subject of the Treaty of 1902 the provisions of the treaty of 1893 would be re-enforced.

It is announced from Simla that Lord Kitchener broke his leg in a riding accident.

Saigon, November 19.

In the French Senate M. Clemenceau advocated the complete freedom of teaching. The Chamber of Deputies has passed the budget for the Colonies.

The Italian Royalties have arrived at Windsor.

THE KAISER.

[The following telegram, received at the Imperial German Legation in Tokyo, has been kindly placed at our disposal.]

Fortunately the Emperor's condition does not give any cause whatever for alarm. The healing of the small wound caused by the operation is progressing very favourably. His Majesty has been able to go out since the day before yesterday.

(Signed) RICHTHOFEN.

(FROM THE "DEUTSCHE JAPAN-POST.")

THE KAISER'S HEALTH.

Berlin, November 14.

The Kaiser is in good health. The slight wound caused by the operation is healing well, but he must be careful in using his voice for some time still. The distinguished patient is in good humour and working hard. Rumours that a pleasure trip to the South is intended are unfounded.

PRUSSIAN ELECTIONS.

The elections to the Prussian Diet have ended with only slight changes. No socialist members were elected.

The Russian Minister to Copenhagen, M. Iswolski, strongly denies the report published by the *Figaro* that he will be the successor of Count Lamsdorff, Russian Minister for Foreign Affairs. It is confirmed that Prince Urnoff is leaving Paris for Rome to replace M. Nelidoff.

KOREA.

The affray at Chiemulpo, according to views formed by leading politicians, will not in any way interfere with the Tokyo negotiations.

PRESIDENT ROOSEVELT.

The feeling in regard to the new presidential elections in America is such that Mr. Roosevelt is expected to remain in office.

ITALIAN ROYALTIES.

The King and the Queen of Italy are leaving today for London, on a visit to the British Court.

KAISER WILHELM RESTORED TO HEALTH.

Berlin, November 17.

Kaiser Wilhelm has recovered and can use his voice as before. On Wednesday the Crown Prince of Denmark is expected on an incognito visit, on his way to Vienna.

NAVAL PROMOTIONS.

Vice-Admirals von Tirpitz, Baron Sunden-Bibran and Bendemann have been promoted to full Admirals.

BANKS COMBINE.

The Dresdener Bank and the Schaafhausen Banking Company have amalgamated their interests, thereby uniting a capital of 284 millions of marks.

COERCING THE PORTE.

It is reported from Vienna, that Turkey has been threatened that if she does not accept the Macedonian programme of the two Emperors, a naval demonstration will take place, in which England and Italy will participate.

BAGDAD RAILWAY.

Berlin, November 15.

Definite arrangements have been made in Brussels regarding the French capital to be disbursed for the Bagdad railway.

BARON SPECK-STERNBURG.

Baron Speck-Sternburg, German Minister to Washington, was received by the Kaiser previous to his returning to America.

PANAMA.

Representatives of the new Panama Republic are soliciting from the European Ministers to Washington acknowledgment of their new Free State. The rumours of an armed resistance by Colombia are false.

SUDDEN DEATH OF PRINCESS ELIZABETH.

As the Tsar and the Tsarina were journeying from Darmstadt to Russia, on the way Princess Elizabeth, daughter of the Grand Duke of Hesse and niece of the Tsarina, suddenly fell ill at Stsimerwiese (Russian Poland) of cholera and died in a short time. The Tsar and the Tsarina immediately returned with the corpse to Alexandrowa.

PROMOTION.

Major Frobel has been promoted to be commander of the marine battalion at Kiaochow.

LATEST COMMERCIAL.

IMPORTS.

In Yarns there has been some business at lower rates; stocks of Grey Shirts are accumulating; there is a forward demand for "Whites" but dealers are not inclined to buy at prices based on the present price of American cotton.

MELLIN'S FOOD

For INFANTS and INVALIDS.
Purely Vegetable and Untouched by Hand.
MELLIN'S FOOD is free from Starch. When prepared
is similar to Breast Milk.

Mellin's Food Works, Peckham, London, England.

SWISS WATCH INDUSTRY. ONLY 20/-

To Every Connoisseur, Post Office and Railway Servant, and Persons Requiring a Splendid Watch, we offer this opportunity of their obtaining this "Original Swiss Watch" (Our Exclusive Property). The Watch in question is made on the World-Renowned "CLARINETTE SYSTEM" and received the Highest Award at the PARIS EXHIBITION IN 1900. IT IS THOROUGHLY BRILLIANT, A SPANISH TIME KEEPER, AND CARRIES WITH IT A THREE YEARS' WRITTEN WARRANTY. It has Three Hous Cases (Savonette), which are made of indestructible Gold Metal. Electrically tested. Based on the Latest Principle, and the finest Connoisseur cannot detect THE DIFFERENCE BETWEEN OURS AND THE USUAL 10 GUINEA WATCH. It wears like Real Gold and is the only watch of its kind having that advantage. To introduce this Watch to the British Public, and Colonists, we will deliver EITHER LADIES' OR GENTS' (for 21 or 22. 0d. post free) formerly costing 21 or 22. 0d. on receipt of Money Order for that Amount. A Leather Case is also given gratis with every Watch. Fashionable Chains, Alberts, or Necklaces of the same Metal can be had for 5s. 6d. or 10s. according to weight. Any Article bought and not approved of will be exchanged. The European Fame of our Firm, according to our daily Orders and Unqualified Testimonials, proves the soundness of our Advertisements. Post Office or Postal Orders should be made payable to MAISON ROYER, SALE, FRANCE.

Bovril
fortifies the
system.

BOVRIL is an extremely palatable drink, and a stimulant that has no bad after-effects. It is also a replacer of used-up tissue and energy; while it enables the system to endure fatigue and to repel disease.

HOLLOWAY'S OINTMENT

IS A HOUSEHOLD NECESSITY

It cures Rheumatism, Scleritis,
Stiff Joints,
Glandular Swellings,
Sore Throat, Quinsy, Mumps,
Burns, Piles, Fistulas, &c.

AND EVERY
FORM OF SKIN DISEASE

Manufactured only at 78, New Oxford St. (late 533, Oxford St.) London. Sold by all Chemists and Medicine Vendors.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOVEMBER 28TH, 1903.

SUMMARY OF NEWS.

DR. ALLEN, the U.S. Minister at Seoul, arrived at Chemulpo on board the *Albany*.

MARQUIS YAMAGATA was expected to arrive at Tokyo on Nov. 20th from Kyoto.

THE *Jiji* states that General Terauchi, Minister for War, paid a visit to Baron Rosen on Nov. 20th.

SUNDRY materials valued at over yen 200, for the Kawasaki Electric Tramway, were stolen on Nov. 22nd.

THE Railway Bureau arranged on Nov. 22nd to have steam heaters in the evening trains on the Tokaido line.

OWING to damage on the Hokuetsu Railway, traffic between Hojo and Kitayama was suspended on Nov. 23rd.

A CASE of cholera was reported on Nov. 24th in the village of Wakutsu near Morioka. The patient was a man.

THE *Niroku* has a telegram from Matsue that a suspicious-looking French gentleman arrived at that city on Nov. 23rd.

TOKYO papers state that Mr. T. Yamamoto, former president of the Bank of Japan, Lieut. General T. Nagayama, and Vice-Admiral T.

Kurooka have been appointed members of the House of Peers.

THE Philippines have again been visited by a plague of locusts, which have descended in vast swarms all over the provinces.

MR. HYON-YONG-UN, Secretary of the Korean Legation at Tokyo, who has arrived at Nagasaki left there for his post via Kobe.

ABOUT seven hundred pupils of the Yokohama Primary School paid a visit on the afternoon of Nov. 22nd to the U. S. warship *Oregon*.

A COOIE (42) fell on Nov. 23rd, from the cliff at Kami-Negishi, where he was employed in cutting the hill side. He died at once.

R. NAKAJIMA, a barber living at Chigasaki, committed suicide on Nov. 12nd by hanging himself with a belt. The cause is reported to be poverty.

GENERAL TERAUCHI, Minister for War, paid a visit to Baron Komura, Minister for Foreign Affairs, on Nov. 23rd at the official residence of the latter.

THE *Toyo Maru* and three other steamers chartered by the Government arrived on Nov. 22nd at Ujina. They were to be released on the following day.

As the result of the proposed administrative reform, says the *Yorodsu*, about a thousand workmen employed at the Yokosuka Naval Dockyard will shortly be discharged.

H.H. the Maharaja of Kapurthala visited the various law courts in Tokyo on Nov. 20th. The following day he left for Nikko, where he was to stay at the Kanaya Hotel.

ACCORDING to Tokyo papers, a foreign resident in Yokohama contemplates establishing iron works at Tsurumi. An area of land has already been purchased for the purpose.

THE body of an infant was found on the evening of Nov. 22nd in the creek at a point near Yonezawacho, Nihonbashi, Tokyo. A large stone was tied to the body.

A TELEGRAM from Takashima states that many of the fishing villagers of Komatsujima and Tsuda quarrelled on Nov. 23rd. Some were killed and many were injured.

MR. S. TSUNEYA, a member of the Tai-Ro Doshi-kai, was arrested on Nov. 23rd at Chiba while delivering a speech in which he severely criticized the Cabinet Ministers.

LADY MINTO and suite, who recently paid a visit to Japan, arrived at Vancouver on Nov. 12th. The *Nichi Nichi* believes that the Governor-General will also pay a visit to Japan.

THE ordinary meeting of the Miye Prefectural Assembly was held on Nov. 24th when the proposed Budget for the coming year was introduced. The total amount was yen 898,000.

SINGAPORE has won the Interport Rifle Match this year with 927 points. Shanghai made 915 and Hongkong 891. Hongkong won nine out of 14 matches; Singapore 3, and Shanghai 2.

M. YAMAGUCHI, former Judge of the Tokyo District Court, who was charged with the forgery of various notes, was sentenced on Nov. 18th in the Oita Court to 15 years' penal servitude.

Y. SHIRATA (26) employee of a civil engineering contractor at Shitaya, Tokyo, on the night of Nov. 22nd murdered another contractor, K.

Sato (38) living at Matsuocho, Honjo, inflicting fatal injuries with a sword on his head and breast. It is reported by Tokyo papers that they had a dispute about gambling. The culprit gave himself up to the Shitaya police.

THE Russian warships *Cesarevitch* and *Bayan* which are on their way to Port Arthur arrived on Nov. 20th at Singapore where they took in coal and provisions. Their arrival at the former port is expected about Dec. 10th.

ABOUT a hundred female workers employed at a raw silk spinning factory belonging to K. Yoshida, in the district of Iruma, Saitama prefecture, struck for an increase of wages. Their employer gave in to their demands.

A JOINT meeting of Tokyo and Osaka journalists who advocate war was held on the evening of Nov. 22nd at the Kokwai-do (public hall), Nabonoshima, Osaka, where they delivered speeches. About 2,500 auditors were present.

R. HATTORI, a youth living at Ishikawa, Yokohama, was arrested on Nov. 21st by the Isezaki-cho police on a charge of having broken a cash drawer attached to the automatic telephone apparatus at Noge and stolen yen 2.75.

A TELEGRAM from Hakodate states that the Nippon Yusen Kaisha has instituted a case in Court against the agent of the Russian steamer *Progress* which collided with the *Tokai Maru*, claiming for the damage sustained by the latter.

OVER three thousand inhabitants connected with the movement against the proposed abolition of the Gifu prefectural office, held a meeting on Nov. 24th at the Midori-za theatre, Gifu, and decided to oppose the proposal. They then held a social dinner party.

K. KODAMA, a member of the Tairo-Doshi Kai, who delivered a speech on Nov. 18th at the Kin-ki-kwan, Tokyo, when he was stopped by the police on the ground that his address was injurious to social peace, was committed for trial on Nov. 25th in the Tokyo District Court.

G. SHINTANI (26), a blue-jacket of the Yokosuka torpedo barracks, was arrested on Nov. 22nd on a charge of having stolen 16 pairs of shoes from the godown of the Naval Supply Bureau and sold them to S. Nakajima, a shoe dealer. The man was removed to the Admiralty Court.

OWING to severe rains which occurred on the night of Nov. 20th, two parts of the Hokuetsu Railway—one between Hojo and Tenkayama, and another between Oshikiri and Mitsuke sustained damage. Traffic was suspended but was expected to be re-opened before the evening of the following day.

BARON KOMURA had audience of the Emperor on Nov. 20th when the Minister for Foreign Affairs, says the *Jiji*, reported the course of foreign affairs during the absence of His Majesty. The following day, Count Katsura, the Premier, and Baron Kiyoura, Minister for Justice, had audience of the Emperor.

THE *Bristol Times and Mirror* says it is authorized to state that Sir Michael Hicks-Beach, formerly Chancellor of the Exchequer, who represents West Bristol in the House of Commons, has decided to support the Prime Minister, Mr. Balfour, in carrying out the programme outlined by the Premier in his recent speech at Sheffield, in which he practically echoed Mr. Chamberlain's protection policy. Sir Michael hitherto has been an uncompromising free-trader.

POLITICAL NOTES.

Monday, November 23.

Some of the Tokyo newspapers are busy with rumours. The *Hochi* declares that Baron Komura, finding his resolute policy restrained by Count Katsura's yielding, will soon resign. He is determined, says our contemporary, to leave the Cabinet rather than to put his name to another abortive and humiliating convention. The *Chuo* writes that Russia has taken Japan's measure, and is deliberately postponing any decision, her persuasion being that the longer she delays the greater the concessions she can obtain from Japan. We read these comments merely as expressions of impatience. But although the complaints do not as yet come from very influential quarters, we are assured by information and observation that a very strong current of impatience and indignation is setting towards the Government, and if the Diet open before a settlement has been achieved, the remarkably moderate and quiet attitude hitherto maintained may be rudely challenged.

The working committee of the *Tai-ro Doshi-kai* had a somewhat stormy meeting on the 21st instant. Men like Messrs. Kudo Kokan and Otake Kanichi, prominent members of the Progressist Party, strongly denounced the Cabinet for incapacity and declared that nothing remained but to impeach it publicly. Mr. Usui Teppu attempted to stem the tide by pleading that the facts of the negotiations being kept secret, no intelligent judgment could be passed, but his protests were futile. The meeting closed its doors, yet the noise of the debate showed how animated was its character. Finally the following resolution obtained, it is said, an overwhelming majority of the 26 members:—

That although the dilatoriness of the Government up to the present has been censured, no confidence can yet be placed in the issue of the situation, consequently, an attitude of hostility to the Cabinet must be assumed.

Two members only seem to have refused to endorse this resolution. It is not thought likely, however, that the Society will consent to any steps such as the nature of the above resolution would imply. In fact the probability is that the course suggested by the meeting will lead to a split in the ranks of the *Doshi-kai*.

Tuesday, November 24.

The *Dempo* (the *Telegraph*) is the name of a new journal just issued in Tokyo. We have already alluded to the probability of this newspaper's appearance and the rumour that its chief inspirers and supporters were supposed to be Count Itagaki and Viscount Watanabe. In the first number of the journal we do not find any mention of either politician's name, but in the declaration of the newspaper's platform there is no mistaking the fact that Viscount Watanabe's *welt politik* will be advocated on the one hand, and Count Itagaki's modified socialism on the other. By *welt politik* (*seikai seisaku*) the *Dempo Shimbun* does not very clearly explain its meaning, but we gather that it indicates national expansion such as is variously known under the names of colonization, imperialism, *welt politik*, sphere of interest, and so forth. Increase of military and naval strength—above all of naval—is an essential feature of the programme, but apparently armaments would be regarded rather as means of insuring the fruits of industrial and commercial competition than as weapons of aggression. As for Count Itagaki's socialism (*shakai seisaku*), our

readers are already acquainted with its essence. It does not involve any idea of a conflict between labour and capital. On the contrary, it would avert any such conflict by timely precautions, and from that point of view Itagaki's socialism is coördinated with Watanabe's *welt politik*, for the former, by increasing Japan's facilities for competition, helps to develop her capacity for carrying out the latter.

One marked feature of the new journal is that it is obviously opposed to Marquis Ito. It publishes an offensive and scurrilous note which plainly shows the paper's bias.

A meeting of some two thousand persons known as the "Society of young men that advocate a strong policy towards Russia" was held at the Kinki-kan in the Kanda district of Tokyo on the 22nd instant, and proceeded to pass resolutions declaring that the policy of the present Cabinet is destructive of the empire's interests, that the Ministry should resign at once, and that an immediate appeal to the sword must be made. Just as these resolutions were on the point of being voted, the police interfered, took possession of the resolutions and declared the meeting closed. A great commotion ensued, and it seemed for a moment that violent measures would be resorted to, but the storm was temporarily allayed by a proposal that a social reunion should be held later on at a different place. With that the meeting dispersed.

All the Japanese newspapers of Tokyo unite in saying that a long telegram reached the Russian Legation from St. Petersburg on the forenoon of the 21st instant, and that its contents seem to have been at once communicated to the Foreign Office. Nothing, however, is known, nor is any conjecture essayed, as to the contents of the message. Our contemporaries do not venture to predict whether it will be followed by another conference between Barons Rosen and Komura, or whether it will necessitate further telegraphic reference to St. Petersburg. We ourselves believe that no importance whatever attaches to these statements. Indeed, we doubt whether any such telegram was ever received, or any such communication made.

This meeting took place on the 22nd instant, and seems to have been a great affair. Two resolutions were passed, one pledging the Party to insist on the reality of administrative and financial reforms; the other declaring that the situation in foreign politics should be speedily resolved and the empire's prestige vindicated. Before the meeting separated, however, it passed a third resolution apparently hostile to the Cabinet's scheme for reconstructing local administrations.

Wednesday, November 25.

All sorts of rumours are in the air. Tokyo newspapers speak with various voices. Some still place credit in the discredited statement that a lengthy telegram reached the Russian Legation on Saturday, and was at once communicated to the Foreign Office. Some say that even the long-suffering Katsura Cabinet is losing patience. Some deny the telegram altogether but affirm that Russia has taken Japan's measure and will make no concessions at all. Some explain that the negotiations up to the present have been merely a prelude to the removal of Alexieff from office, and that, when he is gone, a new basis will be elaborated. In short the only certain fact is that none of the caterers of public news knows clearly what to say.

The *Kokumin Shimbun* speaks on the subject of delay in a manner that commands attention. It dismisses as unworthy of credence the rumour that anything like a Russian answer has been received in Tokyo or communicated to the Japanese Government, and it notes that the proposals submitted by Japan at the close of October, proposals representing her irreducible minimum, remain to this day without any official notice from Russia. There was some room for explanation so long as the Emperor was absent from St. Petersburg; or, at any rate, His Majesty's absence might reasonably have involved a little delay. But such an excuse has small validity in these times when a message can be flashed round the globe in twelve minutes. It is not to be supposed that Russia is deliberately postponing her reply for ulterior purposes, but certainly her tardiness threatens to pass the bounds of all reasonable explanation, and can not be much longer endured by Japan.

The *Nippon* wants to know whether any one but a fool would waste time elaborating treaties with a Power which has plainly shown that it has no respect whatever for such instruments. Because Russia declines to carry out her existing treaty with regard to Manchuria, to take infinite trouble drafting a new treaty with her is the acme of folly. Let her observe her Manchurian treaty or fight. If another covenant be concluded with her now, she will treat it as waste paper whenever her interests or her convenience renders its conditions irksome. Is it proposed, when that event occurs, to go to work drafting yet another treaty doomed to the same fate? The process would be interminable, and the idiocy of the conventional gulls immeasurable. There is nothing for it but to fight.

The *Nippon*, as our readers know, represents the extreme chauvinists of Japan. The *Kokumin* represents the best type of moderates. We now know, therefore, what both are thinking. The *Yomiuri*, which stands near the *Nippon* in animosity towards Russian aggression, vehemently urges that the men who love their country should unite in the Diet and force the Government to act resolutely. Whether this interminable delay be due to the interference of the *Genro* or whether it be attributable to the indecision of the Ministry, it is equally opposed to the country's interests. Let there be no concern about suspensions or dissolutions. A dozen suspensions, a dozen dissolutions weigh for nothing against a question of such importance. The country has made all its preparations, and must insist on not being trifled with any longer.

Thursday, November 26.

We expressed our entire unbelief in the news published on Monday last by a Tokyo agency to the effect that a long telegraphic despatch had reached the Russian Legation on Saturday and that the situation had become very strained. The *Jiji Shimpō* now makes a similar denial. It says flatly that no such despatch was received and that no special change in the situation has occurred. At the same time it is careful to explain that things can not be called very promising but that the ninth conference can not be long delayed.

The operative committee of the *Tai-ro Doshi-kai* seem to be a little puzzled as to the best manner of giving effect to their recent resolution which pledged the association to attack the Cabinet on the ground of weakness and indecision. They evidently can not make up their minds how to proceed, probably because some of their number are

not anxious to proceed at all. It is reported, however, that they have agreed to address a remonstrance to Admiral Baron Yamamoto, calling upon him either to assume a stiff back or retire from office. The Admiral, according to popular rumour, does not belong to the war party.

The *Nichi Nichi Shinbun* has interviewed Count Katsura with regard to the statements said to have been made by him to a correspondent of the *Manchester Guardian*. It would appear, as most persons had probably conjectured, that the alleged statements are very erroneous. The interview did actually take place, but what the Count said has been extremely misrepresented. His Excellency explained that Japan had entered into her alliance with England being actuated by a sincere desire to preserve the peace of the Far East and that he hoped the present question would be solved in accordance with the purpose of the alliance. Russia was doubtlessly actuated by a similar motive, and she and France had clearly declared it on the occasion of extending their alliance to East Asia. In view of all these things the Count concluded that the peace of the Orient would not be easily disturbed. That much he did tell the correspondent. Asked by the latter whether, in that case, the complication would be amicably settled, he replied that he could not give any assurance as to that point.

Friday, November 27.

The *Fiji Shimpō* urges that the Japanese Government should now make up its mind to fix a period within which Russia must be required to reply to the proposals advanced by this country. Our contemporary is careful to insist that the Japanese nation desires peace and would make any reasonable sacrifices to secure it. There is a limit, however, to human patience and that limit has now been nearly reached. However long-suffering Japan may be, however desirous of crediting the Emperor of Russia and his statesmen with the pacific sentiments by which they claim to be actuated, it is impossible to ignore the fact that Russia, while prolonging the negotiations in an unaccountable manner, is devoting the time thus gained to vigorous warlike preparations, which are plainly directed against Japan. That state of affairs can not be suffered to continue indefinitely. The time has come when the nation has a right to demand a definite answer from Russia. If it be an answer tending to the preservation of peace, all the better. But if it be an answer necessitating an appeal to the *ultima ratio*, Japan will not hesitate to accept the challenge and will enter the lists in the cause of legitimate self-defence of her national interests.

The gravity of a situation which evokes such expressions from the *Fiji Shimpō* should not be under-estimated. A few weeks ago we interpreted the then visible indications of the nation's temper as showing that Japan's remarkable patience was nearly exhausted. The *Fiji's* present utterances are not the only proof that our judgment was correct. Russia will make a grievous error if she continue to treat the situation with whatever degree of insouciance her own convenience dictates. She has conducted her Far-Eastern policy in a manner for which the sole appreciable extenuation is that her instincts of imperial expansion wholly obliterate her sense of what is due to the rights of others. Nevertheless it is within her power to conclude an amicable settlement without sacrificing any of the im-

portant interests she has acquired whether by forceful aggression or by diplomatic manoeuvring. She seems, however, to be insensible to the danger of treating Japan like a *quantité négligeable*.

It is curious to find the Government's critics, such as the *Chuo* and the *Nippon*, contending that the *Tai-Ro Doshi-Kai* were originally tools of the Cabinet, but that even these partisans have now turned upon their patrons and are denouncing their weakness. The *Nippon* is exceedingly vehement in its utterances. Indeed it is always remarkably strenuous; too strenuous to be convincing. Yet constant readers of its columns can not but recognise that it is generally inspired by motives far higher than political intrigues, and its attitude throughout this Manchurian crisis would not lack sympathy had it not lent its columns to the publication of verses which plainly advocated assassination. For that offence it was suspended, and again, a few days ago, the same penalty overtook it on account of inflammatory writing. Probably it will again undergo the futile punishment. But in the meanwhile it is producing an unquestionable influence, which every sentence of suspension tends to aggravate.

PROFESSOR JENKS AND JAPAN.

Professor Jenks, the eminent political economist, who is now in Japan collecting information as a member of the United States Commission on International Exchange, has daily meetings with a Japanese Commission consists of Messrs. Sakatani, Mizumachi, Kamino and Tsukada, of the Finance Department; Mr. Sugimura of the Foreign Office, and Mr. Morita of the Department of Agriculture, representing officialdom; and Messrs. Matsuo and Takahashi of the Bank of Japan; Mr. Soma of the Specie Bank; Mr. Soyeda of the Industrial Bank, Baron Shibusawa of the First Bank, and Mr. Hayakawa of the Mitsui Bank. The members of the Japanese Commission entertained Professor Jenks at the Mitsui Club on the evening of the 19th instant. Mr. Matsuo's toast to Prof. Jenks was as follows:—

Your Excellencies and Gentlemen:—It is an honour to me that, on behalf of the originators of this gathering, Baron Shibusawa, M. M. Soyeda, Soma and Hayakawa, I rise now to give expression to the high respect and cordial sentiments with which the whole assembly welcome our distinguished guest, Prof. Jenks, who is on a visit to this country as U. S. Commissioner on International exchange. I think it is admitted on all hands that the United States has stood in an especially close relation to the Far East in the last half of a century. We shall long remember with gratitude the kind endeavours which the great Republic beyond the Pacific has made for introducing Occidental civilization to this part of the World. Indeed, Japan is indebted in a large measure to the United States for the progress which she has been able to achieve in recent years, and we feel that there is a more than common bond between the two countries. The present efforts of the United States with a view to the reform of the monetary system in China are doubtless in accordance with her traditional relation to the Far East. As the project is now under our consideration, I cannot express any definite opinion upon it this evening. But, if the proposed measure be attended by due success, it will not only bring a great benefit to China herself, but also promote the general interest of the commerce of the world. Thus, the reason why we welcome Prof. Jenks is, in the first place because the Professor representing the country to which we stand in an especially close relation, is on a mission for the reform in China which we all desire to see accomplished. It is not on this account only, however, that we accord our welcome to Prof. Jenks. We wish to show our hearty appreciation of the estimable personality of the Professor. This is the second, but not less important, reason for which, Your Excellencies and Gentlemen, I beg to you, to

join me in drinking the health of our distinguished guest.

Prof. Jenks said in reply that he did not deserve the kind words just spoken of him; that the progress of Japan stood to her credit, not to that of outsiders, and that in his efforts for the reform of the monetary system of China he counted much on the experience of Japan and on her influence with China.

The Economic Society entertained Professor Jenks on the 20th instant. The Professor made a short speech explaining the object of his eastward voyage, namely, to investigate the question of a monetary system for countries still employing a silver currency, especially China with her large foreign trade and great prospects. The learned economist did not explain what system, if any, commended itself to him. That would doubtless have been premature. He merely stated that Japan having already gone through the mill and having emerged successfully with a sound currency, her experience and example, to say nothing of her interests and her influence, should be most useful in solving the problem for her neighbour.

Mr. Oishi Masami, one of the Progressist leaders, then spoke of the impressions gathered by him during his recent trip to China and Korea. He declared that while effort on the part of individual Japanese was commendably vigorous in those regions, there had to be lamented a total absence of governmental incentive or enterprise. Meanwhile, the unsettled condition of affairs paralysed everything. Passing on to Russia, he declared that although she was said to have a hundred thousand troops in Manchuria, she had not more than sixty thousand in reality, and that officers and men were alike without confidence, which mood did not derive any improvement from the facts that the fleet remained constantly hidden in Port Arthur, that the supply of coal was quite inadequate for a campaign and that the provisions available would not suffice for more than two months. On the other hand Russia had expended enormous sums on her railways and on the development of Harbin and Dalny, and she was now incurring immense yearly losses. Even the permanent possession of Manchuria could not possibly repay her for these outlays. Evidently she aimed at something greater. And if she had statesmen in St. Petersburg who were thoroughly conversant with the conditions in the East, as de Witte and Kuropatkin, she had a Viceroy at the front who was ready to undertake and carry out any enterprise. On the other hand, Japan was torn by conflicting councils. Her Foreign Minister had to defer to the Cabinet, her Cabinet to the *Genro*. The situation ought to be in the hands of one man. In fact the whole trend of Mr. Oishi's lecture was in favour of war.

Mr. Toyokawa Ryohei spoke of the fact that only 8 years remain of the conventional tariff period and that as notice of revision would have to be given a year in advance, it might be advisable to appoint a committee for the purpose of investigating the many questions that would arise in connexion with that important problem.

With reference to the municipal tax, in proportional rate to the national business tax for the 2nd half of this year, which has to be paid before the 30th inst. we are requested by the City Office to notify taxpayers that the amount is nearly three-fold compared with the amount paid for the first half of the year owing to the fact that twenty per cent. in proportion to the national business tax for the whole year has been added as a supplement to the municipal tax.

CHINA.

Saturday, November 21.

Further accounts are published—this time coming from Seoul—to the effect that Russia is rapidly increasing her forces in Manchuria, and redistributing them with a view to the better protection of the Three Provinces against invasion from the south. It is evident that any steps of that nature would have to be taken now before winters sets in completely. Indeed, it seems to us very probable that much of the activity observed by civilians in military circles in Manchuria may be nothing more than the gathering of the troops into winter quarters, which would naturally involve a general southward movement. It is certain, however, that the present situation must involve a heavy strain upon Russia's resources. She is virtually keeping an army of about 150,000 in the field at a vast distance from its base of supplies, and the cost of maintaining it must be enormous. Had she considered the financial aspect only of the problem, it would have best suited her interests to settle the whole question conventionally before winter set in, but since she has failed to do so—through her own choice, it must be remembered—it matters little in a pecuniary sense whether she comes to terms with Japan now or three months hence. Japan, too, is suffering. Of that there can be no doubt. But her trouble is limited to business stagnation. She is not obliged to support a great army in the field.

Monday, November 23.

General Wogack is reported to have had an interview with Viceroy Yuan and to have spoken on the subject of Manchuria, but the Viceroy would not listen to any representations under that heading. It is stated that the re-occupation of Mukden has imparted a new aspect to the Manchurian problem in Chinese eyes, and that the various Viceroys and Governors have shown much anxiety in connexion with the event. Yuan Shih-kai, however, is going his way quietly, but, at the same time, is vigorously pressing forward the organization and equipment of the troops under his command. Meanwhile news from Mukden indicates that the Russian soldiers in garrison there are behaving with very little consideration towards the inhabitants, and that the latter are making their escape from the city in great numbers. This is not the first rumour of Russian roughness in Manchuria, and we are surprised that such doings should be permitted, for if Russia have any intention—which she certainly seems to have—of occupying Manchuria permanently, her policy should be to conciliate the inhabitants not to antagonise them. It is said that the progress of the works at Port Arthur has been much interrupted owing to the difficulty of obtaining native labour, the Chinese being terrorized by the harshness of their Russian employers. No Power knows better how to win the good will of Asiatics than Russia knows. Her historical method is to strike with unrelenting force at the outset, and to hide the mailed fist altogether afterwards. Perhaps she thinks that the time for striking has not yet passed in Manchuria. Perhaps her doings there are not nearly so bad as rumour represents them to be. We do not know which explanation to choose.

The *Nichi Nichi Shinbun* has a curious telegram from Peking, to the effect that Viceroy Alexieff has prepared and submitted to the Council now sitting at Port Arthur a detailed statement of his views with regard

to the re-occupation of Mukden and other Manchurian problems; and that his own course as to retirement or continuance in office will depend on the reception his opinions obtain at the hands of the Council. That would suggest some difference of opinion between the Viceroy and his subordinates, but such an important fact needs confirmation.

There appears to be some commotion among Chinese students about an agreement said to have been recently concluded in Peking with the cooperation of the Japanese Representative—an agreement that hereafter no Chinese student of law, politics or political economy shall be admitted to Japanese schools without the approval of the Chinese Minister in Tokyo and the Chinese Superintendent of Education in Japan. Messrs. Oishi and Inukai are evidently disposed to make this a subject of agitation, but the authorities of the Education Department are said to treat it comparatively lightly, their view being that students who obtain such approval will possess a constructive claim to official recognition on their return to their own country, and that the restriction can not have any force in the case of students entering private schools. To discuss the matter intelligently without full details of the considerations that guided the Chinese Government and the Japanese Representative in concluding the impugned arrangement, would be impossible.

News from Peking says that a Censor having memorialized the Throne with regard to the dissipated habits of Prince Tsai Ching, an imperial decree has been issued severely reprimanding the Prince, and insisting that in this era of China's troubles such a course of life on the part of a prominent personage is unpardonable. This decree is said to be addressed to others in addition to Prince Tsai.

The *Asahi Shinbun's* Peking correspondent telegraphs that Wang Wen-shao seems to be bent upon retiring altogether from public life, and will probably resign his seat in the Cabinet at an early date. It is expected that his portfolio will go to Chang Po-hsi. There has been talk of admitting the ex-Viceroy Chang Chih-tung to the Cabinet, but the opposition is still too strong to permit such a measure. Chang Po-hsi, who now comes to the front, commenced public life as Literary Chancellor in Shantung, twenty-two years ago. He was appointed special ambassador to England in 1901, but declined the post and immediately afterwards became President of the Board of Works, then President of the Board of Punishments and then Commissioner of Education. He is now President of the Board of Civil Office.

Tuesday, November 24.

It is related in the columns of the *Hochi Shinbun* that Viceroy Yuan has proposed to the Throne an alliance between his country, Japan and England. Apparently Taotai Yuan of Antung, against whom and his two subordinates, Wang and Wu, Russia's complaints were recently directed, is a nephew of Viceroy Yuan. The Governor-General Tso, together with Wang and Wu are all in the hands of the Russians, but Viceroy Yuan managed to effect his escape cleverly. Much of this was known already. What the *Hochi's* correspondent adds to our information is that Taotai Yuan was the head and front of the pro-Japanese party in Manchuria, and had always offered strenuous

opposition to the growth of Russia's influence there. Further we learn that the re-capture of Mukden has produced a profound impression on China, and has divided her officials into two parties, one of which advocates yielding to Russia's proposals for the settlement of the Manchurian problem, and the other begins to talk of an alliance with Japan and England. We can not tell how much truth there may be in all these statements. It is noticeable that in Shanghai, where the news of these various events in Manchuria seems to have been received later than in Tokyo, the *N.-C. Daily News* writes as though there had been some real awakening in China, and publishes statements that ex-Viceroy Chang Chih-tung has been appointed to command the empire's first lines of defense against Russia, Viceroy Yuan having command of the second lines. But it is hard to believe in anything of the nature of resolute action on China's part after her long continued attitude of apathy. As for Wang Wen-shao's displacement, it seems to have been due, less to the Empress Dowager's vivid sense of the dangers of the situation than to an opportunity having been obtained by his rival Chang Chih-tung to open the Court's eyes to Wang's infirmities. It is difficult to find anything very solid in all this froth of intrigue and rumour.

Wednesday, November 25.

It is said—*Jiji Shimpō's* telegram—that the officer commanding the Russian forces in Mukden has intimated to the Chinese officials that their offices must be removed outside the walled city, and has also signified his intention of occupying two other places as essential to the suppression of the bandits. The telegram is not very clear in terms, but its gist evidently is that the Russians have no intention of evacuating Mukden at present. They have come to stay there for the winter at all events.

Thursday, November 26.

A telegram from Peking says that the Russian forces have occupied Haicheng, a place between Mukden and Yinkow, well remembered by students of the China-Japan War.

Major-General Wogack's mission to Peking is invested with a certain amount of mystery, but as yet no one has undertaken to formulate a definite conjecture further than that he has to explain clearly to M. Lessar some points in the policy of Viceroy Alexieff.

A collision between Russian soldiers and mounted bandits near Sin-min-tung is reported. Eight of the Russians are said to have been killed or wounded, and at first it was alleged that some Japanese fought in the ranks of the bandits, but the latter item seems to have been subsequently denied. According to the view of Chinese observers the Russians stirred up the bandits in order to obtain a pretext for occupying Sin-min-tung, but apart from the fact that such procedure is scarcely credible, it remains to be shown that pretexts for military operations are considered at all necessary by Russia in Manchuria.

The *Asahi's* Chefoo correspondent says that reinforcements are constantly reaching Manchuria from Russia's dominions, and that the number of recent arrivals at Port Arthur aggregates some twenty thousand. Experience has shown how untrustworthy estimates of this kind are.

Viceroy Yuan has again proceeded to Peking. It is stated that his influence is stronger than ever at Court. The telegram uses the expression "his influence greatly

recovered," but we are not aware that Yuan's credit had declined.

Friday, November 27.

The *Asahi* publishes a telegram from Peking saying that the Russians are stirring up the bandits in Manchuria, so as to create a pretext for non-evacuation, and that, at the same time, they are pressing the local officials to reduce the strength of the Chinese troops, and seeking to impose limits on the quantity of ammunition served out to the latter. Such rumours are so likely to be manufactured that they can not be accepted as altogether credible.

Fresh troops are reported to be constantly arriving from Russia in Manchuria, and to be pushing steadily southward. The fact that they are new arrivals is said to be indicated by the marks on their uniform. We have more than once remarked that as the re-distribution of troops on the eve of winter would be a natural military measure, all the movements reported recently from Manchuria should not be regarded as strategic measures. But in the face of iterated and re-iterated items of intelligence, it would seem that credence must be placed in the general fact of a southward movement.

KOREA.

Saturday, November 21.

The opposition of the Russian Representative to the opening of Yong Am-pho continues to be as strenuous as ever, it is said. There has not as yet been any Imperial Decree vetoing the opening, but it is thought probable that a change of Foreign Ministers will be one of the consequences of the complication. If Korea submits to Russian influence in this matter she will deserve the loss of independence that plainly threatens her. Perhaps it would have been too much to expect of her inexperience that she should clearly appreciate the Russian processes of empire-building, and should foresee that so simple a matter as granting permission for a private company to fell timber in the Yalu Valley would be converted into an instrument for establishing Russian Sovereignty over the region. But only the blindness that the gods decree for those on the brink of ruin can have hidden from her the meaning of recent events. Her salvation lies in opening Yong Am-pho. There is no other way out of the dilemma. If she neglect to avail herself of the exit, we predict that the next choice she will have to make will be between subjection to Japan or to Russia.

The *Kokumin Shimbun* publishes a telegram from Seoul to the effect that it has been decided to build an arsenal at Yong An-san. That is one of the strangest pieces of news we have heard for some time. Is it conceivable that Korea should choose the site of an apocryphal Russian fortress for such a purpose, or is it conceivable that Russia should include the manufacture of weapons of war among the functions included in a timber-felling convention?

Nickels are exchanging in Seoul now at the rate of $2\frac{1}{2}$ yen face value for one silver or paper yen. Mr. Hayashi, the Japanese Minister, is reported to be interesting himself actively in the question. He has addressed himself to the Korean Government, premising that although most reluctant to interfere in any way in the financial affairs of the country, the interests of his nationals

are so intimately concerned in this matter as to necessitate some action. He therefore seeks an explanation of the Government's intention. It would appear that the official resolve to abstain from further coinage of nickels, a resolve formulated last year, has not been observed, and that a constantly increasing plethora of these tokens is mainly responsible for the present trouble.

Monday, November 23.

According to present appearances there is little hope of the timber dispute in the Yalu Valley being settled amicably without diplomatic intervention. The Japanese Consul in Seoul proceeded to Yong Am-pho on the 15th instant and had two interviews with M. Stromiloff. At first the latter declined to admit that any Japanese subject could have proprietary rights in felled timber, his contention being that Russia has conventions with both Korea and China about the lumber concession, and that, consequently, claims acquired by Japanese subjects from Chinese can not be legally recognized. Ultimately, however, he abandoned that attitude—which is described by the telegraph as "contemptuous"—so far as to give the Consul a letter to the Company's representative at a place which is transliterated into "Bandai," but which we can not recognise in that form. The Consul has now to proceed thither, but it is reported that he anticipates a reception similar to that given to him in the first instance by M. Stromiloff, and believes that the question must either be dropped or made international.

The *Fiji Shimpō's* special correspondent wires from Wiju under date of the 20th instant that he has carefully inspected the state of affairs at Yong Am-pho, and that he finds there a brick building, which serves as the headquarters of the timber company, and an iron-frame building which is to be used as a workshop but has not, as yet, been furnished with plant. A barrack measuring some 30 feet by 120 is in course of construction. As for the alleged fort at Yong Am-san, it continues to be obliterated with earth as it was on the occasion of Mr. Hagiwara's second visit. People are not prevented from ascending to the site of the fort if they insist on doing so, neither are any serious obstacles placed in the way of ships touching at Yong Am-pho, provided that they have a plausible excuse. Of the 150 soldiers recently stationed at the place, a hundred have proceeded to Chasyong to engage in timber-felling operations, so that there are only fifty now in garrison.

From telegrams to the *Fiji Shimpō* we learn that about 150 bandits were recently encamped within 2 or 3 miles of Yong Am-pho, their purpose being to "hold up" Chinese vessels. They were attacked, however, by a party of Russian soldiers, and sixteen of their number were made prisoners. Whatever may be the case in other parts of Russia's East Asiatic "sphere," it would seem that the duty of policing the Yalu Valley is not a sinecure. The obscure point about the above message is that it does not tell whether the bandits were encamped in Chinese or in Korean territory. We presume the former, however.

The Council of Ministers in Seoul are reported to have decided against the proposal submitted by the Chemulpo Consuls, namely, that whenever parties of liberty-men land at Chemulpo, they should be in charge of a warrant officer. Such a proposal is so manifestly impractical that we doubt whe-

ther it has been correctly transmitted. At any rate it has been negated. The Council is also said to have decided that the Japanese subjects who broke into the domiciles of certain Russians in search of the riotous sailors, should be punished. But their punishment, by order of the Japanese Authorities, had already been accomplished, according to previous telegraphic news.

Japan and America seem to have been prominently associated in pressing for the opening of Yong Am-pho, whereas M. Pavlow stubbornly opposed the measure. We do not hear now of England in this context. Perhaps as Mr. Jordan shot his arrow some time ago, he sees no occasion to bend his bow again. Perhaps the old difficulty of co-operation presents itself. How often these Far Eastern complications remind one of the text "where two or three are gathered together, etc." If any three of the strong Powers would simply unite their voices and declare what must be done, done it would be most assuredly, and that without any fighting. America, England and Japan, for example, might demand anything in reason from Russia with absolute certainty that their demand would secure acquiescence. But there seems to be some insuperable obstacle to such unity of action.

Tuesday, November 24.

The *Asahi Shimbun* publishes what professes to be the gist, if not the actual text, of M. Pavlow's protest against the opening of Yong Am-pho. From this we learn that the Russian Minister set out by referring to his previous protest—made in October—, wherein he maintained that to open to the trade of all nations a place situated on her frontier as Wiju is, would be bad policy on the part of the Korean Government. He professes to have believed that the counsel then tendered by him would receive favourable consideration at Korea's hands, but he now learns that the Seoul Government contemplates opening not only Wiju but also Yong Am-pho which forms a station of the Russian lumber company. Therefore he renews his protest, and takes occasion to warn the Korean Government that in the event of his warning being disregarded, Russia will have recourse to whatever measures seem advisable under the circumstances.

The Korean Government is reported to have replied verbally to the above protest, in the sense that such interference on Russia's part was a violation of Korea's sovereign prerogatives. To Japan also answer was made, at the same time, that her frequent applications for the opening of places in Korean territory could scarcely be reconciled with any theory of Korea's unfettered sovereignty.

In the *Dampo Shimbun*, of which the first number has just been published, we find a telegram of a different import. It says that the Korean Government, in response to M. Pavlow's protest, denied his contention that the time is unsuited for opening Wiju and Yong Am-pho, and claimed that, on the contrary, the time seems eminently adapted for such a step. Meanwhile, according to the same authority, the Japanese Representative continues to press the Korean Government, and has pointed out to them that if they admit Russia's right to dictate to them in such a matter, they will have virtually allowed her to include within her sphere of exclusive influence the whole of the Yalu Valley. Dr. Allen, the United States Representative, is said to be vigorously

working along the same lines as Mr. Hayashi.

The *Fiji Shimpō* has a very strong article on this subject. It does not directly attack Russia. The point it makes is that whereas Russia acts first and argues afterwards, Japanese statesmen are wedded to forms and ceremonies, and suffer occasions to escape them by conferences and talk. What the *Fiji* recommends is that Japan, having an unimpeachable case, as she has in the present instance, and being moreover assured, as she is, of Korea's desire to acquiesce in the proposed measure, should not leave to the Korean Court any time for the reception of outside protests, but should proceed at once to performance. We read this article to mean that since Korea is known to be willing to open Wiju and Yong Am-pho, Japan should at once treat them as open ports, disregarding all frivolous obstacles.

Thursday, November 26.

A Seoul telegram announces that a Japanese subject, Takata Kametaro, has been ordered to quit Wiju and not to return thither for three years, his conduct being considered prejudicial to peace and good order. The order was given by the Japanese Consul at Chinnampo. We presume that this man is one of those recently reported, on several occasions, to have been engaged in unlawful acts in connexion with the lumber enterprise.

It is reported that a party of ninety Chinese led by nine Russians have expelled the inhabitants from the island of Keum-dong Kwang-hai-do, and have appropriated the place as a lumber station, in spite of the protests of the Korean Authorities at Wiju. The conjecture is that this arbitrary measure is intended to strengthen the Russian position in the dispute now waging between the company known in Japan as the Gigei-Kwaisha and the Russian concessionaries. The former, according to latest news, have some ten thousand baulks of timber which they are unable to send to Antung in consequence of the complication.

Mr. Inuzuka, Chief of the Railway Bureau, is said to be inspecting the Seoul-Fusan line with a view to making suggestions or taking steps for its speedier construction.

The gentleman who was sent some time ago on a secret mission to Europe, is said to have succeeded in raising a sum of 4 million yen in Belgium.

The Korean Government's reply to M. Lessar's communication about the opening of Yong Am-pho is given at some length by the *Asahi Shimbun's* Seoul correspondent. The document sets out by calling M. Lessar's attention to the fact that the inquiry addressed to him in September by Korea had reference solely to the closing of Pyong-yang, a step which it was within his province to discuss. He was not asked for any expression of opinion about the opening of Wiju or Yong Am-pho, since the opening of these places is within the sole province of the Korean Government and does not admit of any alien interference whatever. Under the circumstances the objections raised by him as to the untimeliness of opening any port along the Yalu, or of opening Yong Am-pho in particular, are manifest encroachments upon Korea's sovereignty and can not be reconciled with any theory of neighbourly goodwill. Especially perplexing is the last paragraph of his despatch, where he says that should Korea disregard his protest, Russia will take whatever steps seem expedient in the circumstances. The Korean

Government declares its total inability to comprehend what is meant by such language. Nevertheless Yong Am-pho remains unopened.

Friday, November 27.

The Minister of Foreign Affairs in Seoul is reported to have again tendered his resignation. He assigns for reason that his authority is too much interfered with, but rumour says that the true cause is the intriguing of Li Keun-thaik and the pro-Russian party who, at the instance of M. Pavlov, are seeking to drive the Minister from office, and who have used as an instrument against him the fact that he did not resent the Japanese Representative's recent note about the nickel coinage. Li Keun-thaik and his friends profess to believe that the sending of such a note was an undue interference with Korea's domestic affairs, but the truth is said to be that they are acting simply at the instance of M. Pavlov.

The telegraph reports that a new Korean Representative at the Court of Japan has been appointed and that he left Seoul for his post on the 23rd instant. His name is given—in transliterated form—as Gen Fu-un, and he is said to be a graduate of the School of Languages in Seoul.

It is stated (*Yomiuri's* correspondence) that the Russian Consul at Chemulpo having presented to his Japanese colleague a claim for damages in connexion with the recent commotion, the Japanese Consul retorted that if any damages were asked for the demand should come from the Japanese side. And so indeed the accounts hitherto published would seem to indicate.

The *Yomiuri Shimbun* publishes a telegram to the effect that, two Chinese subjects having been killed by Korean soldiers at Mu-san, trouble has arisen between the Korean officer in command in Ham-yong-do and the Chinese General in Kirin, and that the latter's troops threaten to take vengeance. We gather from the telegram that the Kirin General has troops in the immediate neighbourhood of Mu-san, but how that can be the case we are unable to conjecture, for Musan is in Korean territory, considerably south of the Yalu.

THE KOREAN ASSASSINS.

The Korean assassins have at length succeeded in carrying out one of their nefarious designs. Some time ago, as our readers may remember, there was talk of an attempt to kill a Korean named U Pon-san, then residing in Chiba prefecture. The police frustrated the scheme and arrested the would-be assassin, of whom nothing more was publicly heard. Subsequently U seems to have found his way to Kure. When in Korea, from which country he fled in 1896, U held the post of Vice-Minister of Foreign Affairs with a seat in the Cabinet. He is said to have made a living in Japan by the practice of calligraphy. Accompanied by his wife—or mistress—a Japanese woman, and by his child, aged 5, he recently arrived in Kure. It is reported that he urged his wife, some time ago, to separate herself from him and take the child with her, as his own death at the hand of assassins was assured. In 1897 he was followed to Japan by one Ko Yong-keun, who is said to have held a position corresponding to that of Lieut.-General. This Ko associated himself with a countryman, No Yun-myong, and the two men contrived U's death. A curious fact is that U seems to have been

very intimate with Ko. He assisted the latter in finding a lodging in Kure, and was much in his society. On the night of the 24th U, Ko and No were drinking together when a quarrel arose. Ko finally stabbed U in the head and throat and No struck him a heavy blow on the forehead with a hammer. There is some talk of trouble having arisen between the men on account of their mistresses, but that theory is negated by the fact that in Ko's bosom, after his arrest, there was found a document indicating that he had long been scheming to assassinate U for political reasons. Japanese newspapers allege that the document speaks of a "nine-years' ambition," but if that is to be taken literally, then the intrigue must have existed prior to U's flight from Seoul in 1896. Both Ko and No are in the hands of the police, and will doubtless receive due punishment for their crime. There is some satisfaction in reflecting that only on this one occasion has achievement attended the nefarious designs of the many Korean assassins visiting Japan, but, on the other hand, this country may not unjustly complain of being made a head-hunting ground by such savages. The great question to be ascertained is whether these Kure murderers had received any encouragement or support from official quarters in Korea.

PROFESSOR MOMMSEN.

The late Professor MommSEN made a grievous error when he inveighed against the methods of British soldiers in the Boer War and when he induced himself to endorse the villainous libel that they protected themselves by fighting behind the cover of Boer women. But he made a still greater mistake when, almost before the ink on his accusations was dry, he declared that Germans are "more nearly akin and in every respect more intimately allied" to the British "than to any other nation." If he had frankly said that he now knew and acknowledged the errors into which he had been betrayed in the days of the South African war, his confession would probably have gone to lay the foundation of a spirit of forgiveness in England, and would probably have helped materially to remove the false impressions under which many, if not the great majority of, Germans still labour. In fact, he should have addressed himself to the German people. His justly high reputation as a historian would have been less impaired by confession of error than by conviction of it, and if he had a confession to make it should have been made to his own nationals, whom he had so greatly helped to mislead. We indeed share his "creed that Germans and Englishmen are destined to go forward hand in hand," but we do not think that the time has come for healing the terrible wounds inflicted on our country's honour by Germany during the Boer War, and still less do we think that they can be healed by any process which ignores the necessity for some *amende*. Apart from the question of tact we sincerely honour the great historian's motive in seeking to promote "the holy alliance of the nations," but he estimated far too lightly the wrongs his country did us when he sought to put them aside so soon and so calmly. A great deal of the balm of time is still needed.

Owing to the fall in price the habutae silk weavers at the district of Shirakawa, Fukushima prefecture, are consulting with a view to suspending business temporarily.

THE ELECTRIC TRAM COMPANY.

Monday, November 23.

It was expected that the converted horse-trams would have been opened to traffic ere now, but a difficulty has arisen about fares. The Directors would fain have raised their prices in consideration of the greatly improved service that the electric cars will furnish, but they saw no hope of obtaining official consent or of avoiding public clamour. On the other hand, a three-*sen* uniform fare would have been condemned by the shareholders. Hence they chose a middle course, and applied for permission to adhere to their old fares, the maximum charge under which scale would be 10 *sen* from Shinagawa to Uyeno, and the average charge would be 2 *sen* per section. But the Home Department is not disposed to accede to that scale and the opening has had to be postponed. Surely 2½*d.* is not a high charge for carriage from Shinagawa to Uyeno? Nevertheless the general conviction is that fine dividends can be paid at much lower rates. The Company will have to surrender, of course. Public opinion in Japan is far stronger than corporate privileges.

Wednesday, November 25.

It has been already related that a delay occurred in opening to traffic the newly converted lines of the horse-tram company from Shinagawa to Asakusa, the delay being due to a question of fares. The Company desired at first to continue its old charges, namely, 2 *sen* per section, but the Authorities objected. Finally on the 23rd instant the Directors held a meeting and decided to adopt the system of a uniform charge of 3 *sen* without regard to distance. Thus it will be possible hereafter to ride from Shinagawa to Asakusa, namely, from the southern suburb of the city to the northern, for 3 *sen*. The *Jiji Shimpō* strongly applauds this resolution and seems to think that a great boon is conferred on the public. We are quite unable to appreciate that view. It appears to us contrary to all principles of justice that one man should be obliged to pay dear for a small service in order that another man may obtain a big service cheap. There is no apparent question of public convenience. Were a three-*sen* bit the commonest coin in circulation, some reason could be shown for adopting it as the uniform charge. But there is no such thing in Japan as a 3 *sen* coin. The common unit is one *sen*, and consequently not the smallest advantage is secured by an unvarying fare of 3 *sen*: 2 *sen* or 4 *sen* would just as convenient, and 5 *sen* would be better than either. As to the argument that people can easily grasp and readily comply with the rule of a uniform charge, we deem it frivolous. It is virtually as simple for a man to be told that he must pay 1 *sen* or 2 *sen* per section as that he must pay 3 *sen* for whatever distance he rides. We have no doubt that the electric trams will prove remunerative even with a uniform 3-*sen* fare, but neither have we any doubt that such a system does great injustice to the humblest section of the population, who think a great deal of the pettiest sum and who would readily avail themselves of the electric railway for short journeys could they do so at an expenditure of from 1 to 2 *sen*, whereas they will walk rather than pay 3 *sen*. It appears to us that the advocates of the 3 *sen* system have been carried off their feet by the mere prettiness of the notion.

Thursday, November 26.

The application of the Densha Tetsudo Directors—that is to say the Directors of the converted horse trams—was immediately granted by the Authorities and a successful trial trip having been made on Tuesday evening, it was decided that the line should be opened to traffic on Wednesday morning. The application here referred to is that seeking permission to inaugurate the system of uniform 3-*sen* fares. Apparently the people of Tokyo are much pleased by this action on the part of the Directors for they are said to have welcomed the passage of the trial cars through the streets. The system certainly looks attractive. Hitherto passengers from Shinagawa to Asakusa have had to pay 11 *sen*—not 10 *sen* as previously stated by us—whereas they will now travel for 3 *sen*, and first-class passengers from Shimbashi to Uyeno will be charged only 3 *sen* instead of 12. That is all very fine so far as it goes, but the case of short distance passengers is apparently not considered. Numbers of people who used to ride from the Shinagawa suburb to Shimbashi for 2 *sen* will now have to pay 3 *sen*. In our opinion a much juster and more rational system would be to charge 1 *sen* per section.

The Street Railway Company has at length recovered its right mind, and it was expected that the election of the new Directors would take place quietly yesterday. Mr. Amenomiya was to be replaced in the presidency by Mr. Takashima Kaemon, former president of the Tanko Tetsudo Kaisha. Mr. Amenomiya becomes Managing Director. The other changes amount practically to a reduction of the officials by one step. There were not to be any actual changes of personnel.

EXHIBITIONS AT UYENO.

There are three exhibitions now going on in Uyeno Park. One, in the Art Gallery, is of pictures; the other two, in the old *Hakurankai* building, are of bronzes and porcelains respectively. Concerning the pictures there is not much to be said. Their general level is below mediocrity. Very few show evidences of talent or even of technical skill. There are a few, however, that command attention and deserve to be regarded as fairly representative specimens of the old school. It continues to be observable that the celebrities of the day do not contribute to these displays. They apparently retain their old want of confidence in the competence of the judges, and indeed it will probably be admitted that the judges have not in this instance shown discrimination which commands immediate endorsement.

The exhibition of bronzes deserves high commendation. Not only are there many beautiful shapes and designs, but there are also most admirable examples of patina-producing. One vase in particular has a surface smooth as velvet and indistinguishable at first sight from the yellowish olive-green of the celebrated *Kuan-yao* porcelain. Another shows a rich verdigris green and round the body a brilliant red crawfish is coiled. Nearly all the specimens are noteworthy for clean casting and general excellence of finish.

Not less interesting are the porcelains and faïences, though the general level of technique is below that of the bronzes; an inevitable difference when it is observed that a great part of the wares are destined for every-day use. Miyagawa Shozan shows some fine examples of under-glaze colours, but he is

rivalled by Kato and certain other Tokyo artists. Hirado, Hizen, Kyoto and Owari are all capable of much better work than the exhibition offers, but only their medium-quality wares are on view, and the same is true of Hirado and Kaga. Tokyo and Yokohama carry off the palm.

FESTIVITIES IN TOKYO.

On the evening of the 20th instant a brilliant reception was given by His Excellency the Minister of the United States to welcome Rear-Admiral P. H. Cooper, who has assumed command of the American Squadron in these waters. The grounds of the Legation were splendidly illuminated, and the salons, which have been entirely re-constructed, and decorated with exquisite taste, presented a delightful contrast to those of the old building. A large number of Japanese and American naval officers were among the crowd of guests, which comprised a majority of the leading residents of Tokyo of all nationalities. An American naval band played, and the party broke up after a most enjoyable conversation.

On the 22nd instant a garden party was given by Mr. Ogawa at his Azabu residence in Tokyo to celebrate his recent marriage with Count Itagaki's daughter. About 350 persons were present. They had the pleasure of hearing the celebrated *hanashika* of the day, and also of witnessing some extraordinarily clever feats of juggling, especially those by a Chinese expert. Refreshments on a sumptuous scale were served in the lower garden, and the party broke up after a delightful afternoon.

THE TEACHING OF RUDIMENTARY ENGLISH.

(COMMUNICATED.)

If the new Minister of Education will set his face sternly against the present methods followed in teaching English in middle schools, it is safe to say that he will have instituted one reform which will meet with the hearty approval of all competent educationists who sincerely desire to accomplish the greatest results with the minimum of effort. It is quite fair to say that there is not a middle school in the Empire, able to secure the assistance of an English-speaking teacher, that gets from that master the right kind of benefit from his effort to teach his language, and equally fair to say that the fault does not always lie, indeed seldom does lie, with the teacher. Let any teacher in a higher school dictate to his classes this sentence:—"That smooth-faced youth thinks there is a thunderstorm gradually approaching." Let him speak the sentence only once, but let him enunciate clearly and pronounce each word distinctly; and we are very much mistaken if the papers handed up to him will not show that more than half the students have understood him to say:—"That smoze fast use sinks there is a sanderstorm gladyary aploching," or something very like it and a long way from what he did say. The reason for his mistake is not difficult to determine. It is simply that when really beginning to study English, that is in the first and second years of the middle school course, those young men were put under the tuition of Japanese teachers who may have been thoroughly competent to teach them the meaning of English words and the mechanical construction of English sentences, and who themselves may have

been able to speak English fluently and write it very correctly, but will themselves admit their inability correctly to guide their pupils in pronouncing the difficult sounds of that tongue and in detecting the dangerous little mistakes which are so easily acquired and so hard to get rid of; while the students, if ever they had a foreign teacher at all before entering the higher school, did not come under his instruction until they were in the fourth and fifth year classes. Now, in the very nature of things, it is impossible that those Japanese teachers, no matter how competent they may have been in most respects, could have given such satisfactory instruction in phonetics as to make the sounds of "th," "r," and "l" unmistakable for all time to the ears of their pupils. If the same sentence were dictated to a hundred Board School children in England, or to an equal number of Public School children in the United States, of the average age of twelve, while there might be mistakes in spelling, it is most improbable that there would be such serious mistakes in rendering the difficult sounds of English letters as those which have been specially mentioned. Why is this so? Simply that the ears of those English or American children had become accustomed to the correct sounds at the formative period in their acquisition of the language, and had always heard their teachers pronounce them properly, just as the Japanese students had so become accustomed to the sound and use of the constantly used words "that" and "there" that probably not one in ten would make a mistake in writing them from dictation. While there are not many of us who would think of writing any one of the possible sounds of "a" with the letter "e," yet anyone, who has had experience with students of the upper schools in Japan, must admit that such mistakes as spelling "sacred" "secret," "part," "pert," etc., are all too common. Other examples of the bad effects which have resulted from lack of proper attention to articulation at the most critical time of acquiring a knowledge of spoken English, that is at the beginning, in the first and second years at the middle school, could be given by every teacher. The confusion of "r" and "l" upon the tongues of both Japanese and Chinese is said by some careless observers to be organic; such a statement is sheer nonsense. The children of English-speaking parents have the same difficulty in pronouncing certain combinations of those letters with others when they first commence to talk, but the trouble disappears as the children pass into adolescence. Why then is it necessary that young Japanese pupils should generally be unable to distinguish clearly between "bright" and "blight"? Their organs of speech and of hearing are precisely the same as are those of our children. Whatever fault there is lies in the method of training those organs, and the proper training cannot be given—we speak in general terms, recognising willingly and with approval, the exceptional Japanese teacher—except by those who themselves enunciate those sounds correctly and can instantly detect any variation, be it never so slight, from the correct pronunciation of words containing the letters which are liable to be confounded with others. If then the training of the ears of Japanese lads, who really begin the study of English at about fourteen years of age, were entrusted to the foreign teacher, when the school is so fortunate as to have one, the sounds of that language which are so difficult for all non-

English speaking adults to acquire, would stand a much better chance of being correctly learned than they do now. Little Japanese children who go to England or America, or those who happen to be born in those countries speak English just as fluently as do the natives. It would not be necessary for that foreign teacher to understand any Japanese: it would probably be better if he did not know a word of the vernacular. The meaning of a word is not so important at that particular time as is the sound; but if it be contended that mere pronouncing, without knowing what meaning the sound produced is intended to convey, savours too much of the old-time Chinese method of rudimentary instruction, the objection could be very easily overcome by a little co-operation between the foreign teacher and one of his Japanese colleagues. A lesson might be selected containing certain words to illustrate a series of difficult sounds, and as a preliminary to the foreign teacher's practical instruction the Japanese teacher—carefully avoiding the pronunciation of those words in English—could tell the class the meaning of them: then let the foreigner drill the pupils in the correct enunciation and pronunciation. But no, for some inexplicable reason, whenever a foreign teacher, whose long experience has convinced him of the great benefit to be derived from such a method, ventures to suggest that he be permitted to take charge of the beginners, his suggestion is waved aside most imperiously, and he is told to attend to the fourth and fifth year classes; to continue to explain the meaning of English sentences in the pernicious system of semi-lecture which is probably keeping more boys from learning English than any other single thing in the existing methods; and to guide his pupils in reading something which even his best efforts can make but dimly intelligible to them: and (but this he is not told to do!) to waste a lot of valuable time in correcting mistakes of pronunciation and construction which should never have been permitted to begin but which have existed for three or four years, until they have become so rooted that muscular strength and the patience of Job are needed to eliminate them, if, indeed, they ever are eliminated.

It is not only those most difficult consonant sounds that are learned incorrectly at the beginning of English lessons, but many of the simpler vowel sounds are also almost hopelessly confused at that time. We are unfortunate in having so many different sounds for the same letter, although there are many who maintain that that multiplicity of sounds is an element of strength and force in the English language, but this is not the time for such a discussion. There are the five sounds of "a" (or shall we say, seven?), for example, and we who are to the language born have little difficulty in detecting the difference between them and, what is more, we are in little danger of confounding one vowel sound with another, although some of us, who are a trifle weak in our orthography, do occasionally get somewhat mixed in our efforts to indicate with letters a given vowel sound, long *e*, for instance, which is expressed in letters by *e* in *metre* (to measure), by *ea* in *meat* (an article of food), or by *ee* in the verb *to meet*; and furthermore by *i* in *machine*, by *ie* in *believe*, by *ei* in *receive*, by *eo* in *people*, and by *æ* in *agis*. If there is this difficulty for us, what must that difficulty amount to when the teacher is himself not clear in his enunciation?

If then, the Minister of Education, exer-

cising that prerogative which is vested in him, of advising *fu* and *ken* officials who have immediate charge of the middle schools, would urge the principals of those schools to abandon the existing (and pernicious) custom of having the lessons of their foreign teachers mere lectures upon the simple subjects of the reading lessons, and persuade them to assign their foreign teachers to the lads who are in the first classes, for right training in pronunciation, we venture to assert that there would soon be little of the existing difficulty in making the students of the higher schools understand English when it is spoken to them, and of the hesitation which those students now evince in trying to express themselves in that language, that has been so often alluded to by teachers in the higher schools and by professors in the universities. But it would be unwise to leave the system at this point, and strenuous effort would be necessary to institute and to maintain a reform: there will be opposition on the part of many Japanese teachers who think the care of the little boys must be left to them, and there will be opposition from the boys themselves who will contend that such a change is *infra dig*.

AFTER THE WAR IN SOUTH AFRICA.

The story of what the British have been doing in South Africa since the war is the best possible refutation of the dastardly slanders circulated by their European friends during the war. It is really a remarkable story, and the following summary of it will repay perusal:—

It was well into July, 1902, before any practical steps toward repatriation and restoration could be taken, but by that time the surrender of the various commandos had been carried out, and the sites for the repatriation depôts had been fixed. The labour necessary to take the Boers back to their homesteads was enormous. Each family required a wagon, and some of the ox wagons were drawn by 16 oxen, while mule wagons were drawn by 10 mules. Many of the conductors employed were Boers, and for the most part they did their work well and faithfully. Each family upon leaving was provided with a tent, bedding, and one month's supply of foodstuffs free of cost from the burgher camps. Other materials given them, such as implements, seed and the like, they were allowed to pay for in cash, or to have debited against their accounts. The Government schools which had been started in the burgher camps began to break up and were distributed over the country. The number of these schools and the children attending them increased continually until the end of June of this year, when there were 25,274 children receiving education in 874 Government schools. At that time the Government was still providing rations free to all children attending these schools. Altogether more than 70,000 persons returned in Government wagons to their homes, and it was noticeable that many of them left with reluctance the camps where they had been concentrated. A great difficulty now met the department, owing to the number of animals employed in taking the families back to their farms and in keeping them supplied with foodstuffs. It seemed impossible to furnish the farmers with animals to enable them to take advantage of the existing ploughing season. To remedy this difficulty the Government collected several available animals and vehicles, and started a plan of driving the country with ploughing columns, which consisted of six ploughs and six teams of animals to draw them, with two natives to each plough. Each column was under the charge of a white conductor, and carried with it a quantity of seed meal, so that the land might be sowed immediately after the ploughing. The area to be ploughed up on each farm was limited to five acres, so that every farmer might benefit by the scheme, and farms not yet reconquered were ploughed up and planted to the same extent. For this service a small charge was made, although not nearly sufficient to cover the actual expenses. The columns drove from farm to farm without delay, and in about two months 23,000 acres were ploughed up and sown in this way. Unfortunately a bad season following made a great deal of this work useless. Meanwhile animals, vehicles, harness, implements, cattle and the like were being collected for distribution among the Boers. The actual number of animals distributed throughout the Transvaal up to the end

of June this year was as follows: Horses, 8,798; mules, 19,005; donkeys, 6,743; oxen, 31,815, and breeding cattle, 9,052—a total number of 75,413 head, representing a value of £1,549,674. Transport vehicles to the number of 4,238, representing a value of £107,092, were also distributed. The value of the foodstuffs, general stores, seeds and building material issued to the Boers up to the end of June this year amounted to a sum of £1,054,071. This sum was not secured by means of promissory notes, but the purchasers could either pay cash or have the amount debited against their names, with a view to a general adjustment upon the final allotment of the free gift of £3,000,000. The cost of administration up to the end of June has been publicly given as £1,400,038.

THE KWANTO BANKS.

The Kwantō Banks held their annual meeting at the Bankers Club on the 25th instant. There were thirty-three bankers present, and Mr. Toyokawa, President of the Mitsu Bishi Goshi Kaisha, occupied the chair. Baron Kioura, Minister of Justice, delivered a speech in which, after alluding to the industrial and commercial development of Japan, he insisted that further efforts must be made and that in fostering her foreign trade Japan could best hope to increase her wealth. He added that the Government appreciated the need of a factory law, but he promised that its provisions would be of such a nature as not to cause any business inconvenience. Mr. Sakatani, Vice-Minister of Finance, explained, in an able speech, that the Finance Department's policy towards the banks had been to prevent the establishment of petty and untrustworthy institutions and to exercise such supervision as would reduce the public's risks to a minimum. The consequence had been a diminution in the number of banks but a large increase in the banking capital of the country. Further, since the year before last the Government had steadily adhered to the programme of not withdrawing funds from the general market. Administrative necessities had been met by recourse to the *Yakim-bu* of the Treasury, and the people had been left to employ their capital in the manner most convenient to them. He hinted that reforms of the Banking Law and of the Exchange Regulations were contemplated. At present the total amount of debentures issued by the banks did not exceed 40 million *yen*, a figure which ought to be greatly increased inasmuch as such securities played a most useful part in the development of commercial enterprise. In conclusion he alluded to the appointment of a committee to confer with Professor Jenks about the currency question, and he promised that the sequel of that measure need not cause any uneasiness in business circles.

"DOE THE NEXT THYNG".

When things go wrong and I am sore perplexed

With the tumultuous duties of each day,
I mind me of a quaint old Saxon text,

The burden of this homely roundelay.
'Twas an inspired thought to send it forth

To cleave the centuries on healing wing,
Bearing this message of transcendent worth,
Doe the next thyng.

"The Lord helps those who help themselves," we say,

Then fold our arms to worry and complain
Because some cherished project went astray,

And where we sowed in joy we reap in pain,
Accept this ancient paraphrase of work,

Peace and contentment it will surely bring,
So when inclined to grumble or to shirk

Doe the next thyng
